25,569. Have you anything to say with regard to the willingness of the people to bear in whole, or in part the cost of prohibitive measures?—It must be evident from what has already been said that prohibitive measures are not called for. The opium habit is limited to a small per-centage of the population. The habit is one which cannot be easily shaken off. It has fostered a craving which must be satisfied. To suppress the trade in opium would be unjustifiable. To tax opium further would place it beyond the reach of the poor man. It would introduce a new motive for the commission of crime. It would deprive the labourer of the means of earning an honest livelihood. It would shut out a simple remedy from people who cannot afford to pay for medical advice or medicines. It would increase beggary. It might cause other evils, the extent of which cannot be gauged now. To increase the general taxation on account of the opium eater would be opposed to all principles of taxation. The opium eater is as useful a member of society as any other. There is no reason why the general taxpayer should have his burdens increased. If additional taxation is to be resorted to on account of the opium habit, it might hereafter be suggested that any other habit, such as betel-chewing, which is quite common, might as well be taxed. The general population will not willingly bear the cost of any prohibitive measures, which neither they nor the opium-eating population want. The annual opium revenue derived by Travancore, Cochin, and Malabar is about Rs. 85,000, while the cost of prohibitive measures, if they are to be efficient, must be immensely more. The opium smuggler will carry on his trade, notwithstanding the vigilance of the preventive departments. A piece of reed, the barrel of a gun, an old sack will answer his purpose as much as anything else, and evade detection, unless every passer-by is subjected to an elaborate examination and to needless detention and annoyance. In fact, efficient, prohibitive measures cannot be carried out in practice, even were they possible.

25,570. What results would you anticipate from any sudden and complete cutting off of the opium supply?—If measures were introduced, whereby opium can be had only in chemists' and druggists' shops and for medical purposes alone, the consequences are better imagined than described. A portion of the population will be rendered miserable without any corresponding advantage. The opium consumer will try other stimulants which are more injurious. He will take to alcohol, ganja, and other intoxicating drugs. Alcohol will impoverish the people, and rapidly spread the evils which come in its train. Ganja smoking will spread likewise with its concomitant dangers. Crime will increase. In this connexion it is necessary to add that the opium eater, after he has had his usual allowance of opium, cannot be induced to take a second dose at the invitation of another till his hour comes. He has fixed hours for taking opium, and does not change them to please others. Not so with alcohol. It knows no refusal. Hence it may be said that opium stands at one end of the national economy while alcohol stands at the other. Opium teaches economy and alcohol extravagance.

25,571. (Mr. Mowbray.) What is a Syrian Christian?—The Syrian Christians claim to be the church of Malabar, founded by St. James the Apostle.

25,572. You claim to be the oldest Christian community in India?—We claim to be the first and the original Christian community—the original apostolic church of India.

25,573. And one of the largest in numbers?—Yes, one of the largest, but not progressing. It is not a missionary church.

25,574. (Sir William Roberts.) Are you confined to a small district?—Malabar, Travancore, and Cochin.

25,575. (Mr. Pease.) What are the duties of Collector's Sheristadar?—I am the chief ministerial officer in the Collector's office; I am responsible for the conduct of all the administrative work in the office directly to the Collector.

25,576. Have you anything to do with the opium traffic?—Yes. I have to do with the issue of notices and answering letters and communications from subordinate offices; in fact, I have to do all things which the Collector has to do.

25,577. Do you collect the opium revenue?—I am not an executive officer to collect the opium revenue.

25,578. Do the teachers of your church give any advice upon the subject of the consumption of opium?—No.

The witness withdrew.

Colonel C. A. PORTEOUS called in and examined.

25,582. (Chairman.) I believe you are Inspector-General of Police, Madras?—Yes.

25,583. We shall be glad to have your views with regard to the opium question generally?—I have completed 37 years' service in India; the very early part (1857-60) of my service was spent with my regiment (27th Madras) in the suppression of the mutiny in North India. At that time the use of opium did not attract my notice in the least. It certainly would have done so had it been used to any extent by the sepoys of my regiment. In May 1860 I joined the police and have served with that department ever since. The early years (1860-69) of my police service were spent in the Madura and Tinnevely districts, where I saw but little opium used, and that chiefly medicinally. Since May 1871 I have been closely connected with the police of the northern range, commonly called "the Northern Circars," consisting of the districts of Ganjam, Vizagatam, Jeypore, Godavari, and Kistna of this Presidency, and I have an intimate acquaintance with the hill tracts (and people thereof). Opium is extensively used all over the northern range, in the delta taluks as well as in the upland taluks and hill ranges. There is a very large market for it at Ambagipetta in the Amalapur taluk, or central delta, of the Godavari district. The opium sold here is brought from Malwa via Hyderabad and Juggiapett (Kistna district). Opium is used medicinally in its crude form in the shape of small pills for diarrhoea, dysentery, fever, ague, rheumatism, &c.; in fact, for nearly every disease. It is the stand-by of the native physician and of the people for every ill or ailment. Not only as a curative, but as a prophylactic it is considered invaluable by the people (especially those of malarious tracts). Even here its uses do not end. It is administered in judicious doses as a sedative to women in pain and to small children, while the comparatively poorly-fed man partakes of it as an invigorator. It gives him life and energy, assists his appetite and digestion, wards off fever, and puts new strength into him. Without his opium a hill-man is listless and flaccid, fit for nothing. If kept long without it he gradually sinks; rheumatism and fever seize him, and he becomes useless and decrepit. Opium is seldom used immoderately. I personally do not know of a single case of the immoderate use of it; while of the benefits of the moderate use of it, I have seen much and have heard still more from the people themselves. While employed in 1880-81 in extinguishing the dying embers of the Rumpa rebellion my work in search of the rebels took me, with small parties of police, all over the hill tracts of the Godavari. The only constables who did not succumb to the malarious fever of those unhealthy regions were those who took their small pill of opium morning and evening. Repeatedly have constables come to me and asked for two or four annas to buy a little opium, and when I gave them what they wanted, how grateful they were and what a wonderful change the little opium pill effected. No doubt people who accustom themselves to the use of opium have a tendency to increase the doses of it in order to bring about the desired effect; still it is seldom taken to excess. It is an expensive article to most who use it, and the purchaser of a lump of opium does not, like the arrack or toddy drinker, think of how much pleasure he will obtain from his purchase by a large consumption

25,579. You say, alluding to the opium consumer, "He has fixed hours for taking opium, and does not change them to please others. Not so with alcohol. It knows no refusal." Would you not reverse that? Is it not opium that has fixed hours, and knows no refusal?—I have already explained that it is not a habit which can be easily shaken off.

25,580. How does opium teach economy?—All my remarks refer to the moderate use of opium. As I have said the immoderate use diminishes the nervous power as well as the physical energy. The immoderate use of opium as well as of alcohol leads to extravagance. The moderate use of opium does not lead to extravagance. A man with Rs. 2 a year would be able to satisfy his craving for opium.

25,581. Are you not of opinion that a man in good health would be better off if he did not adopt the opium habit?—Yes, he would be better.

at one time. No, he knows that it is life to him, that if he consumes it too fast and has not the means to procure more, it means loss of appetite, starvation, ill-health from fever, and perhaps death; therefore he husbands his opium, his great object being to make it last as long as he can, and takes only just enough for his regular doses. I have very recently visited the Golconda Hill tracts of the Vizagapatam district and Rumpa in the Godavari, both notoriously unhealthy regions. In the former I met people who came in from a distance of 20 miles to Lumsingi to purchase opium. On asking them what they had come for, they replied, "We have come to buy a little opium to take back to our homes, so that we and our families may partake of it and live." In the latter place (Rumpa) a Mokasdar (Dhal Dora, of Marivada) licensed to sell opium, complained bitterly of the trouble he had with the hill people when his supply of opium ran short, and there was delay in replenishing the same. He said, "They must have it, or they give me trouble." Already opium is a sufficiently expensive drug, and the poor experience difficulty in obtaining it. It will be a bad day if it gets much more expensive, but it will be a still worse day if its growth and sale in India be interdicted. That will mean starvation, disease, misery to many in the hill tracts, while others, driven to desperation, will probably raise disturbances more serious than any we have hitherto had to deal with. Opium is an absolute necessity to people inhabiting malarious tracts. It is more, it is a blessing to them. It has saved many a life, and it has harmed very few, while deprivation of it would kill thousands. Knowing this, I find it difficult to understand or sympathise in the least with the sentiment against it. What good it has done, how infinitesimal the harm, compared with the mischief that toddy, arrack, and other alcoholic drinks have done to Natives and Europeans! Opium does not incite persons to commit crime; it has the very reverse effect; whereas much crime can be put down to the use of alcohol. I know of no case of insanity caused by use of opium. Hitherto I have dealt only with the eating of opium. I now come to the smoking of it. There is everywhere much less consumption of opium by smoking than there is by eating. By the ordinary dwellers in malarious tracts it is not smoked at all. It is principally in the large towns that it is smoked, and in these places, on the whole, more by Mahomedans than by Hindus; where the latter smoke it they are generally northerners. The ordinary Tamilians and Maliyalis, men and women, are satisfied with their betel and pán, while the Telugas, males and females, indulge in tobacco, and expend their spare coin in procuring these luxuries and not opium. For smoking purposes two preparations of opium are used—madadh and chandoo. Even in the larger towns there is seldom more than one opium-den or madadh-khana, and here, in the evening, from 10 to 25 persons come and smoke quietly; they do not, as a rule, smoke themselves senseless and stupid as the Chinese usually do; they smoke for refreshment and as a sedative after a hard day's work. But even the worst opium den has much less openly objectionable about it than a toddy shop or liquor tavern. In the one case such pleasure, as there may be, is enjoyed in silence, and there is little to offend sight or hearing. Very few people

Mr. G. T. Vurgese, B.A.

(Natives as well as Europeans) even know that there is such a place as an opium den in a town. In the other, noise, vile language, and fighting are prominent, and constantly causing offence. Like everything else, the harm in opium is not in the use, but in the abuse of it. In my opinion the abuse of it is very insignificant compared to the vast benefits derived from the use of it. A few local inquiries in malarious tracts would convince the Commission of the very great value of opium to the people.

25,584. You have given us your opinion as an officer of great experience; can you tell us whether the views you have expressed are the views which are supported by the officers of your service?—My opinion on this subject is shared by nearly all the officers of my department.

25,585. (*Mr. Pease.*) We have been told that the hill men, who are not opium consumers, are as good men as those who are. Is that your view?—I think opium is universally used on the hills of Vizagapatam and Godavari, but is not used amongst the Khonds of Ganjam.

25,586. With regard to these hill men, you say that they are complete slaves to the habit. "Without his opium a hill man is listless and flaccid, fit for nothing?"—Yes.

25,587. Is opium the principal medicine they take for malaria?—Entirely. I think there is absolutely nothing else.

25,588. You have said, "Such pleasure as there may be is enjoyed in silence." I suppose they are soothed by the fumes of the pipes?—It soothes them very much as tobacco soothes us.

25,589. Do you think that that physical state is one which is desirable,—half stupefied?—I do not know that they are half stupefied. It soothes them, but I do not know that it goes so far as to stupefy them.

24,590. Have you had any experience with regard to chandu smoking?—No.

25,591. You say that the Chinese smoke themselves senseless and stupid; has that been the result of your own observation?—That is entirely from hearsay, and from reading.

25,592. Do you know anything of the Khaitie district?—It is in the Nilghiri Hills.

25,593. Is it true that 20 years ago a good deal of the land was under poppy?—I do not know from my own knowledge. At one time I believe that there was a considerable amount of poppy cultivated on the Nilghiris. It was found out and stopped.

25,594. Is it true that the people then were a miserable, weak lot?—I did not know the hills then.

25,595. What do you say of the people at the present time?—They take opium now. About Rs. 300 or Rs. 400 worth of opium a month is consumed amongst the Kothas, Bagadas, and the Todas, who are the aborigines of the hills.

25,596. You cannot tell me whether the statement I have before me is correct—that the health of the people has very much improved since they ceased to grow opium in the district?—They use opium, as stated above, and are now very healthy indeed.

25,597. Perhaps you do not know whether there has been any improvement or not?—I cannot say.

The witness withdrew.

Adjourned to-morrow at 11 o'clock.

At the Town Hall, Bombay.

SEVENTY-FIRST DAY.

Wednesday, 14th February 1894.

PRESENT :

THE RIGHT HON. LORD BRASSEY, K.C.B., CHAIRMAN, PRESIDING.

SIR JAMES LYALL, G.C.I.E., K.C.S.I.
SIR WILLIAM ROBERTS, M.D., F.R.S.
MR. R. G. C. MOWBRAY, M.P.
MR. A. U. FANSHAWE.

MR. ARTHUR PEASE.
MR. HARIDAS VEJARIDAS DESAI.
MR. H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

MR. F. P. HORNE called in and examined.

Mr.
F. P. Horne.
14 Feb. 1894.

25,598. (*Chairman.*) I believe you are here to make a statement concerning the Bombay Medical Anti-Opium Petition?—I am.

25,599. Will you state what is your position?—I am honorary secretary to the Bombay Anti-Opium Alliance. The Alliance was inaugurated at a public meeting presided over by Dr. Milne, Bishop of Bombay, held in the Framji Cowasji Hall, Bombay, on the evening of April 10th, 1891, to support the resolution of Sir Joseph Pease which was brought before the House of Commons the same night. The Bishop of Bombay became the president of the Alliance, and at the fifth committee meeting of the Alliance, held on July 6th, 1891, the suggestion was approved of having an anti-opium petition drawn up and circulated for signature among medical men only. The only medical man on the committee of the Alliance was Dr. Rustum Ranina, and he and I together drew up a draft of the petition which was

read at the next committee meeting. The committee made a few suggestions whereby the petition could be improved and appointed Dr. Ranina, Mrs. Dyer (also one of the committee), and myself to revise the petition. This was done, and at the next meeting of the Alliance committee, held on September 9th, 1891, the petition was approved, and Dr. Ranina and myself were authorised to take the necessary measures to have it circulated for signature. To do this the petition was printed on foolscap paper with space for signatures to be written. All the copies that were printed were not used, and those you now have are a few of those that remained over. I have a few copies of the petition as originally printed which I will hand in to the Commission.

25,600. This is the form in which it was printed with a view of getting signatures?—Yes. The bill for the printing of these was paid by the Rev. R. M. Gray, treasurer of

the Alliance. I will now explain the way in which the petition was circulated among the doctors for signature. The second signature that appears is that of Dr. Ardesir Dadabhoy Mody, of Grant Road. I called upon Dr. Mody to ask him to sign the petition, and he signed it in my presence. This is the only signature that I am personally responsible for. Dr. Ranina called personally upon Dr. J. Gerson da Cunha, whose name appears third on the printed petition, and he signed in Dr. Ranina's presence. I believe Dr. Ranina called personally upon more than one of those who signed, but neither Dr. Ranina nor myself had time to permit of our calling personally upon all the doctors in Bombay, with the possibility of having to call more than once before finding them at home, so we drafted a letter which read as follows:—

"Dear Dr. ———.

"Herewith I send you a petition to the House of Commons dealing with the opium question. At the present juncture the anti-opium party in England are looking for expressions of opium from India, and this petition presents an opportunity for you to help forward a movement which is on the side of truth and justice.

"Trusting you will add your signature to the paper, and thus show your sympathy with the multitudes in this country who are already victims to the use of opium and extend to them this helping hand.

"I remain, yours sincerely,

"FRANCIS P. HORNE,

"Honorary Secretary."

25,601. Is Dr. Ranina coming here?—He is ready to make his statement if he is asked to come. The name for the doctor was left blank that it might be written in. I then procured a peon to carry the petition and the letter round to the doctors, promising to give him Rs. 8 for the work. I quote from two letters of Dr. Ranina to me bearing on the subject:—"14th October 1891. "Your peon is quite exorbitant in his demand. He "would not have anything under Rs. 10 for the petty work. "I should not pay more than Rs. 5. If he does not come "round we had better look out for another man." "16th "October 1891. I have at last engaged the man for Rs. 8 "for the whole job." I sent the peon to Dr. Ranina, and paid the Rs. 8 for his work, but the entire work of sending the peon round to the medical men was done by Dr. Ranina, who also filled in the doctor's names on the printed letter. When the time came for the petition to be forwarded to London, Dr. Ranina sent me the separate printed petition

The room was then cleared.

On the re-admission of the public,

25,603. (Chairman.) It is the view of the Commission that we should not carry your statement any further at present. We will insert in* the Appendix the paper you have placed in our hands with reference to the individual doctors whom you mention and their letters to you, with your replies to them. The Commission are of opinion that nothing has been brought before us which in the least leads us to call in question the *bona fides* of your personal action in the matter. I understand that there may possibly be a further consultation between myself and the members of the Commission that may result in your being before us again; but we do not wish to carry your statement any further to-day. One or two members of Commission will, however, ask you a few questions upon what you have already put before us.

25,604. (Mr. Mowbray.) I interrupted you just now without any desire whatever to prevent your making any statement that you might wish to put before us as to matters within your personal knowledge. I am sure you will believe me when I say that with regard to your personal connexion with this matter, I entirely concur in what has fallen from the chairman. So far as I understand the evidence you have given to-day, the only signature to this petition for which you are yourself responsible is that of Dr. Ardesir Dadabhai Mody, who signed the original petition and also signed the form which was forwarded to the House of Commons, in your presence?—Yes. Dr. Mody signed in my presence.

25,605. And I believe that no doubt whatever has been thrown upon that signature?—No.

25,606 (Mr. Haridas Vekaridas.) Would you be able to get the peon by whom the petition was circulated?—I believe not.

sheets with one, two, three, four, or more signatures on each, as the case might be. I remember looking over the autograph signatures, and they had every appearance of being genuine. At this point, to fulfil the rules laid down by Parliament in reference to petitions, it was necessary for us to have one or two signatures upon the written heading. Two names were thus written.—Dr. Atmaram Pandurang and Dr. Ardesir Dadabhoy Mody. Dr. Mody signed in my presence. Concerning the signature of Dr. Atmaram Pandurang, I quote the following from a letter of Dr. Ranina to me—"There was room for only one signature above that of Dr. Mody, so I have got the first man to resign. If you want a signature on the right-hand side, I can get the second man to sign there, if you "can send back the petition before 12 noon." From the above it is plain that Dr. Atmaram Pandurang signed a copy of the printed petition, and afterwards signed on the written petition. One signature on the written petition is all that the rules of the House of Commons require, but I have shown that we had two names, and Dr. Ranina shows that we could have obtained a third. The mail for England only leaves Bombay once a week, and we wished to avoid a further delay, and so, having two names, we had no object in getting a third if so doing would cause a week's delay, which we wished to avoid. As secretary to the Alliance I saw that the signatures were fixed to the written petition, and that the petition was posted to London to anti-opium workers there. It reached them safely, and before being presented to Parliament it was copied together with the signatures. Our friends in London had the petition printed in the *Anti-Opium News*, dated September 15th, 1892, and it was printed in a pamphlet entitled "An Indian Woman's Impeachment of the Opium crime of the British Government." The petition was mentioned in the *Bombay Guardian* of January 21st, 1893, page 3, when the portraits of Dr. Atmaram Pandurang and Dr. Khory were reproduced. This page of the *Guardian* was on the *Bombay Guardian* notice board outside the gate of the *Bombay Guardian* premises for one week where it could be read by passers by.

25,602. (Mr. Mowbray.) I was anxious that Mr. Horne should make his statement with regard to whatever came to his personal knowledge. The question now apparently is whether these gentlemen signed the petition or not. I believe they are all resident in Bombay, and if we are to go into the matter, I should have thought that the most direct course would be to invite these gentlemen to appear before the Commission, and state whether they signed it or not.

25,607. (Mr. Fanshawe.) You stated that you sent round the petition in sheets. So far as you know each sheet would have the printed petition on it?—Yes; what you hold in your hand was printed at that time.

25,608. There would be no sheet sent round without the petition printed at the top, so far as you know?—I feel confident of that.

25,609. You state in the petition, which was drawn up by the body of which you are secretary, that numerous cases of poisoning have arisen from the habit of giving opium to children. Had you any statistics to establish that before the committee at the time?—I am not prepared to say what cases there were before us at that time, but I feel very confident that we had proper statistics.

25,610. Had you made any special inquiry on that subject?—My impression is that at that time it was not so much a matter of making inquiry on the subject, but we had before us here and there cases which we knew. We did not require to make a special investigation on the subject of that particular paragraph; we knew it.

25,611. The point to which I ask your attention is the phrase "numerous cases," you think you had numerous cases within your knowledge at the time?—Yes.

25,612. In the next paragraph of your petition it is stated that "one evidence of the strength this habit exerts "is the fact that when the means of purchase are exhausted rather than endure the physical torture caused "by its discontinuance a man will sell his wife and "children to purchase the drug." Would you tell me whether you had any authenticated case before the committee of a person in Bombay selling his wife or children to enable him to obtain opium?—Yes.

Mr.
F. P. Horne.
14 Feb. 1894.

* See Appendix XXI. to this Volume.

Mr.
F. P. Horne.
14 Feb. 1894.

25,613. Will you kindly tell us what the case was if you remember it?—I was pretty familiar with the Bombay smoking dens at that time. I had visited them in company with several parties, and on one occasion I went round with a well-known pandit in Bombay, and in conversation with the men who were in the den one of them volunteered the statement that he had sold his wife for 20 rupees in order to get opium.

25,614. Was any attempt made to verify that fact, to ascertain whether it could be properly established?—I am not aware of any investigation on that point.

25,615. To the ordinary reader the language you have used would convey the idea that such cases were not uncommon, would it not?—That might be so.

25,616. You have referred to the Bishop of Bombay, as being president of the Alliance; does he still occupy that position?—He has resigned.

25,617. Do you wish to state the circumstances in which he resigned?—I do not think they bear directly on the case.

25,618. (Sir James Lyall.) You say, "To fulfil the rules laid down by Parliament in reference to the petition it was necessary for us to have one or two signatures upon the written heading"; does it mean the written petition?—It means the text of the petition written.

25,619. You say that Dr. Ranina sent you the separate petition sheets with three or four or more signatures on each; did they all go home?—No; they were cut off and pasted up.

25,620. On the petition that was sent home?—Yes.

25,621. (Sir William Roberts.) Have you reason to suspect the honesty of the peon who went round?—I had every reason to trust him.

The witness withdrew.

25,622. Is it still your view that these gentlemen did read the petition and sign it?—My impression is that the character of the letter which was sent round with the petition was such that no man would have signed it without having read it. My opinion is that the letter then written was a suitable letter, and one calculated to cause the doctors to read before they signed.

25,623. And you still adhere to the genuineness of this petition?—Yes.

25,624. (Mr. Pease.) You stated that you were unable to present the petition?—Yes.

25,625. Can you give any explanation why he should not appear before us?—I have inquired where the peon is now; I am told that he has gone from Bombay.

25,626. (Mr. Fanshawe.) I believe the number of signatories to the petition was upwards of 40?—49.

25,627. Was the petition sent round generally to all the doctors in Bombay or to any selected number?—My impression is that the peon was sent to all the doctors whose addresses were known. I feel confident of that. I know from the number of forms which I gave to Dr. Ranina and the number of letters I gave him. He used one letter for each doctor.

25,628. Can you tell me generally how many doctors there are in Bombay?—I do not know; I know there are a great many more than 50.

25,629. How many letters did you send round?—I am not sure.

25,630. The paper says 50?—There were 50 more I think. I believe Dr. Ranina had 50 at first, and that was the second 50.

Mr. JAMES M. CAMPBELL, C.I.E., recalled and further examined.

Mr. J. M.
Campbell,
C.I.E.

25,631. (Chairman.) Do you wish to make any statement to the Commission with reference to the subject matter of the evidence of the last witness?—I do. My attention was drawn to the subject of this petition by a letter from the Rev. Mr. Robinson in the *Times of India* of the 28th of October 1893. A list of the signatories was given in this letter. One of the signers was Dr. Gerson da Cunha. The statements Mr. Robinson quoted from the petition seemed to me extreme and incorrect. As I had previously held conversations with Dr. da Cunha regarding opium I asked him if he agreed with the views in the petition. Dr. da Cunha replied that he disagreed with the views, and further that he had never signed the petition. I accordingly had a circular notice drafted and sent round by the Opium Inspector to as many of the other signers as we could find, asking them to be good enough to enter in the book whether they had signed or not, and what their opinions on the subject were. I have here the answers to this circular. I will read the circular:—"Accompanying is a printed copy of the petition presented to the House of Commons some time ago. It purports to have been signed by 48 medical gentlemen of Bombay whose names appear therein. The undersigned will feel extremely obliged if these gentlemen, if there be no objection, will be good enough to inform him whether they have signed the petition." The circular is signed by Mr. Rustonji Pestonji Jehangir, my inspector. The following is a summary of the answers:—Of 44 signers three admitted their signatures and accepted the views; five admitted their signatures but repudiated the views; six stated that they had signed without reading; two stated that, if they had signed, it was under a misapprehension; two stated, if they signed, it was under a misrepresentation; two stated that they signed something else; 18 did not remember signing, and six stated that they did not sign. In addition there is the case of Dr. Khory who was not then in Bombay, and who, I believe, has stated in an English paper that he did not sign the petition.

25,632. Is the writing in the book before you autograph writing?—It is.

25,633. Does it purport to give the views of the writers with reference to the opium question?—It is merely about signing. May I read one or two of the entries? The first is from Dr. Merwanji Kuvvarji, who says, "I do not remember having signed such a petition. If I have it must have been under some misrepresentation, for my views are quite the contrary." That is the class of entry

all through. I believe the summary of the entries given above is correct.

25,634. Do the entries generally give expression to the views of the writer with reference to the opium question?—Not I think with reference to the opium question, but to the statements contained in the petition. All but three disagree with the views expressed in the petition.

25,635. The last witness has put before us a paper containing statements which include the impressions of a considerable number of doctors on the opium question, purporting to be extracts from what has appeared in the *Times of India*?—They are probably the same as these.

25,636. Have you anything further to say with reference to the action you took in connexion with the petition?—No further action was taken at that time. A letter from Mrs. Dyer appeared in the *Times of India* on the 9th of January, and a letter from Mr. Horne appeared in the *Bombay Gazette* of the same date. Both Mrs. Dyer and Mr. Horne stated that these expressions of opinion and repudiations of their views by the signers were due to official pressure. In consequence of these charges the editor of the *Times of India* sent round one of his leading men to the repudiators of the petition. The result was a unanimous statement from all the signers who were in Bombay, 36 in number, that no pressure of any kind had been used. Since then Dr. Atinaram Pandurang, who was absent from Bombay, has also stated that in his case no pressure was used.

25,637. (Mr. Wilson.) Do I understand that the statements in the book before you are substantially those which appeared in the *Times of India*?—I suppose they are.

25,638. Can you tell me how they got there?—They were sent, I suppose.

25,639. By you?—Not by me.

25,640. Can you tell me by whom?—By my inspector.

25,641. What was his name?—Mr. Rustonji Pestonji.

25,641. (Mr. Pease.) Let me ask you whether you ever heard of a case of a Government officer connected with a public department sending round to persons who had signed a petition on a matter affecting his department to inquire whether they admitted having signed the petition?—No, I do not know that I have.

25,643. (Mr. Wilson.) Do I understand you to say, in reply to Mr. Pease, that you never heard of such a case before?—I never heard of such a petition before. In all my time in India I know of no such case as the present.

Mr. J. M.
Campbell,
C.I.E.

14 Feb. 1894.

25,644. What I should like to know is, whether it was part of your official duty, and the duty of the Opium Inspector, to interest yourselves about a petition to the House of Commons, and for what purpose the inquiry was instituted?—I think it was part of my duty. It was part of my duty to know about the opinion of the doctors in Bombay, and to find out whether this was a correct expression of their opinion. It was contrary to what I myself believed to be their opinion.

25,645. It is the only case in which you have known such a course pursued?—It is the only case in which I have known such a petition made.

25,646. (Sir James Lyall.) You said, I think, that you were first moved to take that course by happening to meet and talk with Dr. da Cunha?—Yes, I have talked with Dr. da Cunha on the subject; we had talked on the matter generally; he is a friend of mine.

25,647. He happened to mention that his name appeared on the petition, but that he had not signed it?—That was after I read Mr. Robinson's letter. After I had read Mr. Robinson's letter I went to see Dr. da Cunha, and asked

him about the petition. I asked him because I thought the views in the petition were not his views. It was in consequence of what Dr. da Cunha said that I became anxious to procure statements from the other alleged signatories.

25,648. What was the purport of Mr. Robinson's letter?—Mr. Robinson is a Methodist clergyman in Poona. He said he had long been weighing the good and evil of opium, but he was undecided which opinion to hold, until he saw this petition. This petition, he said, absolutely concluded the matter. He thought that Government servants might be biassed, but here was a body of men who were absolutely independent, and that to his mind was final. Mr. Robinson is highly respected in Poona, and his views were entirely changed by reading this petition. That was how I came to know of the petition, and it was because of its effects on Mr. Robinson that I determined to make inquiries regarding it.

25,649. Can you give me a copy of Mr. Robinson's letter to the *Times of India*?—I can procure a copy.

The witness withdrew.

Dr. R. N. KHORY called in and examined.

25,649a. (Sir William Roberts.) You are doctor of medicine and member of the Royal College of Physicians of London?—Yes.

25,650. And President of the Grant College Medical Society?—Yes.

25,651. You are also the author of the work entitled "The Principles and Practice of Medicine" and of "The Bombay Materia Medica"?—Yes.

25,652. You are a medical practitioner in Bombay?—Yes.

25,653. To what districts of the Presidency and what races are your observations applicable?—My observations are applicable to the city of Bombay and the island of Salsette, and apply to all races found therein, but chiefly to Musalmans.

25,654. To what extent is opium used among the population of these districts?—Without statistics I may say that my impression is that four per thousand of my patients use opium.

25,655. Of your patients generally, not merely adult males?—No; all of them—males, females, and children.

25,656. What opinion have you to give as to the effect of using opium habitually?—By "use" I mean habitual use in moderate doses; by "abuse" excessive use by an opium eater. Its moral effects are mainly negative. It does not make a criminal of the consumer, nor a bad father, husband, or relative. Its positive effects are to make the consumers cowardly and indifferent and easily duped. The physical effects are (1) negative and (2) positive. It does not interfere with digestion and assimilation, it does not produce wasting, it does not impair procreative powers or bodily activity, it does not depress except temporarily, it does not shorten life. It gives good sleep, enables fatigue to be borne, deadens flying pains, craving for food, increases endurance, keeps the consumer lively and of equable temper. It acts as an aphrodisiac.

25,657. What is your impression as to the excessive and injurious use of opium?—The physical effects are to interfere with digestion and assimilation, to lower the general tone of the system to produce languor, lassitude, depression of spirits, and ultimately wasting. The moral effects are to make the consumer careless and apathetic, and incapable of managing his own affairs. To satisfy his craving he may resort to petty thefts or cheating.

25,658. What are the methods of using opium in this district?—The methods of consumption are in the shape of crude, solid opium, or as balagoli for children, chandul smoking, madak inhalation. The effects of the consumption of crude opium are described in my previous answers. Balagoli pills contain besides opium, carminatives, and other substances, the proportion of opium being from one-twelfth to one-twentieth of a grain. The effects are similar to those of crude opium. The pills are of special value as keeping children lively and playful during their parents' absence, as checking infantile diseases, such as diarrhoea, colic, tympanites, vomiting, and restlessness. Children thrive under their use. The chandul smoker is absorbed in his occupation. After a time he becomes languid and drowsy, and can only remain in a recumbent position, but he can answer questions intelligently. After

the immediate effect has passed off the smokers declare themselves to be invigorated, more active, and able to work. I do not think chandul smoking has anything to do with the smokers being haggard or emaciated.

25,659. Are you speaking from personal knowledge of opium smokers?—Yes; I visited what they call the dens in Bombay, several of them. I found that there were 40 or 50 present: the lowest number being about 20. I sometimes had conversations with the men, and I have looked into their conditions and their duties in life, the business that they were following, and so on. I remember one man, a buggy driver, who came there every day about seven o'clock at night to smoke chandul, and he said that in about an hour's time he left the place and went to his occupation which kept him the whole night working as a driver. He said it always invigorated him considerably, and that he became more active in his work.

25,660. I suppose there are no Chinamen in Bombay?—There are a few.

25,661. I suppose the number of chandul smokers in Bombay is very small?—Yes; but still there are many to be found who go to these chandul houses; in private places there are very few.

25,662. What has been your experience with regard to madak smoking?—The same remarks apply to madak inhalation as to chandul smoking, but the effects are milder.

25,663. Do you consider that opium is useful in fever?—Opium is used as a prophylactic in malarial diseases, diabetes, enteric diarrhoea, cholera, and dysentery, rheumatic pains, and some nervous headaches. Its habitual use checks the recurrence as well as the onset of fever, diarrhoea, and dysentery. In cholera epidemics it is useful by acting on the mind of the consumer, and checking indigestion and diarrhoea. I have known cases in families in which there was a hereditary history of diabetes, where the disease was averted by the habitual use of opium.

25,664. How would you compare opium and alcohol in their effects?—Opium and alcohol taken in moderation are similar in their effects. Alcohol in excess makes the consumer an active danger to himself and others, but the consequences of excessive consumption of opium are not so much of an aggressive character. So far as society is concerned it is passive in its effects.

25,665. You have made no post-mortem examinations of excessive consumers?—During the time when I was in hospital I had now and then to make a chance post-mortem examination in the case of accidental poisoning by opium; but in private practice we seldom or never have such opportunities.

25,666. You never made a post-mortem examination of an habitual opium consumer?—I do not remember one since my connexion with the college ceased—for the last 25 years.

25,667. The opium habit is difficult to give up, is it not?—It is difficult, but not impossible, to give up the opium habit. Those who give it up are likely to resort to other drugs, as tobacco, ganja, alcohol, and probably in excess.

25,668. What effect has the habitual use of opium on the mental faculties?—Mental faculties are in a few cases

K K 2

Dr.
R. N. Khory.

14 Feb. 1894.

slightly impaired, but this is not usual; where they are, the impairment is not such as to interfere with the discharge of duty or business.

25,669. Have you any further observations you wish to make?—There are instances in which by gradual increase an amazing quantity of opium can be taken with impunity. I have seen more than one case in which between 20 and 30 grains of opium have been consumed habitually without injurious effects. It is not a cumulative poison. When taken frequently and for a long time, its effects are not diminished, and it is therefore not necessary to take it in increased doses. In a warm country like India, opium is better tolerated, and is perhaps required. Children bear opium worse than adults; females resort to it less than males.

25,670. (Chairman.) Did you sign the petition to the House of Commons of which we have been hearing something this morning?—No, I did not sign it. A friend came to me about two or three months before I left Bombay for England, asking me as there was agitation about opium, if I had any objection to give my photo, as the photos of leading medical men were required; and I understood him to say that my opinion would shortly be wanted. I had not my photo at the time when he came, and I told him that he might see me some other day, when I would give him one. He came a few days after. I was in a hurry and I gave him a photo and he went away. After two or three months I left Bombay. I never heard of my opinion being asked for till I was in London. It so happened that one night I attended an Indian *soiree* of an association of Indian gentlemen living in London. While I was talking with a friend of mine, a solicitor, Mr. Abdulla Mehralli Dharamsey (he was a constant companion of mine and we had started from Bombay together), my attention was drawn to a table where some native Indian gentlemen were signing something. I went in and inquired what they were signing. They said that the opium question was to be brought before the House of Commons and they were signing a petition for opium to be put a stop to. I said "It is very funny; do you think that opium should be put a stop to; what do you say about alcohol; is not alcohol the first thing to be put a stop to before opium?" They said, of course, that alcohol was the fundamental thing for Government to put a stop to. I then said, "Why do you sign this? you ought to know that you are signing a document which may go against us." After this conversation took place I left. The next day, or perhaps the day after that, I had occasion to see Sir George Birdwood. I think it was a day or two before the House of Commons met for this purpose. I was talking to Sir George Birdwood about what had occurred. Mr. Dharamsey was with me at the time, and he said, "If when your signatures were taken the matter was not properly explained, you should write a letter to the *Times* of London." So I did. The letter was sent, but unfortunately it was not found in the next day's paper. A few days afterwards I received from the editor a memorandum stating that unfortunately want of space precluded the insertion of the letter. I spoke afterwards to Sir George Birdwood about the result of my writing to the *Times*, and there the matter ended. After my coming to Bombay it was brought to my knowledge that my name appeared among the signatories on the petition sent to the House of Commons. I was surprised at it. I had told Sir George Birdwood that I had given my photo because it was asked, and I was told that my opinion would be asked for soon after. The question of the signatures was discussed by several medical gentlemen in Bombay. I was asked if I would repudiate my signature. I said, "I have not signed, what is there to repudiate? There is nothing except the photo that I have given." Nothing further was done in my case.

25,671. Was your name published in any list as having signed the petition?—After my return to Bombay the names of those who had actually been asked to sign the petition were somehow or other found published in the papers, and among them were the names of the medical gentlemen who had themselves written on the subject; but I had not done anything of the sort.

25,672. It was a mistake?—Yes, it was published under a mistake.

25,673. Did anything happen with regard to your photograph?—Not that I know of.

25,674. (Mr. Pease.) You quite understood at the time you gave Dr. Ranina your photograph that it was to appear upon a document connected with the anti-opium petition, did you not?—Dr. Ranina came to me and said that as the agitation about opium was going on it would be better that the photos of the leading medical men should be given.

He said he would like to have my photo, and I understood him to say that my opinion would be asked. I said I had no objection if the photos of the leading medical men in Bombay were required. I knew that when my opinion was asked I should give my opinion, as I have given it here and elsewhere.

25,675. Do you know Dr. Ranina's views with regard to the opium question?—No. He came to me one evening in my rooms when I was engaged with my patients. He simply asked me for a photo, and I told him that when he came the next time I would give him one. The next time when he came I was busy, and he took the photo away. I waited to be asked for my opinion. In the month of April I left Bombay.

25,676. Do you wish to say that you did not know what Dr. Ranina's views were?—No, except this, that my opinion was to be given afterwards.

25,677. For what purposes do you think he asked for your photograph?—Because he wanted the photographs of the leading medical practitioners as the agitation was going on. I said the photo might be taken by him, and I would afterwards state what my opinion about opium was.

25,678. Was it your impression that he was going to publish the opinions of medical men *pro* and *con* with reference to the opium question?—I did not question him on that or on anything. He asked me, and I said I would give him one.

25,679. (Mr. Wilson.) Do I understand that when he had this conversation with you on the subject the interview ended without your having the slightest idea of what his views were?—I had not questioned him; he simply asked for my photo, saying that he was collecting the photos of the leading medical practitioners, and I understood him to say that my opinion would be wanted. So I promised him the photo, and I gave it to him afterwards.

25,680. That is not an answer to my question, which I will repeat. Do you mean that after the conversation with Dr. Ranina upon this subject the interview terminated without your having the slightest idea as to what his views on the subject were?—There was no other conversation beyond what I have said. He came in the evening when I was busy, and he simply talked to me about this.

25,681. About what?—About the agitation on opium, and he said that my photo was wanted as one of the leading medical practitioners.

25,682. Did you understand that it was an agitation in favour of opium?—No, I understood that my opinion was wanted. I said, "I will give it whatever it is." I did not say it was either in favour or against.

25,683. You gave your photograph in advance, to be followed by your opinion?—Yes.

25,684. You gave your photograph without knowing what side he was upon, or the nature of the petition?—No.

25,685. (Mr. Mowbray.) Do I understand that you never saw this petition on which your picture appeared, and on which your name was printed as one of the signatories, until you returned to Bombay from England?—No. After my return to Bombay I actually sent for a copy from the secretary to the Anti-Opium League, as I wanted to see it.

25,686. Having seen it, may I ask you whether you agree with it or not?—I do not agree with it at all.

25,687. (Mr. Fanshawe.) Will you tell me the date on which you returned to Bombay from England?—On the 14th or 15th of October 1893.

25,688. When did you go to England?—About the 22nd of April 1893.

25,689. You returned on the 15th of October the same year?—Yes.

25,690. It has been stated that your portrait was reproduced in the *Bombay Guardian* of January 1st, 1893. Apparently at that time you would be in Bombay?—Yes.

25,691. Did it never come to your notice that your portrait was published in connexion with the petition?—I do not know whether it was in January, but some of my patients told me that the photo was seen by them at some press. I did not care about it because I knew I had given the photo, and I was waiting to give my opinion.

25,692. It did not lead you to make any inquiry about the matter?—I did not make any inquiry about it.

25,693. (Mr. Pease.) When were you first aware that your name appeared as a signatory on the petition?—After I came from Bombay to England.

25,694. What was the first step you took to let the public know that you had not signed the petition?—I did

nothing in the matter, because I knew I had not signed it. I only spoke to my friends about the photo, and what I had said to Sir George Birdwood. I said that my photo was asked, but that my opinion had not been taken.

25,695. Was your communication to Mr. Campbell the first occasion on which you repudiated your signature?—I have not communicated with Mr. Campbell.

25,696. Had you any inquiry from the Opium Department as to whether you had signed?—The inquiries were made when the matter appeared in the *Times of India*. I said, "I have never signed, I know nothing about it." I was not going to say that I would repudiate because I had not signed it.

25,697. Had you any inquiry from the Opium Department as to whether you had signed?—The inquiry was as regards what appeared in the *Times of India*. I remember I was asked by a Parsi from the Opium Department if I had signed the petition. I said, "No, I have not." He asked if I repudiated my signature. I said, "What have I to repudiate if I have not signed it." That is how the matter ended. I have not communicated anything to Mr. Campbell with regard to repudiating the signature.

25,698. You had an inquiry from Mr. Campbell through his staff?—I remember his asking me if I had signed the petition. I said I had not signed. He asked if I was going to repudiate, and I said I had nothing to repudiate.

25,699. Had you stated previously to that time that you had not signed the petition—before you had a call from Mr. Campbell's representative?—That was after I came to Bombay from London. In London when I was with Sir George Birdwood I had a conversation about it.

25,700. Were you aware when you were in London that your name appeared on the petition?—No. I was asked about the signature, and whether I had signed the petition, I said, "No." I knew nothing about the petition. When I came to Bombay the first thing I inquired about was the petition. I got a copy, and I saw that there was my signature. When a man came from Mr. Campbell and asked me if I was going to repudiate the signature I said, "No, I have not signed this, I am not going to repudiate anything."

25,701. How long was it between the time of your first becoming aware that your signature on the petition and your making the statement to anybody that you had not signed it?—The statement to the gentleman who came from Mr. Campbell was about two months ago, or more; I do not exactly remember. I had come to know about it from Sir George Birdwood when I was in London.

25,702. You said you did not know when you spoke to Sir George Birdwood that your signature was on this petition?—I was asked by Sir George Birdwood if I had signed the petition. I said, "No, I know nothing of the petition." When I came to Bombay I purposely sent for the petition to know what it was, and whether it had my signature. I found the petition with my photo. The photo I had given, but I knew that I had not signed the petition.

The witness withdrew.

Dr. J. GERSON DA CUNHA, M.R.C.S., L.R.C.P., called in and examined.

25,721. (Sir William Roberts.) You are a medical practitioner in Bombay?—Yes.

25,722. Where have you made your observations on the opium habit?—My observations are applicable to the city of Bombay.

25,723. And to what races?—To the Hindu and Musalman races.

25,724. To what extent is opium used among the population of this city?—I am unable to state to what extent it is used among the population of this city, and the approximate proportion of persons using it.

25,725. What is your opinion in regard to the use of opium unless prescribed medically?—It is in my humble opinion unless prescribed medically baneful to the moral and physical condition of the user, both in its use and abuse. I may say that 12 years ago I had the honour of

25,703. You got to Bombay in October?—Yes; I wrote to the secretary asking him to send me a copy. When I got it I did not agree with it.

25,704. When you returned in October you found your name was printed, and two months later, in February, you stated to Mr. Campbell's agent that you had not signed it?—I do not exactly remember the time, but a conversation did take place of that sort.

25,705. You do not remember saying to any one previously to your communication with Mr. Campbell's agent that you had not signed the petition?—I cannot say that because in regard to this matter there had been so much talked about it that one may not remember whether he has talked to So-and-so, or whether he has not.

25,706. (Mr. Wilson.) You wrote to the secretary for a copy of the petition?—Yes.

25,707. To what secretary?—To the secretary to the Anti-Opium League.

25,708. The gentleman who appeared here as a witness?—I saw him for the first time here.

25,709. Did he furnish you with the copy?—Yes, asking me to return it after I had seen it.

25,710. You did return it?—I do not think I did.

25,711. At any rate he supplied you with it, and your name was upon it?—Yes.

25,712. And you did not then to him or to any one else say that your name was improperly upon the petition?—I might have talked to several persons.

25,713. You asked the secretary of the Anti-Opium Alliance to oblige you with a copy of the petition?—Yes.

25,714. And upon that you found your name printed?—Yes.

25,715. Having received that act of courtesy from that gentleman did you show him the courtesy of replying and saying that your name being there was in mistake?—No, nothing.

25,716. (Chairman.) On the general question before us do you consider it desirable that the use of opium should be regulated by being restricted to medical purposes?—No. I should like to place before the Commission my views which are given in a pamphlet that I sent to the secretary.

25,717. Our medical colleague will give his attention to anything that you may send.

25,718. (Sir William Roberts.) The date given is the 23rd of January 1894. You mean, I presume, that these statements were made before the correspondence appeared in the papers about the petition?—These are merely medical views.

25,719. They are practically the same views as are expressed in the printed statement submitted to the Commission?—Yes.

25,720. You put these into our hands with the view of showing that these views are not quite recent that at any rate you held them a month ago or more?—Yes. In addition you have the views of a large number of medical gentlemen who have sent their opinions to the medical society.

reading a paper on the subject of the opium question before the Medical and Physical Society of Bombay. I then stated with regard to the use of opium that "there has no doubt been much exaggeration in what has been talked about and written on the subject, in spite of the testimony of Chinamen themselves tending to prove that the effects of opium smoking, when injurious to health and destructive to all the best parts of man's nature, are derived from the abuse rather than the moderate use of the drug. But it seems to me that no limit can be assigned to moderation, the quantity of opium taken, or of any other drug, varying with the constitutional habits of the individual. As one dose becomes inert it must be increased by degrees, until it attains the proportions of an over-dose, in the general acceptance of the term."

25,726. What has been the mode of using opium?—The method of consumption observed by me is that of taking it in the form of pills.

Dr.
R. N. Khorj.

14 Feb. 1894.

Dr. J. Gerson da Cunha,
M.R.C.S.,
L.R.C.P.

Dr. J. Gerson
da Cunha,
M.R.C.S.,
L.R.C.P.

14 Feb. 1894.

25,727. In your opinion is opium a prophylactic against fever?—I have no idea that opium is used as a prophylactic by any of my patients.

25,728. You do not express any opinion of your own, but merely, as far as you know, the opinion of your patients?—That is all.

25,729. Does the use of opium as habitually indulged in by natives lead to consequences as serious as those which follow the use of alcohol?—The use of opium habitually by the natives leads to consequences as serious as those which follow the use of alcohol. They are both pernicious, opium especially so. Alcohol is taken often for mere pleasure, opium always for some ailment, at least at the beginning. I speak here not only as a medical practitioner, but as a medical referee to four or five life assurance companies in Bombay. I have always found that when people take opium it is for some ailment, in the beginning at least. It grows into a habit in the course of time.

25,730. Do you advise the acceptance of the lives of persons who eat opium on the usual terms?—I am always guarded and careful in accepting lives when I know that they take it for some ailment, as they generally do.

25,731. If the consumption is excessive?—Yes.

25,732. Would what you call a moderate opium user be considered a bad life?—I should advise the addition of some years to the life.

25,733. Is the opium habit difficult to give up?—I think it is difficult to give up the habit, but I do not know if it results in the use or abuse of other drugs or of alcohol.

25,734. What effect has the habitual use of opium on the mental faculties?—The effect of the habitual use of opium is injurious to the mental faculties, although it may not interfere with the consumer's ability to conduct his business successfully, if he uses the drug moderately.

25,735. Have you any other observation to make?—I have no other observation to make except that so much having been already said on the subject, my evidence may be dispensed with.

25,736. Has your personal experience of opium eating been considerable, or do you speak mainly from hearsay?—I am speaking from what I have seen among people in Bombay.

25,737. When you say that the use of opium leads to consequences as serious as those which follow the use of alcohol, are you speaking of the use of opium in excess?—I am speaking of the use of opium habitually, whether in excess or not.

25,738. Would you also speak of the consequences of using alcohol in moderation as serious?—I should think so. I am opposed to both.

25,739. You are absolutely opposed to any use of alcohol or opium habitually?—Yes, I am opposed to them on this principle, that the man who uses them is apt to abuse them. A man begins to take a small dose, but he increases it in a short time.

25,740. Do you speak of alcohol?—Alcohol and opium both.

25,741. Have you ever known persons taking alcohol or opium in moderation during a long life?—Yes, I have known persons live to a very old age; I have known opium takers live to 80 or 90.

25,742. Then would you qualify your statement somewhat?—Certainly not. A man may live long and still live the life of an imbecile.

25,743. I suppose you have known people using alcohol temperately and moderately who have lived to a good old age?—Yes, but I would not trust them. People take these stimulants either for some physical or some moral ailment. I find in Bombay that people take opium to stifle the voice of conscience. A thoroughly moral man would neither take opium nor alcohol—a man with religious principles.

25,744. Not in any quantity?—Not in any quantity.

25,745. That will enable us to judge of your mental attitude in regard to opium?—That is my humble opinion.

25,746. (Chairman.) You desire to see the restriction that has been suggested in regard to opium extended to alcohol?—Yes.

25,747. (Sir James Lyall.) You said, in reply to Sir William Roberts, that you were always careful in recommending an assurance company to accept opium eaters, and that you recommended an addition of one or two years?—Some years.

25,748. Did I understand you to say that you did that because of the ailment with which you think the use of opium is generally connected, or simply because of the opium habit?—Both because of the ailment and because the man is apt to abuse it.

25,749. (Mr. Fanshawe.) I believe your name is among the signatories to the petition to the House of Commons?—Yes, it figured in the petition, unfortunately.

25,750. Do you wish us to understand that you did not sign this petition?—I have no recollection of having signed it. I should say no, because the signature attached to the printed petition is not mine. I never sign my name in that way. This is the way I sign my name (*handing a card to the Chairman with the name Gerson in full*).

25,751. Have you seen your signature on the original petition?—Only in a printed paper, the *Times of India*.

25,752. You assure us that you never yourself signed any paper or petition to the House of Commons against the use of opium?—I have no recollection, and the signature attached is not mine; so I should say I did not sign it. If I signed by oversight I do not remember.

25,753. You say that the printed signature does not represent your name in the way in which you usually write it yourself?—That is what I mean.

25,754. (Mr. Haridas Veharidas.) You would wish that measures restricting the use of alcohol should be taken in the first instance before restricting opium?—Together, if you please.

25,755. Not one first and the other afterwards?—No, there is no difference whatever.

25,756. Do you not think that if restrictive measures were taken with regard to opium there might be a tendency towards their taking alcohol?—No. I think the Indians are always temperate.

25,757. (Mr. Mowbray.) Having seen this petition to which the name of J. G. da Cunha is attached, may I ask whether the views set forth in it represent your opinions?—They do not; I repudiate my signature.

25,758. When did you first see this petition?—I saw it in one of the daily papers in Bombay some four months ago.

25,759. Last October?—About the month of October.

25,760. Was your attention drawn to the fact that a signature bearing a great deal of resemblance to your own was attached to it?—Nobody spoke to me about it.

25,761. When did you first take any steps to explain that the petition did not represent your views, and that you did not regard the signature as being yours?—I took no steps whatever. I was simply waiting for the Royal Commission, to explain my views if necessary.

25,762. (Mr. Pease.) Do you know Dr. Ranina?—I know him.

25,763. Is he a gentleman in whose word you would have confidence?—I cannot say anything.

25,764. If he said that you had signed this petition in his presence what weight would that have with you?—I would doubt it.

25,765. Is it possible that in England they might not be able to decipher your way of writing the word "Gerson," and simply put the initials, J. G.?—I do not think so. It is very plainly written. I never write G. They might mistake the spelling of a name, but they would not omit it.

25,766. I daresay you have observed that upon the petition it is stated that some of the names are not decipherable?—I do not know.

25,767. I only suggest whether it is not possible that your writing might be such that they would think it better simply to put the letter G?—My Christian name is so well known, Gerson, it is known in every civilised nation.

25,768. It may be well known in Bombay, but not by those who copy petitions in London?—It is French and German, and it is known everywhere.

25,769. (Mr. Wilson.) You say that you have no idea that opium is used as a prophylactic by any of your patients. You do not prescribe it?—I prescribe it sometimes with quinine for malarious fevers.

25,770. You prescribe it for those who have the fever?—Yes, and to prevent the return of it.

25,771. Why do you say that you have no idea that it is

used?—I speak of my patients. People habitually use it themselves. I do not speak of the medicinal use of it. The

reply is to a question with regard to people using it. People sometimes doctor themselves.

The witness withdrew.

Mr. V. N. MEHTA called in and examined.

25,772. (*Chairman.*) You reside in Sheik Memon Street?—Yes.

25,772a. Are you aware that your name has been printed as one of those who signed the petition to the House of Commons against opium?—Yes.

25,773. You are aware that it has been circulated?—Yes.

25,774. Did you sign that petition?—No.

25,775. (*Mr. Pease.*) Did you write a letter to Mr. Horne in which you said, "so far as I remember I never signed the petition; however I cannot say one way or the other in the matter unless I see personally my signature"?—Yes, I wrote that.

25,775. (*Mr. Mowbray.*) Having seen the petition, may I ask whether it represents your views as a medical man in Bombay?—I saw the petition only two months ago; I do not know anything about the petition.

The witness withdrew.

Dr. F. E. MADON called in and examined.

25,783. (*Chairman.*) Do you reside in Dhobi Talao?—Yes.

25,784. Are you aware that your name has been circulated in print as one of those who signed the petition to the House of Commons with reference to opium?—Yes.

25,785. Did you actually sign that petition?—No.

25,786. (*Mr. Pease.*) Did you write this to the secretary, Mr. Horne, "To the best of my knowledge I well remember to have never signed the anti-opium petition"?—I had a letter saying that as there was a controversy going on, would I write personally stating whether I had signed the petition or not. In reply to that I sent my letter.

25,787. Do those words "To the best of my knowledge" mean that you may have signed it, but that you have no remembrance?—As far as I recollect, I never signed the petition—I meant that.

25,788-9. You have no remembrance of it; you do not feel absolutely certain?—As far as I know I am certain I have not signed it. If you will read the whole letter I say I give my honest and true opinion. I wrote to the best of my knowledge that I did not remember to have ever signed the petition. Perhaps the only explanation I can give is that I once signed in connexion with the temperance movement. I was once in my dispensary when a Brahmin came in and showed me a paper. I asked what it was about, and he told me that it was in connexion with the temperance movement. My views against alcohol were as strong as ever, and, without hesitation, I put down my

The witness withdrew.

Dr. J. C. LISBOA called in and examined.

25,794. (*Sir William Roberts.*) I believe you are a graduate of the Grant Medical College?—I am.

25,796. And you are a private practitioner in Bombay?—Yes.

25,796. To what district or districts of the Presidency are your observations applicable?—My experience on opium eating does not extend to beyond Bombay and Poona, and am sorry that I did not keep any notes to give now any approximate proportion of those who take the drug. I will, however, bring to the notice of the Royal Commission on Opium one or more instances of well-to-do persons, which will go to prove the statements I make.

25,797. What is the effect of the use of opium in moderate doses?—This drug, when taken in moderate doses, acts as a stimulant and tonic. It is used by many brokers and merchants who lead a life of incessant toil and mental activity. It gives them both mental as well as physical energy to work. The Chinese, who eat opium, are hard workers, and endure fatigue more easily than Indians and Europeans. Opium induces sound sleep, and the opium eater rises in the morning refreshed, with his intellect as

name. That is the only recollection I have of signing my name.

25,790. (*Mr. Mowbray.*) As a portion of the letter has been read, we may as well have the whole of it:—"To the best of my knowledge I well remember to have never signed the anti-opium petition. I once remember to have signed a petition concerning the temperance movement. I was, and am still, strongly against the use of spirits by the masses. That I have not read the anti-opium petition I am positive and certain. Whether one was offered to me to read I do not remember. My views regarding the use of opium I had expressed before in connexion with the use of balagoli (containing opium) in children. According to my honest belief the moderate use of opium is not harmful, but beneficial." Is that the letter you wrote to Mr. Horne?—Yes.

25,791. (*Mr. Fanshawe.*) You have referred to being consulted about the use of balagoli; when were you consulted on that subject?—I do not remember; it was some time ago. A circular was issued to all the members of the Medical Union as to whether the use of balagoli (which is extensively used amongst children) is harmful or not.

25,792. You cannot recollect how long ago that was?—No; it was, I think, long ago.

25,793. (*Sir James Lyall.*) Did you ever attend any anti-opium meeting?—No.

bright as ever, while alcohol produces bad after-effects, insomnia or interrupted sleep, especially on those who do hard mental work, followed by depression and loss of appetite. Moreover, I do not think that opium produces delirium or insanity, or is an incentive to vice and crime as alcohol. In alcohol drinkers there is generally a craving for increasing the quantity of spirits, and with many it becomes their all-absorbing passion, while the opium eater seldom increases his dose. Opium is not the primary cause of certain diseases of the kidneys and liver as alcohol is. It has saved many lives, and has been the means of prolonging, in comparative comfort, the lives of many individuals, especially of those subject to chest, intestinal complaints, and malarial fevers. It has an action in cutting short the cold stage of intermittent fevers, and lessening the intensity and duration of the second stage, if administered at the commencement of the first stages. Opium does the same work for the labouring classes in India that coca does in Peru and other parts of South America. My opinion on the effects of opium were expressed in my Presidential address, delivered before the Grant Medical Society in 1879, and again referred to in 1889. I was President of that society for several years.

Dr. J. Gerson
da Cunha.
M.R.C.S.,
L.R.C.P.

14 Feb. 1894.

Mr.
V. N. Mehta,

Dr.
F. E. Madon.

Dr.
J. C. Lisboa.

Dr.
J. C. Lisboa.
14 Feb. 1894.

25,798. I presume that the opinions you then expressed were in accordance with the opinions you have now laid before us?—Yes. It was in 1879, long before this agitation commenced. I was led to think that opium was very good after operations, especially in the case of women after severe labour, when the uterus would not contract and there was a large amount of hæmorrhage. When the uterus was made to contract, a large dose of opium was given, from $1\frac{1}{2}$ to 2 grains, and the woman would sleep and get up in the morning refreshed.

25,799. That is the medicinal effect of opium?—Yes, and it was that which led me to think that opium was not so bad as had been described in European books, and believed by the generality of people. Then in operations of lithotomy and amputations and large tumours, I gave opium and I found that it was not deleterious. Then I saw that the Parsis, among whom my chief practice lay, used to give to their children, when young, balagolis to make them sleep at night and let their mothers sleep, to quiet them, to diminish the irritation of teething, and so on.

25,800. Have you noticed any evil from that practice in your experience?—No. Many of these children are now grown up, and perhaps some of them are here. They commenced at an early age when they were one or two years old. I have seen cases in which it was given at the age of seven months. That was in cases of teething when the children were troublesome at night. Of course there are cases of excess. Some women, not knowing the dose to give, give too large a dose; but that is a different thing.

25,801. Have you known serious or fatal accidents from giving an overdose?—Yes, I have seen one or two; I remember only two. In one case constipation was so great that the child was brought to me with its stomach puffed out, and nothing could be done for it.

25,802. May we assume that you have had large personal experience as to the giving of these little opium pills to infants and young children?—Yes. If one woman does not know what to give, there are neighbouring ladies who will tell her.

25,803. Is it a practice that you approve of?—It does a great deal of good, and so I approve. I have seen the good effects of it, and that is the reason why I brought it before the medical society. That was my opinion long before the agitation commenced.

25,804. Would you give these pills to healthy children?—They are not given to healthy children; they are given to those who suffer from the irritation of teething or from bowel complaints. Very often after finding that it does good the mothers continue to give it because they can get rest by putting their children to sleep.

25,805. The practice is always begun for some ailment or disturbance of health?—In adults and in children too.

25,806. Having once begun to use it in that way, they go on using it after the disturbance has passed off?—Yes, for one or two years. After that it is given up when the children do not suffer.

The witness withdrew.

Dr. EDALJI NASSARVANJI called in and examined.

Dr. E.
Nassarvanji.

25,820. (Sir William Roberts.) I believe you are a graduate of the Grant Medical College and a practitioner in Bombay?—Yes.

25,821. Where have you gathered your experience of the opium habit?—My observations on the use of opium are confined to Bombay, where I have been practising for the last 35 years.

25,822. To what extent is opium used among the population of the districts to which your observations apply?—Here opium is very commonly given by the Hindus and some of the Mahomedans to their little ones with the object of keeping them quiet. It is generally given after the third month, and is continued almost to the end of the second year. It is given in the shape of what is called balagoli (pill for the child), which contains some aromatics and carminatives in addition to opium. When the children who get these pills are properly nourished no bad effects are seen, but when as among the poor and labouring classes the children are left at home without nourishment for some hours while the parents are out at work, they become emaciated, and suffer from effects of malnutrition as diarrhoea, sloughing of the cornea, &c., but such instances are very rarely seen in these days. I used to see some such cases during my student-

25,807. Can you give us any idea of the per-centage of infants who get these opium pills?—I do not know. I have given up practice for some years, for the last 10 years.

25,808. (Mr. Pease.) What is your attitude towards stimulants for persons in good health?—They do not require it; there is no necessity for any stimulants.

25,809. You would not advise persons in good health to take opium?—No; I never had occasion to do so. They never asked me whether they should take it. It is only when they are weak or suffering from some disease, such as diarrhoea or dysentery.

25,810. Do you think that taking opium as a habit is a bad thing for persons in good health?—No; it is useless, just as it is useless for those in good health to take alcohol.

25,811. Are they not establishing a habit that they may find it very difficult to break off?—Many of them break it off; they do it gradually. When I was writing a work on botany I took as much as 30 drops of the tincture of opium. I could not sleep. Then I reduced the dose and came to eight drops. I began to take it for chronic diarrhoea.

25,812. You give it as your opinion that people very largely increase the dose?—We had an interesting case of a man taking 147 grains a day when in good health. I have seen that. Generally people take two doses morning and evenings and afterwards never increase it. That is what I brought before the society, asking them to make inquiries on the subject.

25,813. (Mr. Haridas Veharidas.) You say that opium is not so bad as has been described in medical books?—The opinion that has been given by missionaries and others, I do not say, has been exaggerated, but they have been deceived.

25,814. It is not so bad as has been described in books by anti-opiumists; would you also say that it is not so good as has been described of late?—I have distinctly said that it is good in certain diseases.

25,815. But it is not so good as has been lately said?—I have said that it is useless to give it to healthy men.

25,816. (Mr. Fanshawe.) We have been told that opium is used by older men, say after 30 or 40, as a restorative; is that within your experience?—They take it after 50, but they feel weak. Their relations say to them, "Why do you not take opium?" We give it to those who are suffering from chronic asthma, which we cannot cure.

25,817. It is used among healthy men as a restorative, is it not?—Yes.

25,818. We have been told that at the present time the use of balagoli among the Parsi community is not general?—It is not general.

25,819. You agree in that?—20 years ago it was more general than it is now. They do not use it so much, because doctors tell them not to give it to their children.

ship 35 or 37 years ago, but nowadays such instances are very rarely seen.

25,823. Is the population somewhat better fed now?—It is better fed, and perhaps opium is not so much given, or it is given with more caution.

25,824. What is the effect of the habitual use of opium in adults?—Among grown up people it is principally used by the Mahomedans and the Hindus, more especially those who have come from Cutch, Kathiawar, Marwar, Lucknow, Delhi, Cambay, and Hyderabad Deccan. Some use it as a remedial agent for the relief of pain, some for checking diarrhoea, and some for checking attacks of asthma. Others use it as a stimulant, a tonic, and an aphrodisiac; and for such purposes generally combine it with such substances as musk, amber, saffron, pearl, quinine, and aromatics. Taken for such purposes and in small doses it seems to produce no bad effects whatsoever on the mental and physical condition of the consumer, nor does it demoralise him in any way. The opium eater is always a quiet and harmless individual, and I have seen some live to a good old age, and in the enjoyment of good health.

25,825. What is the method of taking it?—It is generally used in the form of pills, but is sometimes used in the

form of a liquid extract known as kasumbha. It is very rarely smoked here. I refer to the class of people among whom I have seen it. I believe it is smoked pretty freely among the lower classes, the Mahomedans, the labouring classes, the weavers, and the embroiderers. In the solid form its action is slow; it first stimulates the nervous system and afterwards produces sleep.

25,826. Is opium used as a prophylactic against malarial fever?—I have not seen it used as a prophylactic against fever, but it is sometimes given by vaida in the cold stage of fever.

25,827. Does the use of opium lead to serious consequences?—I have not seen its habitual use lead to such serious consequences as those which follow the use of alcohol, and its moderate habitual use does not necessarily produce structural changes in the organs, whilst the habitual use of alcohol does produce structural changes in the liver, nervous tissue, &c. Taken in excess opium as well as alcohol is injurious and poisonous.

25,828. Do you mean to suggest that the habitual use of alcohol in moderation produces structural changes?—I believe even taken in moderation in the long run it does induce some structural changes in the liver.

25,829. I suppose your experience of alcohol is entirely confined to India?—Yes.

25,830. You say that taken in excess opium produces injurious effects?—Yes.

25,831. Have you any large personal experience with regard to opium eaters?—Not very large. The cases I have seen have been among the patients I have visited, and they have generally used opium in moderation.

25,832. You have seen few examples of opium taken in injurious excess?—Very few.

25,833. You do not remember what the symptoms were?—The symptoms in these cases are indifference, inactivity, torpor, and disinclination to work.

25,834. Does it shorten life in these conditions?—I have no data upon which to say that.

25,835. Is the opium habit difficult to give up?—The habit of taking opium once established is difficult, but not impossible, to give up, and I have succeeded in some instances, where it had not been used as a remedial agent, in inducing the consumers to gradually diminish the quantity they consumed, and ultimately to give it up.

25,836. What was your object in inducing them to give up the use of opium in these cases?—To relieve them of a vice, a habit, and to free them from dependence upon it.

25,837. Not because you thought it would do harm?—I thought that leaving off the habit would improve their health.

25,838. Are you speaking of the excessive use of opium by the people whom you tried to persuade to give it up?—Moderate.

25,839. Then you think the habit is all evil in any proportion?—In any proportion. I may mention, as an instance, that there was once an attack of fever that broke out in Cambay, and a large number of people came from Cambay to Bombay suffering from fever, and almost every one of the sufferers was an opium eater. Some took it in large quantities, others in moderation. Some of them were induced to leave off the habit, but they were reluctant about it; others were bold enough as they were taking it in only small quantities. There were no bad effects resulting from the discontinuance of the habit.

25,840. They did not take to other stimulants?—They did not.

25,841. With regard to the habitual moderate use of opium you have not seen any ill consequences?—No bad consequences whatever. The habitual moderate use of opium produces no deleterious effects on the mental faculties of the consumer, nor does it interfere with his ability to conduct his business successfully, but on the contrary stimulates him, and enables him to do his work efficiently. The habitual moderate use of opium is not considered disgraceful. I have seen it consumed by merchants and well-to-do people.

25,841a. (Mr. Fanshawe.) I understand that your name appears as one of the signatories to the petition to the House of Commons?—Yes, I was not aware of it, until my attention was drawn to it one day by Mr. Rustumji, inspector of the opium department.

25,842. What statement do you wish to make with regard to your name appearing on the petition?—I have already made my remarks on a paper to Mr. Rustumji, wherein I said that I did not remember having signed the petition, and that if I ever did sign it, it must either have been under some misrepresentation or without having read the contents of the petition. When I read the contents of the petition to which my signature was attached I found that I could not by any means bear witness to the truth of the statement mentioned therein.

25,843. When was your attention first called to the fact that your signature was upon the petition?—About October or November last.

25,844. Previous to that you were not aware of it?—I was not. In fact, while the anti-opium agitation was going on I was not aware that my signature was on the petition till I was shown a copy of the petition with my signature to it.

25,845. That was in October or November last year?—Yes.

25,846. You have already expressed an opinion showing that you in no way hold the views stated in that document?—I have distinctly expressed it to Mr. Rustumji and also to Mr. Horne in reply to a printed letter sent to me a few days ago.

25,847. (Mr. Pease.) What is your practice with regard to signing petitions? Do you make yourself acquainted with their contents before signing them?—Certainly I do; but I had really no idea of that petition. I am quite at a loss to say with regard to this petition how I signed it and under what circumstances.

25,848. You have said, "I might have put down my signature to the anti-opium petition under circumstances of which I have now no recollection"?—Yes.

25,849. You say, "I now do formally withdraw it or repudiate it, as you term it, and that for the reason that when I happened to read a printed copy of the petition bearing my signature I found that it contained statements for the truth of which I could bear no testimony"?—Yes, exactly.

25,850. You state in your evidence that you have succeeded in inducing persons to give up the opium habit by reducing the quantities?—Yes.

25,851. Have you used any medicine or other agent to assist them in breaking off the habit?—No. By persuasion I have succeeded. I might mention a case that recently happened in Bombay. A man named Abdulla Rahman Shah, an Afghan, came to Bombay from Persia suffering from fever and dysentery. He had an emaciated look, and I thought it was brought on by suffering from fever and dysentery. I found out while he was under treatment that he was smoking opium to the extent of about 20 grains a day. I persuaded him to diminish the quantity, suggesting to him that perhaps the large quantity of opium he was smoking was interfering with his circulation and keeping up his suffering. He consented, and reduced the quantity in the course of a few days to one-fourth without any ill effects; on the contrary, his condition improved as regards the fever and his dysenteric symptoms. His general condition was also improved.

25,852. Was the effect of the large quantity of opium to increase the fever or to maintain the fever?—It might to a certain extent have interfered with his rapid recovery.

25,853. You say that the disuse of opium does not necessarily lead to the use or abuse of other drugs or of alcohol. You have observed that these people have given up the habit and that is your impression?—That is my belief. I can cite a few cases in support of this view. I am attending a Mongol family. The head of the family is taking opium in the form I have described; little tonic pills containing opium, musk, and so on. His wife, a very delicate lady suffering from cough, also began to take opium with a view to checking the cough. She was a very spare lady, and having come to know that she was taking opium, and thinking that it might diminish her digestive power, I advised her to discontinue it. Acting upon my advice she left it off, and she has not been obliged to take any other stimulant.

25,854. (Chairman.) May it be taken as the practical result of your evidence that you do not recommend that the use of opium should be restricted by law or by regulation to medical purposes?—Yes. It need not be interfered with.

The witness withdrew.

Dr. E.
Nassarvanji.
14 Feb. 1894.

Dr. J. A.
da Gama,
L.M.

14Feb. 1894.

Dr. J. A. DA GAMA, L.M., called in and examined.

25,856. (Sir William Roberts.) You are a graduate in medicine of the Bombay University?—Yes.

25,857. To what district and to what races are your observations applicable?—I am a graduate in medicine of the Bombay University and a Knight Commander of the Order of Christ of Portugal. I have been practising physic for the last 22 (twenty-two) years in the district of Mandvi, Bombay, among the Khojas, Memons, Baniyas, Bhatias, Lohanas, and Marathas.

25,858. What is your experience of the use of opium?—Both men and women use opium habitually, generally after 30 years of age, in some cases earlier, but then for some ailment or other. The proportion is larger among the Muhomedans than among the Hindus, the per-centage of opium eaters among the former being about 8 or 10 per cent.

25,859. You mean of adult males?—Males and females.

25,860. Have you seen any injurious effects from the excessive consumption of opium?—I have no experience of the effects of the abuse of opium, but those who use it habitually have their physique improved, and have never had their moral condition in any way lowered by its use.

25,861. How do the people use it as a rule?—Usually, in this district, people take it twice a day—at 6 a.m., and at 6 p.m.—in the form of a pill, about a grain each, but the quantity is increased only up to the production of the desired effect, and not more, i.e., just enough to give the individual sufficient stimulus; and I have actually seen taken as much as 80 grains a day, i.e., 40 grains in the morning and 40 in the evening, without the least inconvenience to the individual, neither physically nor morally.

25,862. Have you any experience in the use of opium as a prophylactic against malarial fever?—I cannot say that opium is used here as a prophylactic, but for a long time I had prescribed with success a grain of opium with 10 grains of quinine in cases of ague. This dose shortened both the cold and hot stages of the fever, which was not the case when quinine alone was administered.

25,863. Does the use of opium as habitually indulged in lead to consequences as serious as those which follow the use of alcohol?—I emphatically say no to the first part of this question, because so far from seeing consequences from habitual use of opium as serious as those which might arise from the use of alcohol, I have found beneficial effects from its use in various cases, and markedly in some cases of habitual drunkards. I have by the administration of opium reclaimed some drunkards, who by indulging in other vices in consequence, or as an accompaniment of the alcohol abuse, had so debased themselves as to squander their fortunes, and had reduced their families almost to beggary, but who now, thanks to the regular use of opium, have retrieved both their moral character and their worldly affairs.

25,864. You are speaking from actual personal experience?—Yes.

25,865. What have you to tell us with regard to the use of opium in infancy and childhood?—Opium is administered to children in the form of pills, called bala golis or baby pills, containing a minute quantity of opium, and several aromatics and carminatives. I give here a rough formula of the composition of those pills:—

The Formula for Bala Golis.

Nutmeg -	-	-	2 tolas.
Mace (of do.) -	-	-	2 "
Cardamoms -	-	-	2 "
Catechu -	-	-	2½ "
Supari flowers -	-	-	2½ "
Bhang, washed, boiled in water, and dried	-	-	14 "
Sugarcandy (Chinese) -	-	-	25 "
Opium -	-	-	5 "
Cinnabar, factitious	-	-	1½ "

56½ tolas for one lot or one mass.

One hundred pills or bala golis are made out of the weight of 2½ of a tola of this mass. That is, 2½ of a tola of this mass gives 100 pills.

25,866. What amount of opium is there usually in each pill?—About one-eleventh of a grain.

25,867. I presume they are not always of the same composition?—I do not know. This receipt was given to me by the maker. These pills are given to the children, one in the morning and one in the evening, and sometimes in

the middle of the day. When I first settled in this district 22 years since, such pills were administered universally to the children until they had reached the age of 2½ or 3 years. Well, I had been taught in the Medical College that the use of opium produced in children marasmus. I therefore used all my influence with the well-to-do people in this district to induce them to abandon the administration of bala golis to the children of their families. I have succeeded in this to a very large extent, but I find that the children to whom bala golis were not given have not fared better nor worse than those to whom they had been given. I had seen, and I still see, emaciated children to whom opium is being given, but they belong chiefly to poor classes of the inhabitants; further inquiries have convinced me that emaciation is not due so much to the administration of opium or bala golis to the children as to the want of proper and timely nourishment. Very frequently it happens among the poorer classes that a mother has no one to entrust her nursing to while she is at work to earn her wages, and through sheer necessity she is obliged to put her baby to sleep with opium to keep it quiet during her absence from home, and to nurse it at long intervals. It is chiefly owing to this long-interval nursing that makes those children thin. Now, however, I do not object to the administration of bala golis to children, as I find them decidedly beneficial in early life, when children suffer from diarrhoea, flatulence, &c.

25,868. What have you to say about the moderate use of opium?—As regards the expression "moderate use of opium" it cannot be said to be confined to a quantity which an individual may consume, but it is to be understood to be any quantity which will give the individual a stimulus which enables him to carry on his avocations; for a quantity short of the required one will keep him languid, and any quantity above that will make him drowsy. When only such a quantity of opium is taken no evil effects will result. So also with regard to the moderate use of alcohol, which I take it to be the consumption of that quantity which will not affect the head of the individual taking it. There is another distinction between the habitual use of opium and that of alcohol, namely, the stimulus afforded by opium is more lasting and more invigorating than that given by alcohol, which is temporary, and may serve as an adjunct to food, and in this wise the opium eater does not wish for more when he has had his required quantity of opium, whereas an alcohol drinker does take occasionally more than is good for him.

25,869. That is also the case, is it not, with regard to the excessive users of opium?—No, because they are not left without a stimulus—the stimulus is more lasting. The contrast between opium and alcohol becomes more salient when their abuse is considered. An opium eater, when he takes it in excess, will have to lie down until its effects are worn away, and at most he may do harm to his constitution (which I doubt, having seen that opium eaters have a long life); whereas an habitual drunkard, besides causing irreparable damage to his internal organs, is, while intoxicated, dangerous to himself and to his fellow creatures. I do not think that anybody has heard that a man was taken to a police chauki for being an opium eater, whereas the police records are full of the pranks of drunkards.

25,870. Have you ever made a post-mortem examination of an opium eater?—No.

25,871. Is it difficult for an opium consumer to give up the habit?—He may not give it up voluntarily but when he is told to give it up he will give it up easily, that is, supposing at first the use is stopped he feels languid, but gradually if he makes up his mind he gets accustomed to it and does not feel any the worse for it.

25,872. You have seen many cases in which people have given up the opium habit?—I do know several cases.

25,873. You did not put your signature to the petition which was sent to the House of Commons?—No, I wrote to the Secretary of the Anti-Opium Society declining to sign it.

25,874. Do you think that children lose their healthy appetite for food by taking bala golis?—No.

25,875. Do you mean to say that the moderate use of alcohol makes a man lose his head?—He does not lose his head, but he feels the effect.

25,876. You wrote the following letter to the Secretary of the Anti-Opium Society with regard to signing the petition:—

"DEAR SIR, Bombay, November 1891.
"I BEG to acknowledge the receipt of your letter of 1891, accompanying a copy of the petition to be sent to

" the Honourable Commons of the United Kingdom by the medical profession of the Bombay Presidency for my signature. In reply, I beg to say that I cannot conscientiously put my signature to a petition which I, as a medical practitioner of 20 years' standing, think tends more to help a movement which is not on the side of truth and justice than otherwise, and the following are some of my reasons:—1. I have not observed many evil effects on the population from the moderate, though habitual, use of opium; on the contrary, living in a district—Mandvi—where opium is largely used both by Mahomedans and Hindus of both sexes, I have observed that those who habitually take opium take it as a stimulant and not as an intoxicant, and its use gives them strength, and enables them to carry on their work, and I have seen many a confirmed opium eater who has lived to a good old age. It is true that those who take it regularly do require it at stated hours, and here they take it at 6 a.m. and at 6 p.m., and if the quantity of opium he takes does give him stimulus enough for work, he seldom increases the dose, and if he increases it, it is simply to get that amount of nerve force which he requires for carrying on his avocations. 2. I have myself, many a time, prescribed the opium habit in many chronic cases of disease with marked benefit to patients, and have also reclaimed several confirmed drunkards by substituting the habit of opium eating for that of spirit drinking with complete success, and I have had the satisfaction to see them retrieve their fortunes under its use when they had brought ruin on themselves and on their families while addicted to drink. 3. It is a fact that a person habituated to take opium feels languid and unable to work if he does not get his usual dose at the proper time, but once he has had his required quantity he does not crave for more. 4. I cannot understand that if, out of 100 persons who once take opium in any form, 99, if not all, become confirmed opium slaves in a short time, as the petition says they do, how can any one be saved from being a confirmed opium slave if he takes it in any form under qualified medical advice. 5. There is a vast difference between an habitué of moderate use of opium, and that of its immoderate use, as there is difference between an habitué of moderate use of alcohol and that of its immoderate use. The symptoms described in the petition are those presented by an habitué of its immoderate use. If there is no prohibition to use alcohol moderately, why should law be asked to prohibit the moderate use of opium? 6. There are many things in this world, besides opium, the abuse of which is pernicious to mankind, and for all

" that it would not be right to forbid their use. Fancy, for example, asking Government to prohibit the sale of meats and other foods, simply because there is a large amount of dyspepsia caused by their abuse. 7. I am aware that small pills are given to children both among the rich and the poor, but in the majority of cases they are bala golis, pills containing minute quantity of opium, but chiefly composed of aromatic and stimulant drugs. These are administered to the children traditionally, and because they are thought to be beneficial to them. Among the poorer classes the mother gives to the child a little opium to keep it quiet until her return from her work, and this she is obliged to do out of sheer necessity. She must go to her work to earn her livelihood, and where she cannot carry it along with her, and if she leaves the child without the opium, there is nobody to take care of it; the mother under the circumstances chooses the lesser evil. The habit of giving bala goli and of opium is continued until the child becomes a couple of years or so old; then the child is weaned from it. I confess to having seen and treated many cases of accidental poisoning of children, but you must observe accidents are not the rule. What would be said if people in Bombay had petitioned Government to prohibit importation of kerosine oil, simply because through it some fires have occurred in the town. 8. It appears to me that the petition puts forward an exaggerated and vague view of the matter, and gives no facts and statistics to prove the assertions made therein; for these and other reasons I feel that I should not sign the petition." ?

—Yes.

25,877. (Sir James Lyall.) You say that the opium eater does not wish for more when he has had his quantity of opium, whereas an alcohol drinker does take more than is good for him?—Yes.

25,878. How do you explain that?—The opium eater takes just sufficient to enable him to do his work, and the stimulus given by the opium lasts a certain time, but if an opium eater takes more than his usual quantity he will become drowsy, and not able to do his work; that is not what he wants, and so he will not take more. Alcohol being rapid is not so lasting, but in the end it accumulates and is more exciting, and the narcotic effects afterwards are too much.

25,879. A man drinks a glass of alcohol partly for the taste?—Yes.

25,880. He does not swallow a pill of opium for the taste?—No; he does not taste the pill of opium at all because he takes it with a little ghi or water.

The witness withdrew.

(Sir James Lyall took the Chair for the remainder of the sitting.)

DR. TEMULJI BHIKAJI NARIMAN, L.M., called in and examined.

25,881. (Sir William Roberts.) You are a Licentiate of Medicine of Bombay College?—Yes.

25,882. In what district have you practised?—I am a medical practitioner of 21 years' standing. My practice is limited to Bombay alone. I am practising among all classes of the inhabitants, both European and Native, but largely among the Parsis.

25,883. Is opium used to any extent in Bombay?—I think opium is used to a very limited extent by the people in Bombay, excepting Hindus and Mahomedans; the other races seldom or never resort to it as a luxury. A very small per-centage uses it habitually for some physical ailment, but the number is infinitesimally small. Out of a population of 830,000 about 7,000 eat opium and 600 smoke it according to the Census report. I do not think more than a score among the Parsis eat opium. They never smoke it. The Marwaris, among the different races I treat, are the largest opium eaters. I believe I in 20 eat opium.

25,884. I suppose you mean among the adult males?—Yes.

25,885. What effects have you observed from the use of opium?—The effects of opium are either stimulant or narcotic in proportion to the dose taken. Age, sex, diet, individual peculiarity, and a variety of other causes influence its effects. In moderate dose to an habitual consumer the effects are not prejudicial to his health, and it does not affect him physically or morally in the least. In the very commencement, if a little larger dose is taken, there is dryness of the mouth, impairment of appetite, headache; but these effects are temporary, and when the habit is established the consumer's appetite is improved;

he gets a regular evacuation of the bowels, his intellect is kept very clear, and he does not suffer the agony of the ailment for which he first commenced opium eating. A large number of consumers resort to this practice for some supposed or real bodily disease, especially asthma, bronchitis, diarrhoea, rheumatism. I can describe the symptoms of abuse as read in books, but I have never seen a single case of abuse of opium, except in accidental or suicidal poisoning. Some of my patients taking opium are very shrewd men of business trading on an extensive scale.

25,885a. How is opium taken?—All those who take opium eat it from 2 to 5 or 10 grains once or twice daily, generally twice. I have seen a large number of opium smokers who smoke chandul and madat in the different opium dens. If I observed anything prejudicial it was the place where they generally clubbed together. The rooms were small, with hardly any ventilation, and likely to suffocate one by the prevention of fresh air. But with all these drawbacks I never saw one living skeleton, as described by some observers. I saw men of all ages, from 20 to 80 years old. There were some who had haggard, wasted countenances and thin bodies, but they were sufferers from chronic dysentery, asthma, and such other chronic complaints of from two to 30 years' standing. They were generally people of the working classes, also tailors, barbers, weavers, carpenters, &c.

25,886. What is your opinion as to the use of opium as a prophylactic in malarial fever?—Opium is used to cut short an attack of ague. Given in the cold stage, I have seen it cut short an attack of fever. It very often shortens or aborts an attack of coryza or cold and its subsequent

Dr. T. B.
Nariman,
L.M.

14 Feb. 1894.

effects. It is used as a prophylactic against asthma by some with good effects. It is also used by patients suffering from diarrhoea and rheumatism.

25,887. All those examples you have given us are examples of the medicinal use of opium?—Yes.

25,888. Have you formed any opinion as to whether habitual users of opium derive any benefit from opium in regard to their liability to malarial troubles?—Opium is not used so much at Bombay as a preventive against malaria as it is up-country; in fact it is hardly used at all for that purpose here.

25,889. There is not much malaria in Bombay?—No.

25,890. Does the use of opium, as habitually indulged in, lead to such serious consequences as the use of alcohol?—The habitual consumers of opium and alcohol in moderation do not suffer any evil consequences. If any, the consumers of alcohol suffer more than those of opium. In excessive doses the consumers of opium harm themselves, while the consumers of alcohol not only harm themselves, but are a nuisance and a danger to society. I have not seen a single case of an excessive opium eater in the streets, but I have seen hundreds of alcohol consumers, and in some streets, where there are taverns and liquor shops, disturbing the peace of the neighbourhood by their quarrels and obscene language. Some of them while drunk are a regular terror to the peaceful neighbours.

25,891. Have you made any post-mortem examinations of opium users?—No.

25,892. Is the opium habit difficult to give up?—I think it is very difficult to give up the habit of taking opium, but I know of cases where, after years of habitual use, patients have given it up altogether without resorting to any other stimulants; but the majority of natives would take to other harmful stimulants if opium were prohibited.

25,893. What is the effect of opium on the mental faculties?—So far as I have seen, opium has no deleterious effect on the mental faculties of the moderate consumers. On the contrary, they carry on their business with marked ability and foresight, and are expert in calculation.

The witness withdrew.

Mr. M. D.
Cama, L.M.

MR. MANEKJI D. CAMA, L.M., called in and examined.

25,898-9. (Sir William Roberts.) You are a Licentiate of Medicine of Bombay and Joint Honorary Secretary of Grant College Medical Society?—Yes.

25,900. You practise in Bombay?—Yes. My observations apply to the city of Bombay and its vicinity, and chiefly to Mahomedans and Hindus, and a few Chinamen and Parsis.

25,901. To what extent is opium used among these people?—Opium is used habitually by a very small percentage of the population of Bombay, at the most perhaps 20 per mille, but it is used casually to a large extent by natives of all nationalities and creeds, as it is the commonest of all household remedies.

25,902. What is your experience as regards the moderate use of opium habitually?—The use of opium taken in moderation, say not more than 10 grains a day, is not injurious in any way either as regards the moral or physical condition of the consumer. On the contrary, it is decidedly beneficial to people in the condition of life of those who habitually use it, such as poor Hindus and Mahomedans. They are generally very hard-worked, their food is poor in quality and quantity, they live in damp and ill-ventilated places, and as they mostly sleep in the open air, they are enabled to work so hard, digest their bad food, and cope with chill and damp only by the use of opium. The abuse of opium, as of everything else, is bad, both physically and morally, but not so bad as the abuse of spirits, bhang, and other intoxicants, inasmuch as the opium sot injures himself only, and there is no tendency to become aggressive and do harm to those around him, whereas the alcohol sot easily becomes quarrelsome, aggressive, and violent, and thus becomes dangerous to society.

25,903. In what modes is opium consumed in Bombay?—Opium is consumed as—chandul and madat when it is smoked, crude when it is eaten, kasumbha when it is drunk, balagolis given to children. When smoked as chandul or madat its main action is on the respiratory system. Being absorbed as vapour, diluted with pure air or vapour of water, by the pulmonary alveoli, it acts as a direct sedative to the respiratory system, soothes cough and irritation of the larynx, restores the respiratory rhythm, promotes

25,894. What has been your experience of the use of opium among infants?—I have seen numberless cases in which bala goli pills are used by nursing mothers for their children. I always discourage the use of them. I have seen some children thriving on these pills, especially of the middle and upper classes; but ill-fed and badly nourished children suffer from them. They are used to quiet children when they cry much at night. Improper food is the principal cause of the pain from which children cry. Bala goli temporarily soothes them, but the cause is there, and the irritation and inflammation set up continue unabated, and until that is removed, children pine away, suffer from diarrhoea and constipation alternately, and die of exhaustion. This, of course, is seen in poorer classes. Instead of drugging them with bala goli, I always instruct my patients to pay more attention to the hygienic and dietetic treatment of their children. I know of cases where the nurses apply opium to their nipples and then give wet breasts to sucking children with the object of keeping them quiet at night. I have seen two or three cases of poisoning by it, but no death. Mahomedan nurses resort to this practice much more than Goanese.

25,895. Have you any other observations to make?—In conclusion, I must say that I am personally against the habit of using alcohol, opium, or other stimulants, excepting the use of opium in certain localities where it is said to be a great help in the mitigation and prevention of climatic diseases. One unfortunate result, however, of this Commission would be the increased use of opium, as its virtues have been so highly extolled by medical and other witnesses and so widely circulated all over India.

25,896. Have you formed any opinion as to whether there is a difference in the European constitution and the constitution of the native of India with regard to tolerance for opium?—I believe the natives of India have a greater tolerance than Europeans.

25,897. Do you think the difference is accounted by race, diet, climate, malarial conditions, or what?—That is rather a difficult question to answer, but I think it is a combination of those things you mentioned.

expectoration, and regulates respiration by relieving the spasm of the bronchi, and thus aiding impeded and harassed circulation, it restores the normal action of the heart. It also dilates the arterials of the skin, and thus relieves internal congestion of the lungs and other viscera, helps the elimination of deleterious products, and thus promotes the absorption of food, and helps the building up of tissues.

25,904. What is the effect of opium eaten in the crude state?—When eaten as crude opium, or sipped as kasumbha, its main action is confined to the digestive system, and enables it to tolerate and digest the hard food stuff which it receives, which it would otherwise peremptorily reject. It regulates and slackens the peristalsis of the intestines, promotes absorption and assimilation of food, and prevents colicky pains, and the flow of the chyme being retarded time is given for the absorption of the liquid element, and the formation of stools of normal consistence, and diarrhoea is thus prevented.

25,905. How are the pills used?—As balagolis, being made up of an infinitesimal quantity of opium with various carminatives, they are decidedly beneficial and a real boon to infants.

25,906. Is opium used as a prophylactic against fever?—Opium is used as a prophylactic in cough, asthma, fever, diarrhoea, cramps, colic, toothache, diabetes, dysentery, and for the prevention of chills, the king of causes of all diseases, and with very good results indeed. With all the various resources of medical aid in Bombay the mass of the Hindu and Mahomedan population rely upon a few cheap indigenous drugs, of which opium is the chief.

20,907. Do you mean that they use opium not as a prescribed drug but as a household remedy?—Yes.

20,908. Does the use of opium, as it is indulged in by natives, lead to consequences as serious as those resulting from the use of alcohol?—Though opium is used habitually by the natives, it does not lead to consequences so serious as result from the use of alcohol, whether taken in excess or in moderation. Opium in moderation helps digestion, promotes the elimination of deleterious products of tissue change, braces up and gives tone to the system, enables it

Mr. M. D.
Cama, L.M.

14 Feb. 1894.

to work hard, and bear privation with fortitude. It is cheap, and this is a *sine qua non* with the poor. Cheap alcohol is of a deleterious quality, acts as an irritant, makes the consumer quarrelsome, and ends in making him a public danger. Even taken in excess opium is less injurious than alcohol. It takes a long time to work its ravages, which at the worst are less extensive, and are more functional than structural, whereas cheap spirits act more quickly and cause rapid degenerative structural changes of the nervous, circulatory, respiratory, and digestive systems, producing degeneration of the liver, paralysis agitans, and raging mania, thus making the consumer a danger to others, while at the worst opium makes him emaciated and apathetic to his surroundings.

25,909. Have you made any post-mortem examinations of opium eaters?—In my practice I have had no opportunity of making a post-mortem examination of an opium eater, but while a student, my attention was frequently called to the lesions of alcoholic excess in the various regions of the body, but never, to the best of my recollection, to any opium lesion.

25,910. Is there much difficulty in giving up the opium habit?—I do not think it is at all difficult to break the opium habit except for those who suffer from some chronic incurable disease, which is sure to return on stopping opium. But by those who take it only as a stimulant or for some acute malady, the habit is easily broken. Some lascars while on land are known to take opium, while at sea they stop it without inconvenience, and the same is the experience in the jails, where opium eaters have to do without it.

25,911. Has the use of opium any injurious effect on the mental faculties of the consumer?—Opium has no injurious effects on the mental faculties of the consumer. On the contrary, it clears his mind, sharpens his intellect, and enables him to drive better bargains than when without it.

25,912. Have you any other observations you wish to make?—I have had several opportunities, in company with other medical men, of visiting the opium dens of Bombay. I was a frequent visitor, and had ample opportunities for interviewing and examining hundreds of confirmed opium eaters. I went there at all hours of the day and night, without giving any previous notice. All our questions were readily and willingly answered by the smokers. I have many a time watched the farmers working in their rice fields at Thana and Saisette during the monsoon, when their fields are flooded, they have to wade knee deep in water and mud all day, and sleep at night in huts soaked through with water. They are protected from rheumatism, diarrhoea, and ague by opium alone. From what I have observed of the food and habits of life of opium consumers, I consider a little dose of opium is a real boon to them, and to deprive them of it would be to consign them, if not to immediate death, to life-long and terrible ailments and to a miserable existence.

25,913. You speak of farmers working in their rice fields during a monsoon—is the use of opium very common amongst them?—Very common.

25,914. Are you speaking from personal experience?—Yes. It is only taken during the monsoon, when the fields are flooded. They cannot do without opium then.

25,915. You say they do not use it after the monsoon?—Not to such an extent.

25,916. Do they take it to protect them against chills?—Yes.

25,917. Fever is often the result of chills?—Yes, and also pneumonia.

25,917a. (Mr. Mowbray.) When did you visit the opium dens you speak of?—In the months of October, November, and December last year.

25,918. That is since the licensed houses were closed?—These were regular visits; when I went there the last time I was informed that the opium dens would be shortly closed.

25,919. They were the old licensed dens which were open under license?—Yes.

25,920. You told us you had had ample opportunities of interviewing and examining hundreds of confirmed opium eaters. I suppose you meant opium smokers?—Yes.

25,921. What sort of questions did you ask and what sort of statements did they make to you?—I was always attended by a very capable shorthand reporter, who took notes in my presence, and those notes have been published in the form of a history of opium smokers of Bombay.

25,922. Are you the author of that work?—I am not the author, but most of the evidence was taken in my

presence by a shorthand writer. I cross-questioned these men.

25,923. (Mr. Fanshawe.) The book you refer to is **"Lives of Bombay opium smokers"* by Mr. Rustomji?—Yes.

25,924. (Mr. Mowbray.) The accounts of opium dens in that book are compiled from shorthand notes taken by a reporter in your presence?—Yes.

25,925. You can vouch for the statements in that book?—Yes.

25,926. (Mr. Haridas Veharidas.) Are you in the Government service?—No, I am a private practitioner.

25,927. Were you specially employed to do this work?—No, but I had a great interest in the work. I was told of the mischief opium was doing in Bombay, and so I volunteered to go and find out all about it.

25,928. For the sake of truth and justice?—Yes.

25,929. You say the farmers working in the fields will take opium, do not those take it who do not work in the fields?—Yes, during the monsoon, because the outhouses are very damp and wet. They give up the habit afterwards.

25,930. Have you had charge of any jails?—No, but I have had opportunities of seeing jails.

25,931. Have you heard that a prisoner suffers when he is not allowed opium on admission into jail?—Yes, they suffer at first and they are unable to work and then a little opium is given to them.

25,932. They cannot easily be weaned from the habit?—No.

25,932a. (Mr. Fanshawe.) You spoke of farmers using opium during the wet season, do you mean that they eat opium or smoke it?—They are opium eaters.

25,933. We have been told by witnesses in Bengal that persons who eat opium are unable to work in water, your experience is directly contrary to that?—Yes.

25,934. (Mr. Haridas Veharidas.) You say you vouch for the accounts of opium smokers in Mr. Rustomji's book?—Yes, the questions were asked in my presence and I can vouch for them.

25,935. You consider the statements contained therein correct?—Yes.

25,936. (Chairman.) Did Mr. Rustomji go with you to these dens?—On a few occasions, not all.

25,937. You went with the shorthand writer?—Yes.

25,938. Did you go to translate?—The shorthand writer knew Hindustani very well, and he took it down in my presence.

25,939. (Mr. Mowbray.) The whole book is a series of statements made by the opium smokers to you, and taken down by the shorthand reporter, who was present?—Yes.

25,940. (Chairman.) Some witnesses who have been before us stated that when they visited the smoking dens the smokers called out to them that they were ruined by the habit, and entreated them to get Government to close the shops—did ever such an incident occur in your experience?—There was one solitary incident of that sort, but we were informed that the man was not a smoker himself, but that he was sent there by the missionaries on purpose to corrupt the other people.

25,941. You stated that your observations covered a few Chinamen?—Yes, there are a few in Bombay, they do bamboo work.

25,942. Are there a thousand Chinamen?—I should say more. One of the opium dens was kept by a Chinaman, and of course there were more Chinamen in his den than in the other dens.

25,943. Was both chandu and madak smoked in these dens?—No, there are separate dens for each. In madak smoking the opium used is taken from the scrapings of the pipe. It is a mixture of opium, and not pure opium.

25,944. Do you think it has a worse effect than chandu smoking?—Yes; it is not so good as chandu because it is a mixture, there are greater chances of contamination.

25,945. What bad effects do you think it has? Have you come to any conclusion as to the smoking of chandu and madak?—Madak is only resorted to as a cheaper practice. The smokers prefer chandu.

25,946. Have you come to the conclusion that madak is more deleterious to health than chandu?—Yes.

25,947. In what way?—It dries up the secretions of the lungs more than chandu does—that is the only difference I can find out. The smokers confess themselves that they

* For extracts from this book, see Appendix XXII. to this Volume.

Mr. M. D.
Cama, L.M.

14 Feb. 1894.

would rather have chandu than madak. Just as the waste end of cigars are made up into new cigars, so madak is made up of the dregs of pipes when they are cleared out.

I should like to hand in a *copy of the book by Mr. Rustumji.

(Chairman.) Certainly.

The witness withdrew.

Mr. A. T.
Bocarro, L.M.

Mr. A. T. BOCARRO, L.M. called in and examined.

25,948-9. (Chairman.) You are a Licentiate of Medicine of Bombay?—Yes.

25,950. In what districts and among what races have you had experience of the opium habit?—Bombay, including Salsette and Bassein. The native Christian community of Bombay, Salsette and Bassein designated under the term "Bombay East Indians"; Europeans and Eurasians. The Mahomedans, the Hindus, including Banias, Bhatias, Marathas, and other low classes of Hindus. The Bombay East Indians number about 60,000 souls. Amongst these opium is not consumed as a rule, but rather as an exception. About 1 in 2,000 may be habituated to its use. The Europeans and Eurasians do not take opium. The Mahomedans take opium in the proportion of about 500 per mille male adults. The upper and lower classes of this community, excepting the more educated persons, take opium as a general rule. It is also universally used as a soporific for infants. The Banias, Bhatias, and other class of Hindus take opium in the proportion of about 250 per 1,000 male adults.

25,951-2. What are the effects of the habitual use of opium?—From those people with whom I have come into contact, whether as patients or socially, I have not observed any ill effects from the use of opium when taken in small or moderate doses, whether morally or physically. In fact, no very decided effects can be traced morally on the condition of the user. It is used as an aphrodisiac from a mistaken popular notion that it possesses such properties, chiefly by those in whom the virile powers are at an ebb or entirely lost. Its effect is to render the mind active and the imagination vivid; hence its aphrodisiac effects. Its general use besides the above is to relieve pain, to allay mental worry, and to stay the effects of hunger in the poorer classes, whence arises its habitual use.

25,953. Is opium used as a household remedy for any purpose?—Therapeutically it relieves pain of a rheumatic or neuralgic character, acts as an astringent in bowel complaints, and as a direct sedative on coughs or lung affections, and as a soporific in distressed conditions of the brain and general nervous system. It is employed as a soporific in wakefulness and mental worry, and is principally in use as a soporific for infants by both the upper and lower classes of Mahomedans and Hindus. Amongst the upper classes it is used to procure quiet and rest to infants and the parents themselves; in the lower working classes to ensure sleep during their absence from home.

25,954. What is the effect on the physical condition?—The effect on the physical condition of the user and general appearance as regards nutrition of the body is almost *nil* if taken in small doses and coupled with good living and a sufficiency of food. In fact, it produces a beneficial effect upon the general constitution of the user. When, however, it is taken in large or increased doses repeatedly its beneficial effects are lost; firstly, because the nervous system is repeatedly stimulated unnecessarily, and secondly, because less food is taken, the appetite being lost or impaired. Hence follows emaciation and loss of colour of complexion, &c. In excessive doses all the above conditions are augmented, the circulatory and urinary system being implicated. Hence follows extreme lassitude, inability for any mental or physical work, and exhaustion.

25,955. In what form or forms is opium indulged in?—In the form of crude opium taken as pills and smoking. It is also used as a soporific for infants. Smoking is carried on in two forms—chandu and madak. The former contains about six grains of opium, the latter five grains. When opium is taken in the solid form its effects are slower and more gradual, and are less deleterious to the system than smoking it.

25,956. What is the effect of smoking?—In smoking the effects are more rapid from the concentrated form in which it is taken, its sedative effects rapidly supervening. Hence it produces very decided evil effects constitutionally. Smoking is generally had recourse to by hardened habitual opium eaters.

25,957. What have you to say as regards the effects of opium as a prophylactic against malarial fever?—Opium has been reputed as a prophylactic against malaria; but, as far as Bombay is concerned, opium is not used for any such purposes that I know of. Opium would undoubtedly act as a prophylactic against cholera from its stimulating and astringent properties.

25,958. Comparing opium with alcohol what is the result of your experience?—The habitual use of opium does not lead to the serious consequences which follow the use of alcohol. In moderate doses it acts as a tonic and stimulant, the individual having no tendency to the commission of any crime or acts of immorality. He is able to follow his daily avocation and to undergo a greater amount of physical and mental strain than non-consumers, or those that take alcohol. In larger doses it checks the secretions in the body, impairs appetite, and, if persisted in habitually, it brings about an enervating effect upon the general constitution, emaciation, and exhaustion. Alcohol taken in moderate doses assists digestion, and produces a general stimulant action upon the nervous system, which is more evanescent than that produced by opium. In large doses it generally leads to acts of immorality and crimes. In opium no organic lesions have been observed to take place, whereas alcohol, even in small doses, produces some organic changes in the tissues of the body. In large and continued doses alcohol gives rise to tremors, delirium tremens, and paralysis; and dementia has also been observed in habitual drunkards. None of these results occur even in the excessive use of opium.

25,959. Do you wish to say that even in small doses alcohol produces organic changes?—Even in small doses when it is long continued. Easy circumstances of life seem to retard the evil effects of opium, while on the contrary they enhance those of alcohol. Cases of opium-poisoning are generally suicidal; those of alcohol almost always accidental. It has been proved beyond doubt that alcohol in excessive doses produces degenerative changes in the offspring, and hereditary moral degeneracy. No such results have been observed to occur in cases of habitual use of opium.

25,960. Have you observed whether there is a tendency to increase the dose among opium eaters?—In the case of opium, the doses are gradually increased, because the system gets rapidly habituated to its use. In the case of alcohol, the system becomes habituated to increased doses from mere self-indulgence. Opium sustains the mental and muscular powers of the individual more so than alcohol, which decidedly lessens the capacity for active muscular exertion; the mental faculties, too, being only temporarily stimulated. I believe that a consumer of opium is able to bear a low temperature and other climatic influences to greater advantage than one taking alcohol under the same circumstances of life. In large doses opium checks the various secretions of the body, without producing degenerative changes. Alcohol checks them, producing degenerative changes in the liver and the circulatory system at large.

25,961. Have you made any post-mortem examinations of an habitual opium-eater?—No lesion whatsoever was discovered in the post-mortem examinations made during my college career, that I remember. Since then I have had no opportunity offered for a post-mortem examination.

25,962. Is the opium habit difficult to give up?—It seems difficult to give up the use of opium, even more so than that of alcohol. If compelled to give up, it will most probably be followed by the use of Indian hemp by the poorer classes of the people, which is a drug much more injurious than either opium or alcohol. The more educated and richer classes may substitute alcohol instead, but alcohol being strictly prohibited by both the Mahomedan and Hindu religions, the substitution will not be looked upon with favour by either of these communities. Alcohol could not be easily substituted for opium by the poorer classes, as alcohol is at least four times dearer than opium; hence its suppression will be most likely followed by the use of Cannabis Indica.

* For extracts from this book, see Appendix XXII. to this Volume.

25,963. What effects have you noticed opium has on the mental faculties?—Opium when taken in small or moderate doses acts as a stimulant to the general nervous system, thus stimulating the mental faculties and rendering the imagination more vivid. And this action does not, as in the case of alcohol, produce any degenerative changes in the brain. It does not destroy the discerning power of the individual or produce loss of memory, thereby interfering with his ability to conduct his own business, when taken even in increased doses. In excessive doses, although there is a disinclination or inability for any physical exertion, yet the mental capacity seems to remain intact—the patient not speaking incoherently as in the case of alcohol.

25,964. Have you any further observations you would like to make?—Since alcohol is a substance which is religiously prohibited by both the Mahomedan and Hindu religions, the suppression of opium and its substitution either by alcohol or Indian hemp will not be very acceptable to either of these races. Again, all classes of people over the world, so to say, from the most barbarous to the highly civilised, have recourse to some kind of nerve tonic and stimulant, whether for pleasure or to counteract the depressing effects of mental toil and bodily fatigue; the use of opium for the people of India cannot, therefore, be too strictly prohibited, without producing disastrous effects upon the country at large. If the use of opium was suppressed, some other form of nerve stimulant, probably alcohol, would replace it; but as I have already pointed out that alcohol produces degenerative changes in the tissues of the body, and offspring, and sows the seeds of moral degeneracy, the substitution of alcohol for opium cannot be considered good or wise, inasmuch as it could not morally be substituted for opium. Besides, the excessive use of alcohol it is always associated in the lower classes with crime and immorality—90 per cent. of prostitutes and their paramours are spirit drinkers, whereas hardly 10 per cent. of them take opium, and 20 per cent. take both opium and alcohol. Alcohol may consequently be said to be a direct means to immorality, which cannot be said to be the case with opium. The general use of alcohol would certainly be much more ruinous than that of opium amongst the lower classes of the people of India, on account of the heat and other climatic conditions here. Besides, it would appear probable that the adulteration of spirits, such as brandy and whisky, would be more easily done than that of opium. I consider it would be a boon to the people of India if alcohol were more restricted, or at all events lessened in strength. The masses of the people of India, with the exception of the educated classes, seem to be more or less dissatisfied with the Government on account of taxation and general poverty existing amongst the working classes and rayats. And any further interference with their privileges and liberties would in all probability give rise to very general dissatisfaction amongst all classes of people, which may result in disastrous consequences to the Government and the country at large. The policy would, therefore, appear unwise.

25,965. (*Mr. Moubray.*) Did your name appear among the signatures to the anti-opium petition?—Yes, I think it did.

The witness withdrew.

Mr. G. B. PRABHAKAR, L.R.C.P., called in and examined.

25,982. (*Sir William Roberts.*) You are an L.R.C.P. of London?—Yes.

25,983. You are practising at Bombay?—Yes.

25,984. What opportunities have you had of studying the effect of the opium habit?—My observations are applicable to Gohelvad Prant, one of the four districts of Kathiawar, and to the city of Bombay with respect to both Hindus and Mohamedans.

25,985. To what extent is opium used in these localities?—In Gohelvad its use is general. It largely enters into the social customs of Rajputs and Kathis, the two dominant castes of the prant; no gathering, either social or State, being complete without kasumbha or opium drink sipping. Kunbis, or cultivators, and other labouring classes who have to work hard in inclement weather, as well as artisan classes of whom patient and steady work is required, indulge more or less in this drug. Though they are not so much addicted to the use of this drug as Hindus, Musalmans, nevertheless, contribute a large per-centage to the opium-consuming population of the prant; Banias or traders, though otherwise a very sober people, are not

25,966. I presume, after hearing your evidence, you do not agree with the terms of that petition. Will you tell me how you account for your name appearing among the signatories?—I may have signed the petition but I do not remember it. If I did sign a petition it was not like that one, and so I had to change my opinion after signing it. That was the reason I said I wished to withdraw if I had signed.

25,967. When did you take that step?—After I received a letter from Mr. Rustomji some two or three months ago. Mr. Rustomji is one of the opium inspectors.

25,968. Was that the first time your attention was drawn to the fact that your name was appended to this petition?—Yes.

25,969. When was that?—I think it was two months ago. I do not recollect the exact time.

25,970. Did you then say that if you signed the petition the first time you saw it you certainly did not agree with it when you saw it the second time?—I think, probably, the wording of the petition was changed.

25,971. Do you mean to say that the petition which we now have before us, and to which your name is appended as a signatory, is not worded in the same way as that to which you originally put your name?—I think so.

25,972. Do you say you never saw this petition which is before us, and to which your name is attached, until two or three months ago?—I cannot say the exact date, it may have been more than that.

25,973. At any rate, it was not until two or three months ago that you took any steps to withdraw your signature from the petition which you now say you disagree with?—That is so.

25,974. What steps did you take to dissociate yourself from the petition when it was brought to your notice that the petition to which your name was appended was not the one which you agreed with?—I wrote to say I had no recollection of signing it, and that if I did sign it my name was wrongly spelt.

25,975. Whom did you write to?—To the Parsi gentleman who brought me the papers. I did not care much; I was very indifferent about the matter. I also said that if I did sign the petition I saw reason to withdraw my name, because the wording was different from the one I saw.

25,976. Did you keep a copy when you signed the original petition?—No.

25,977. Can you say what your impression is about it? Do you recollect having signed the petition?—I recollect having signed some petition. I may have signed, or I may not have signed.

25,978. And if you did sign, the petition did not contain the terms which it now contains?—That is so.

25,979. (*Mr. Pease.*) Was a form handed to you for signature like this [*exhibiting a form*]?—I think it was in manuscript.

25,980. Who was the individual who handed it to you for signature?—A peon.

25,981. You do not know his name?—No.

quite free from this habit, and even Brahmins have solitary instances of opium eaters among them. But these two castes are comparatively small. I would put the proportion per mille of persons using opium at about 150, mostly males, though women in this part of the country are not quite free from the use of this drug; these cases are few and far between, and it is taken as a remedy for some chronic complaints rather than for intoxication. In Bombay the proportion is small, the habit being more or less confined to persons hailing from Kathiawar, North Gujarat, Central Provinces, and Upper India. Among the Dekhans the use of this drug is limited to labouring classes, who administer it to their infants in the form of soothing pills called bala golis.

25,986. What effects have you observed from the opium habit?—I have not come across cases where moderate use of opium has led to physical deterioration or moral degradation. I have seen many respectable persons, 60 to 70 years old, who, though using the drug for the last 30 or 40 years, have been keeping very good health for their period of life. I do not believe that moderate use of opium leads to any untoward consequences. There is no

change in appearance, and it is often very difficult to distinguish by appearance a consumer from a non-consumer. And even when a person abuses the drug he suffers rather in body than in morals. The abuse of the drug results in physical inactivity, dulness of intellect, and emaciation.

25,987. In what manner is opium consumed in these districts?—In Gohelwad, among Rajputs and Kathis, and among such persons as have the privilege of attending the gatherings of these classes, kasumbha is the favourite form of using opium. In preparing kasumbha, opium is first dissolved in water and then strained through a piece of cloth, and the solution is flavoured with sugar and cardamoms, and scented with rose petals. But pills are the more general form of opium taking. In Bombay it is also smoked, and there are some persons who are in the habit of getting morphia injected hypodermically. Opium drinking and opium eating are similar in effect; opium either drunk or eaten in moderation sharpens intellect, assists digestion, partially increases staying powers, and has a soothing influence. Opium smoking is said to be always attended by evil results, but I have had very few patients from among opium smokers. The number of persons injecting morphia is negligible.

25,988. Is opium, so far as you know, used as a prophylactic against malarial fever?—Opium is used as a prophylactic with considerable beneficial results in the following diseases: dyspepsia, diarrhoea, dysentery, malarial fever, cold, rheumatism, neuralgia, and diabetes. In some cases it acts as an antiperiodic, and when taken in cold stages it cuts short the cold stage.

25,989. Does the habitual use of opium affect the people more than the habitual use of alcohol would?—No. The consequences of the habitual use of opium are not as serious as those which follow the use of alcohol. I have already stated that habitual moderate use of opium does not lead to any serious consequences, nor is moderate use of alcohol attended by evil consequences. But in the case of alcohol there is one danger. An habitual drinker when drinking in company often drinks more than he has been accustomed to, while an habitual opium consumer rarely exceeds his usual dose, though he be in company. Opium when taken in excess impairs the digestive system in general, engenders lazy habits, causes dulness of intellect, and produces anæmia and emaciation. In this stage the person becomes careless about his affairs and regardless of public opinion. An opium eater is always quiet, while a drunkard is always boisterous, and is thus troublesome to his neighbours. Again, the effects on the human body of excessive use of alcohol are more serious than those of excessive use of opium. It impairs the digestive organs in general, causes enlargement of liver, and produces degeneration of brain and spinal cord, and often ends in delirium tremens.

25,990. Is the habit easy to break off?—In the majority of cases it is found difficult to break off the habit, but it is not so difficult as is generally supposed. I have seen several persons giving up the habit in their old age, and I

have made prisoners break off the habit. While at Palitana (in Kathiawar) as State medical officer in 1880, I was ex-officio superintendent of the State jail, containing 70 prisoners, of whom 25 were opium eaters. I stopped altogether the issue of opium to prisoners, and they grew mutinous, and I had to give in; but I changed my plan and gradually reduced their doses, substituting extract of gentian for opium, and within three months the habit was broken off. If the habit is given up by consumers of their free will they will not take to alcohol or other narcotics, but if they are forced to break off the habit there is every chance of their taking to alcohol or some narcotic, and there is every probability of their preferring alcohol to narcotics, as the use of alcohol is coming in fashion and religious scruple against the use of alcohol is wearing away. Among younger generations of Rajputs the use of opium is on the wane, but alcohol is taking the place of opium and with frightful results.

25,991. What is the effect of opium on the mental faculty?—I have already stated that moderate use of opium sharpens intellect, while its excessive use causes its dulness. I do not believe that habitual moderate use interferes in any way with the consumer's ability to conduct his business successfully.

25,992. Have you any further observations to make?—Moderate use of opium does not shorten life, as is generally supposed. I have seen habitual opium eaters living to the old age of 80 years and in good health. I had a case of a riding fracture of the thigh bone. The patient, a Rajput of 80 years old, was an habitual opium eater. He did not allow me to administer to him chloroform, but took himself an opium pill and allowed me to handle his thigh for about 25 minutes without moving a muscle of his face. It is again urged that sale of opium should be prohibited, except for medical purposes. If such a measure were carried out, it would prove disastrous; instead of being a boon it will be a bane to the rural population of the malarious parts of Kathiawar. There are hundreds of villages in these parts where either a qualified medical practitioner or a native vaidya or hakim is not found to treat poor villagers. And if the sale of opium is prohibited to any one but medical practitioners, the poor will be deprived of the only remedy they know for most of the prevailing diseases, and as a consequence the death-rate of such districts will increase considerably.

25,993. (Mr. Haridas Vekaridas.) You say "religious scruple against the use of alcohol is wearing away," what is the cause of that?—I think it is owing to the spread of education and western habits and manners.

25,994. (Mr. Fanshawe.) You are a Parbhu, are you not?—Yes.

25,995. Can you tell me whether the use of opium as a restorative is common among the old men of the Gohelwad district?—It is very rarely used in that way.

25,996. Your personal experience has been in Kathiawar and Bombay only?—Yes.

The witness withdrew.

Khan Bahadur
Dossabhai
Pestonji.

KHAN BAHADUR DOSSABHAI PESTONJI, called in and examined.

25,997. (Sir William Roberts.) You are assistant surgeon at Surat?—Yes.

25,998. You are honorary assistant surgeon to H.E. the Viceroy and a Fellow of Bombay University?—Yes.

25,999. Where have you gained your knowledge of the opium habit?—My observations as regards the use of opium are applicable to the district of Mahi Kantha, to the men belonging to the Gujarat Irregular Horse at Ahmedabad, and to the city of Surat, and the races to which they extend comprise Mahomedans and Hindus. In the year 1860 I was appointed to the medical charge of the Mahi Kantha Political Agency at Sadra. In this station there were located at that time 1,000 horse belonging to the Gaekwar Contingent. Their duties consisted in patrolling the district, in furnishing escort party to the political officers during their tour in the province, and in bringing mails from Ahmedabad to Sadra, a distance of about 20 miles. The men of the Contingent consisted principally of two classes, viz., Marathas and Mahomedans. Amongst them there were a great many addicted to the use of opium, and they were considered most useful and active in the proper discharge of their duties. In the year 1862 I was appointed to the medical charge of the Gujarat Irregular Horse, under the command of Colonel Harpur. Most of these men consisted of Mahomedans, and some of them were opium eaters. Since the year 1865 I have been stationed at

Surat in medical charge of the Parakh Dispensary, where nearly 10,000 patients are treated annually. I have also extensive practice amongst the population of the city, which number about 110,000 people, of whom the greater portion consists of Mahomedans and Hindus.

26,000. To what extent is opium used in this district?—In the province of Mahi Kantha there were, on an approximation, 20 per cent. of the total population addicted to the use of opium. Amongst the men of the Gujarat Irregular Horse the proportion was not so great as above, and in the city of Surat consumption of opium is much limited, being only 2 or 3 per cent. of the whole population. Amongst a class of people called the Dheds, who are the principal operatives in the mills, the use of opium is almost unknown.

26,001. What effects have you observed from the habitual use of opium?—In small doses it produces exhilarating and a tonic effect, it sharpens the appetite, and increases the power of endurance to physical work and mental application. It is a good anodyne in cases of rheumatism, gout, and lumbago. When taken in large doses it produces general emaciation of the system and a pale and sallow expression of countenance.

26,002. In what form is opium used?—It is used in two forms, solid and liquid. In the solid state it is taken in the form of a pill or smoked in a pipe. In the liquid form

it is mixed with pure water and filtered through cotton wool and then called kusumbha, which is generally used amongst the rich on occasions of marriage and general rejoicings amongst their families.

26,002. Is it used as a prophylactic?—Opium is used as a prophylactic in malarial districts against fevers, chills, and rheumatism. Also in cases of asthma and chronic bronchitis it is used with beneficial results. In diabetes and chronic dysentery its effects are sometimes marvellous.

26,003. How would you compare the effects of opium with the effects of alcohol?—I am of opinion that the habitual use of opium as indulged in by natives does not lead to consequences as serious as those which follow the use of alcohol. When opium is taken in small doses it renews the vital powers and renders its user more able to endure fatigue and mental exertion. The well-to-do habits take it to excite and increase their sexual powers. This cannot be said about the use of alcohol, the after effects of which are languor and lassitude. In large doses, opium produces general emaciation of the system, but produces no organic lesion of any kind. When alcohol is taken in excess it produces delirium tremens, hepatic abscess, and softening of the brain.

26,004. Is it difficult for the habit to be given up?—It is difficult for a confirmed opium eater to give up the habit, and if he is compelled to do so, he would soon fall into the habit of taking alcohol or dhatura seeds, which would be a greater calamity to him both bodily and mentally.

26,005. What is the effect of the opium habit on the mental faculties?—When a man is in the habit of taking opium in moderate doses it produces no mental disability of any kind, even when he attains to an old age. I know the case of an opium eater, who is now 80 years old, but who is as strong and active and is considered a most useful servant by his employers and is still in their service.

26,006. Have you any other observations to make?—I am respectfully of opinion that any attempt to prohibit the growth and sale of opium would cause considerable discontent amongst the people and would lead to political

complications with the Native States. It would also cause much deficit in the revenues of India, which, in the present straitened condition of the finances, would render the administration of the country extremely difficult.

26,007. (Mr. Pease.) Have you met with numerous cases of this general emaciation of the system, and the pale and sallow expression of countenance to which you allude?—Not many cases of confirmed opium eaters.

26,008. What quantity did this person of 80 years of age, whom you mention, take?—Nearly 12 grains, six in the morning and six in the evening.

26,009. He was not a very excessive consumer then?—No.

26,010. (Mr. Fanshawe.) You state that the mill operatives at Surat are not consumers of opium—is it the case that they are large alcohol drinkers?—They drink a large quantity of toddy.

26,011. (Chairman.) Is there any particular custom of any class to take dhatura seeds?—No, there is no particular custom; the people smoke it along with ganja.

26,012. (Mr. Pease.) Is it not the fact that when toddy is first drawn from the tree there is no alcohol in it at all?—It does contain alcohol to a certain extent, but it is not strong until it undergoes fermentation.

26,013. Is not toddy consumed in the evening when it is drawn?—Sometimes in the morning and sometimes in the evening. If it is allowed to remain 12 hours it becomes strong.

26,014. There is a certain amount of alcohol, but it can hardly be called intoxicating when it is only 12 hours old?—It depends on the kind of tree, some trees give strong toddy, some give mild.

26,015. I have understood that it was impossible for a person to become intoxicated with toddy which was drawn one day and consumed in the evening of that day, but if it was allowed to stand for another 20 hours it would become heady?—That is so.

26,016. It is usual to consume toddy the evening of the day it is drawn?—Yes.

The witness withdrew.

Mr. B. H. NANAYATI called in and examined.

26,017. (Chairman.) I believe you are a graduate of Bombay University, an assistant surgeon in the Bombay Medical Service, and a teacher of surgery and midwifery in the Byramji Jijibhai Medical School, Ahmedabad?—Yes.

26,018. In what districts have you had experience of the opium habit?—I have held charge of dispensaries in parts of Gujarat, Dharwar, and Khandesh, and my observations regarding opium eating are based on experience gained in the discharge of my professional duties extending over a period of about 12 years.

26,019. To what extent is opium used among the population you have had experience of?—I do not think the consumption of opium is unusually great either in the Ahmedabad city or in its districts, for in the former, with a population of 144,451 souls, the amount of opium sold during the year 1892-93 was 4,781 lbs., and in the latter, with a population of 780,845 souls, it was 15,104 lbs. only.

26,020. Do you think these figures show the real consumption?—They have been taken from the farmers and are reliable statistics.

26,021. Is there much illicit opium used?—I cannot tell you.

26,022. What are the effects of opium on the physical condition of the consumer?—A moderate use of opium does not debase a man's morals, or degrade his sense of truth and honesty, and I do not believe that the habitual opium eater is the degraded and untrustworthy individual he is so often represented to be. As regards the physical effect of the opium habit, I may say that I do not share the belief of those who state that it produces a slow, but steady, degeneration of the muscular tissues, with various disorders ultimately leading to extreme emaciation of the body. On the contrary, I am of opinion that its moderate use enables a man to undergo a vast amount of toil and fatigue; that it happily makes him regardless of the minor evils of life, such as insufficient clothing, bad food, scanty meals, and renders him to a certain extent proof against exposure to cold, wet, &c. Such a person is generally hardy and well-conditioned, and fit for hard, active work. When the habit is first contracted, opium produces a slight

sense of drowsiness; but this wears off soon, and its effect upon the habitual consumer is one of exhilaration of spirits. Its moderate use, especially during the middle and old age, brightens the intellect, promotes digestion and general activity of the body, and sustains the system during periods of great hardship and exertion without any marked discomfort and pain. But opium, if taken in excess, is certainly deleterious in its effects, and produces those trains of symptoms such as derangement of digestion, diarrhoea, and general wasting of the body, and which are so often erroneously supposed to result from its ordinary moderate use. Its moral effects under similar circumstances are equally pernicious. It weakens memory and moral control, often rendering the man unfit for any active occupation. Such cases, however, are very rarely met with, and I do not remember having come across more than one solitary instance of this kind in the course of my experience.

26,023. How is the habit generally began?—The poor, and perhaps the middle class persons, generally begin the use of the drug for relief of some bodily infirmity or pain, as rheumatism, diarrhoea, dysentery, diabetes, &c., whilst amongst some of the well-to-do and the better class of people it is perhaps used more as a luxury. The usual period at which the habit is contracted is between 35 and 40 years. People of this age use it more largely than those under it, with a view to prevent bodily waste, to add to their comfort, and to keep the various functions of life in order and regularity. It is at this period of life and after that it proves of the greatest benefit. I have already mentioned that in the habitual consumer opium exerts a stimulating effect, and that is the reason why the habit is kept up, even after the relief of pain for which it was probably originally used.

26,024. Do you think opium is ever used in this country as a prophylactic, and, if so, for what reasons?—I am of opinion that it is a prophylactic against malarial fevers, and under this belief it is often generally used by the labouring poor. I believe that it is a potent factor in conferring, to a great extent, immunity from these diseases in districts where they are widely prevalent. My personal testimony may be of some value in this respect. I was in medical charge of Kharaghoda (a small place about 80

Khan Bahadur
Dossabhai
Pestonji.

14 Feb. 1894.

Mr. B. H.
Nanavati.

Mr. B. H.
Nanavati.

14 Feb. 1894.

miles away from Ahmedabad, where extensive Government salt works exist) in the years 1886-87, and was struck with the fact that whilst the residents of that little place—almost to a man—suffered from malarious fever and its effects, the only class of people who almost entirely enjoyed immunity from them were the “Agrias,” men who manufactured the salt, and a few others. This led to an inquiry on my part, which revealed the important fact that most of them were in the habit of eating opium habitually, and that they had a belief in its efficacy as a prophylactic. This belief is well grounded, for “narcotine,” one of the constituents of opium, has been known to possess considerable anti-periodic powers. A similar inquiry was, at my request, made by the officer in charge of the works, and the results of these inquiries have also gone far to strengthen my belief in the prophylactic virtues of opium. It is also valuable in subduing neuralgic pains of all kinds, as well as in preventing their recurrence.

26,025. Are the consequences of the habitual use of opium very serious, and how do you contrast them with those that follow the excessive use of alcohol?—Opium in moderation, especially during the middle and old age, acts as a soothing stimulant, helps digestion, and promotes general bodily vigour and comfort. A moderate amount of alcohol, at a similar period in life, acts in an equally beneficial manner. But both, in excess, are injurious, and alcohol, certainly, much more so than opium. It is perhaps needless to add that an opium sot is an idle, lazy, inoffensive creature, but a drunkard is a great nuisance. The former is sure to remain in a state of repose or lethargy, but the latter is most likely to grow quarrelsome or dangerously violent at any unexpected moment. Alcohol is a good deal responsible for poverty, destitution, and crimes; and certainly this cannot be said of opium. Every medical man knows that alcohol in excess causes degeneration and diseases of the various organs in the body, but I am not aware of any organic disease being caused by opium whether taken moderately or in excess; of course, the abuse of opium leads to various disorders, e.g., diarrhoea, emaciation of the body, with a weak state of mind, perhaps bordering upon imbecility, but such cases are exceedingly rare. Briefly speaking, it may then be said that the evils attending the excessive use of this drug are very insignificant in comparison with those resulting from the abuse of alcohol. It is said that the use of opium (even in moderation) shortens life to a very great extent. I disagree from this view, for I know a large number of men who, at 45-50 years, and more, are in excellent health, with every prospect of a still further tenure of life before them.

26,026. What effect has the habitual use of opium on the mental faculties?—Opium does not impair the mental faculties of the habitual consumer. The Marwaris, though habitual opium eaters, are, nevertheless, a shrewd business-like class of people. I believe, therefore, that bearing in

mind the peculiarities of the climate, the habits of the people, and their avocations often requiring them to undergo excessive bodily fatigue and exertion under a tropical sun, with perhaps a diet not far removed from semi-starvation, the use of opium in moderation, far from being a vice, is a real boon to the poor. It is in the nature of mankind to seek solace in stimulants, in one form or another, and opium is the one that is most suited to the people of India. It appears to me that it would be as difficult, if not impossible, to compel the people of India to give up the habit of opium taking as to turn the whole of the inhabitants of Great Britain into total abstainers. If Government were to prevent the use of opium, the people would naturally be driven to seek solace in a free and immoderate use of alcoholic drinks of all kinds, or of the Indian hemp, which must, unfortunately, result in increase of misery, crimes, and mortality.

26,027. Have you any other remarks to make?—In conclusion, therefore, I venture to state that as stringent rules in connexion with the growth, sale, and consumption of opium already exist, additional prohibitive measures are unnecessary; and interfering, as they would be, with the cherished social habits and customs of the people are likely to be viewed as oppressive, and to give rise to great discontent.

26,028. (Mr. Pease.) Do you think the quantity in the Gujarat district is decreasing?—I cannot say.

26,029. We were told in Ahmedabad that there was a very great decrease?—I am not in a position to confirm that.

26,030. Do you think the custom of using opium on ceremonial, social, and other occasions is losing its hold on the people?—I do not know that it is losing its hold on the people of Gujarat.

26,031. (Mr. Haridas Veharidas.) Do not you think opium eaters require nourishing food?—I do not think so necessarily.

26,032. Opium would not do those who cannot afford to get nutritious food so much good as those who can afford it?—I have said that a moderate amount of opium enables a poor man to tide over many difficulties, and he can go without a meal and work all the same with the help of opium.

26,033. That would only be for a time. Of course if he took opium every day he would require some nourishing food?—I do not think so.

26,034. Would the effects of the excessive consumption of opium be the same on a poor man who could not afford nutritious food than on those who can afford it?—Yes, the same.

26,035. Would it not do the poor man injury?—It would do them both injury; but I think it would do more injury to the man who could not get nutritious food.

The witness withdrew.

Dr. Vishram
Ramji Ghole.

Dr. VISHRAM RAMJI GHOLE called in and examined.

26,036. (Sir William Roberts.) You are a retired assistant surgeon and an honorary assistant surgeon to His Excellency the Viceroy and Governor-General of India at Poona?—Yes.

26,037. Where have you had opportunities of studying the opium habit?—My observations are applicable chiefly to the district of Poona, though I have served at Ahmedabad, Bassein in Thana Zilla, Bombay in the Sir Jamsetji Jijibhai Hospital, Karachi, Kumta in Kanara Zilla, Mhow, Sehore, Jhansi, Gwalior, &c. My observations are applicable to all classes of people, viz., Musalmans, Hindus, Parsis, Jews, Christians—natives as well as Europeans.

26,038. To what extent is opium used in the districts of which you have had experience?—In the district of Poona grown up persons eat opium, and opium is given to children. About 60 per cent. of children amongst Hindus and Musalmans are given opium. It is commenced when the children are about a month old or earlier, and continued until they are about two years old. The quantity given to each child averages from one-twentieth of a grain to one grain for a dose given morning and evening. The quantity taken by grown up persons averages from one to twenty grains daily taken morning and evening. In exceptional cases the quantity taken averages from one to two drachms or more daily. The proportion of persons taking opium amongst the urban population is about 20

per mille and about 2 per mille amongst the rural population.

26,039. Are you speaking of the entire population?—Yes.

26,040. What effects have you noticed from the opium habit?—In moderate doses, such as are commonly used by the working and other classes of people, the effect of opium is as follows:—It excites and exhilarates the person, his intellect is brightened, he feels invigorated (while he is under the influence of the drug) to do his daily work; he is able to digest his food better. Morally speaking the opium eater is quiet, non-quarrelsome, and is just as well behaved as one who does not take opium. His body is pretty well nourished if he gets sufficient food. By long usage his features look haggard and careworn. His life is in no instance shortened, but, on the contrary, it seems to be prolonged and is rendered more enjoyable, especially in old age. Abuse or excessive use of the drug is baneful both mentally and bodily. The excessive opium eater looks haggard in the face, is emaciated, looks dull and inactive, and is generally unfit for work. He loses his appetite, and suffers from constipation of the bowels, nervous and mental weakness, but such cases are few, and are found only amongst the idlers and mendicants. Opium is eaten in the shape of pills. Opium is made into solution called kasumba and drunk. This method is practised in Gujarat, Kathiawar and Marwar, and it is smoked

either as chandul or madat. Chandul is prepared thus :—A piece of opium is taken and mixed with the dregs of previously smoked opium. This mixture is macerated in water. The infusion thus prepared is boiled and strained through a piece of felt or thick cloth to purify it or remove the extraneous matter and the resultant fluid is kept in a phial. The smoker takes an iron spit, dips its further end in the fluid and holds it on a flame of a burning lamp to thicken and dry it. He goes on doing this several times until a mass about a grain or two in weight is formed on the end of the spit. He puts this dried mass into a hole made in the side of a small China inkstand, on the top opening of which a small pipe is attached for a mouth-piece. He applies a flame of a ghee or cocoanut lamp to the mass put in the side hole of the inkstand and smokes it in a whiff or two. He repeats the smoking till he is sufficiently under the influence of the drug. Madat is prepared thus :—About five grains of opium are taken and mixed with about a treble quantity of powdered charred babul leaves and made into a bolus of the size of a small betel-nut. The smoker provides himself with a small hubble-bubble or hooka which consists of a cocoanut shell for containing water and a pipe stuck on the top of the shell and another pipe stuck in the side of the shell for the mouth-piece, the top pipe is without the usual receptacle called chillum which is used for smoking tobacco. The smoker takes a small piece out of the bolus, puts it on the top of the top-pipe and applies the burning end of a small stick to it and takes in two or three puffs when the opium burns off with a slight noise and the refuse falls down. Opium takes about half an hour to act when taken in the shape of pills. When taken as solution it acts sooner than when taken as a pill. When smoked, it has effect in a minute. Smoking of opium acts more injuriously on the system than eating it. Dull and heavy looks, wrinkled face, debility, emaciation, some deterioration of the mental faculties, moral weakness, depraved appetite, &c., are more pronounced in opium smokers than in opium eaters.

26,041. What is your opinion about the use of opium as a prophylactic?—It does not seem to be used as a prophylactic for any disease in the district of Poona.

26,042. How would you compare the habitual use of opium with the habitual use of alcohol?—The use of opium as taken by the natives does not seem to lead to consequences so serious as those which follow the use of alcohol.

26,043. Does the use of opium appear to shorten life?—No, I have seen men 70 and 80 years old who take opium.

26,044. Have you known it to cause suicide?—No.

26,045. Have you made post-mortem examinations of opium eaters?—I may have performed post-mortem examinations on persons addicted to the use of opium, and who had died of other diseases, but my attention was not drawn to any organic lesion as caused by opium eating alone.

26,046. Is the opium habit difficult to give up?—In the case of adults it is very difficult and distressful to leave off the habit when once formed, and when it is given up it is very likely to lead to the use as well as abuse of other intoxicants, notably to alcohol primarily, and then

to bang or to datura, stramonium, hyosciamus, nux vomica, cocculus indicus, nutmeg, narium, oleander, &c. In the case of children, when they are once weaned off from the habit they cry for some days and feel uneasy, but no other drug is resorted to as a substitute in their case. The practice of giving opium to children, highly reprehensible as it is, does not seem, when once given up, to lead to the formation of the habit in after life.

26,047. You disapprove of giving opium to infants?—Yes.

26,048. What is the effect of the habitual use of opium on the mental faculties?—In moderate doses the habitual use of opium brightens the mental faculties and produces a state of exhilaration and invigorates the body and mind, and enables the consumer to perform his mental and bodily work better and without feeling fatigued. If he does not get his usual dose, then his mind becomes confused, his attention is diverted, his bodily powers become languid and he feels exhausted; there is running from his nose, his bowels become relaxed, and he cannot digest his food properly—in a word, he becomes uncomfortable and unhappy.

26,049. Have you any other observations to make?—No doubt the habitual use of opium is a vice, as is the use of alcohol, and, as such, both should be reprobated. The habit of using opium is acquired by some persons by imitation and association with opium eaters; by others, as in Marwar, Gujarat, Kathiawar, &c. by custom. Majority of persons get into the habit by taking it for the alleviation of suffering and prevention of disease; many persons take it to prop up their strength in old age; some persons become accustomed to take opium by using it for sexual weakness and to ward off fatigue after exertion; so it will be found impossible to suppress the evil, nor would it be justifiable to do so. The practice of giving opium to children, so universally followed in India by working and other classes to put their children to sleep so as to enable the mothers to do their daily work, is another insuperable obstacle to the prohibition to the use of opium. If it is stopped for “non-medical purposes” it will be obtained by opium eaters under the pretext of sickness or by smuggling, so it will be found very difficult and vexatious to limit its use to medicine alone. The people would certainly feel aggrieved and oppressed if the use of opium were prohibited for non-medical purposes. By taking all these circumstances into consideration it seems to me unnecessary to interfere with the production and sale of opium. The present restrictions about it are quite sufficient to control its use.

26,050. (*Mr. Fanshawe.*) We have been told that in some parts of India the practice of giving opium to infants is common amongst the better classes as well as among the lower classes. Is that your experience?—Yes, in some cases among the better classes.

26,051. You speak mainly of the working classes?—Yes, but the better classes also do it.

26,052. In their case do you think it is open to objection?—I think it is open to objection in both cases.

26,053. Have you known cases among the upper classes where the practice has led to loss of life?—I have seen some cases, but they were accidents.

The witness withdrew.

Mr. GANESH KRISHNA GARDE, L.M., called in and examined.

26,054. (*Sir William Roberts.*) You are a Licentiate of Medicine of Grant College, Bombay, and a private medical practitioner of Poona?—Yes.

26,055. What opportunities have you had of studying the opium habit?—My observations are applicable to the Poona district, and to Hindus, Mahomedans, and native Christians. In this district opium is given to children as a soporific, calnative, or soothing agent. It is commenced after they are a few weeks old, and is continued in gradually increased doses until they are about three years old. The dose ranges, according to their age, from one-sixth of a grain to a grain and a half, morning and evening. About 90 per cent. of the children of Poona are habitually drugged with opium. The proportion of opium-drugged children in the district is a little less than this. I have estimated it at 75 per cent. The proportion of opium eaters among the adult population of the city is approximately 9 per mille, and in the district about 1 per mille. The majority of these are Mahomedans.

26,056. That is a very small proportion; you say not more than 1 per mille of the grown-up people are opium eaters?—Yes, in the district.

26,057. What effects have you observed from the habitual use of opium?—In moderate habitual consumers it does not seem to produce any appreciable effects on the moral and physical condition of the consumer. The only bad effect that may be attributed even to a moderate dose in many cases is constipation of the bowels, and disturbance of digestion consequent upon it. But the habitual opium eater tries to prevent this effect by the use of large quantities of fatty substances, especially milk, in his diet. The above statement is true only with regard to the internal use of opium by the adult. The effects of opium smoking, on the other hand, are pernicious even in small doses. It produces dyspepsia, anæmia, emaciation, nervous debility, dulness of intellect, and failure of memory.

26,058. Are you speaking of madak or chandu smoking?—Both. The same may be said with regard to the effects

Dr. Vishram Ramji Ghole.

14 Feb. 1894.

Mr. G. K. Garde, L.M.

Mr. G. K.
Garde, L.M.

14 Feb. 1894.

of administering opium to children for the purpose of keeping them quiet. Even small doses produce a very injurious effect on their delicate constitution. The principal disorders attributable to opium drugging in children in this province are constipation, dyspepsia, anæmia, enlargement of the liver, and convulsions. The excessive habitual use of opium produces very injurious consequences; the digestive organs are greatly impaired, the energy of the mind is lessened, memory is destroyed, the person is incapacitated from managing himself or his affairs, a state of fatuity and abject misery is induced. The excessive consumer's look is haggard, sallow, and stupid; he is extremely emaciated, his blood is impoverished, and he wears a cachectic appearance. But with all this it is very curious that none of the important organs of the body seem to be specially affected with any organic lesion, as is the case with alcohol. His moral nature may also be altered to some extent, but not in such a way as to make him offensive to his neighbours, or to excite him to crime.

26,059. Is the excessive consumer very exceptional?—Yes, in Poona.

26,060. In what modes is opium consumed in Poona?—Opium is consumed in Poona in two ways, viz., eating and smoking. It is eaten by the habitual consumer, in the form of a pill, generally twice a day—morning and evening. The average dose in the case of adults is 8 grains. The majority, however, eat much less than this (about half that quantity), and a few (and these are exceptions) consume as much as 48 grains at a time. There are two ways of smoking opium prevalent in the district—madak (vulgarly called madat) and chandu. Madak is thus prepared:—A little opium is boiled with water. The resulting decoction is strained and again boiled down to the consistence of an extract. One tola of this is mixed with a quantity of leaves of babul (*Acacia arabica*), the whole beaten together and made into 24 pills. One of these pills is put in a kind of huka, kindled and smoked. An ordinary smoker will use on an average six pills (containing 48 grains of opium) each time. The preparation of chandu differs from madak in not containing a diluent like the leaves of babul. A liquid extract of opium is kept ready. It is condensed into a solid pill by the heat of a lamp just at the time of smoking. The dose for an average smoker is about the same as madak. The effects of a moderate dose of opium, whether taken internally or by inhalation in one of the above methods, are as follow:—The pulse is increased in force, fulness and frequency, the temperature of the skin is augmented, the muscular force is increased, the senses are quickened, the spirits animated, and new vigour given to the intellectual faculties. Its operation, while thus extending to all parts of the system, is directed with peculiar force to the brain, the functions of which are considerably exalted. In a short time this excitation is cooled down into a general calmness both of body and mind; and the individual becomes forgetful of all care and anxiety. If the person is not a habitual consumer, these effects are followed by sleep, which having continued for four or five hours is succeeded by some after-effects, such as nausea, headache, tremors, &c., which soon yield to the reaction of the system. These after-effects are not produced to any appreciable degree in the habitual consumer. Opium diminishes all the secretions of the body with the exception of perspiration, which is slightly increased. The peristaltic action of the bowels is also lessened. Both these effects are not so general or marked in the habitual consumer. When opium is taken internally, the effects commence to take place after about half an hour, but the effects of smoking are instantaneous and more energetic. The majority of opium smokers are Mahomedans. Since the closing of the shops where the preparations of opium for smoking (chandu and madak) could be obtained ready prepared, and were allowed to be smoked by Government license within the premises, the number of these smokers has lessened. There are said to be, however, about 500 opium smokers in Poona.

26,061. Is opium used as a prophylactic by old men in Poona?—It is used as such by some old men in this province for preventing cold, bronchial catarrh, and senile asthma, and, I think, with success.

26,062. How do you compare the effects of the use of opium with the effects of the use of alcohol?—The effects of the habitual use of opium are much less serious than

those of alcohol. The effects of moderate doses of opium and alcohol, both on body and mind, are well nigh similar, with this difference, that while both act as general stimulants and exhilarants, the intellectual and imaginative faculties are more exalted by opium than by alcohol. The secretions with the exception of perspiration are diminished by opium, while they are mostly increased by alcohol. The sleep following the exciting effect in the case of opium is more sound than that of alcohol, but the after-effects of the former are in many cases, especially in novices, more marked and disagreeable. Taken in excess, both lead to serious consequences, those produced by alcohol being by far the most dangerous. Although excessive indulgence in opium produces, in the long run, the most miserable condition of body and mind by inducing dyspepsia, languor, nervous prostration, poverty of blood, emaciation, and a cachectic condition of the body and weakness of memory and intellect, yet it is not known to produce any organic mischief in any organ of the body, nor to induce any particular disorder of the body or mind beyond those mentioned above, nor to shorten life. Alcohol, on the other hand, when habitually indulged in, in excess, is known to produce gastric catarrh, congestion, cirrhosis and abscess of the liver, hæmorrhoids, diabetes, gout, acute and chronic Bright's disease, gravel, ascites, laryngitis, palpitation, angina pectoris, heart disease, delirium tremens, dipsomania and other forms of insanity, in many cases characterised by suicidal and homicidal tendencies, moral degradation, apoplexy, atrophy of the brain and paralysis. It acts preeminently as a cause of shortening life, and producing premature old age. The connexion of drunkenness with crime is also a well-established fact. No lesion of any kind in any part of the body, attributable to opium, has been ever discovered from post-mortem examinations.

26,063. Is the opium habit difficult to give up?—A habitual consumer of opium finds it impossible to give up the habit, and when given up, it is in many cases likely to be substituted by the use of alcohol or other intoxicating drugs, as ganja, bhang, charas, dhatura, &c.

26,064. What is the effect of opium on the mental faculties?—The habitual moderate use simply stimulates and exalts the mental faculties, and instead of interfering with the consumer's business, it enables him to do more work. The habitual excessive use of it, however, renders the mental faculties dull, and so interferes with the consumer's ability to conduct his business successfully. From the foregoing observations it is evident that no case has been made out for legislative interference with the growth of poppy and manufacture and sale of opium in British India, and that the system at present followed for regulating and restricting the opium traffic can control the consumption of opium as far as it is practicable. Any further restriction on the consumption of the drug is sure to be followed by the greater evil of intemperance, or resort to other drugs. The idea of total prohibition, therefore, is, under existing circumstances, mischievous and calculated to do more evil than good, both from a medical and financial point to view. Before such a prohibition is thought of the liquor shops that have spread all over the country, and the number of which is increasing every year, should be closed each and all, and the growth, manufacture, and sale of the hemp narcotics should be prohibited all over the kingdom.

26,065. (Mr. Fanshawe.) You said that since the closing of the smoking shops in Poona the number of opium smokers has lessened—have you any trustworthy information to enable you to make that statement?—Yes, I have made careful inquiries.

26,066. You can speak with some certainty about it?—Yes.

26,067. You also say, "The liquor shops are spread all over the country, and the number is increasing every year"—are you referring to native liquor shops, or what?—All shops; toddy shops, &c.

26,068. Are you quite sure that the number of shops is increasing every year?—The consumption is increasing.

26,069. Are you sure about the shops?—The consumption is increasing, and therefore I presume the shops are also increasing. I am sure they have increased in Poona city.

The witness withdrew.

Mr. R. M. DANE called in.

26,070. (*Chairman.*) I believe you wish to make an application to us?—Yes. The evidence of the witnesses from the Madras Presidency who were selected by the Commission for examination was taken yesterday, and I now request that, if there be no objection, the abstract of evidence of Surgeon-Captain Williams, one of the witnesses selected, who was prevented from attending by illness, may be printed in the Appendix, and that the abstracts of evidence of the following witnesses, who were tendered for examination by the Government of the Madras Presidency, and who furnished abstracts, but were not called by the Commission, may also be printed in the Appendices, and that a note may be made of the fact that they were not required to attend:—

Mr. P. Nageswaram, Pantulu, Deputy Tahsildar.
R. B. Narainswami, Naidu.

Mr. Geda Krishnama, Kannapuram.
Mr. Prendergast, Superintendent of Police, Kistna.
Mr. P. S. Ganapati Aiyer, B.A., Treasury Deputy Collector, Salem.
Surgeon-Major J. Lancaster, District Surgeon, North Arcot.
Surgeon-Major J. Maitland, M.B., General Hospital, Madras.
Surgeon-Major W. O'Hara, District Surgeon, Bellary.
Surgeon-Major W. H. Thornhill, M.D., Superintendent Lunatic Asylum, Madras.
Surgeon-Major J. L. Van Geyzel, M.B., Chemical Examiner, Madras.
Syed Mohildeen Sahib, 1st class Hospital Assistant, Triplicane Dispensary.

(*Chairman.*) The abstracts* of evidence will be printed in the Appendix as you request.

Adjourned to to-morrow at 11 o'clock.

Mr. R. M.
Dane.

14 Feb. 1894.

At the Town Hall, Bombay.

SEVENTY-SECOND DAY.

Thursday, 15th February 1894.

PRESENT:

THE RIGHT HON. LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

Sir JAMES B. LYALL, G.C.I.E., K.C.S.I.
Sir WILLIAM ROBERTS, M.D., F.R.S.
Mr. R. G. C. MOWBRAY, M.P.

Mr. A. U. FANSHAWE.
Mr. ARTHUR PEASE.
Mr. HARIDAS VECHARIDAS DESAI.

Mr. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

Dr. RUSTAM N. RANINA called in and examined.

26,071. (*Chairman.*) I daresay you have seen a statement which was made to us by Mr. Horne?—Yes, I have seen it in to-day's papers.

26,072. Will you briefly describe to us the part which you personally took in connexion with the preparation and signing of the Bombay Medical Anti-Opium Petition?—I was a member of the committee of the Anti-Opium Alliance, and a proposition was brought forward that a petition from the medical profession of Bombay should be presented to the House of Commons. I was asked by the secretary to supply him with some material for that purpose, and I sent him extracts from medical and other works. A rough draft of the petition was prepared, and it was then submitted to the committee of the Alliance. I had some objections to some statements contained in that rough draft, which I put before the committee, and a sub-committee was then appointed, of which, also, I was a member. The sub-committee revised the draft, and subsequently the revised draft was presented to the committee of the Anti-Opium Alliance. There were some statements also in that revised draft which I did not agree with; but the majority of the committee adopted it. I was not present at the last meeting of the committee of the Anti-Opium Alliance when the draft was officially adopted. Subsequently, when the draft was finally adopted, I was deputed with the secretary of the society to engage in the further preparations of the matter, and take the necessary signatures from the medical men. I personally saw two of the signatories put down their signatures in my presence; the rest were waited on by a peon, who carried a letter, over the signature of the secretary of the Anti-Opium Alliance. Some of the medical men signed and others declined to sign.

26,073. Who were the two who signed in your presence?—Dr. Atmaram Pandurang and Dr. Gerson da Cunha.

26,074. They signed in your presence?—Yes.

26,075. Did they read the petition before they signed it?—Both of them did.

26,076. Do you know anything about Dr. Khory's signature?—I sent a peon with the letter of Mr. Horne, and I believe Dr. Khory put down his signature.

26,077. Did Dr. Khory give you his photograph?—Yes, he did. It was subsequent to the sending of the petition. Mr. Horne wrote to me that it would be much better if we had some photographs to append to the copies of the petition which were to be given to the public, and I asked Dr. Khory whether he would like to give me his photograph. He said yes, and sent two copies of his photograph to me, which I sent to Mr. Horne. One photograph was accepted, and the other was returned to me, and I subsequently returned it to Dr. Khory.

26,078. You selected the photograph which you thought gave the best portrait of Dr. Khory?—No, I did not select; I sent them both to Mr. Horne.

26,079. And he chose?—I do not know. One was returned to me, which I subsequently returned to Dr. Khory.

26,080. Did you assume when these photographs were given that it implied approval of the movement?—We had been talking for nearly half an hour on the matter, and I think that Dr. Khory was in favour of the movement about that time.

26,081. (*Mr. Fanshawe.*) I understand that you and Mr. Horne together drew up the original petition?—No, not I and Mr. Horne.

26,082. That is what Mr. Horne stated yesterday?—Then it is rather inaccurate. I believe all that I did was to supply Mr. Horne with some extracts from medical works, and he used them.

* See Appendix XIX. to this Volume.

Dr. R. N.
Ranina.

15 Feb. 1894.

Dr. R. N.
Ranina.

15 Feb. 1894.

26,083. You state that in the revised draft, as finally adopted, there were certain statements of which you did not approve; will you kindly tell me which those statements were?—There is one statement in the petition saying that it “leads the victim from grains to drachms.” I have not seen any case in which any individual had consumed drachms of opium by himself. When that petition was prepared I had not seen any case where any individual had consumed more than one drachm of opium in 24 hours. Subsequently I heard of cases, and I know there are some individuals, but at that time I was not aware of it, and I objected to that statement. There is another statement about “when the means of purchase are exhausted rather than endure the physical torture caused by its discontinuance a man will sell his wife and children to purchase the drug.” As I was also not aware of any such case I objected to that statement going in. Mr. Horne assured me that he knew of a case, but as the case was not properly investigated by myself, and as I had not heard of it before, I thought it ought to have been deleted.

26,084. Was there any other statement of which you could not approve?—No, I do not find any other in the present draft.

26,085. Then may I take it that the fact that you were unable to approve of those statements was the reason why you did not sign the petition?—No, I was prepared to sign it. It was only because the petition was sent away in a hurry. They had no intention to send it by a certain mail, but on a Saturday morning they thought it advisable to send it by the mail of that day, and on that afternoon they accordingly sent it. For that reason I could not put my signature to the petition.

26,086. Was that the only reason that led you not to sign it?—That is the reason.

26,087. Can you tell me whether, in sending round this petition by a peon, or messenger, you sent individual letters addressed to a number of doctors?—Yes; there was a printed copy of a letter, over Mr. Horne's signature, asking the medical men to sign it, and saying that it was a petition in the anti-opium cause.

26,088. We have the form of that letter; my point rather is this, were those petitions enclosed in letters addressed to individual medical officers?—No, the petition was sent round like that (*copy of petition handed in*). There was a separate letter enclosed with it.

26,089. Was the letter addressed to individual medical practitioners or not?—There was the address on the envelope.

26,090. To each person to whom it was intended to be presented?—Yes, to each person. There is one point I may mention; on the form of the letter there are the words “My dear Dr. —,” and it was intended that I should fill up the name of the gentleman in that part of the letter. In some cases I did fill it up, but afterwards I found it was inconvenient, and so many had to be addressed. I addressed the names in some cases, but in the rest I did not write anything.

26,091. I should like to have it quite clear; you are speaking of filling in the names on the letter form?—On the form I filled in the names in some cases, and on the envelopes in all cases.

26,092. How many of these forms did you issue?—About 100.

26,093. So far as you know, was there any case in which a statement, or a sheet, was sent round on which there was no printed petition and only signatures?—A blank sheet.

26,094. I mean a sheet on which there were certain signatures, without the actual petition on the top?—No, there was not one.

26,095. Can you tell me how long the peon was occupied in this work of taking the letters round?—About a fortnight.

26,096. (*Chairman.*) Did you look over the signatures which the peon obtained?—Yes, I did.

26,097. Were you satisfied that they had a genuine appearance?—Perfectly satisfied.

26,098. Did you personally know the handwriting of many of these medical men?—Not many; some of them I knew, but very few of them.

26,099. But so far as you knew the handwriting appeared to be genuine?—Perfectly genuine. I was perfectly satisfied it was genuine.

26,100. (*Mr. Fanshawe.*) There is a large number of native practitioners in this city, between 300 and 400, probably?—Not so many; perhaps a couple of hundred.

26,101. In sending round these letters addressed to 100, how did you select the particular hundred?—I did not select; I wrote to those whom I could remember.

26,102. How many signatures were there?—Some 48 or 49.

26,103. Am I to understand that the others received their letters and did not sign?—Yes; there were some who received letters and did not sign. There were others who did not receive the letters at all, perhaps because they were not in Bombay at the time, and the letters were returned to me by the peon, who said the man was not there.

26,104. With regard to Dr. Khory, there is one matter which I think should be made quite clear; at the time he gave you the photograph, do I understand you to say that you had already seen his signature on the petition?—Yes; the photograph was given subsequently to the signature being put on the petition.

26,105. (*Mr. Haridas Veharidas.*) Were the two photographs of a similar kind; was there any difference between the two?—Yes, they were different. My impression at this time is that one was a large one with a pugree on, and the other was without a pugree.

26,106. If they were similar, there was no reason to send you two?—Yes, there was a reason; as Mr. Horne wrote to me, when he returned one of the photographs, that it was a little too dark, and not convenient for the artist to take the photograph from. I believe that when I returned the photograph to Dr. Khory I told him what Mr. Horne had written. I believe that Dr. Khory at that time, being at leisure, also mentioned the artist who had taken the photographs, and the amount he had paid for them, &c.

26,107. (*Mr. Mowbray.*) I should like to be quite clear why you did not sign this petition yourself?—The fact was that the petition was presented to each of the medical men in this form, so that some signed on the second, some on the third, and some on the fifth line, leaving some gaps. I had reserved my signature to fill up a gap. One morning Mr. Horne wrote to me that he wanted to send the petition by that day's mail, and in the hurry of sending it off it was not sent over to me for my signature.

26,108. When Mr. Horne was here yesterday, he said that he had asked you to get a signature on the written form of the petition, and he quoted from a letter from you saying, “There is room for only one signature above that of Dr. Mody, so I have got the first man to resign.” I wish to suggest to you why, if time was of importance, and you, yourself, were ready to sign the petition, you did not take that opportunity to sign it?—I quite well remember the occasion; but that was the very first gap on the petition, and I was anxious that it should be filled up by a senior gentleman of weight and influence, and therefore I took it to Dr. Atmaram Pandurang, and got it resigned.

26,109. I suppose that even then there would have been time for you to have signed it yourself?—Yes, if the petition had been sent back to me by 12 o'clock, as I had requested Mr. Horne to do, because all that took place in the forenoon.

26,110. You are aware, of course, from the correspondence that has taken place in the public press that some doubts have been raised with regard to the signatures of several of these gentlemen?—I am.

26,111. Can you tell me whether any of these gentlemen whose names appear on this petition are coming to give evidence before this Commission?—I read in this morning's paper that some have already been before the Commission yesterday.

26,112. The gentlemen who have appeared before us have said either that they did not sign, or that at the time they did sign they were not aware of what they were signing; can you tell me whether any of the other gentlemen whose names appear on this petition are now coming before the Commission to say that they did sign, and that it represents their views?—I do not know who is coming, and who is not coming.

26,113. You are aware, of course, that considerable weight has been attached to this petition in England?—I cannot say that I am aware of it, but I think it must be attached?

26,114. Do you think so still?—I think so.

26,115. (*Sir William Roberts.*) Was this petition sent round to European medical men in Bombay?—Most of the European medical men are Government servants, and I avoided all Government servants, whether native or European, because I believed they were not at liberty to put their signature to any petition against Government measures.

26,116. Are you prepared yourself to endorse all the statements in this petition?—Not all. There were some to which I did not agree at the time, but agree with now, and there is one with which I do not agree even now.

26,117. Which is that?—About people selling their wives and children. I have not come across any instance of that sort.

26,118. I believe that the peon who was sent round with the letters is no longer in Bombay?—I understand from Mr. Horne's evidence that he is not in Bombay; but I know nothing about the man. He was engaged by Mr. Horne who sent him over to me, and after the work was finished I had no occasion to see him.

26,119. (*Chairman.*) I suppose you took the trouble you have taken in connexion with the preparation of this petition because you feel strongly with regard to the evils which result from the excessive use of opium?—Yes, and my individual opinion on that point is midway between the two parties.

26,120. What is your opinion on that point generally? That opium does do a great deal of harm, but that in those cases in which people can feed themselves on milk and nutritious foods, and afford to live in well-ventilated houses, the evil effects of opium do not pronounce themselves so soon, and in some cases, even, they do not show themselves at all, as in the case of that witness before the Commission who was 77 years old, and who was taking opium. In his case, I think he has been taking good nutritious food, and that has kept him up; but in the majority of cases those who take opium are poor people who do not get even one full meal in the course of 24 hours, and live in over-crowded localities, and on them opium has the worst possible effects.

26,121. And you think that equally whether they are young men in the prime of life or old men who are going down the hill?—I think so.

26,122. What you say in condemnation of opium for people living on insufficient food applies equally you think to all ages of life, to the old as much as to the young?—Yes, old as well as young. If they do not get sufficiently nutritious food they suffer.

26,123. What is your view with regard to stimulants generally; do you think there are dangers and evils arising from the use of alcohol?—There are.

26,124. If you think there are sufficient reasons for State restrictions upon the use of opium so that it will not be

obtainable except on a medical certificate, would you say that similar restrictions were desirable in the case of spirituous liquors?—Yes, they are desirable, inasmuch as both are injurious. The only difference I can see between alcohol and opium is, that while alcohol expends all its force on certain organs of the system, and therefore hurries on the destruction, opium destroys the whole system at the same time, and therefore the work of destruction is only delayed.

26,125. One works its evil more rapidly than the other?—Yes, alcohol works more rapidly than opium.

26,126. Do you know whether many medical men with whom communication was made on the subject declined to sign the petition?—Yes, there were many who declined.

26,127. So that so far as you had an opportunity of testing the opinion of the medical profession in connexion with this petition you would say that there was a wide division of opinion among them, would you not?—I cannot say that, because this is a petition which goes a great way, and perhaps there may be some who may not agree with some of the statements made in it, and perhaps on that account, though they may be against the use of opium, they did not subscribe to it.

26,128. You think among them there were many who thought that certain parts of the petition presented a rather exaggerated view?—Nobody told me that, because I personally saw only two, and those two read it over and signed it without demurring. I had no occasion to speak to others.

26,129. (*Sir James Lyall.*) Supposing a case or two could be found of opium sots selling a wife or a child to supply themselves with opium, do you think it would prove much against opium. Is it not the case that if you searched among the low and degraded races of India you would find many instances where men have sold their wives or some of their children for the love of gain only, or to meet other necessities due to poverty?—I have never heard of a case like that.

26,130. Have you ever heard of a system of buying women in the Punjab to sell in Sind and in the Punjab which has given rise to criminal prosecution of late years?—I have not heard of any case in which women or children were sold.

26,131. Have you ever heard of a set of people called Naiks who live in Kumaun and always sell their daughters to be mistresses, or women servants, or prostitutes?—I have not heard they are sold for that purpose. I have heard that women of certain families are allowed to follow these occupations, but I have never heard that they are sold for that purpose.

26,132. From my information they are actually sold?—Your information is much superior to mine.

The witness withdrew.

The Hon. T. D. MACKENZIE recalled and further examined.

26,133. (*Chairman.*) I believe you are Commissioner of customs, salt, opium, and abkari?—Yes.

26,134. Will you give us a brief description of the duties of your office in respect of opium?—The opium contracts of the year are finally sanctioned by the Commissioner of opium. The Collector of each district has the tenders submitted to him. He forwards them to the Commissioner of opium with his recommendation as to the various contractors concerned, and the Commissioner, from his knowledge, both of the contractors and of the general way in which the business has been worked, makes the selection of the contractor for the time being.

26,135. On Monday last you put in a note* on the system of excise management of opium in the Bombay Presidency which will appear in the Appendix?—Yes. I have worked that note out and I think it is as full as I possibly can make it.

26,136. It is a very recent document, which is dated the 4th December 1893?—Yes. I prepared it this last cold season.

* See Appendix XX. to this Volume.

*Dr. R. N.
Ranina.*
15 Feb. 1894.

*The Hon.
T. D.
Mackenzie.*

26,137. In that note you describe the arrangements by which the Malwa opium is imported into the British territory, and the arrangements adopted for enforcing the existing agreement in respect of opium with the Native States under the political control of the Bombay Government?—Yes.

26,138. What have you to say with regard to the export of Malwa opium through British territory?—I understand that to mean foreign export of Malwa opium from Bombay after it has been imported from Malwa as distinct from the imports of similar opium for consumption in the British districts of the Presidency and the Native States under the political control of the Bombay Government. It is exported from Malwa for consumption in British India, as well as for export to China and other foreign countries.

26,139. Have you any figures to which you wish to call our attention with regard to the foreign exports of Malwa opium?—Yes; the following table gives the exports for 10 years from 1883-84 to 1892-3:—

The Hon.
T. D.
Machenzie.

15 Feb. 1894.

Years.	Hong-kong.	Shanghai.	Zanzibar.	Port Natal.	Delagoa Bay.	Noor-bay.	Mauritius.	Coomer.	Muscat.	Singapore.	London.	Brindisi.	Trieste.	Total.
1883-84 - - -	Chests. 17,014½	Chests. 22,080½	Chests. 5	Chests. 3½	—	—	—	—	—	—	—	—	—	Chests. 39,703½
1884-85 - - -	20,721	19,325	6	1	—	—	—	—	—	—	—	—	—	40,053
1885-86 - - -	22,364½	14,155	8½	1	—	½	—	½	—	—	—	—	—	36,530
1886-87 - - -	21,966	14,784½	16	½	—	—	2	—	—	—	—	—	—	36,769
1887-88 - - -	21,522	14,167½	29½	3	—	—	—	½	½	—	8	—	—	35,731
1888-89 - - -	16,452½	13,348½	9	9	—	—	—	½	—	—	1	—	—	29,820½
1889-90 - - -	13,339	15,369	15	—	—	—	—	½	—	—	2	—	—	28,725½
1890-91 - - -	12,457	15,962	12	1	—	—	—	—	—	—	1	—	—	28,433
1891-92 - - -	11,704	17,358	4½	8½	1½	—	1	—	—	—	—	1	1	29,079½
1892-93 - - -	9,640½	15,803	8½	1½	—	—	—	—	—	2	—	—	—	25,455½

I further tender a similar statement of the exports from Malwa for consumption in British districts and Native States under the political control of the Bombay Government for the same period :—

Year.	For British Districts.	For Native States.	Total.
1883-84 - - -	Chests. 1,012½	Chests. 345	Chests. 1,357½
1884-85 - - -	1,063½	470½	1,534
1885-86 - - -	1,278½	318	1,596½
1886-87 - - -	1,277½	459	1,736½
1887-88 - - -	1,204	522	1,726
1888-89 - - -	1,294½	400	1,694½
1889-90 - - -	1,427½	447	1,874½
1890-91 - - -	1,171½	568	1,739½
1891-92 - - -	1,250	601	1,851
1892-93 - - -	1,146	459½	1,605½

26,140. Speaking broadly, do these figures show an increase or decrease in proportion to the population?—I should say a decrease.

26,141. A decrease in the consumption of illicit opium?—Yes.

26,142. Would you say within the same period that the preventive measures have become more effective, and that the tendency was to diminish the consumption of illicit opium?—Distinctly so.

26,143. So that the general result will be distinctly on the side of a diminished consumption of opium in proportion to the population?—I think so, looking to the fact that the population has increased since the census of 1881-82.

26,144. Are you able to give us figures showing the number of shops licensed for the sale of opium in the crude form, and for consumption in the form of chandu or madak smoking?—Yes. I submit the following statement, showing the consumption of licit opium in each district of the Bombay Presidency, including Sind, for ten years from 1883-84 :—

Districts.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1889-90.	1890-91.	1891-92.	1892-93.	Remarks.
Bombay -	Lbs. 11,557	Lbs. 12,615	Lbs. 15,532	Lbs. 17,088	Lbs. 16,903	Lbs. 21,792	Lbs. 20,785	Lbs. 19,766	Lbs. 19,854	Lbs. 18,223

Total -	117,440	127,971	145,170	150,434	142,324	148,295	160,657	136,115	140,490	127,010	
Aden -	228	195	225	222	203	216	192	144	148	139	

Note.—The figures given in the statement include opium used for the manufacture of chandul and madat.

I also append a statement showing the number of shops licensed for the sale of opium (a) in the crude form, and (b) for consumption, in the form of chandul or madat smoking on the premises for a similar term. It will be seen that since 1888-89 the number of shops has been

steadily lessened under head (a), while those under head (b) have ceased to exist, except in the town and island of Bombay, and it may be mentioned that even there all such shops were closed on 1st August 1893:—

*The
Hon. T. D.
Mackenzie.*

26,145. Is the number of shops increasing or decreasing? —The number varies slightly; but generally the tendency is towards decreasing.

26,146. Can you supply us with figures showing the annual consumption per head of population of each district

of the Presidency?—Yes. The following statement shows the annual consumption per head of population in each district of the Presidency, including Sind, for the same period:—

Districts.	Rate of Consumption per Head of Population in Tolas.										
	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1889-90.	1890-91.	1891-92.	1892-93.

*The
Hon. T. D.
Mackenzie.*

15 Feb. 1894.

26,147. What deductions do you draw from the table?—The deductions to be drawn from these statements are that while consumption is, as it always has been, largest in Gujarat, there has even there been since 1888-89 a general decrease all round, and it cannot fairly be said that the consumption per head is excessive in any district.

26,148. Have you anything to say on the subject from your personal experience?—I have completed 28½ years' service as Assistant Collector, Under Secretary to Government, Collector, Secretary and Chief Secretary to Government in the Revenue, General and Financial Departments, and Commissioner of Customs, Salt, Opium and Abkari. I am personally acquainted with all Gujarat (except the Panch Mahals), the Konkan districts of Ratnagiri and Thana, the Deccan districts of Nasik, Poona and Khandesh, and the Belgaum district of the Southern Maratha Country. My experience is that in all the consumption of opium is general, but that it is largest in the districts of Gujarat. It is most common among Rajputs, Musalmans, Girasias, Kunbis, and Kolis. I cannot call to mind more than one or two instances where the consumption by individuals was excessive. I am of opinion that the moderate consumption of opium, in Gujarat especially, where the climate is very feverish and during the hot weather and the monsoon trying and depressing, is beneficial to the consumer, particularly as regards the physical condition. With reference to the moral condition I do not remember any instance in which crimes of violence, fraud, or the like have come before me as a magistrate which could be attributed directly to the use of opium. Alcohol is responsible for very much violent crime. Violent crime of course occurs in connexion with the smuggling of opium.

26,149. What is your view of the disposition of the people of the districts with which you are acquainted with regard to a prohibitory policy on the part of the Government in relation to opium?—I am confident that the people of Gujarat generally consider the use of opium for non-medical purposes in every way beneficial and useful, that they in fact look on opium as a necessary of their life, as a stimulant, a sedative, and as a preventive of diseases of the bowels, and I am sure that not only would they not consent to bear in whole or in part the cost of prohibitive measures, but that any such measures would lead to such discontent as to be a very serious political danger. Even with our present restrictions, which allow opium to be obtained in moderate quantities at a moderate price, it is impossible to repress extensive smuggling. With total prohibition the hand of every man in Gujarat would be against Government, organized opposition to such prohibition would everywhere successfully be set on foot, and a general feeling of bitterness against Government would be aroused. In my opinion to prohibit the sale of opium in British India, except for medical purposes, would be to invite a general rising all over the country against what would be regarded, and in my mind justly regarded, as cruel and causeless oppression. The prohibition would be as useless in preventing consumption of opium as the closing of chandul and madat shops has been. It would be impossible to extend it to Native States, from which the opium must find its way into British territory. As showing how far help might be expected from the Native States in this Presidency, their non-acceptance of the rule recently introduced into British districts whereby two tolas of opium were made the legal quantity which might be possessed by an individual may be noted. If they were averse from helping us in a comparatively small matter like that, what expectation could there be of help from them in such a business as total prohibition? Money would not compensate them for the unpopularity they would incur with their own subjects.

26,150. A great deal has been said with reference to clauses and conditions, and the form in which licenses were granted, and under which the license-holder undertook or made himself responsible for selling not less than the specified quantity of opium?—That is what is commonly known as the guaranteed minimum vend.

26,151. Have you any observation to make upon that?—I am respectfully of opinion that a mistake was made in abolishing the system which prevailed up to last year, whereby the Commissioner of Opium fixed a minimum guaranteed revenue and selected the farmer. We thereby abolished one of the chief securities for obtaining the farmer's help in repressing illicit practices. I think a further mistake was made in abolishing houses licensed

for the consumption of preparations of opium on the premises, inasmuch as Government are no longer able to exercise control and supervision over such houses, which as a matter of fact not only continue to exist as so-called "clubs," but have considerably increased in number. The moral certainty is, not that the consumption of licit opium has been diminished by that step, but that a strong stimulus has been given to the illicit consumption of larger quantities of opium, and that Government have lost and must continue to lose revenue unnecessarily. I think a third mistake was made in reducing the quantity of opium which might legally be possessed from ten tolas to two. It is distinctly oppressive in its action, inasmuch as while a man may legally possess 10 tolas in Kathiawar, the Mahi, or Rewa Kanta States, the moment he crosses the border line into British territory he becomes a criminal, most frequently in ignorance of his offence till he is arrested and punished by our officers. It is further oppressive in that two tolas is a very small quantity for a man going on long journeys to have if he is a consumer of the drug. Believing as I do that a moderate use of opium by the native consumer in India is beneficial, I think Government ought to have control over what have been called "opium dens," and that in the interests of their revenues they ought to avail themselves of all means to check illicit practices. I would therefore have what I regard as three false steps retraced, and the system restored to what it was before the changes above mentioned were made.

26,152. Turning to another aspect of the question which is referred to this Commission, I should like to have your view as to practicability and the right to enforce any changes in the existing arrangement with the Native States for the transit of opium through British territory?—I have gone into the subject at some length in my Note. I may say, without going into detail, that, having regard to the policy which has hitherto been pursued with reference to the Native States and the engagements which have been entered into with them, it would be in the highest degree impolitic and even dangerous to attempt to terminate those engagements. I can conceive no ground on which such termination could be justified, equitably, morally, or legally. The Honourable Mr. Lee-Warner* will, from his intimate acquaintance with the treaties and engagements, be better able to say than I am whether such a measure could be defended, but I cannot conceive how such defence can be made.

26,153. Have you any observations to make with reference to the effect on the finances of India with reference to the prohibition of the sale and export of opium, taking into consideration (a) the amount of compensation payable, (b) the cost of the necessary preventive measures, and (c) the loss of revenue?—It is impossible to estimate even approximately the various items coming under heads (a), (b), and (c), but I have very little doubt that the effect on the finances of India, taking those three heads into consideration, would be bankruptcy. There is a fourth head which the resolution of the House of Commons does not specify, but which in my opinion would force itself to notice if the sale and export of opium were prohibited, and that is the general uprising against the Government which would take place in the course of a very few years. England would never dream of taxing herself to pay compensation to India. If India therefore had to pay the compensation she would have to do it out of her own resources. How those are strained by the depreciation in silver it is needless to say. But to pay this compensation to Native States, to find the cost of preventive measures, to recoup her loss of revenue, she would have to raise enormous taxation by other means. She cannot do it on the land, she cannot do it on salt, she cannot do it on liquor, she would not be allowed, even if she could thereby raise enough funds, to do it by reimposing the import duties. To endeavour to gain some faint idea of the compensation which would be claimable by Native States it is necessary to remember the heads under which they would claim, viz., (a) the revenue which they derive from the drawback allowed on imports of opium into their States; (b) the revenue they derive from their internal opium arrangements; (c) the loss of prestige and popularity; (d) the cost of the very large preventive establishments they would have to maintain if they kept honestly their engagements with the British Government to suppress the traffic in opium. As regards head (a) the following statement shows the quantities of opium issued for consumption in the several Native States under the political control of the Bombay Govern-

* For Mr. Lee-Warner's evidence, see Appendix XXIII. to this Volume.

ment for the 10 years ending 1892-93 and the share of duty retainable by each:—

Average	28,115	54,816	1,995	790
Duty	Rs. 144,591	Rs. 98,970	Rs. 2,052	Rs. 406

26,154. I notice that there has been an increase in the number of opium smuggling cases detected in 1892-93 as compared with the previous year; what have you to say about this?—I put that down in great measure to the 10-tola rule which prevails in this Presidency, and does not prevail in most of the Native States. I have recently been on a tour on the northern frontier. I have made inquiries from the inspectors there, and I have found that it is quite a common practice for a man coming from Kathiawar to get drawn into conversation, and made to state how much opium he has. Knowing that 10 tolas is the limit within his own territory, he has no hesitation in saying what he has got, for he knows if he has 10 tolas he cannot be touched at the frontier station and he goes on. But with him goes an officer of the Excise Department until he comes to the first British station, Viramgam, where there is a magistrate, and he is there run in, because at Viramgam the limit allowed is only two tolas. The man, therefore, becomes a criminal perfectly innocently. I mention this as an instance of what I consider to be the oppressive working of the two-tola rule.

26,155. What is the average annual revenue of the Bombay Presidency from opium under various heads?—An examination of the tables I have given shows that the average annual revenue is Rs. 2,23,00,000.

26,156. Supposing a prohibitory policy with regard to opium were to be adopted, do you think that there would follow an increased exportation of opium from Persia and other countries to China?—I think, certainly, that would be the case. I think, also, that unless it were put down in the Native States we should recur to the condition of affairs which prevailed for many years in this Presidency, namely, that Native States would grow opium largely, and would smuggle it across our frontiers, export it to Persia, and it would then be exported to China as Persian opium, whereas it would really be Indian-grown opium. We should lose the revenue we ought to get from it.

26,157. May we take it to be your clear and distinct opinion that a prohibitive policy would be perfectly nugatory unless it was extended to the Native States?—Entirely so.

26,158. Do you consider that a prohibitive policy with regard to opium would have the effect of increasing the resort to alcohol and ganja?—I think so.

26,159. May we take it, from what you have said, that you are impressed with the belief that a prohibitory policy would be the cause of discontent among the people?—I think it would be the cause of more than discontent. I think it would be dangerous to the last degree to adopt a prohibitory policy.

26,160. Have you anything to say to us with reference to any petitions which have been presented on this subject? We have heard something of the petition which has been signed by medical men in Bombay. Have there been petitions from other places on the subject?—There was a petition in 1892 purporting to come from certain inhabitants of Poona, who said they were opium consumers. It was sent to the Secretary of State, who sent it to this Government for inquiry and report. An inquiry was duly made, and a report was submitted to the Secretary of State. I have been desired by Government to present the proceedings in the particular case to the Commission for such consideration as they may think it deserves, and I now put it in. (*Handed in.*) The depositions are in the Marathi language. Three or four taken at hap-hazard have been translated as giving the general idea of the statements made by every one of the alleged signatories to the petition. I was at that time Commissioner of Opium, and I made a report to my Government upon the subject.

26,161. I see the general result is set out in the second paragraph of your report to Government,* which runs to this effect: That “the petition is not genuine, that all the alleged signatories deny that they signed any such petition or authorised their signatures being affixed; and that three of the signatories admit having signed the petition for the continuance of chandul shops. If the petition were genuine there is no reason why the signatories should deny their having signed it.”—That is so.

26,162. You wish to say, generally, that the petition is not a genuine document?—I believe it was not a genuine document.

26,163. (*Sir James Lyall.*) I wish to ask you a question or two about the minimum guaranteed vend system. In practice do you think the minimum was fixed well below the expected vend?—I, as Commissioner, fixed it myself.

26,164. On what statistics did you fix it?—I had the statistics for some 10 or 12 years before me, from the time when the system was introduced in 1879-80, of the actual sales. It was upon that and upon the general knowledge of the department as to what ought to be the consumption of the district in the ordinary way that I fixed the amount. Having the knowledge that the sums bid had been somewhat in excess of the right and legitimate demand, I, in accordance with instructions of Government, was very careful to fix the probable demand considerably below what the statistics showed me it ought to be.

26,165. If the system were properly worked it is unobjectionable, but there seems to be a certain danger of collectors using the system to run up the vend?—I do not think where it is a question of disposing of the contract, not by auction, but by selection, that the Collectors have any power in the matter. It is the Commissioner himself who settles this from the figures in his office and from his own experience. When the Commissioner had fixed what he considered the legitimate vend, tenders were called for. The notice stated that so much was considered to be the amount which the farmers should guarantee to sell during the year. I, as Commissioner, therefore called upon intending farmers by advertisement to come forward and state whether they were willing to tender for this farm. Their applications had to be made to the Collector by such and such a date, and the Collector would then submit his recommendations to the Commissioner. He submitted all the tenders to the Commissioner with his recommendations in each particular case. The Commissioner was in no way bound by the Collector's recommendation. He was allowed to use his discretion in selecting the actual farmer for the particular district.

26,166. Then it was not done by auction but by tenders?—Up to 1889 the system was by auction.

26,167. That is the farmer was selected by auction?—The farm went to the highest bidder; but in that year Government having carefully reviewed all the circumstances found there was a tendency for men, seeing that previous farmers had made large sums of money out of the contract, to bid higher than they ought to, and they directed that the commissioner should call for tenders and dispose of the farm in the manner which I have above briefly indicated, but which in my Note is given in detail.

26,168. What was the result supposing a farmer found he could not sell the minimum amount, did he take less than the minimum amount of opium from the Government depot, or did he pay the difference?—He paid the difference; but that was sometimes considerable under the auction system. As a rule by the selection system the selections were very carefully made, and there was seldom any deficiency to be paid.

* No. 1993, dated 24th April 1893, to the Government of Bombay.

*The
Hon. T. D.
Mackenzie.*

15 Feb. 1894.

26,169. You say you object to abolishing houses licensed for the consumption of madat and chaulul on the premises. One reason you gave is that you think the clubs which have taken their place use illicit opium and not opium derived from the shops?—That is so.

26,170. I do not see why they should do that. Would not the licensed vendors look after the men who use the clubs and inform against them?—It is a somewhat difficult matter. The proprietor of the club is not entitled to have more than two tolas of opium. The way in which it is worked is this. Each person attending the club is supposed to bring his two tolas which he has bought from the shop-keeper. If they want more than that, they must get it illicitly. We have also this fact that whereas the "opium dens" were about 20 in number, they have now increased, I believe, to 130 places in the shape of clubs in Bombay itself. In the last six months of the year the consumption of licit opium has fallen from 1,500 lbs. to 300 lbs. The inference is that there being more clubs than there were "dens," the consumption of licit opium ought to be greater now, but it is really very much less. More opium is undoubtedly consumed but it is illicit.

26,171. The owners or managers of these clubs could send as many men as they liked to the shops and get opium and so get it by degrees, could they not?—They could get it by degrees, but if they were in possession of more than two tolas they would be run in on account of being in possession of more than the limit.

26,172. Were not these public licensed saloons haunts of bad characters, and was not the habit of smoking generally reprobated by the respectable public; is it not well that Government should not recognise and license such places even if private places were substituted?—It is a question of choice of evils. It seems to me to be better that the Government should be able to lay its hands upon these places and have some supervision over places where disreputable characters assemble. I think the "dens" were places of such squalor and abomination that there was no temptation for young men to enter them. I think there is much more temptation now in the so-called private clubs. There is a certain secrecy and mystery about them. It is like the desire of the school-boy to smoke tobacco in spite of his master. Men will go and smoke in these "clubs," with the idea that they are doing something which the Government will not approve of; and possibly it may be illegal. It has a savour of crime about it though it is not actually criminal. Therefore I should say that these "clubs" have an attraction to a certain class of mind.

26,173. That may be true. I suppose it is not impossible to legislate against these clubs?—I think it would be an excellent thing to legislate against them.

26,174. That could be done without licensing the opium saloons again?—I should prefer to have legislation to put down these clubs, and have the so-called opium saloons or "dens" licensed.

26,175. If two tolas is too small, do you not think that 10 tolas is unnecessarily high?—I think 10 tolas is unnecessarily high. I should fix the limit at about five tolas. It would also depend upon the districts. It has been found in part of the territory of Sind, bordering upon the desert, impossible to enforce the two-tola rule. Men had to go long distances for their opium supplies, and the two-tola rule was a positive hardship. The rule has been rescinded, and the 10-tola rule is now in force there, and it might be with advantage restored in various parts of Gujarat. I think the rule should scarcely be made a hard-and-fast one.

26,176. I believe you are prepared to give some supplementary evidence which will appear in the Appendix?—Yes. I thought possibly the question of smuggling had not been sufficiently clearly brought out, and I therefore prepared a note on the subject.

26,177. I understand that by the present system of selection you get a more respectable set of opium farmers than you got formerly?—Certainly. The Commissioner uses his discretion under the auction system; he simply took the highest bidder.

26,178. With a more respectable set of men, do you not think that if the smuggling of opium from Malwa begins again you will hear of it?—We shall hear of it, of course. Harm will be done, and when the mischief is once done it is much more difficult to repair it than to check it in advance.

26,179. The men will be under the same temptation that they were in the old days to use smuggled opium?—Precisely.

26,180. Do you think their virtue will be equal to the strain?—I should doubt it.

26,181. (*Mr. Pease.*) You state that in Gujarat the quantity consumed cannot fairly be said to be excessive. I observe that in one district—the district of Broach—the consumption is more than double that of any other district, except where there is a large population, as in Bombay and Ahmedabad. Do you know any special reason why the consumption in Broach should be so large compared with other districts?—Yes, I think I may say I do. Broach is a black soil district, that is, it is liable with very little rain indeed to become water-logged. A quarter of an inch of rain will make any road in the district impassable. I have been Collector and Magistrate of that district for four years, and I may say that it is, perhaps, the most feverish district in the whole Presidency. It has also one of the highest death returns from bowel complaints. The natives of that district who, I may mention, are amongst the most stalwart men and finest cultivators in the Presidency, protect themselves, or believe that they protect themselves, from some of those diseases by taking opium in moderation. There is a much larger proportion of the actual cultivating race in that district who are opium consumers than in any other district with which I am acquainted.

26,182. It is a question of medical or semi-medical use, and not a question of indulgence?—I think so.

26,183. You say you do not remember any instance in which crimes could be directly attributed to the use of opium. We have often heard that there were petty thefts and cases of that kind which have arisen from poverty and persons having the opium craving?—I cannot remember a case of that sort.

26,184. I thought you probably used the word "directly" to convey that idea?—I mean as compared with alcoholism. Of course there are many cases of violence and crime of a serious nature due directly to alcohol, but there is no crime of that sort, so far as I know, due to opium.

26,185. With regard to the point referred to by Sir James Lyall, do you prefer the system of selection to the system of taking the highest bidder?—Yes.

26,186. I think the selection is now made by the Excise Department?—It is made by the Commissioner. The collector never did select the contractor.

26,187. (*Sir James Lyall.*) Did the Collector never select the contractor in Bombay?—No, I do not think so.

26,188. (*Mr. Pease.*) You say the system was abolished whereby the Commissioner of opium selected the farmer?—Yes. Previous to that the farmer was, so to speak, selected by auction. Then in 1889 the Government introduced the system by which the Commissioner of opium selected the farmer who agreed to accept the minimum guaranteed vend fixed by the commissioner. Now the Commissioner still selects the farmer, but the farmer only pays the duty on the opium he purchases.

26,189. The minimum guarantee was settled with the view that the sales of the period would be sure to be equal to that minimum guarantee, was it not; the amount guaranteed was an estimate that the sales were sure to be equal to that amount, were not they?—Approximately.

26,190. Were there not many cases in which the sale apparently did not come up to that amount?—I do not think so.

26,191. And the licensee had to pay a fine?—There were a few cases in which he had to pay the deficiency, but they were infrequent and small in amount.

26,192. In those cases where he saw the deficiency was likely or inevitable, had not he a strong inducement to push his sales of opium so as not to have to pay for opium for which he had received no payment from his customers?—That is possible. He had some inducement possibly. It was owing to the unsettled state of opium affairs, the transition state, that contracts were only given for one year from 1889. The previous system was to give contracts for three years. If a farmer had a contract for three years there would be no temptation to push the sale. The first year of the contract is always a bad one. The farmer has to make his arrangements. He has to see where shops have to be placed and has to make himself acquainted with the district and the actual wants of the people. The first year is therefore always worked more or less unprofitably. If he has a contract for three years, as he formerly had, though there might be a deficiency in the first year it would be made up in the second and third years. There would be no such inducements as you now mentioned. If the farmer finds himself falling short there

is to a certain extent a desire to push the sales towards the end of the contract, if he considers he is doing badly and thinks he is not likely to have his contract renewed. If, on the other hand, he knows he has been doing well and the deficiency is small, he knows the probability is that his contract will be renewed for another term, and the temptation is lessened.

26,193. You say the first year's returns are unsatisfactory. Do you mean on account of the expense of carrying on the business or on account of opium sold?—In both ways. If the farmer is new to the district he has to come in and learn the trade, so to speak. He does not know how to manage his sales or what the demand may be. He has to learn his business, and as it were to pay his footing in the trade.

26,194. Everybody desirous of buying opium can purchase it during the first year?—Yes.

26,195. And during the next two or three years the increase of the sales will be the result of the man pushing his business?—Pushing it legitimately. I do not know that there is any harm in his doing so.

26,196. You have given us an instance of a man being drawn into conversation and acknowledging that he had 10 tolas in his possession, and then when he came over the frontier being at once laid hold of by the police; is the person who draws him into conversation a representative of the British Government?—I think it is probable that the opium officials are all on the look out for those cases. They know what the rule is; they know that if they detect a smuggling case they get a reward.

26,197. Would it not be his duty if he found a man possessed of 10 tolas to warn him of what the law was?—That is expecting a high standard of duty from a low-paid subordinate.

26,198. Has the subordinate an interest?—He has an interest, because if he has displayed any detective ability or any special merit and obtains a conviction he gets a reward.

26,199. Therefore for a breach of the customs law of this kind a man is liable to be put in jail?—He is liable to be fined, and the opium is destroyed. If he could not pay the fine he would have to go to jail to expiate his offence. As a rule the men are fairly well-to-do, and are able to pay the fine.

26,200. Do you think there is any necessity to give persons in Native States notice as to the quantity of opium they will be permitted to bring into British territory?—If the Native States accept our two-tola limit they will give the notice themselves, and it will become illegal in their territory to have more than that quantity.

26,201. You are alluding here to cases of ignorance?—Yes.

26,202. Is it not important on the border land that every man should know what the law is?—It is distinctly important. The rule ought certainly to be abolished in our territory, or made the same for all. Until that is done full information ought to be given on the border land.

26,203. It is not given at the present time?—There may be notices posted up at the stations of cases of men being punished, but I do not know that there is any special notice given on the frontier.

26,204. You feel that it is the duty of the Government to make men ignorant of the law know that they are amenable to it?—Yes.

26,205. (Mr. Mowbray.) With regard to the closing of smoking shops, you say that all such shops were closed on the 1st August 1893. Were you the person responsible for seeing that order carried out, or who was the responsible person?—The person directly responsible would be the Collector of Bombay.

26,206. I suppose he acts under your supervision?—Yes; he acts under my general supervision.

26,207. In some of the abstracts of evidence to be given before us there are allegations made that the shops are continued open with the knowledge and connivance of the Government?—It is an absolute falsehood.

26,208. Has every means to the best of your ability been taken to make the closing of these shops as effective as the law at present allows you to take?—Most certainly. Every possible endeavour has been made.

26,209. You have told us that you think the closing of the houses was a mistake because it has led to more attractive places being opened not under Government supervision. Supposing for the sake of argument that the licensed shops were reopened to-morrow, what is there to

prevent these more attractive places still being continued to be opened without Government supervision as they are at they present moment?—There is nothing at the present time to prevent them being continued. I think if the licensed shops were reopened they would attract from the "clubs" a considerable number of their present customers. Many of their customers go there under a sort of fear that they may be doing something illegal. I think it is very probable that some of these private club people in the course of time will be emboldened by impunity, and be run in for doing something illegal, whereas if the licensed shops were reopened the old habitués could go to them and have their smoke without any fear of a police raid. They would go there at once, and thereby custom would be attracted from the clubs. The difficulty is that the mischief has been done by closing these shops. It is so much more easy to do mischief than to repair it.

26,210. With regard to the limitation to two tolas, you say you think that is a mistake?—I think that is a mistake; I think it is hardly sufficient.

26,211. We had evidence given before us—I think it was by Mr. James—with regard to Sind, that the reduction of the amount which may be possessed from 10 tolas to two tolas was a considerable assistance in dealing with these unlicensed smoking houses. Do you find it is so?—I ought to explain that I have not had any personal experience of these unlicensed smoking houses, and my opinion on the point, perhaps, is not so valuable as Mr. James's, if he had personal experience. Mr. Campbell's opinion upon that point would be more valuable than mine.

26,212. The difficulty I apprehend in dealing with these clubs is to prove a sale upon the premises where the smoking is going on?—That is one of the very greatest difficulties.

26,213. On the other hand, if persons are found on any premises licensed or unlicensed, in possession of more than the legal amount of the preparation of opium, that in itself is an offence?—Yes; but it is very difficult to prove. Supposing there are five people in one of these places. If one person possesses 10 tolas of opium he would be run in; but supposing each of these five say, "It is true, there are 10 tolas here, but my share of this 10 tolas is two tolas"—you cannot do anything. The total amount which one man may possess is exceeded, but each man claims his share.

26,214. I do not say it enables you to act with certainty, but I should have thought myself that it would facilitate the detection, at any rate, of one form of a breach of the law?—I do not quite see where the help would come in.

26,215. I should have thought it would have necessitated, at any rate, to take your example, that the five men should distribute the 10 tolas among themselves, and that in itself would be a certain amount of trouble, and unless that trouble is taken there is a breach of the law that could be proved?—There are five people there jointly in possession of 10 tolas.

26,216. But if one person has all that he is obviously breaking the law. The five would have to go through the form, before any officer came in, of distributing the 10 tolas among themselves in order to keep themselves technically within the law; that I understood to be Mr. James's view—that the reduction to the two-tola limit had been of assistance in dealing with these unlicensed places?—I think that is a point which would probably have to be settled by a legal decision of the courts.

26,217. You have told us that you would be very glad to see legislation to deal with these clubs. I should like to know whether you have ever been able, in your own mind, to form any practicable scheme?—I have not attempted to do so yet. The question was put to me as to whether they ought not to legislate, if it is possible, against them. I should say, "Yes;" but it is a matter which would require very careful consideration.

26,218. In England we have had very much the same difficulties with regard to public-houses and so-called unlicensed clubs which evade the licensing law, and a Committee of the House of Commons sat upon the subject last session?—I was not aware of the fact, but I know the question bristles with difficulties.

26,219. With regard to the Native States, does your estimate of the compensation refer only to the Native States which are under the Bombay Government?—Yes; and it excludes Baroda. Baroda is territorially in this Presidency, but it is technically under the Government of India.

The
Hon. T. D.
Mackenzie.
15 Feb. 1894.

*The
Hon. T. D.
Mackenzie.*

15 Feb. 1894.

26,220. I should like to know a little more about what you say as to the non-acceptance by the Native States in this Presidency of the rule whereby two tolas of opium were made a legal maximum. What efforts have been made to induce the Native States within the Bombay Presidency to adopt that rule, and how far have they been successful?—That is a matter which has been worked in the Political Department of the Government. I am unable to say what specific efforts have been made; but I know such efforts have been made, because one or two of the Native States have accepted the rule, but others have declined. I know that they have declined, because I have information of these cases coming from their territory into our territory.

26,221. Do you consider that the difficulty which has been experienced with regard to the Native States in the Bombay Presidency of inducing them to adopt this rule with regard to the two-tola limit throws any light on the question referred to this Commission as to the possibility of extending any general system of prohibition of the growth or manufacture of opium to Native States as well as to British India generally?—I think it does. I think it shows they are entirely unwilling to do such a thing. If they would not help us in a little thing, would they help us in a big thing?

26,222. I see that there has been a considerable increase during the last 10 years in trans-shipment fees on Persian and other foreign opium; are these purely trans-shipment fees?—Yes.

26,223. There is no illicit importation of Persian opium into India?—I do not think so; I am not aware of it.

26,224. It is not permitted to be imported, is it?—No.

26,225. Is it altogether prohibited, or is it admitted under duty?—Rule 11, section 5 of the Opium Act of 1878 under "Import" says, "No opium shall be imported into the Presidency of Bombay by sea except in whole or half chests for re-exportation as provided by Rule 29. Provided, however, that at the port of Bombay only, opium may be imported otherwise than in whole or half chests for exportation, subject in all cases to payments of the full duty imposed by the sea-customs tariff for the time being in force, and to any special orders passed by the commissioner, as to subsequent possession and disposal of the opium imported."

26,226. I suppose the Persian and other foreign opium which is transhipped at Bombay is mainly intended to be transhipped for the eastern market?—Yes.

26,227. And that shows, therefore, a considerable increase of Persian opium being sent to the east?—Yes.

26,228. Bearing upon that you have said that the total number of Malwa chests shipped for Singapore from Bombay was only two?—Yes.

26,229. The Malwa opium shipped from Bombay goes almost entirely to China and not to the Straits Settlement, does it not?—It goes almost entirely to China.

26,230. Do I understand you to say in your note that in future there will be no license fees?—I ought to explain that in Bijapur, Dharwar, Belgaum, Kanara, and Ratnagiri the consumption is very small, and there is little or no temptation to smuggle. The old system of license fees in addition to paying opium duty has been continued in those five districts. That is where the revenue comes from under that head, and will continue to come under the head of "license fees for the privilege of retailing opium" and preparations of opium."

26,231. I see last year the license fees had fallen to Rs. 16,000 as against a lakh of rupees in 1883-84?—Yes.

26,232. That is in consequence of the change of system?—In 1883-84 this guaranteed system was not in force in certain districts and the revenue was obtained by means of this license fee system. This minimum guaranteed system was gradually extended further and further; and as that was done the license fee system was enforced in fewer districts; consequently the revenue under that head gradually fell.

26,233. But a small amount of revenue will continue to be raised?—Yes.

26,234. With regard to the bulk of the Bombay Presidency, I understand that there will be no license fees in future, but the farmers are required to maintain additional establishments for the supervision of their retailers and the prevention of smuggling and other illicit practices. Have you had enough experience of that system to say whether it is a satisfactory system?—We have not. We have only had one year of it, and it is impossible to say with certainty. If you look at the return of smuggling cases you will find that there has been an increase in the number of cases detected from 359 in 1891-92 to 530 in 1892-93. I think

that is a possible indication to show that the farmers are not paying that attention to the repression of smuggling which they would have done had they been required to guarantee a certain minimum vend. I do not put it forward as a certainty because I have not sufficient data to go upon, there is only one year.

26,235. Who is responsible for seeing that these opium farmers keep up an efficient staff in lieu of the license fees?—The Collector of each district primarily. It is of course under the Commissioner of opium too. He has a general supervision over them.

26,236. In your judgment then is it better to allow farmers themselves under supervision to keep up this detective force rather than to take the money from them and to keep up the force yourselves?—I think in some ways it is a good thing. They have means of getting information which our people have not, and they are more personally and directly interested in the matter.

26,237. I see in the list of revenue that there has always been in the last 10 years a contribution paid by the licensees for the cost of the Government establishments?—Yes, they pay a certain amount towards them.

26,238. That has gone on increasing whilst the fees have gone on diminishing. I suppose the growth of the one and the diminution of the other are connected?—They are. As the minimum guaranteed vend system was introduced, each farmer increased his contribution towards the establishment charges.

26,239. He pays less in fees and more towards the establishment?—Yes.

26,240. You were asked a question with reference to the vendors having to make up the minimum guaranteed revenue in the last 10 years, that has amounted to an average of Rs. 90,000 a year, has it not?—Yes.

26,241. And that item of revenue, I suppose, will now disappear altogether?—That will disappear altogether.

26,242. Out of this average annual revenue of Rs. 2,23,00,000 how much is local revenue and how much is Imperial revenue?—Out of that Rs. 2,11,70,815 is Imperial. Of the remaining Rs. 11,25,619, one-fourth is provincial, three-fourths are Imperial.

26,243. (*Mr. Haridas Veharidas.*) Do you believe that the effects of the use of alcohol are more injurious than those of opium?—I believe so.

26,244. In that case do you consider that restrictive measures are more necessary for the consumption of alcohol than for the consumption of opium?—Very strong efforts are now made to repress the excessive consumption of alcohol. But I would not repress the consumption of alcohol altogether. What I should aim it would be to repress the excessive consumption of alcohol.

26,245. The minimum amount allowed in the case of opium is two tolas. What is the minimum quantity of alcohol which one person is allowed to sell or possess?—I really forget the exact amount, I think it is about a gallon, but it varies in different districts.

26,246. If my information is correct I believe that there is no limit whatever to the amount of European liquor which can be sold—any quantity may be kept or sold?—Yes, wholesale, of course.

26,247. But only about a gallon of native liquor may be had at a time?—That is so.

26,248. If alcohol is more injurious than opium, do you not think that restrictive measures are more necessary in connexion with alcohol than in connexion with opium?—I am not prepared to say that more severely restrictive measures with regard to opium are required; and I think the existing restrictive measures with regard to alcohol are sufficient at present.

26,249. In neither case do you think any restrictive measures are required?—I do not think restrictive, i.e., prohibitive, measures are required with regard to opium. I should be very loath to say that stricter measures would be required with regard to alcohol except in the case of particular districts, but the question could only be decided after an examination of the circumstances in any particular case.

26,250. (*Mr. Fanshawe.*) Mr. James Munro, who was Inspector-General of Police in Bengal, and afterwards Chief Commissioner of Police in London, gave evidence in Calcutta with regard to preventing the smoking of opium on unlicensed premises. I put this question to him: "With regard to the closing of licensed smoking shops, your view is clear, is it not, that the wiser policy would be to keep them open because the people in them would be subject to police control," and he replied, "certainly." Do

I understand that that is the view you take also?—Certainly.

26,251. With regard to the semi-medical use of opium to which you refer in the Broach district, do you think it will be practicable to make any arrangement by which opium could be provided for that class of use, while at the same time it would not be available for use as a luxury or stimulant?—It would be perfectly impracticable. Who would be the authority to grant the permission? If it were granted by a medical man where is the medical man to be found? The district is a large one. Access throughout is

extremely difficult. The time when the drug is most required is during the monsoon, when the country tracts are practically impassable.

26,252. One of our difficulties in the administration of this country always is to find trustworthy agency, and if the power of giving medical certificates were placed in the hands of native vaid or hakims you would not consider that any certainty had been secured that opium would not be obtainable by any person for any purpose for which he required it?—I think it is certain that any person could obtain any amount of opium he wanted by paying for it.

The witness withdrew.

Mr. W. PORTEOUS called in and examined.

26,253. (Chairman.) You are Collector of Poona?—Yes.

26,254. Will you give us the summary of your services in India?—My service extends over 26 years. During that time I have served as Assistant Collector or Collector in all the districts of the northern division of the Presidency, viz., Ahmedabad, Kaira, Panch Mahals, Broach, Surat, and Thana, in the districts of Nasik, Ahmednagar, and Poona of the central division, and in the districts of Ratnagiri and Bijapur of the southern division. As Collector of salt revenue and Customs I have at different times travelled over the whole of the northern frontier line, and visited every port of any importance from Broach to the extreme southern limit of the district of Kanara. From 1874 to 1878 I served under the Government of India in the province of Mysore. I served as Assistant Commissioner or Deputy Commissioner (Assistant Collector or Collector) in three of the eight districts which make up the province, and in other capacities I visited on duty the headquarters of four of the remaining five districts. Throughout my service I have spent on an average four to five months of each year in the interior of the districts to which I belonged, living in tents among the people. I may also add that I have acted as commissioner of the northern division.

26,255. What is your experience as regards the consumption of opium by the different races of people in the districts with which you are acquainted?—The consumption of opium by the different races of people among whom I have thus served has never forced itself upon my notice. I knew, as it was my duty to know, that opium was consumed, but I looked upon and look upon the use of it as I look upon the use of alcoholic liquors by the European community. I have always looked upon opium when taken in moderation as a temporary and harmless exhilarant, just as I look upon wine and malt liquors and spirits when taken in moderation as temporary and harmless exhilarants. I have never known tracts of country or classes of people where or among whom it was notorious that opium was consumed to excess, and this I say because I have known tracts of country and classes of people where and among whom it was notorious that country liquor, distilled or fermented, was consumed to excess. I have often heard it said of a man that he was an opium eater, the phrase being meant as a stigma upon the man, but I have always looked upon the phrase as more or less equivalent to the phrase "he drinks" when used of a European. This phrase invariably conveys the meaning that the person of whom it is said drinks more or less to excess, and by an "opium eater," the phrase being used disparagingly, I understand a man who consumes opium more or less to excess. I know that opium in some districts is very frequently given to young children; in my present district of Poona I know it is thus given.

26,256. What is your experience as regards the effect of such consumption on the moral and physical condition of the people. As regards the effects of the consumption of opium on the moral condition of the people, I consider that, speaking generally, it has none. If the question be meant to involve the more particular question whether the consumption of opium deadens the moral sense and leads the consumer to commit petty offences, which otherwise he would not commit, then I answer in the negative. I have never in my service had to deal directly or indirectly with any criminal offence which but for the fact that the offender was a consumer of opium would not have been committed. I have tried many hundred criminal cases, and had to deal, on appeal or revision, with many hundred more, and I have never known, say, a theft or an assault committed because the offender was under the influence of opium at the time, or because he wanted to get opium illegally which he could not get legally. I have, of course,

had to deal with many cases of breaches of the Opium Act. As regards the effect of the consumption of opium on the physical condition of the people, my experience is that taken in moderation it has no deleterious effects. Taken to excess it renders a man idle, listless, and unfit for work, but it does not render him troublesome to the police or a nuisance to his neighbours or the public. I have known, however, a few instances of excessive consumption. I have never had to discharge a clerk or a servant because he was "an opium eater," that is to say, a consumer of opium to excess, and I cannot recollect that I have ever had to discharge a peon for this reason.

26,257. Would the people of India, so far as you know, be in favour of regulations limiting the use of the sale of opium to medical purposes, and would they be willing to bear in whole or in part the cost of prohibitive measures?—My opinion as to the disposition of those of the people of India whom I know in regard to the use of opium for non-medical purposes is this: The bulk of them do not use opium, and their attitude is one of indifference to those who do. Those who use it to excess are looked down upon. The people would not bear willingly either in whole or in part the cost of prohibitive measures. If the cost of such measures was by any possibility to be adjusted without the imposition of taxation, the bulk of the people of the Poona district, if left to themselves, would probably not care very much whether prohibitive measures were introduced or not, but there would be a large and discontented minority.

26,258. Should, in your opinion, the sale of opium in British India be prohibited except for medical purposes?—In my opinion the sale of opium in British India, except for medical purposes, should certainly not be prohibited. So to prohibit it would be an error fraught with the gravest political consequences. As I have said, the people of the district of Poona—and I take Poona as a type of a district where the consumption is small—would probably, if left to themselves, accept the position and say nothing. I do not believe that as yet 5 per cent. of the 1,040,999 Hindu and Mahomedan inhabitants of the district, the city of Poona included, have even heard of the Royal Commission which is now sitting, far less of the circumstances which led to its being appointed. But the people would not be left to themselves. If prohibition were to be enforced the motives of Government would be misrepresented to them, and put before them in every light but the true one. The connection between the missionary bodies, or some of them, and the anti-opium movement would be made much of, and that their religion was threatened would be instilled into the minds of Hindus and Mahomedans alike. The results would be such as no thinking man who knew the country could venture safely to forecast.

26,259. Do you think the motives of Government would be misrepresented?—Most certainly.

26,260. Do you think prohibition could be extended to the Native States?—I think not to the Native States with which I am familiar.

26,261. Supposing total prohibition to be impracticable, can you suggest any change in the system at present followed for regulating and restricting the opium traffic, and for raising a revenue therefrom?—I consider total prohibition to be impracticable, and I have no change to suggest in the system at present followed for regulating and restricting the opium traffic and for raising revenue therefrom. The present system works well, although I am not yet convinced that the abolition of the minimum guaranteed vend system will turn out in all districts to have been prudent. Circumstances might arise to render it necessary for fiscal purposes to raise the price of opium, but I should be opposed to any raising of the price with the sole object of making the luxury more difficult of

The
Hon. T. D.
Mackenzie.

15 Feb. 1894.

Mr. W.
Porteous.

Mr. W.
Porteous.

15 Feb. 1894.

attainment, of making opium dearer to consumers, so that for what is called their own good they were able to buy less of it or none at all.

26,262. (Mr. Fanshawe.) A witness from the Poona district stated yesterday that the number of liquor shops is increasing every year in your district; I should like to have your opinion on that?—I do not think that is the case.

26,263. What he said was this: that he felt sure the number of shops was increasing in the city, and he thought they were increasing in the district—consumption was certainly increasing in the district?—The consumption is not increasing in the district of Poona. The contractor pays for his contract the same now that he paid four years ago. Up to the present he has not consumed the proportionate amount of liquor that would pay him for his contract. As regards shops, I do not recollect that I have opened three shops in the last three years. I do not know on what basis that gentleman founded his statement at all.

26,264. Speaking generally, as regards this statement, you would say that it could not be founded on authority?—Certainly it could not.

26,265. (Mr. Haridas Vekaridas.) Would you like to see stronger measures taken to restrict the excessive consumption of alcohol?—It is restricted at present.

26,266. I believe country liquor is consumed to excess?—You cannot help people consuming it to excess if they get the chance.

26,267. But do you not think stricter measures necessary?—I do not quite know what you would like—the number of shops diminished or the hours which the shops are open restricted. I am not prepared to say that anything more restrictive should be put upon the alcohol trade.

26,268. They should be allowed to use alcohol in excess with impunity?—We do not allow anyone to use alcohol or anything else in excess.

26,269. Is it not necessary, seeing how injurious alcohol is, for Government to see what stricter measures could be taken to check the use of alcohol?—I did not come prepared to answer questions on the alcohol trade; but I am prepared to say that at present the restrictive measures are as good as we can make them.

26,270. (Mr. Mowbray.) I think most of your evidence relates to the eating of opium?—Entirely so, almost.

26,271. Have you any views to express with regard to opium smoking?—Opium smoking is not considered respectable. I have served in Gujarat, where it is occasionally smoked; but it holds a very different position in the eyes of the general public from opium eating.

26,272. Do you consider that that arises from the fact that it is considered a disreputable thing in itself, or because it is a practice that is indulged in by disreputable people?—The people who smoke are generally the idlers who get money to spend occasionally, and spend it all at once.

26,273. I believe there are smoking dens at Poona? Are you responsible now for carrying out the order of the Government of India for the closing of shops in which opium is consumed on the premises where it is sold?—Yes; as head of the executive police, I am responsible.

26,274. Have you done everything in your power since that order was made to see that it has been effectively carried out?—Everything has been done to carry it out loyally.

26,275. Have you found any difficulty owing to these licensed shops being turned into unlicensed clubs?—I personally have not found any difficulty; but I have no doubt that a number of clubs have been formed since the shops have been shut up.

26,276. Have you ever tried to bring any of these clubs to a test case, as to whether they were illegal or not?—I have not.

26,277. Mr. Mackenzie just now put in some petition from Poona; had you anything to do with that?—It came to me from Government. I saw the petition about 12 or 18 months ago.

26,278. Were you responsible for making investigations with regard to the genuineness of the signatures?—I sent it to the city magistrate, and he investigated it.

26,279. (Mr. Pease.) You recognise, I suppose, that the purpose of licensing is not to raise revenue from the taxation of a luxury but for the purpose of repressing an indulgence which is injurious?—I am prepared to admit that.

26,280. And, therefore, if the present system of licensing alcoholic liquors is not effective in preventing a consumption which is injurious it so far falls short of the intention of the system?—I should like to know how it is assumed that consumption is injurious if consumption is increasing. It does not follow that the same number of people drink more liquor; it may mean that a larger number of people drink a moderate amount of liquor.

26,281. I only assume it from your own words; you say, "I have known tracts of country and classes of people where and among whom it was notorious that country liquor, distilled or fermented, was consumed to excess"?—Yes, I can mention those districts.

26,282. Therefore it is possible that the restrictive laws with regard to alcohol are insufficient, and might be improved?—I am referring in what I said, principally, to the district of Surat, in which I served many years ago. At that time there were several tracts of country in that district where the original settlers used to drink to excess every night. Our rules, then, for obtaining liquor were such that it was very easy to get it, and everybody used to be drunk every night. Now things are changed in a very marked degree. I also know, from my own personal experience, having been in Surat since the days of which I speak here.

26,283. Do you think that result has arisen from restrictive legislation?—Most certainly.

The witness withdrew.

The Rev. D. O. Fox, M.A., called in and examined.

The
Rev. D. O.
Fox, M.A.

26,284. (Chairman.) How long have you been in India?—Twenty-one years.

26,285. In what capacity?—Pastor of the Native Mission of the Methodist Church in Poona.

26,286. You have come before the Commission, I understand, with the view of making a statement of your experience with reference to the consumption of opium?—Yes; I have been in India over 21 years. I have been pastor of the Native Mission of the Methodist Episcopal Church in Poona for several years. My attention has been called to the use of opium among the people for some time past. For a year and a half I have looked up the matter carefully in Poona. A part of my work is in a locality called Bhanghatte, among a community of sweepers. There are many cases among the men and some among the women and many among the children who use it. I have also visited the opium shops and smoking dens in the city of Poona many times. I find the men with very few exceptions began the use of opium for the purposes of lust. I talked with a large number at different times and in different places and they give this as the reason for beginning its use. The common cause among women is that of disease, especially diarrhoea and

dysentery. The effect of its use physically, mentally, and morally are evil. This is admitted by those who use it almost without exception. The degree of the evil physical effects varies according to the constitution of the opium user, the amount of food he can obtain and its nutritiousness. The evil effects are much more apparent in those who have used for a long time and have used it in large quantities. It is difficult to measure the mental and moral effects. But from careful observation I am satisfied that the use of opium is damaging. This is especially true morally. They seem unable or unwilling to grasp the truths of morality so as to be influenced by them. They are habitual liars and, so far as I know, the men are without exception immoral. In conversation with the men they admit this. And this is the charge made by their neighbours. The users of opium are ashamed of the habit. They freely admit that it is degrading, that they are slaves. There is a universal feeling among those who do not use it that its use is a disgrace and is debasing. Once it is formed the user must have his usual quantity of opium. Without it he is in a most miserable condition, entirely unfit for any kind of work. His legs cramp, water runs from his eyes and nose, and he has great difficulty in breathing. I have never found one man or woman who had

broken off the habit though with few exceptions they all express the desire to be saved from it. The smoking dens in Poona city which were closed by Act of Government on the 31st of July 1893 are still in operation. They claim now to be conducted on the principle of clubs. In January 1894 in one room, 8 feet wide by 10 long, I found 16 men smoking opium. I visited the dens before the Act went into operation, and I have visited them since. The same places are used for the same purpose. In one room at 8 o'clock at night I found a native policeman. He said he had stepped in to have a chat. That the known relation of Government to the opium traffic is an encouragement to the people to use it there can be no doubt. The feeling among the people is that Government not only approves its use but desire them to use it. But the more intelligent know the Government is only seeking a revenue, and they speak in strong terms of contempt of its relation to the business. From careful inquiry I do not think there is the least reason to apprehend a rebellion by the opium users. The disaffected and evil-minded class of the people could be incited to rebel on this question as they can be on any other similar question. But that the opium eaters and smokers will rebel there is not the least fear.

26,287. (*Sir James Lyall.*) Is it not curious that the opium smokers and eaters you speak to tell you frankly that they began the habit for lust, and that they are immoral men. People do not generally run themselves down in that way?—I do not say they do that.

26,288. You say that "in conversation with the men" they admit they are immoral; and you say in another place, "I spoke to the men, and they gave as a reason for beginning its use that they took it for lust"; I say is it not curious that people you speak to all seem to tell you with such extraordinary frankness that they are immoral people?—They admitted it on being questioned.

26,289. But is it not very curious? It is not easy to get anything out of a native?—I would not think it curious, if it was a matter of fact in their experience, if they told the truth.

26,290. You think in this country—or in any country—people always tell the truth when it is very much to their discredit?—Regarding this question, I think they told the truth. I may say I have not only their own testimony, but that of those I am acquainted with who live in the locality. The neighbours confirm their statements that they use it for that purpose.

26,291. I say it is curious that they should make such a statement about themselves; you say, "I found the men, with very few exceptions, began the use of opium for purposes of lust. I talked with a large number at different times and different places, and they give this as the reason for beginning its use"; that is a direct statement that they told you so. Then you say, "so far as I know the men are without exception immoral. In conversation with the men they admit this." You have distinctly stated twice that the people you spoke to all made these admissions. I say it is a very curious fact?—Yes; my explanation is that I asked them about it. I do not claim that they came to me and told me without being questioned on the subject. I questioned them and they admitted that was the reason that led them to begin the use of it.

26,292. You say that you are confident these men told you the truth, and yet you say they are habitual liars?—I judge they have told me the truth, because their statements were confirmed by their neighbours, who knew them.

26,293. In this particular thing you think they told you the truth; in other things they are habitual liars?—I believe they told me the truth in this. I have evidence to prove what they said was correct by their general life.

26,294. Take a class of men who are habitual liars; what interest have they in telling the truth in a matter which is to their discredit?—They are more likely to be telling the truth if it is to their discredit.

26,295. Why?—If they tell me that which is to their discredit frankly, and that statement is confirmed by the neighbours, it goes to show that what they say is correct.

26,296. That is not an answer to my question. My question is, if you have a class of men who are habitual liars, why should these habitual liars tell the truth in a matter which is greatly to their discredit?—I do not think it is necessary for me to explain that. My answer is, that I believe they told me the truth regarding the question of their beginning the use of it, because they admitted it themselves, and the neighbours confirmed their statement.

26,297. You cannot explain why they should tell the truth on this occasion when they are habitual liars on other occasions?—Is it necessary for me to go into a dissertation on human nature just now?

26,298. We will take it that you cannot explain it.

26,299. (*Sir William Roberts.*) You say that the men with very few exceptions began the use of opium for the purposes of lust; I presume you would regard the using of a remedy for the sake of lust an immoral thing?—Yes.

26,300. Do not you think that even amongst the people of India that would be also regarded as an immoral act?—Yes, largely.

26,301. I would infer, therefore, that those who take opium for the sake of lust they must have been immoral before they commenced the habit of using opium?—The purposes of lust have a special significance here in the use of opium. It enables them better to enjoy the lust as a doctor would tell you.

26,302. According to your statement they must have been degraded and immoral characters before they would resort to the habit of using opium for such a purpose?—They began the use of opium for the purpose of enhancing their ability to enjoy their lust.

26,303. They were immoral characters. It was not opium that made them immoral; they were debased before. Had you any experience among respectable classes?—Not much. I know of some Brahmins who use opium.

26,304. Did you find that they were debased or demoralised or injured physically?—I know of one or two exceptions; but most of them admitted that they used it for the purpose of lust, of increasing their power to enjoy lust.

26,305. I may take it that your experience of what we call moderate opium consumers amongst the decent respectable classes is very limited amongst the non-criminal classes?—The class I speak of are non-criminal. They belong to a decent caste of their own.

26,306. I mean people who are called respectable citizens by their fellow citizens; have you had much experience amongst opium eaters of that class?—I do not mean to convey the impression that because they are sweepers they are disreputable persons. They are of low caste, but they are respectable people. They are not what we would term a degraded caste.

26,307. Have you studied the use of opium in moderate quantities?—Yes. For a year and a half I have given careful attention to it.

26,308. That is not a very long time; you have been in India 21 years?—My former experience in India was amongst Europeans entirely, and of late years I have been among the natives.

26,309. So that your experience has been very short with regard to the opium habit?—A year and a half.

26,310. Your attitude with regard to alcohol, like that of other members of the Methodist Episcopal Church, is antagonistic, is it not?—Yes.

26,311. So that you would wish to have both opium and alcohol prohibited by law?—Yes.

26,312. (*Mr. Mowbray.*) How long have you actually been in Poona?—Except for three years I have been in and out for 21 years. I was there four consecutive years. Then I went away for three years, and returned again, and was there as general supervisor for five years. I then went home for two years; but since 1887 I have been stationed there; so that except about three years in Karachi and two years at home I have been there all the time.

26,313. What has been the change in your position there that led you for the bulk of the time to mix with Europeans and only for the last year and a half to mix with natives?—Our church began here in Western India among Europeans. I came out in 1872 and was made pastor of the English church at Poona, and my time was taken up with that. Subsequently I went to Karachi, and three years afterwards I was made presiding elder of the English work of our church in the Bombay and Madras Presidencies. In 1887 I was made pastor of the English church in Poona. Our native work was just beginning in 1887. In 1890 I was made pastor of the native work entirely.

26,314. The thing is divided; do you mean that somebody else takes the English side and you take the native side?—We have now an English pastor in Poona who has charge of the English church, and I have charge of the native church.

The Rev. D. O. Fox, M.A.

15 Feb. 1894.

*The Rev. D.
O. Fox, M.A.*

15 Feb. 1894.

26,315. That is since 1890?—Yes.

26,316. In your evidence you almost invariably speak of the use of opium; do you wish to draw any distinction between smoking and eating?—No; I use the word as including both smoking and eating.

26,317. And the remarks which you make on the one are applicable to the other?—I think that, so far as my observations go, smoking is more deleterious than eating.

26,318. But when you use the word “use” here, you have deliberately intended to include eating as well as smoking?—Yes.

26,319. (*Mr. Haridas Veharidas.*) These Bhangis are the lowest class, are they not?—Yes.

26,320. A low caste people would not possess such morals as you expect to find in the higher castes; you say the Bhangis are habitual liars; opium would not make them worse, would it?—I compare opium users with those who do not use opium, and the latter are more reliable.

26,321. You find the non-opium users are not such liars as the opium users?—Yes, and they are more accessible religiously too.

26,322. Do they use alcohol freely?—These sweepers use alcohol.

26,323. Are they violent when they drink alcohol?—Yes.

26,324. They are not violent when they eat opium?—No, they are not.

26,325. Then so far opium is better than alcohol?—No, I do not think so, because if opium had the same effect on them that alcohol has it would make them violent. It has a contrary effect, it quiets them.

26,326. It makes them liars, but not violent or senseless?—It makes them senseless when they eat much.

26,327. Alcohol drinkers are mischievous to others, while opium eaters only injure themselves; do you make that distinction?—Yes.

26,328. (*Mr. Fanshawe.*) I understand that you have not had any experience of the people in the district, and that your experience of native life is mainly confined to the Bhangis, people low down in the social scale?—Among some of the Brahmins too, but my work is confined to the lower caste.

26,329. You have nowhere apparently distinguished between the use in moderation and the use in excess; do you wish it to be understood that all people who take opium, whether in moderation or not, are, without exception, habitual liars and immoral?—You notice I say that the evil effects are much more apparent in those who have used it for a long time and have used it in large quantities.

26,330. You would not extend that general condemnation to persons who take opium in moderation?—Not so much; it would be measured by the time they had been using it and the quantities they used.

26,331. In describing the effects on the user, are you speaking of persons who take opium in excess or moderation?—Of those habituated to it.

26,332. In excess or in moderation?—If he is a moderate user the effects will not be so great as in the case of a person who is an immoderate user; but the moderate user must have his daily quantity or else he is useless.

26,333. But the physical effects that you describe would not be the physical effects that would follow the moderate use of opium?—Not so marked, but there are evil physical effects even in the case of the moderate user if he does not get his quantity of opium.

26,334. You are aware, of course, that the consumption of opium, on the whole, is small in the city of Poona?—Yes.

26,335. What do you mean us to understand when you say that “the same places are used for smoking opium”; do you mean to say that they are used with the sanction and by the arrangement of the licensed vendors, or that smoking is now carried on in the present licensed shops?—No, I refer here to the smoking of opium in unlicensed shops.

26,336. You say, “I visited the dens before the Act went into operation and I have visited them since. The same places are used for the same purpose.” Do you mean to say that the smoking is going on in the licensed shops?—I do not think they are licensed shops.

26,337. The shops are no longer in the same place?—They are in the same room, but I am sure they are not licensed by Government.

26,338. The place where smoking is carried on is not the licensed shop of Government?—It is in the same room that was used when the place was licensed; but now though the license is revoked the place is used for the same purpose still.

26,339. Have you seen any sales taking place yourself there?—Not personally; but it has been brought to my notice. One of my preachers went, under my directions, to see if they would sell opium in the place. I may say I went myself to investigate this matter. I tried the men, but they knew the law and were so shy that they would not tell me. I was satisfied that the fellow who owned the room sold the opium to these men, and that they used it there. I therefore sent my preacher. I said to him, “You go; they will not suspect you. Find a man you know who smokes, give him the money, and go with him and see that he buys the opium and smokes it there.” In two different shops the man my preacher took went in and bought opium and smoked it there. In the second shop the owner of the shop, suspecting what he was there for, gave the money back and drove the man out of the shop.

26,340. You obtained certain evidence of an illegal sale; did you bring that to the notice of the City Magistrate or the Magistrate of the district?—I only secured it last week.

26,341. You have not thought it necessary to take any steps to bring it to the notice of the authorities?—No. I would if the officers wished to investigate it.

26,342. (*Sir James Lyall.*) Does your church place its converts under discipline in the matter of the use of opium?—Yes.

26,343. Is it found difficult to keep up that discipline?—No, not in our church.

26,344. (*Mr. Moubray.*) When you found the opium sold and smoked on the premises you say you did not inform the authorities?—It did not occur to me that I had better at once inform the Government.

26,345. How are the Government to interfere with illegal sales if well-disposed citizens who have evidence on the subject do not come forward to tell them?—I would be willing to do that to help suppress it. I am prepared to help suppress it in every way.

26,346. In your evidence you say that you found in one room at 8 o'clock at night a native policeman. I do not exactly know what you mean by stating that?—I think he ought not to have been there.

26,347. Then if you thought that the policeman ought not to be there, and if well-disposed citizens like yourself and your preacher when they are there do not report breaches of the law, how are the Government ever to discover a breach of the law?—I will report it to Government if they wish it.

26,348. (*Chairman.*) Do you place the members of your church under discipline in regard to alcohol?—Yes.

26,349. They are under discipline both with regard to opium and alcohol?—Yes, and ganja.

26,350. Which of the two restrictions do you find it most difficult to enforce?—We have never had any case among the Christians either of opium or of alcohol, but we have of ganja.

26,351. You have had experience of over 21 years of spiritual work in India, and you have told us that during the last year and a half your attention has been given to the evils arising from opium, but not before that. Now during the earlier years of your somewhat long service was not your attention called to the evils arising from the abuse of alcohol?—Yes.

26,352. You had become sensible of the evils which arise from the excessive use of alcohol in the earlier stage of your experience; may we draw the conclusion from that circumstance that of the two alcohol is the greater evil?—I have to tell you that my attention was called to the evils of alcohol before I left America, and it was no new subject to me when I came to India. I had to deal with Europeans here, and I never found any case of habitual opium consumption amongst them. I had heard of the Ayahs giving it to children, and all mothers being on their guard in regard thereto. So far as alcohol is concerned, I have had frequent occasion to deal with persons who have been ruined by it.

26,353. Does it not appear to you evident that you have been asking us to take up two positions which are inconsistent and contradictory; you have asked us to believe that the consumers of opium are habitual liars, and at the same time you have asked us to attach value to their confession to you in answer to your questions to the effect that they took opium for the purposes of lust. Now, if we

are to attach value to the confession must not we give up the assumption which you ask us to make that those who made that confession are habitual liars. If, on the other hand, we are to believe that those who made this confession are habitual liars, is it not evident that we cannot attach value to the confession?—You can attach value to the confession if it is confirmed.

26,354. But confining ourselves to the testimony of the men; if we are to believe, with you, that the consumers of opium are habitual liars, can you seriously ask us to attach much value to the confession made by these men—I mean, apart from the testimony of the neighbours?—I say that their admission is reliable, because their admission is confirmed by the testimony of those who know them. That goes to show that what they said to me regarding their use of it is correct.

The witness withdrew.

Dr. THOMAS BLANEY called in and examined.

26,360. (*Chairman.*) You are, I believe, a private practitioner in Bombay?—Yes.

26,361. And President of the Municipal Corporation?—Yes.

26,362. (*Sir William Roberts.*) Where have you acquired your knowledge in reference to the opium habit?—In the city of Bombay only. I have practised medicine here for 46 years, with the exception of a month at the Hills and a summer trip to England.

26,363. What is your opinion as to the extent in which opium is used in Bombay?—I do not think it is very extensively used. My practice has been as extensive as that of any medical man in Bombay, and it continues to be so. I practise among all classes of the community.

26,364. You cannot give us any estimate of the extent of the practice of opium eating?—No, I cannot do that.

26,365. Have you had an opportunity of seeing the effect of the habitual use of opium amongst the natives of Bombay?—Yes.

26,366. Will you tell us the result of your experience?—The result of my experience is that it is always used in what medical men call moderation, that is to say, appropriate doses. These doses may sometimes be increased from usage; but my own experience is that there has been no large increase. All the hundreds and hundreds of natives I have seen taking their doses in Bombay have taken doses of about 2, 3, or 4 grains.

26,367. You recognise that some individuals seem to be able to tolerate much larger doses than others?—Yes, that is a fact.

26,368. For what purposes have you observed opium to be used?—Generally, I think, they begin to take it for aches and pains. The natives of Bombay are so liable to run to something to relieve their aches and pains, especially stomach and bowel troubles, that they even consume Eau de Cologne very largely—they say for alleviating wind. In the same way, if any little ache or pain begins they resort at once to this household drug, opium; and I believe that is how the habit commences.

26,369. Have you observed the practice of giving opium to infants?—Yes. I may say I have been Coroner of Bombay for 17 years. I only gave it up last year because I found the work took up too much of my time. In that 17 years, of course, I have had great experience of the effects of opium on infant life. In the last 22 years there have been 463 inquests of suicide by opium.

26,370. That is among adults?—Yes, of course. The children's deaths were accidental. There have been 44 inquests held when the verdict returned was "accidental death." Many of them were infants. As regards infants' deaths, it happens in this way: the infant has been used to its dole of opium, which is generally kept in a small tin box, on the floor or within reach of the infant. The infant, perhaps 2 years old or so, gets hold of it and takes a quantity. The friends come in and find it in a state of narcotism, and the child is taken to the hospital.

26,371. How many accidental deaths?—44 in 22 years, two a year.

26,372. Are those amongst infants?—Not always. The minority are infants. I have distinct recollection of five or six infants that have been accidentally poisoned.

26,373. Have you known injurious results from the practice of giving balagoli pills to infants?—I have very great experience of their use among infants in Bombay. I

26,355. Is it really worth while to rely upon any statement made by a man that you describe to us as an habitual liar?—It is worth while if it is confirmed by good evidence. If I had not been told, except by themselves, that they used it for such purposes, I admit it would be unreliable; but their testimony has been confirmed by their neighbours.

26,356. On such a matter as that do you think the testimony of the neighbours goes for very much?—Yes.

26,357. You think that on such a matter as we are discussing the testimony of the neighbours or anybody is really of much account?—Yes.

26,358. You do?—Yes, as confirmatory.

26,359. I am very much surprised that you should think so.

think I am medical man to all the balagoli manufacturers of Bombay. I know that opium is used very largely indeed with infants of the lower classes. I estimate the labouring classes to amount here to 200,000 persons, including men and women. They use balagoli for their children, but not always so, as crude opium is cheaper. In one form or another the poor labouring classes give their infants opium for the first two years or so of their life.

26,374. With what effect?—I have never seen any bad effects.

26,375. Do you think that the infants of the natives are more tolerant of opium than the children of Europeans?—I am quite certain of it, and adults also. Native adults and children can certainly tolerate larger doses of opium than Europeans.

26,376. I presume you have also had brought to your notice cases of the use of opium habitually by adults and elderly people?—Yes, I may say thousands.

26,377. What has been your conclusion as to the consequences upon their physical health and upon their moral health?—Absolutely none whatever; and I think I can quite understand the stimulant action of an ordinary dose of opium. I myself start work early in the morning, visiting my patients. I get home to breakfast between one and three o'clock. I am 71 years of age; and I have found that for the last one or two years muscular and nervous energy shows decided failure about this time. After my breakfast I take what would be called a strong cup of tea, because, finding a great desire to have a little nap I have had to resist it, as I want my afternoon to myself to do my work in connexion with the school board, technical institute, and various committees. The cup of tea revives me, and I do some of the hardest work in the afternoon after that cup of tea. I believe the opium eater feels in the same way after taking his doses in moderation.

26,378. But occasionally you have observed opium eaters go to excess?—Yes, very few. So few that I think I could count them on my fingers.

26,379. Sometimes occasional excess, and sometimes habitual excess?—I have no knowledge of a single pure abuser of opium habitually. I have seen a man taking a large dose of opium, and he has explained the reason why, and stopped it again, and gone back to his usual dose; but of the opium debauchee I have no experience whatever.

26,380. Have you had personal experience of the lower classes?—Very largely.

26,381. And even amongst them have you not met or seen cases of habitual excessive use of opium?—I have not.

26,382. Have you ever been connected with any jails?—Having been sheriff for two years I had the charge of the civil jail, and was responsible for this jail. When the Government conducted inspections of the jails through certain justices I was always selected by my brother justices to draw up the reports. I have had experience of jails in that way.

26,383. You have heard of such things as excessive opium eaters becoming thin and emaciated?—I have read of it in newspapers; but I have not seen it.

26,384. Is it difficult for the habitual consumer of opium to give up the habit?—I know of many cases where it has been given up on my recommendation.

26,385. And so far as you know, has the habitual use of opium had any effect on the moral status of the individual?—None whatever.

*The Rev. D.
O. Fox, M.A.*

15 Feb. 1894.

*Dr. T.
Blaney.*

Dr. T.
Blaney.

15 Feb. 1894.

26,386. Have you any further observations to make?—I wish to say that as coroner of Bombay I have never held an inquest on a destitute opium-eater whose body was found lying in the open, or on the maidan. I have held a great many inquests on poor people who have died on the roadside, and these cases have always involved a very full coroner's inquiry; but in no instances have I known an opium eater becoming emaciated or dying on the streets. If it was a common thing one case would have surely come under my official notice in 17 years; but there has been no such inquest held. I should like to say that I am very strongly of opinion that the abolition of opium in India would be a very great deprivation, and be very greatly destructive to life. That is my honest and firm opinion. There is nothing in the world that can accurately replace opium.

26,387. As a household remedy?—For the purposes which it serves in the nervous system.

26,388. Have you formed any opinion as to the usefulness of opium in the morbid conditions produced by malaria?—Yes. When Warburgh was alive he prepared a tincture which went by the name of "Warburgh's Drops." He kept its nature secret. The East India Company was then the Government of India, and they bought the remedy from Warburgh. It was brought to India largely, and I was one who used a lot of it. We used it with the best effects. The worst Gujarat and Sind fever cases that came to Bombay were treated with it; and one or two bottles of Warburgh's Drops brought them round. We all wanted to know for many years the secret of its preparation. It was said there was only five grains of quinine in each bottle, and that it contained opium. I do not think anything was proved on analysis. So far as I know it contained no opium.

26,389. I did not know Warburgh's Drops contained opium; do you state that, as dispensed here, it contained opium?—No; we thought so. There was no chemical analyst in Bombay in those days.

26,390. It only contained quinine. I do not see what hearing that had on the opium question?—I and others have added a little opium to a preparatory dose of quinine when the cold attack was expected, and it had a very good effect.

26,391. (Mr. Pease.) Is it a common practice for healthy, native young men here to take opium?—No; it is not a common practice, certainly.

26,392. Is it the practice of some of them who are in health to take opium?—Yes, I think so.

The witness withdrew.

Khan Baha-
dur Kazi
Shahabudin,
C.I.E.

KHAN BAHADUR KAZI SHAHABUDIN, C.I.E., called in and examined.

26,405. (Chairman.) I think you are late Dewan of Cutch and Baroda, Fellow of the University of Bombay, formerly a mamlatdar and district deputy collector in Gujarat, and now residing in Poona?—Yes.

26,406. What is your experience with regard to the consumption of opium by the different races of people in the districts with which you are acquainted?—I am personally acquainted with the Native State of Cutch; the province of Gujarat, including the Baroda State, and with that portion of Kathiawar which forms the Amreli division of the Baroda State. Much opium is consumed in these provinces, particularly in Cutch, Kathiawar, and the northern districts of Gujarat. The use of opium is not confined to any one class of the people. All classes use it, the Rajputs and Charans being larger consumers than others. Opium is taken in its crude state or dissolved in water. I have not heard of opium smoking in these provinces. The bulk of opium eaters take it moderately.

26,407. What is your experience as regards the effect of such consumption on the moral and physical condition of the people?—The effect of opium on the moral and physical condition of those who take it in moderation is beneficial. Opium checks propensities to violence and crime. One does not witness exhibitions of brutality and self-degradation or domestic misery resulting from the use of the drug. Opium does not cause nerve or brain affections. Opium eaters are steady and devoted to their pursuits. The above is true of a moderate use of the drug. Excessive indulgence leads to the enfeeblement of the body and mind. It makes a man dull, lazy, and impotent. A man who takes opium habitually cannot easily leave off the habit, or do his daily work well without taking his dose at the appointed hour.

26,393. Do you think that that is a good or bad habit?—Just as good as taking tea, or just as bad as taking tea, whichever way you like to express it.

26,394. (Mr. Mowbray.) As President of the Municipal Corporation you are elected by the Corporation itself?—Yes.

26,395. I should like to know from you whether you have any regulations in the city of Bombay dealing with the sale of poisons?—Yes.

26,396. Is that under the General Municipal Act?—No. It is under the Poison's Act, an Act by itself. It is regulated by the police, and not by the municipality. There is nothing in that Act about the sale of poisons.

26,397. It is an Act applying to the whole of Bombay Presidency or to the city itself?—I believe to the Presidency, but I will not be sure.

26,398. Could you tell me the provisions of it?—Not right off. Opium and arsenic are omitted. According to the returns I appear to have held 128 inquests on deaths from arsenical poisoning in 17 years. Arsenic may be purchased in large quantities; but there is a limit to opium.

26,399. Opium is under special restrictions of its own we know; but I wanted to know what restrictions there were as to the sale of other poisons?—I think there are restrictions on prussic acid, strychnia, and one or two others; but on very few.

26,400. (Mr. Haridas Veharidas.) There is this difference, is there not, between a young man taking opium and tea, that while he would be able to give up tea he would find a difficulty in giving up opium?—I think he would feel just as uneasy in giving up tea. If you stopped my tea I should feel extremely uneasy.

26,401. That is your own case, I am speaking of other people?—I should feel it a great deprivation. Never having taken opium or alcohol I can say nothing about them, but about tea I can speak decidedly.

26,402. You cannot compare the giving up of the habit of tea and opium because you have no experience of the latter?—No.

26,403. (Mr. Fanshawe.) I rather gather that you have had no experience of opium smoking?—None whatever. I never saw a pipe of opium smoked.

26,404. The use of opium which your practice has brought you into contact with has been a very moderate use of opium. I think you said about four grains was the largest dose you knew of?—Yes.

26,408. What is your opinion as to the disposition of the people of India with regard to the use of opium for non-medical purposes?—The people of the districts I am acquainted with would certainly feel sorely aggrieved, and regard it as an act of oppression if deprived of opium, except for medical purposes. Many who are not addicted to it use the drug in their own ways as medicine. It is common to administer it, mixed with other drugs, to infants. Rajputs, cultivators, Charans, and certain other classes at marriages and such like occasions entertain their guests and friends with opium. On these occasions opium is as indispensable as the marriage feast at weddings.

26,409. Would the people of India be willing to bear, in whole or in part, the cost of prohibitive measures?—Assuming that this part of the question relates to the British districts, I have no doubt but that an impost for prohibitive measures would be very unpopular, the more so as it would be imposed for a purpose which the people would regard as despotic. And, too, there is at present no room for further taxation. If funds must be raised, they would not feel so much an indirect tax, say a duty on Manchester cloth, as a direct one. The vexation to the people, hindrance to trade, and extortion, attendant on prohibitive measures, are also matters worthy of consideration.

26,410. Should, in your opinion, the sale of opium in British India be prohibited except for medical purposes, and could such prohibition be extended to the Native States with which you are acquainted?—I am of opinion that the sale of opium, except for medical purposes, should not be prohibited either in British or native territory. As regards the Native States, the Chiefs would, I feel convinced, never consent to such a measure; and if the

British Government insisted on their adopting it, they would regard the act as arbitrary and as a breach of faith. For instance, the British Government have entered into a fresh agreement with the Baroda Government, under which the latter cultivates opium in its own territory, and issues it to its own subjects. It also, when necessary, imports opium from Central India or Bombay free of British duty. The Native States derive revenue from opium under arrangements entered into with the British Government, and I think they would sorely feel the injustice, and regard it as bad faith on the part of that Government if they were deprived of an established right, and the revenue derived from its exercise. This is not all. They would feel their status lowered by such an interference in a matter which pertains entirely to their internal administration. All this would create a great discontent in their minds, and distrust as to their future status. We have to add to this the grievance of their people in order to comprehend the full effect of prohibition.

26,411. Can you suggest any change in the system at present followed for regulating and restricting the opium traffic?—The present system is well calculated to serve its purpose, viz., to raise a revenue and prevent illicit traffic in opium. I am unable to suggest any change.

26,412. (*Mr. Pease.*) Have you known many instances of cases of excessive indulgence leading to the results you speak of?—I have known a few—not many.

26,413. (*Mr. Haridas Veharidas.*) Do you take opium yourself?—No, I do not take it. I have used it rarely on certain occasions; for instance, after a hard day's shooting or a long ride, with great benefit. I have given it to my horses when they were over-worked; it is the best thing to do according to my experience.

26,414. You think it is beneficial to take it occasionally for the purposes you mention?—There are certain occasions when it is beneficial. It is beneficial for colds, coughs, pains in the body, and so on.

26,415. You would not, I hope, consider it a good habit for young men in good health to take it habitually?—No; it is not necessary for men in good health to take opium. Opium satisfies in a very harmless way a kind of hunger and longing. I think it is in our nature to take something different from mere food. We all drink tea or smoke tobacco, or take tobacco in various ways. I have seen people clean their teeth with tobacco, and they could not do otherwise. Then there is alcohol and all sorts of wines, bhang, madak, and chandu, and all these things. There seems to be a universal craving felt for something. Opium satisfies these cravings in a most harmless way.

26,416. If a man is at all inclined to have something exhilarating, you would prefer opium to all the other things?—Yes. I think taken moderately, opium acts as a benefactor to the people, inasmuch as it keeps tens of thousands from the liquor shops.

26,417. I suppose you look upon the liquor shops in the worst possible light?—Yes; I think liquor is a great curse of modern times, to India more especially, as it is invading classes which never touched it before—the higher classes of Mahomedans and Brahmins; and its use is increasing. I would rather have these people take a little opium.

26,418. What do you consider the cause of the increasing tendency to take alcohol?—I attribute it to the religious restrictions which formerly existed having been removed, and to our education having become too secular. I fear that is one cause. People who formerly thought it a degrading habit to take alcohol do not think so now, because the highest men in India take alcohol. I do not think there is the stigma attached to taking alcohol that there was formerly.

26,419. Do you attribute it to English education?—I do not attribute it to English education altogether, but to the sort of education given in our schools and colleges. There is, as it were, no home education such as children receive in Europe. All the education we receive is in schools and colleges, and that education is entirely without moral teaching or religion; it is entirely secular and utilitarian, as it were.

26,420. If any prohibitive measures were adopted, you would like to see alcohol stopped first?—I should like measures adopted to minimise the consumption of alcohol as much as possible. I do not think these evils can be eradicated entirely, but they can be minimised to a great extent.

26,421. (*Mr. Fanshawe.*) We have had some evidence to the effect that Rajputs and kindred castes are giving up the ceremonial use of opium. What is your experience in Gujarat and Cutch upon that point?—I do not think they

are giving up the use of opium. They use opium on all possible occasions, at funerals, marriages, births; and when friends visit one another they are treated to kasumbha. If an opium eater did not treat his friends to a little kasumbha I suppose it would be thought a slight.

26,422. As far as your experience goes there is not any marked tendency to give up the ceremonial use of opium?—No.

26,423. We have been told in many parts of India that opium is generally taken by elderly men as a restorative; is that within your knowledge in Cutch and Gujarat?—I think so.

26,424. Is opium taken among the better class of Mahomedans?—There is no distinction as to the classes who take and who do not take opium. It is taken in Kathiawar particularly by the Rajputs, who are the rulers of the country, and by the Kathis.

26,425. Do young men take opium at all as a stimulant—in moderation—as we may take tobacco? Is that within your knowledge?—Yes. In Kathiawar and Cutch and North Gujarat I should think fully 20 per cent. of the population take opium. There are a great many young men also who take it. The habit is very common, and they take it in company. When once they begin to take it, as is the case with tobacco and even with tea, they do not give it up afterwards.

26,426. Is the use on the whole a moderate use with young men, or does it tend to become immoderate?—Whether used by young or by the old, the use of opium is, as a rule, moderate. The instances of immoderate use are very few and far between.

26,427. We have been also told that opium is to some extent taken for the purposes of lust; what have you to say about that?—I think it does excite lust when taken moderately, like any other stimulant. When taken immoderately, as I have said, it leads to impotency.

26,428. What I wished to know was more directly whether this was a general or common object with which opium is taken?—No; the habit is contracted in company. A great many people take kasumbha and shake hands and laugh over it. The habit is caught by the young generation and they imitate their elders. It has the effect, as I have said, of exciting lust, but it is not taken in the beginning for that purpose.

26,429. (*Mr. Pease.*) You have stated that you do not think there has been any giving up of the practice in connexion with social and ceremonial observances; is it not a fact that there has been a very considerable reduction of late years in the quantity consumed on these occasions?—I do not know the statistics; but I must modify my answer to this extent, that owing to the great spread of education among the better classes; those who are educated do not take as much opium now as they used to do formerly. There is a movement in Gujarat to give up the old custom of taking opium at marriages, dowries, and other ceremonies. It costs a great deal to treat opium to some five or ten thousand people.

26,430. When we were at Ahmedabad I got the impression that partly in consequence of an increase of price, and also on account of a change of custom, there was an enormous decrease in the quantity of opium that was provided and consumed on such occasions?—Amongst the educated classes that may be the case, but I do not think that there has been any increase in the price of opium lately. I should like to make one or two other remarks. I have heard a statement about the selling of wives and daughters. It is said that opium eaters, when they have no money to procure the opium, sell their wives and daughters. I may say that I have never heard anything of the kind. I was Magistrate and I was Dewan in two of the most important Native States, and such a thing I have not heard. I know when children are sold, particularly girls, they are sold to prostitutes. The profession of prostitutes is supplemented from time to time by sales of children, but not by opium eaters. The other day I heard a statement made by a witness about a certain class of people selling their children. It is very common among the jungle tribes. Among the people living in Songadh, in the Gaikwar's territory, and the Dang forests I have heard of cases in which a debtor when he is unable to pay off his debt goes and pledges his wife or daughter or son to the creditor. He says, "Keep them, they will serve you for some time." The people do not repudiate their debts. They are very truthful. With the exception of these two cases, children bought by prostitutes and children assigned as pledges for debt by some jungle people, I have never heard of a traffic in children in any other way. I have heard of compensation being paid to Native States. I was

Khan Kabadur Bazi Shahabudin, C.I.E.

15 Feb. 1894.

for a long time connected with the Native States, and I am still connected with Baroda. It is my firm conviction that these Native States would not, first of all, consent to the prohibition of the opium traffic in their States, and if compensation were offered to them they would not think it an adequate return for two things they are now enjoying, the right and long-established privilege of selling opium, and the revenue they derived from it, which, it must be remembered, is progressive. Then there is prestige. They would not like to give up this source of revenue on any account. When they are compelled to do it they would regard it as oppression and a breach of faith. Now that I am on the subject I may mention that I have heard from good people that the opium agitation is in order to increase European liquor in India. Of course I do not say so. When I heard it formerly I thought it came from very ignorant sources, in fact, from the very low classes. A fortnight ago, however, I was dining with some Bombay and Poona merchants, and one of them said the same thing. I poochpoohed the suggestion, and I told him that it was not the case. They put me down with a high hand, and they said, "You do not know." I wish to bring these things to the knowledge of the Commission, because these opinions really exist even among the better classes, classes which ought to know better. There is not the least doubt in my mind that the suppression of the opium traffic would increase the consumption of liquor; and whether that result would be very desirable, it is for the Commission to consider. At the same dinner table there was this talk: "Why do not they suppress the liquor traffic, which is doing so much injury?" One gentleman instituted a very striking analogy as it appeared to me, and I put it before the Commission. He said, "The British Government derives a very large revenue from liquor, and so does the Government of India derive a very large revenue from opium. There is no prohibition against the taking of liquor in England. There are not the strict rules and regulations which hamper the sale and consumption of opium in India; liquor which is manufactured in England pays duty to Government, is exported to Africa and to all the countries in Asia; but opium, which is

"manufactured in India, is exported to only one country, namely, China." He said, "Look at the difference between the results of the consumption of opium and the consumption of liquor." I could not answer him. Those who know what a curse liquor is becoming in India could answer.

26,431. (*Chairman.*) You have referred to liquor. Looking at this question from the moral standpoint, if there were to be prohibitory legislation with reference to the use of stimulants, you would say that of the two there was more urgency to deal with the alcohol question than with the opium question?—In the first place I do not believe that it is possible to prohibit entirely either the traffic in liquor or the traffic in opium; but if there must be prohibition I would prefer it to be applied to the liquor traffic, at least that the consumption should be minimised as much as possible; and it is in the power of the State to do it.

26,432. I take it from what has fallen from you that you do not believe in the practicability of dealing with any evils which arise from the excessive use of stimulants in certain cases by a sweeping measure of prohibition?—No, I do not.

26,433. Would you say that we must look to the moral and social influences and education to bring about the reform that is desired so far as it is necessary?—The consumption of liquor, and even its excessive use, can be minimised by certain measures by the Government. I can give an instance. I can mention cities in which there were only two shops; now there are 30 or 40 or 50. If there were only two shops people would not have the temptation when they had three or four pice in their pockets to have a glass. A man would not care to walk two or three miles to have a glass of liquor, but he would take his money home to his wife. Now the shops are staring him in the face and inviting him with all sorts of coloured bottles to come in and drink, and he sees a lot of his companions who make themselves merry. I should like to see the consumption of liquor minimised in preference to the prohibition of opium.

The witness withdrew.

The Rev. A. W. Pritch.

The Rev. A. W. PRITCH called in and examined.

26,434. (*Chairman.*) I believe you have lived in India for 9½ years?—Yes, during four of which I was actively engaged as a *colporteur* of Scriptures and tracts among the natives, thus coming into close contact with all classes.

26,435. What knowledge have you of the vernacular languages?—I speak the Marathi and Hindustani languages, and I understand colloquial Gujarati.

26,436. Will you tell us your experience with regard to the opium question?—Eight years ago I first visited an opium shop, since then I have visited opium smoking shops and also shops where crude opium is sold by weight in Bombay, Poona, Surat, Sholapur, Akola, Thana, Kurla, Bhiwadi, Igatpuri, and Lucknow. I made it a point always to converse with the opium users (smokers and eaters) and find out all I could regarding the physical and moral effects and their views and opinions on the habit. Since 1890 I have visited and taken strangers to the opium smoking shops more than 100 times, acting as translator in nearly every case. I base my evidence on the above experience. The opium smokers all admit that the habit is bad and that it ought to be stopped, and that it would be very good if it was stopped. Every smoker considers it disgraceful. One year ago I was invited to visit the opium smoking shops in Bombay by Mr. Madden, who had made an appointment with Mr. Rustomji Pestonji Jehangir, Chief Opium Inspector. We visited four or five shops, found them crowded. Mr. Rustomji undertook to show that the anti-opiumists had over-stated the facts, and I undertook to show that they had understated the evil. Our plan was to enter into conversation with a group of from ten to thirty smokers, then Mr. Rustomji would ask, "How would you like to have the smoking closed, and what would happen?" Usually a chorus of voices would say, "We would die," "Our blood is dried up," "We must have opium," &c. Then I would put the question in another way, stating that as nearly all present have been in jail what did they do then? Did you die? And if there would be a lock on the door to-morrow morning, what would you do? They said, "This is true, in jail we get no opium and live, and if the door was locked we would learn to do without it, and it would be good for us," and then we would hear of their former prosperity and present ruin through opium. In Mr. Rustomji's

presence I asked regarding the statement I had always heard that many began the use of opium to stimulate sexual vice. This was generally admitted with the qualification that after a year or two the user becomes "useless" or "dried up." The conversations varied, but in every instance the smokers condemned the habit, pronounced it bad, and expressed sorrow that they were smokers. Mr. Rustomji admitted that the smokers held that position toward smoking, and stated so clearly before Mr. Madden, Mr. King, and myself. He stated that he was publishing a history of 80 opium smokers. I asked him to incorporate what he heard that night (but he did not); he said he was personally paying for the printing of the book and doing it in the interests of philanthropy, that he had only returned from England a few weeks before, and he that night told me he was going home to England again shortly. He went and published the book. It would be easy to put over against these 80 robust opium smokers, twice 80 human skeletons made so through the use of opium. That book simply shows the human material that is destroyed by the opium habit. Many opium smokers told me that they learned to smoke opium in the houses of prostitutes; a large number stated in a shameless way that they began to use opium "to increase their sexual endurance." And all but a small proportion when questioned admitted that their reason for beginning the use of opium was to stimulate their vile passions. The exceptions stated that companions and friends first taught them, and not more than fifty of the thousands spoken to said they began in order to deaden the pain of some ailment, usually chest complaints. I have met well-dressed smokers and those who had scarcely a rag on to cover their nakedness. I met those who were bright and intelligent in conversation, and those so dull that they would only mumble a few disconnected words. I have met those who were robust and also emaciated wrecks, and those of all grades between these extremes. In speaking with a well-dressed smoker who was physically in a good condition, I found that he was a new beginner, or that he was well-to-do and had nourishing food, and that the "human skeleton" smoker seldom left the opium pipe, or was a beggar whose food was scanty and uncertain. The statements of the well-dressed and the beggar were alike emphatic against the use of opium. Nearly every opium smoker declared his desire to stop the

habit, and with his next breath declared it was impossible as long as opium was obtainable, that the habit had a hold upon his life. The period when the use of opium was a pleasure was variously stated to me at from six months to two years; after that the dose in eating or the frequency of smoking had to be increased to get the same effect, and then their physical craving drove them to get their relentless appetite quieted. My attention has also been called to another condition into which the opium slave sinks, when all pleasurable sensations cease and the effort of the opium slave is to get rid of a pain caused by not having opium. I know of one woman who threw herself from her bed in the Cama Hospital in the last agony I described. I also know of a little girl nine years old who has reached this last stage where she becomes uncontrollable, and shrieks like mad when she does not get her supply of opium. My firm conviction is that there is not another such a seductive delusion of the devil to debase humanity as the opium habit. Several times as I sat down in opium dens old smokers have laid their hands gently on my shoulder or arm and begged me not to begin to smoke opium, but to look at their condition, and perhaps he would call on several to confirm his statement that opium was ruinous, and they would give me their history or point to some dirty wretch and tell how wealthy he once was. But on assuring them I had no intention to smoke, but that my desire was to stop the opium right from the growth, and that I came for information, I was blessed by these poor degraded opium smokers. One man said, "The stopping of opium may kill me, but look at the benefit to those who will not learn. This is a good work." During these several hundred visits to opium shops never once was I insulted, or rudely spoken to, or treated with contempt, or treated with indifference, but always as a friend. Every smoker approved of stopping opium. Their usual statement was, "It will be well for us if opium is stopped, but as long as we can get it we must have it," and often, "How will Government give up the revenue?" When the order was issued to close the opium smoking shops July 31st, 1893, I was thanked by over 40 opium smokers. Several times when I drove in hired carriages in Bombay the drivers turned to me and said, "That was a good work to stop the chandul shops." But after a few weeks, as I went about my mission work, persons would stop me and tell me new smoking shops are again opened, and volunteered to show them to me, and in every case the opium department was mentioned as knowing about it. I have had more than 20 persons inform me of this. At intervals I visited these illicit opium smoking shops, open contrary to Government order, but with the knowledge of the opium department. In order to disguise the crime the natives were taught to call them "ke-lubs" (clubs), but in every case I found that there was no membership fee, no charge toward the room rent, or smoking lamps, or matting, &c., that the pipes were all owned by the "manager of the club," i.e., owner of the shop; that any opium smoker could go into any one of these "clubs," pay for as much opium as he wanted and smoke it there; that the owner of the shop (or manager of the club) made two annas profit on every tola of prepared opium he sold, and this was his reason for selling. The number of these new kind of smoking shops was variously stated at from 30 to 60 in Bombay. The most open and defiant illustration of the conducting of these unlicensed, illegal smoking shops occurred between December 23rd, 1893, and January 2nd, 1894, at the Mahomedan fair at Mahim, within the municipal limits of Bombay, when three opium smoking shops and one kasumbha (opium drinking) shop were kept open for the public with opium department police stationed near them keeping the ordinary police from interfering and stopping these illegal shops. I submit the statement which I am about to read, and I quote from an article of my own in the *Bombay Guardian* of January 9th:—"Continued investigations into the systematic deception practised by certain officials in the Bombay Government Opium Department compel us to state the following facts so as to make apparent the hollowness of any so-called reform which comes short of absolute prohibition of the growth and manufacture of opium except for medicinal purposes. On the 31st July 1893, as before stated, an order was issued to close all existing opium smoking dens in Bombay, but in the preceding article we have shown that a number of illegal smoking shops were thereafter conducted with the connivance of the opium department (in place of the smaller number of licensed places which the authorities professed to have closed). The general public will be surprised to hear that the way in which the Bombay Opium Department carries out the Government order to close licensed opium dens is by actually conniving at a larger number of unlicensed

"ones. We learn on the evidence of several witnesses that Damaji Laxmanchand, a vendor licensed to sell opium for consumption off the premises, illegally sent opium to Mahim (an out-lying portion of Bombay) for the manufacture of chandul, and sold it through his own servants in smoking dens opened for that purpose during the Mahomedan fair held there between December 23rd, 1893, and January 2nd, 1894. We charge Rustomji Pestonji Jehangir, chief opium inspector of Bombay, with personally taking a staff of opium department police to Mahim on the above stated occasion to supervise the illegal smoking shops either under the direction of the collector of customs or contrary to his order. We further affirm that the opium department police were stationed at the three opium smoking shops and one opium drinking (kasumbha) shop conducted at Mahim on the occasion of the above-named fair, and kept the ordinary police from interfering with these illegal departmental opium smoking shops. We affirm that the following illegal shops were conducted with the full knowledge and consent of Rustomji Pestonji Jehangir, chief opium inspector: (a) one madak shop in Kassibharri, Mahim, was kept open for eight days by one Aga Mahomed and a woman named Saddi; (b) a chandul shop was kept open for five days on Mahim Bazar Road by one Karim Jetli and Khuda Bux; (c) another chandul shop was kept open for ten days by one Rahimtulla in Mahim also; (d) a kasumbha (opium drinking place) was kept open for seven days by Haji Ahmed, near Kassibharri, Mahim. We, therefore, as a matter of common justice, demand that Rustomji Pestonji Jehangir be called to account for the above-named fraudulent and illegal proceedings, and, with his official accomplices, in whatever position, receive adequate punishment. We also call for the adequate punishment of Damaji Luxmanchand, the opium license holder for Bombay. We respectfully invite Lord Harris, Governor of Bombay, to institute a thorough and impartial investigation, conducted by others than officials, into the above stated charges, in order to further bring to light the existing fraud and want of integrity on the part of the opium department and to punish the criminals. This investigation should embrace Rustomji Pestonji Jehangir's two recent visits to England; the origin, publication, and statements of his recent book purporting to give the history of Bombay opium smokers; and also his visits to Bombay medical men who signed the Medical Anti-Opium Petition to Parliament, and which visits were followed by the alleged repudiation of a number of the signatures."

26,437. Have you anything to say with regard to giving opium to children?—It is my experience that the giving of small quantities of opium to quiet children—regularly dosing them—is all but universal in India. It has the sanction of Government in that balagolis (children's pills) are advertised to be sold only by licensed opium vendors, by order of Government. This unnatural stupor in which a child is kept can only be hurtful to its physical or mental development, and there is no doubt in my mind but that many vicious traits in older persons are directly due to opium dosing in childhood. A case of blindness in a child came to my notice in February 1893. I wrote about it at the time in the *Banner of Asia* for March, as follows: "My attention has been called in a very painful manner to the subject of blindness caused by opium. My native preacher at Thana has a child (a boy) 18 months of age. Six weeks ago the boy was attacked by diarrhoea and was taken to Dr. Lazarus, of the Scotch Free Church Dispensary, Thana. Dr. Lazarus wrote a note to me saying that the child had been dosed with opium and could not be cured while this drugging continued. I had an earnest talk with the father and mother who promised to stop giving opium to the child. Shortly after the child's eyes became ulcerated. He was by my directions taken to the eye ward of Sir Jamsitji Jijibhai Hospital, Bombay. The European doctor treated the eyes for a week. Then my native preacher asked me to come personally to see the doctor, to learn if any hope existed for the child's eyesight, for if not he and his wife and boy would return to Thana. I went to the hospital on Friday, February 10th. Dr. Maconachie was in attendance. We took our turn. I asked Dr. Maconachie what hope there was for recovery of the child's sight. He said, 'none whatever. The sight has entirely gone. Suppuration has set in and the eyes will slough off, and only large white spots will remain. The child, if it lives, will never see again. Its eyes have been ruined by opium. It is very common for natives to dose their children with opium, and it often causes just this condition of the eyes. I

The Rev. A. W. Proutch.

15 Feb. 1894.

The Rev. A.
W. Proutch.

15 Feb. 1894.

" 'have hundreds of native children brought to me whose sight is utterly destroyed by opium. Some are even in a stupor when brought here. They are ill-fed and then to quiet them opium is given to them. All I am doing for this child is to reduce the inflammation and to tone up its general health. The sight is entirely gone and the child might as well be taken to Dr. Kirtikar, civil surgeon of Thana, as that will be more convenient.' A few days afterwards I went with the child to see Surgeon-Major Kirtikar at the Civil Hospital, Thana. At the first glance he said, 'Another case of opium poisoning. Nothing can be done for sight.' I then told the foregoing experience at Bombay and that Dr. Maconachie had sent us to get the general health of the child toned up. In answer to a question Dr. Kirtikar said, 'I have many cases of children dosed with opium. I register them in my books as chronic cases of opium. They usually begin with chronic diarrhoea, and often they lose their eye-sight by supuration of the cornea. This is very common among the natives,' &c., &c. It would be well if the connexion between giving opium to children and blindness were examined more closely and made more widely known, as I gather from the medical authorities above quoted that the practice and the result are very common, adding another to the many and great recognised evils arising from the wicked traffic in opium."

26,438. Have any steps been taken to bring these cases of infractions of the law before the courts?—There was a case reported to be a genuine case, but I have my doubts as to whether the case was real or whether it was "fixed up."

26,439. What association do you work with?—I work with the Methodist Episcopal Mission.

26,440. Did your Mission take any steps to bring these infractions of the law before the courts?—No.

26,441. With reference to your general attitude of mind and experience generally on the subject, I should like to ask you whether in recommending a prohibitory policy by regulations of the Government, that the use should be limited to medical purposes only, you would say that what you desire in the case of opium would be equally desirable in the case of alcohol?—Certainly.

26,442. (Mr. Fanshawe.) I understand that the headquarters of your work are at Thana?—Yes.

26,443. Do you do actual mission work in Bombay itself?—Not now. I was transferred to Thana a few years ago. Up to that time I was stationed in Bombay.

26,444. In your description of your visits to opium-smoking shops, you seem to assume that nearly all the smokers present had been in jail; is it the case that any such large proportion of them can be said to be criminals?—Yes. I made that statement to the smokers in Mr. Rustomji's presence. There was a general admission when I made that charge broadly to them. There was no dissent from it.

26,445. You are aware, I presume, that a careful statistical inquiry was made by Government officials in 1891, and it was reported that two-thirds of the smokers in the smoking shops were regular artisans following their ordinary daily avocation?—I never knew of those statistics.

26,446. In the Blue Book on the Consumption of Opium, 1892, there is this statement by Mr. Campbell, Collector of Customs in Bombay: "It is true the houses are watched by the police, for thieves meet in them and scheme crimes. Still, are all or nearly all the smokers ne'er-do-wells? Not nearly all. So far as I have seen a Bombay opium-smoking house is much like Dr. Morison's description of a Bengal smoking house:—'Almost all the smokers are of the labouring classes, tailors, day labourers, and one or two shopkeepers.' So far as I could judge by questioning the smokers in Bombay smoking houses about two-thirds are regular working craftsmen and labourers. I asked the assistant collector to frame a separate estimate. His estimate was:—'At the fewest 70 per cent. regular craftsmen and labourers; at the most 20 per cent. beggars and 10 per cent. bad characters.' I made a further personal test in three houses taken at random. The result was, in one house of 11 smokers all were craftsmen in regular work; in a second house of 25 smokers all were craftsmen in work; in a third house of 47 smokers one was a woman, nine were beggars, the rest were craftsmen and labourers." The results of that careful statistical inquiry do not seem to agree with your assumption that nearly all the smokers in Bombay were criminals?—I had a conversation with

Mr. Campbell two weeks ago, and he made about the same statement to me, and I differed with him then.

26,447. You still wish us to believe that nearly all the persons who smoked opium in these licensed shops were criminals?—I told them "when you are in prison your opium is cut off and you do not die." My argument was to convince these people that they did not die if they got into jail, and therefore they would not die if the shops were closed.

26,448. Do you wish us to understand that nearly all the people are criminals who smoked opium in those shops?—I do not say that of all opium smokers; I am not going to make sweeping statements.

26,449. You do not wish us to understand that all of them were criminals?—I made inquiries at the Bombay police headquarters, and I looked at the photographs of the people who had been imprisoned more than once; I saw a hard look upon most of the faces. I put the question to three of the police officials of Bombay, "Is it true that large numbers of these people are petty thieves?" They said, "You can safely say that all the Mahomedans are."

26,450. How do you apply that to smoking dens?—They must get their smoking in the dens. If their photographs are in the rack at the police station they are, perhaps, most likely frequenting the dens.

26,451. You say, "most likely"?—The chances are that if they are opium smokers they are opium smokers in the dens. The men were photographed as criminals. The fact of their being opium smokers leads them to petty thefts, because they lose their occupation.

26,452. What was your proof that they were opium smokers; I do not quite follow that?—I did not get any evidence that would pass in a court of law as evidence; but in conversation with the police they made this admission.

26,453. Do you mean that the police admitted that these criminals were largely opium smokers?—Yes.

26,454. That is that the men whose photographs you saw were largely opium smokers?—Yes.

26,455. With reference to this visit to the opium shops with Mr. Rustomji Pestonji Jehangir, apparently from what you state, the opium smokers first agreed with Mr. Pestonji Jehangir, and then they agreed with you; ought not that to suggest that you should have received their statements with a great deal of caution?—I always receive an opium smoker's statement cautiously.

26,456. I understand you to agree with Mr. Rustomji Pestonji, to whose book you have referred, that there are a large number of opium smokers in robust health?—They are apparently in robust health; that is the way to put it.

26,457. You have stated, that in order to disguise the crime, the natives were taught to call the places where they smoked opium "clubs"; what do you wish us to understand by the meaning of the words "were taught"?—Not once but a dozen times in visiting the opium smoking shops the people said, "We are allowed to keep these places going, but we must tell the people that they are clubs when they call here. We are tutored to say that."

26,458. Tutored by whom?—They were tutored by Damaji Laxmanchand.

26,459. Who is he?—He is the licensed vendor of opium, to whom I referred in the *Bombay Guardian*.

26,460. With regard to the occasion of the Mahomedan fair at Mahim, you state that three opium smoking shops and one kasumbha shop were kept open for the public with opium department police stationed near them, keeping the ordinary police from interfering with and stopping these illegal shops; kindly tell us on what knowledge you state that?—I personally went to Mahim; I asked the police there, and got a statement of the fact in the presence of a witness that they all saw these places where I describe them.

26,461. You did not see them yourself?—No.

26,462. Did you personally see any sales in these places?—I did not visit Mahim during the fair.

26,463. Had you any information that absolute sales were going on in these places?—Yes.

26,464. What information?—The manager of the smoking shop, under Rahimatulla, informed me of this, and gave me the facts.

26,465. What did he inform you—that he had personally seen the sale of opium in one of these places?—He told me he was the manager of the shop.

26,466. Did he tell you that he had been making sales in the shop?—Yes.

26,467. Sales on that day?—On the 10 or 12 days of the fair.

26,468. He informed you that he had himself made sales during the days on which the fair was open?—Yes; and he told me he would give me 12 witnesses of those who bought and smoked. I took his testimony very cautiously, and went and checked him up at the police. I did not believe him at first because he was an opium smoker.

26,469. What authority have you to say that the opium department police were stationed near the shops for the purpose of keeping the ordinary police from interfering and stopping these illegal shops?—Mr. Rustumji came to Mahim and told the civil police not to interfere.

26,470. Would it not be more reasonable to say that the opium department police were stationed there to see that sales were not carried on in defiance of the law?—I was not there; and I am not in a position to answer that.

26,471. Have you ever been asked by officers of the opium department to assist them in detecting illegal sales of opium?—I was; two weeks ago.

26,472. Is that the first occasion?—Yes; to my recollection.

26,473. Have you ever had any personal discussion with the collector yourself as regards these sales?—I only saw him for two hours two weeks ago.

26,474. Did he make any statement to you then with regard to the legal difficulty in stopping colourable sales?—Yes; he told me that at present they are more difficult to stop than before the law was enacted on the 31st of July. When I asked him what new law went into effect, he told me that practically no new law went into effect. I asked him, "How did you suppress shops before July, and yet you are unable to do it now?" He did not answer that, except that this agitation was all wrong and all a mistake, and that we had weakened their hands.

26,475. Surely the previous shops were held by licensed vendors who would be required by Government to alter the terms of their licenses in such a way that might be thought proper?—What objection was there to clubs before; nothing new was enacted. The same law that applies to clubs now applied to clubs then; you could not have stopped them then, any more than you could now.

26,476. Was it your opinion that there were no private clubs in existence before the smoking on licensed premises was prohibited?—I never inquired into that.

26,477. With regard to Thana, is it the case that native liquor is drunk to a large extent among the people of Thana?—It is drunk to a fearful extent. Its ravages are perceptible.

26,478. (Mr. Mowbray.) These statements of facts which you have given us from the *Bombay Guardian*, which I have not had the pleasure of seeing before, and also these statements of fact in your evidence are, I suppose, you would agree with me, facts which can only be tested in a court of law?—They are about to be tested in a court of law on the 21st of this month.

26,479. (Sir William Roberts.) Have you had any experience of the moderate eating of opium?—I have heard men state, whose words I did not disbelieve, that they had taken a small quantity, and kept to that small quantity for a number of years.

26,480. I understand your statements apply practically and exclusively to opium smokers?—Mostly to opium smokers.

26,481. Except what you have stated about children?—Yes. The opium eaters, in my statement, buy their opium in quantity and go home and eat it. It is not so easy to get into conversation or address them with regard to it.

26,482. (Chairman.) Your observation seems to me, so far as you have described it, to have been amongst a very low class of the population, persons you have spoken to as frequenting the opium dens which you have visited in your missionary work; they seem to have belonged very largely to the criminal class?—Opium has a tendency to make people criminal. They neglect their legitimate business, and they have practically to get their living by any plan they can invent.

O 82588.

26,483. It seems when challenged by you that they did not attempt to dispute that they were all more or less acquainted with the interior of prisons?—That is so.

26,484. You have also been referring frequently to the police, and to a class of persons whose photographs are in the possession of the police, in fact, they are the class we speak of at home as "well-known to the police." Does it not occur to you that the phenomena you might observe when looking at this unfortunate class of the population might perhaps not be the true indication of what you would see among the large majority who, happily, do not belong to the criminal class?—I have met what would be called respectable people—because they are wealthy—I met one man who has two brothers who are householder. He is supported by his two brothers—he has practically out-casted himself because of his vice of opium. I have met a pleader with his briefs smoking. He still had on his pugree with gold lacing on it. He had evidently not got down to the strata where the opium habit leaves them. As I have said in my evidence I have met people of all classes in smoking dens. It is more perceptible in poor men, as I have said, because their food is scanty and not so nourishing.

26,485. It seems to me that I am not drawing an unfair inference when I assume that your view of the evil and degrading facts of the use of opium have been drawn from your observation of its effects among a class which may almost be described as a criminal class?—A class who congregate in opium-smoking shops, and who are practically degraded through their habit, whatever their previous standing might have been. They are drawn from all classes—Brahmins and Mahomedans—all congregate in one place. It levels them all.

26,486. These persons of whom you speak have, as it were, segregated themselves from the mass, and become, by resorting to very low places, a specially degraded class?—I made that statement in my evidence. I said it is a peculiarly "seductive delusion of the devil."

26,487. Have you anything you would like to say to us with reference to a certain petition of which we have heard which was got up at Poona?—I got that petition up myself. I confess I am little surprised at the diligence with which the opium department have sought to suppress anti-opium evidence. I thought their business was to look after opium illegally and illicitly consumed, instead of looking after a petition. That petition is *bona fide*; I sent to-day to get a fac-simile of it. It was printed two years ago. This happened in 1892. I have before me a copy of the *Banner of Asia* for 1892, and I will present to you a fac-simile of the petition which was written by a man named Shankar. I, personally, went and got signatures. I think there were 72 signatures to the petition. I got them nearly all myself. I sent that petition on to England and it was *bona fide*. It was signed in my presence. The only man who refused to sign it, stated as his reason that he was a Government servant, and that he could not sign any petition against Government. I, personally, went and got the petition ready myself.

26,488. You wish to say that you are really personally responsible for the preparation of that petition, and that to the best of your knowledge and belief the signatures appended to it, with few exceptions, were made in your presence?—With very few exceptions, I think, they were all signed in my presence.

26,489. (Mr. Pease.) When did you first know that this petition had been made the subject of Government inquiry?—Two hours ago.

26,490. (Mr. Fanshawe.) Could you give me the date when you went up with this petition?—Two years ago.

26,491. Your actual work is in Thana, but you went to Poona and got up the petition?—I went up there to protest against the traffic, because it was an evil to the cause of God.

26,492. You are well known in Poona?—Yes.

26,493. You would be well known by the people who signed it?—Yes, I think so. I told them I was a missionary. There is one other matter I should like to mention. I think I understood Mr. Slater the other day to say that not one case of opium eaters had died in his insurance company.

26,494. (Chairman.) I think he said that there had been no case in which his office had been called upon to make a payment on account of death which have been attributed to the use of opium.

(Witness.) If it is permissible I should like to put in the *Bombay Gazette* of Saturday the 10th, in which a case

P p

The Rev. A. W. Prutch.

15 Feb. 1894.

The Rev. A. W. Prutch.

15 Feb. 1894.

was decided against the Oriental Insurance Company with reference to a confirmed opium eater.

26,495. (*Chairman.*) We will take it into our consideration.

(*Witness*) I also desire to submit a copy of the prospectus of the Oriental Life Insurance Company, dated May 1893, on page 4 of which I find that the total number of policies

in force is 14,967. Mr. Slater is, no doubt, able to explain that. He states that there are 20,000 native lives. This document states that the 14,900 includes natives, Europeans, and Eurasians.

26,496. (*Mr. Mowbray.*) What date is that?—May 1893.

(*Chairman.*) We will let Mr. Slater see these papers.

The witness withdrew.

Mr. E. M. Gordon.

Mr. E. M. GORDON called in and examined.

26,497. (*Chairman.*) I believe you are a missionary of the Christian Mission, Mungeli, in the Central Provinces?—I am.

26,498. Will you tell us what you have to say with regard to the opium question?—For the past four years I have been interested in the opium question and have made observations on all occasions. During 1890 I frequently visited the opium smoking dens in Bombay and was repeatedly told by opium smokers that they first acquired the habit in order to increase the sexual appetite. Since 1891 my work has brought me into close contact with the people of the Bilaspore district, Central Provinces. Opium eating and smoking is not common in this district, the habit of consuming opium is considered contemptuous, and it is an insult to ask a man if he takes opium. The common word for opium is amal which, according to Bate's Hindi Dictionary, means—intoxication. 100 per cent. of the non-Christian native children in Bilaspur district are fed with opium from a few days after birth until they are able to sit up or walk. Opium is given to children twice a day. The quantity is increased with the growth of the child. If the opium is suddenly discontinued, the child will not sleep, and suffers from diarrhoea. Fever is very prevalent in the Bilaspur district, especially during the monsoons, and shortly after. I have never heard of opium being used as a remedy for prevention against fever. On making inquiries I find that Indian nurses frequently give opium to the children of European parents in order that the children may not be troublesome. In 1889 my niece was drugged with opium by her Indian nurse. The child's parents were unable to arouse the babe and finally had to consult a doctor. He declared that the child had been overdosed with opium, and with difficulty he succeeded in arousing the babe. On the way from my station at Mungeli to Bombay, I spent Wednesday, February 7th, at Kampti with Rev. C. G. Elsam of the M. E. Church. Together we visited a madak smoking shop. It was about 10 yards off the main road leading to the bazaar, well hidden behind large buildings. The shop was in charge of one Mahomed Yesu who was selling the madak golis or balls from a small box before him; there were four men outside in the verandah and about twelve men inside the room; all were Mahomedans. Mahomed Yesu, who sold the golis, told us that he allowed the men to congregate "for friendship's sake." The next day, February 8th, at 9 a.m., Rev. C. G. Elsam and I visited the shops at Sitabaldi and Sudder Bazaar, Nagpore. In the former place we saw no smokers, but in the Sudder shop about 15 men had assembled, some had evidently just stopped smoking, and one man's pipe appeared under his coat. At 3 p.m. on the same day Rev. C. G. Elsam and I visited a shop in the locality known as "ganja ka khet." This shop was off the road, well hidden from view. The man in charge was one Pappa Meer, a Mahomedan, who was selling the golis at two for a pice. The liquid opium was being boiled in the shop. 32 persons were in this place, all smoking, one prostitute was with them. As we left the place a chorus of voices exclaimed "Sahib log is ko band karo, is ko band karo"—freely translated—"Gentlemen, stop this business, stop this business." A policeman watched us making our inquiries. The second shop visited was near the Itwari Dispensary. It was a shed. A license was hung up on a board. There were 28 men in this shed. Madak was being prepared on the spot. Man in charge was one Mahomed Ali. The third shop was in the locality called Bhandara Darwaza. A Mahomedan was the man in charge. The men were smoking in a shed where the golis were being sold. The license board, however, was not in the shed, but in a room across the road about forty yards away. In this room across the way, the opium balls were being prepared. The fourth shop visited was near Juma Darwaza, Haji Khan was in charge. This man informed us that the license to sell opium in Nagpore was bought by Bichraj,

Marwari. This Marwari, in turn, had sublet a part of the business to Haji Khan, our informant, who had engaged men to open the other shops we visited. There were two prostitutes in the shop near Juma Darwaza. In one room we counted 20 men and in the other about 10. This shop was on the main road near the Small Cause Court, but it was upstairs. What Haji Khan called his license was signed thus:—"W. R. Dholily E.A.C., for the Deputy Commissioner."—The signature was not clear and the initials may be different.

26,499. You have been engaged in missionary work in this country, and carefully considering the main cause of moral evil here, you have come to the conclusion that opium is a pregnant source of evil?—That is so.

26,500. Would you say the same with regard to alcohol?—Yes.

26,501. Would you desire that the prohibitory legislation which you recommend in the case of opium should include alcohol as well?—Yes, certainly.

26,502. (*Mr. Fanshawe.*) How long have you been at missionary work?—I have been at missionary work for the past three years.

26,503. Have you been during the whole of that time in the Central Provinces?—Yes, altogether in the Central Provinces—in the Bilaspur district.

26,504. What do you wish us to understand about the sale of these madak balls; the sale of madak is not prohibited in the Central Provinces, is it?—I was told that the sale was not prohibited, but that they were not allowed to smoke on the premises. That is how I understand the business.

26,505. You have described certain sales, but there is nothing illegal in that, is there?—I do not think I said it was illegal.

26,506. Why did you bring it to our notice?—I was merely giving a description of our visit to the dens.

26,507. In what you call "ganja ka khet" you saw some smoking, I understand?—Yes; there were 32 persons in this place all smoking.

26,508. Is that on the licensed premises?—I did not notice a license board for this shop, but I did in the other place.

26,509. It was a private gathering of people for smoking so far as you know?—From the fact that opium was being sold on the spot, and that they were smoking in the same place, I should conclude that it was a licensed shop, though I did not see the board.

26,510. You had no other reason for believing that it was a licensed shop?—No.

26,511. Did you see any sales yourself in this place?—Yes; I saw men come in, pay their pice and sit down and smoke on the spot.

26,512. Did you take any steps to bring this to the notice of the authorities?—I left the same night by train for Bombay.

26,513. Even then it might have been in your power by letter or otherwise to bring it to the notice of the authorities or the deputy commissioner?—I did not do it. I might have done it.

26,514. (*Mr. Mowbray.*) These were visits that were paid on your way down to this Commission?—Yes; on my way down to give evidence.

26,515. Your frequent visits to Bombay were before you went into missionary work at all, I suppose?—Yes.

26,516. In the Bilaspur there is not much eating and smoking, is there?—No.

The witness withdrew.

Mr. S. C. KANAGA RATNAM, B.A., called in and examined.

26,517. (*Chairman.*) I believe you are assistant master of the London Missionary Society High School at Belgaum?—Yes.

26,518. We should be glad to hear any statement you have to make with regard to the question under our consideration?—I am a native of Jaffna. I take great interest in the opium question, as it has a close bearing on the moral progress of the Indian community, and I have given my special attention to it. It is my firm conviction that opium is injurious to man physically, mentally, and morally. The Tamils and the people of South India regard opium as poison, and look down upon both opium eaters and opium smokers with the utmost contempt. Opium smoking is considered more deleterious than opium eating. The use of this drug is so much condemned by the public opinion that no one would like to be known as having anything to do with opium. Those who use opium are more or less emaciated in form and lead miserable lives. Life is a burden to them, and they are known and treated as the wrecks of society. The Tamil word for opium is aphin, and it is a significant fact that one of the most contemptuous and meanest terms that can be applied to a man is aphini (an opium user), an aphini being always supposed to be a careless, indolent, silly, physical wreck and moral coward. I have never known any Tamil to say a good word for opium. Moderate use of opium often, if not always, leads to excessive use of it. Opium eating is frequently begun in the company of prostitutes. I am at present assistant master in a high school at Belgaum. On one occasion I wanted to ascertain what the students think about the use of opium, and asked the students of the matriculation class to express their opinion on the matter. Without one dissentient voice they all said that opium was a bad thing and no respectable person ever used it. Some of these students had friends and relatives who used this drug and have consequently impaired their health to a considerable degree. One opium eater told me, in the presence of a number of witnesses, that he had learnt the habit from a European Government official under whom he was employed as a servant. His master, owing to his indulgence in opium, soon began to dislike all active work and became quite incapable of doing any public work. He himself had suffered much and pathetically referred to the injury done to him. I regard opium as most injurious, inasmuch as it saps the life of any habitual consumer and renders him less active and deadens his moral faculties. If opium eaters are less injurious to society than those who use alcohol, it is because the former have less life in them than the latter. They suffer from want of will and are really too weak to do any harm. Many of my countrymen acknowledge that opium, except when taken in medicinal doses, is a curse to India, and is daily adding to the miseries of the already much suffering people of this country. The Tamils do not regard opium as a preventive or cure of fever. I would like to emphasise the fact that moderate use of opium, when taken habitually, produces injurious effects. I have known opium eaters themselves frankly testifying to the bad effects of this drug and wishing they had never got into the habit and that no temptations had been put in their way. It is true the poorer class of people live on a starvation diet, and when such people take opium, the temporary relief from hunger they seem to experience is more than counterbalanced by the injurious effects afterwards. The baneful results from the use of opium far counterpoise any so-called good effects. The missionaries in this country come into closer contact with, and are better informed of the natives of this country and their attitude towards the opium question, than any other Europeans, and the evidence the majority of them have given before you is exactly what the masses of the people say on the question. It is sometimes alleged that the consumption of opium in India is very insignificant, and if this were true, it is difficult to understand how the suppression of the opium traffic would cause so much discontent as would end in a rebellion, that would eventually lead to the loss of India to Britain. Only two or three days ago a rich educated Parsi gentleman who has taken an abkari contract from Government for one or two lakhs said that a single visit to any opium smoking place by the Opium Commission would go a great way towards disclosing the pernicious results of opium smoking. By the administration of opium, children are sometimes killed and often injury is done to them. Recognising the injury that is often done to children by opium, the well-to-do classes of this country are very careful in employing as ayahs (nurses) women who would not give opium to their children with a view to curtail their labour and trouble. Some time ago a

native of Belgaum and a friend of mine who has lived with me sometime began to take opium in small doses. Gradually his craving for opium increased until it culminated in a sad event. One day he brought two pice worth of opium and kept the poison at home, a portion of which his only daughter of three years old took and ate. This took place in the morning, and the child died the same evening. The same day the father in deep agony resolved he would not any more take opium, but has not yet got over this habit to which he has become a slave. There are about a thousand confirmed opium eaters and one hundred opium smokers in Belgaum, and their number is no doubt increasing day by day. I am opposed to the opium trade and strongly desire its abolition before too late for its abolition to be possible.

26,519. Do you make the same recommendation with regard to the prohibition of alcohol?—Yes, I do.

26,520. (*Mr. Fanshawe.*) Will you kindly tell me what is your age?—I am 25.

26,521. How long have you been in Belgaum?—It is a year since I went to Belgaum.

26,522. What is your pay as assistant schoolmaster in the High School?—I have no objection to answer the question; but may I ask whether you put that question to all the European witnesses who have been examined?

26,523. I think you had better answer the question. There cannot be any great matter of concealment about it, is there?—I do not suppose it will in any way materially affect the evidence I am giving before you. I have no objection to tell you if you particularly want to know.

26,524. I wish for a reply?—My pay is Rs. 75.

26,525. Such experience as you have had is amongst the Tamils, is it not?—Yes.

26,526. There is hardly any consumption of opium amongst the Tamil race, is there?—As far as I know the Tamils use the least quantity of opium.

26,527. Judged by the statistics the consumption amongst them is very small?—Yes.

26,528. Is it a fact that they are alcohol drinking people?—They use alcohol in greater quantity than opium.

26,529. You have given your opinion that missionaries in this country have a better knowledge of the natives than other Europeans. I suppose you will admit that the natives of the country are themselves very competent to testify to their own views about opium?—Yes; but I believe those people who are not connected in any way with Government service are better capable of getting at the opinions of the natives.

26,530. You have referred to visits by the members of this Commission to opium smoking places; perhaps you are not aware that probably all the members of this Commission have visited a number of such places in various parts of India?—I am not aware of it.

26,531. (*Mr. Mowbray.*) You have stated that there are about a thousand confirmed opium eaters, and a hundred opium smokers in Belgaum, and that their number is no doubt increasing day by day. Is that the result of your personal investigation during the past year?—Yes.

26,532. It may interest you to know that we have had statistics as to the consumption of opium in the Belgaum district for the last ten years. The consumption is '3 of a tola per head per annum. It is precisely the same rate of consumption as it was nine years ago, and it is rather less than it was six or seven years ago. It is, in fact, with one exception, the smallest consumption of any district in the Bombay Presidency. I venture to think that before stating that the number is no doubt increasing day by day it would have been well for you to take more than a year's experience?—I have lived and talked with several opium eaters and had personal conversation with them. This is what they told me, and they expressed their desire that this evil traffic may be reduced.

26,533. (*Mr. Pease.*) Has there been any change in the population of Belgaum?—I cannot say; I am not aware of it.

26,534. (*Sir William Roberts.*) What is the population of Belgaum; is it a large place?—The population of the town is about 25,000.

26,535. Including men, women, and children?—Yes.

Mr. S. C.
Kanagh
Ratnam, B.A.
15 Feb. 1894.

Mr. S. C. Kanaga Ratnam, B.A. 26,536. You say there are about a thousand confirmed opium eaters; that would mean that about one quarter of the adults use opium?—Yes.

15 Feb. 1894. 26,537. Do you really think that every fourth man is an opium eater?—I have not had sufficient time to make a thorough inquiry into the matter, but this is what the opium eaters themselves state.

The witness withdrew.

* Mr. MANSUKH LAL called in and examined.

Mr. Mansukh Lal. 26,539. (Chairman.) What position do you hold?—For 10 years I was an officer of the Salvation Army, and in that capacity have spent six and a half years in India. I am now acting editor of the *Banner of Asia*. In accordance with the custom of that society I adopted an Indian name some years ago, and although I have resigned my position there for family reasons, I desire to continue that name by which I have been known for a good many years.

26,540. We should be glad to hear what you have to say with regard to this question?—Most of my time here I have worn the Indian dress and lived in the towns and villages of the Gujarat, Kathiawar, and Marathi countries as one of the people themselves, eating their ordinary food and sharing their homes. I therefore consider that I have had ample opportunities of knowing exactly what is the feeling of the people as to what things they regard as beneficial or otherwise to themselves. In the villages I visited I was generally called to see the sick, and asked to give them something for malarial fever which is the chief thing from which the people suffer. Though not a medical man I always carried with me a few simple remedies, but up to this day have never been asked for opium as a remedy, and have met only two men who ever claimed that opium was good for them non-medicinally; one of these was an intoxicated fakir and the other was a debauchee who had lately begun the habit. As staff officer of the Salvation Army in the thickly populated parts of Gujarat I had under my charge from 20 to 30 native officers who spent their whole time in villages working among the people. It was my duty to supply these officers with a few simple remedies for fever and any other complaint that might trouble them. We kept quinine and opening medicine, and a few other things, such as Dr. Gregory's stomachic powder. We never were asked for opium and it was never hinted that opium was used in cases of fever. I was also in Gujarat when cholera was prevalent, and I myself had a severe attack. I buried four of my comrades at that time, but I never heard any man ask for opium even when they were in the greatest straits. Gujarat is a very malarious country, and I have suffered greatly from fever there. My experience is that malarial fever hinders the action of the bowels, and that the first thing prescribed or taken is an opening medicine, and not an astringent such as opium. And even if opium were occasionally prescribed for fever by doctors, which I strongly doubt, still that is a very different thing to selling opium in poisonous doses to the public without a doctor's prescription, and regardless of the purpose for which it is used. To show that I am not speaking from fancy, I should like to quote a very brief extract from the *Indian Medical Record* of December 1st, in which a medical practitioner, Mr. M. R. Ranade, discusses the question of the use of a drug called atropia in opium poisoning. He gives instances of a number of cases of people who take opium. One woman took it to commit suicide, another took it by accident. He describes the effect of this drug upon such occasions. In one part of his statement he says, "Cases of opium poisoning are very frequent, for the simple and awful reason that opium is so easily procurable in the bazaar. It is therefore commonly resorted to by poisoners and suicides." As far as I know this doctor is not an anti-opiumist. I beg to tender that extract for the consideration of the Commission. I also wish to call the attention of the Commission to the *Medical Reporter* of Calcutta, which is a pro-opium newspaper, but which in an article advocates the appointment of a commission for poisons. If every doctor in the world were to say that he used opium as a medicine for any disease whatever, that would not warrant the non-medicinal sale and use of the poison. In India snake bite is a frequent cause of death to the people, and strychnine has been stated to be a splendidly effectual antidote to the poison of the cobra, but we do not see strychnine sold in the bazaar as opium is, as though it were sweetmeat or food. I have carefully conversed with hundreds of Indians upon this subject, and can fearlessly say that the feeling of the entire community is firm against alcohol and opium.

26,538. You have mentioned a case of accidental poisoning by opium. I presume that you are aware that accidental poisoning by opium might occur when the drug is dispensed under a physician's prescription?—In the case I referred to the doctor was called in and he said that it was owing to opium.

Until the appointment of this Commission the harmfulness of opium was never disputed by the Indian people, but the idea has got about that if opium be stopped then taxation will increase and alcohol be more largely used. I regard the plea that alcohol will take the place of opium as an unsound argument upon the part of those who make it, because I think that diligent research will show that most of those Europeans who foster the alarm about alcohol do not themselves abstain from alcohol, and probably will be the first to oppose any measures for the prohibition of alcoholic liquor for India, which the total abstinence party may and undoubtedly will introduce. I am for the abolition of the liquor traffic by local option. I have paid special attention to the smoking of opium, because smoking dens follow in the wake of the ordinary opium stalls, because they enable the Government to sell more of the drug. An opium dealer informed me that men who are content to eat two annas worth of opium (which has a bitter taste) will smoke twelve annas worth in the same amount of time. It is more luxurious. The smoking dens bring in a greater profit to Government. It has been my habit to visit the opium smoking dens in Indian dress, and to converse with the smokers for one or two hours each time, so as to get their real opinions of the poison. Several times I witnessed the eager way in which they always signed any petition to Government for the closing of the dens, and they would most pathetically plead with us to make haste before they were destroyed, and before their children could learn the horrid habit. I remember one instance especially, when I was in one of these places in company with General Booth, and interpreted some remarks of his to the smokers. We also had some prayer there, and at the conclusion of the visit, some of the opium smokers cried out and said, "It is all very well to pray and talk, but when are you going to do something. Here are we all enslaved by opium, and still the trade is not stopped." The smokers frequently impressed upon me the need of stopping the manufacture of opium altogether.

26,541. Can you suggest any substitutes for the opium revenue?—I beg to suggest one or two ways by which this deficit might be met, although with regard to the anticipated loss of revenue, I do not think that the onus of finding a substitute should be put upon the anti-opium party, but upon those financial experts who are paid to raise revenue, not by morally indefensible means, but by morally as well as commercially profitable measures. The bulk of this could be raised by an almost imperceptible tax of $\frac{1}{4}$ per cent. upon all ocean-borne commerce leaving British ports. This commerce has been recently estimated at 1,200,000,000 per annum. A tax of one quarter per cent. (that is to say, a little under $2\frac{1}{2}$ farthings in the £) upon this amount would yield an annual revenue of three million pounds. This tax, though so slight, is hardly to be felt by the mercantile world, would be more than compensated by the friendly relationship with China which the abolition of the opium traffic would make possible—thus opening the way for a more extensive trade in British goods with that vast nation. If this were not sufficient, a further and substantial amount might be raised by taxing an article of luxury which is extensively used all over India, but which is not in any sense of the word a food—i.e., the betel nut and pan leaf which the people chew. The present price of this article is absurdly low. In this way India would combine with Britain to abolish the cultivation of the poppy except for medicine and so ensure the future prosperity of the empire.

26,542. What do you say to the argument that there is a certain class of Indian people who use opium and yet are physically strong?—If there be any one class of Indian people who are said to use opium and yet are physically strong, it will be found that their strength is due to causes other than opium. They are strong in spite of opium and not as a result of it. Take an illustration. Britain is said to be the mightiest power in the world, and no doubt she is. Yet in Britain, according to Dr. Norman Kerr's estimate, 50,000 persons every year die directly from strong drink; Sir Archibald Alison, author of the "History of

[* This witness bears a native name, but is a European.]

Europe" and sheriff principal of Glasgow, stated that in that city alone 30,000 persons nightly went to bed intoxicated—in London 70,000; one person in every 40 in the British Isles is a drunkard, one in 40 a pauper, one in every 100 a criminal, chiefly from one cause; the cause that according to Sir James Hannen is behind 75 out of every 100 divorce cases. Dare anybody attribute England's greatness to the fact that drink is the national vice? I think not. England's power is in spite of her drunkenness, and the same is true of India's people and opium. A remark frequently made to me is, "Government wants the money" and does not care for us—we are *kala lok* (black people). And then others would reply, "Yes, but what will become of the revenue when the opium habit has taken a thorough hold upon the subjects, and they are demoralised and poverty stricken?" Bombay being considered to be a healthy place and not so malarious as other parts, I concluded that the great quantity of opium sold in this city could not be required for medicinal purposes, and to find out the truth, minutely questioned every smoker or eater I met as to the reason for which he first took opium. Their answers were a revelation to me. As a further test case, on the 31st of July 1893, I conversed with 70 opium smokers in one den, and out of that number 65 agreed in saying that the chief reason for using opium was its supposed power to sustain abnormal sexual endurance. An account of this visit appeared in the *Banner of Asia* for September of that year. As is common in eastern countries, the manner of speech is very plain and these things are more generally talked of than in western lands; but the interests of truth upon so serious a subject demand that details be fully given, though perhaps not suitable for publication in any other than the Report of a Royal Commission. On one occasion, when not satisfied with general statements such as I had heard for years, I pressed for details, the smokers stated that opium acts upon the generative organ by artificially prolonging the sexual act. On the 18th of December 1893, in the presence of two missionaries, I asked a group of men, "Is it not true that for every one man who takes opium for any complaint, a hundred take it so as to prolong their unnatural indulgence with women?" They all, as on other occasions, emphatically answered in the affirmative. This artificial aid to debauchery, while it affords almost incredible license for a short time, yet after a few months, or in some cases, a year or two dries up the man's vitality and leaves him physically and morally wrecked for the rest of his days. Another result of the habit is that those who use opium for a year or two become so dried up that they seldom succeed in begetting children. The smokers say never, but perhaps there are exceptions. It was the inward vileness of the opium traffic from this particular point of view which caused me to take an attitude of absolute hostility to it, as every Christian man and woman should do. Not only is the opium traffic a wicked thing, but it is short-sighted, and must ultimately overthrow the very revenue for which it is sustained; because it surely and increasingly drains every other source of social strength in the family life of the Indian nation. I am acquainted with men who, though able to earn 20 or 30 rupees per month when at work every day, now are content to struggle along on one-third of that amount of money, and who spend the rest of their time in the opium dens. Even better class people who eat opium have to consume a much larger quantity of milk, ghee, and sugar in order to counteract, in some measure, the debilitating effect of the poison. A regular user of opium is easily recognised by the peculiar look in the eyes, the form of which is altered until some of them are almost almond-shaped. The lips also become thin and of a purple colour. Both within and without India the Government is engaged in a stupendous business of pandering to lust.

26,543. Turning to the question of opium dens, which has been raised by previous witnesses, have you anything to say on that subject?—I am prepared to conduct the members of this Commission around Bombay, and to give them an opportunity of hearing from the lips of the ordinary populace the truth of what I have stated about the harmfulness of opium, the dread of it which respectable people have, and their anxiety to keep it from their own children. The Commission to choose their own interpreters, to name the localities to be visited, and to ask any questions they may think fit. The only stipulation I make is that the time of the visit be not made known to any Government officials, and that no employés of the opium department be allowed to accompany the party. Early in August 1893 the *Times of India* informed the public that the opium smoking dens in Bombay had been finally closed (in response to the agitation of the anti-opium party) on the 31st of July. A few days later the same paper stated that the result of closing the dens would be the formation of "opium clubs,"

thus throwing out a hint to those who wished for such a suggestion. It was known to me and others shortly afterwards that a number of fresh opium dens had been opened, and we also suspected what ultimately came to our knowledge, that these "clubs" were of a charmingly primitive character. The names had been changed, but the identical things remained. On Monday, the 18th of December 1893, I, in the company of two missionaries, paid a visit to some of these "clubs." The first one we entered was in the same building as the previous licensed opium den, but upstairs instead of on the ground floor. The entrance to the room in which we found the smokers was so small that one had to stoop almost double, and in the inside we saw eight men reclining for the opium smoke. Three opium lamps were burning, and two men were in the act of smoking. One of our number made a few inquiries which took the following forms:—"What place is this?" (chorus of voices) "A kalab, sahib." "What kind of club?" "Oh, like the Byculla club that the sahibs use." "What is the subscription rate, and what are the rules, then?" "Whatever one likes. It depends upon what he has to eat, drink, &c. There is no rule or anything for membership, and you only pay for what you get." "Then can anybody come here and smoke opium?" "Oh, yes, of course, if he pay for his smoke." "Then what is the difference between this place and former dens?" "Kuch nahin" (nothing at all). We were then interrupted by the owner of the place, who was uneasy. He extinguished two of the lamps, and told the men to *chup raho*, i.e., keep quiet. Before leaving, we asked them whether there were any more of these clubs, and they shook their heads, saying, "We know not." But when one of our party offered four annas (sixpence) to any man who would take us round to a few of them, a man jumped up and said, "Come on then, I'll show you." We went with him and, within an area of 200 yards, visited six other dens in which the same thing was going on. In every place we introduced ourselves as missionaries, and asked the smokers to give us their real opinions as to the use of opium. They did so, and were absolutely undivided in their vigorous condemnation of the opium use and traffic, saying, "If the opium trade were stopped, we would be compelled to do without it, but now that it is so easy of access, we cannot abstain from it." In order to verify what we had heard, we made an appointment with one of the opium slaves, to meet him and four others the next day, and they accordingly came. We stipulated that they should receive no fee or reward whatever, beyond payment for half a day's coolie (labourer's) work. These four men came to a place arranged by us, and though at first a little afraid to speak, they slowly gained confidence when convinced that our object was merely to get a true statement from them. The spokesman, a fairly intelligent man, said that he first took to the habit on the suggestion of a friend, who told him that opium greatly added to the power and pleasure of sexual indulgence. In this manner he abandoned himself to the most horrible debauchery for a month or six weeks, after which he became very weak, and now is compelled to smoke three annas' worth of opium daily to alleviate, for a few hours, the evil effects of the poison. This man also stated that he previously earned Rs. 30 per month, while now he could not work for many hours without going to the opium den. All the men agreed in making the following statement of facts:—(a.) The opium smoking dens in Bombay were all supplied with opium by the man Damaji, who holds the license to sell opium in quantities of two tolas only to each purchaser. (b.) Any man who starts a "club" without the permission of the opium vendor is immediately prosecuted by the authorities, but those who agree to purchase all their opium from Damaji are perfectly safe from prosecution. (c.) The men who run the "clubs" themselves manufacture the chandul from the crude opium, ready for smoking, making two annas' profit on every tola. (d.) The existence of these mock clubs is well known to opium Inspector Rustomji Jehangir, who has frequently visited them. (e.) The men who own the "clubs" instructed the smokers to say that the opium does them good, and so on, when questioned by the sahibs. (f.) Messengers are sent round to inform the smokers whenever visitors are near, and two or three lamps are extinguished. (This was done when they were visited by myself and others.) (g.) All of them heartily desire that the supply of the drug, through other than medical men, be stopped entirely. "While it is so easy to get opium we cannot abstain from it, but if the supply were discontinued, then we would have to do without it, and would go to our different occupations." From time to time many stories I have heard from the lips of the poor, of misery caused by opium, were very sad, and so numerous that they would fill a large volume.

Mr. Mansukh Lal.

15 Feb. 1894.

Mr. Mansukh Lal.

15 Feb. 1894.

26,544. What is your experience of the views of opium smokers themselves with reference to this source of moral weakness?—It is a singular fact that if you converse with a man in a friendly manner, while he is in the act of smoking opium he generally will denounce the opium in strong language, but that same man when deprived of his smoke for a few hours, and feeling the opium crave, will beg that his supply of the drug may not be stopped. To compare this with the smoking of tobacco is absurd and thoughtless. It is my belief that if this vile trade in poison be longer upheld, then there will assuredly be a fearful retribution for the English-speaking races, caused by the subtle encroachment of the opium habit upon them. First the wealthy and idle, and ultimately the poorer classes will succumb to this insidious plague. These words are the outcome of an inward conviction as the result of personal observation and thought, and I feel constrained to add my voice in warning, to those thoughtless persons who, for the sake of revenue, are willing to submit to the organised debauchment of two splendid nations—India and China—and through them the ultimate devastation of the whole world.

26,545. (Mr. Fanshawe.) Are you aware that we have had some number of natives of India before us in various parts of the country who have stated that opium is used as a protection against chills and malarial influences?—I should not be surprised at anything that might be stated by a man of any nation whatever.

26,546. Your own experience extends over six and a half years, and is limited to certain parts of India, is it not?—My experience of India is that I went straight away into the villages on my arrival in the country. The six and a half years' experience have been divided between Kathiawar, Gujarat proper, and the Maratha villages.

26,547. Your experience extends over six and a half years, and to certain parts of the country only?—Yes.

26,548. You can quite understand that a use of opium which you have not found in your experience may be known in other parts of the country, I presume?—I understand that, if it is stated so, that may be so; but I strongly doubt it.

26,549. You speak very confidently about the feeling of the entire community being against opium?—I do not speak of the southern part of India; I speak for the people in that part of the country in which I live.

26,550. From what you have said your argument appears to be that alcohol will not be given up because Europeans are in favour of it; therefore the danger that alcohol will take the place of opium will remain, as far as I understand?—I may say my argument is this, that if to-morrow any society were to introduce a Bill for the local suppression of the liquor traffic, the first persons to oppose that Bill would be those very official Government witnesses who now raise the alcohol bogie. The future will prove the truth or otherwise of my statement.

26,551. We want to go a step further. Your argument requires that alcohol will not be prohibited?—I do not say that.

26,552. You anticipate that by your argument?—I do not anticipate it, because the public will agitate and agitate until it is prohibited.

26,553. That is what you mean?—That is what I think.

26,554. You say that you think that alcohol will be prohibited?—After a severe struggle.

26,555. And therefore there is no fear of alcohol taking the place of opium if opium is prohibited?—That does not follow.

26,556. Many natives as well as European officials have expressed to us great fears that the alcohol habit will spread if opium is prohibited?—Those same officers and those same newspapers which are the voice of the officials while they hold up the alcohol bogie hold out their advertisement pages to advertising various kinds of whiskeys.

26,557. We have had native witnesses before us who have expressed their opinions that if opium is prohibited alcohol will spread?—The people of India have a very great dread of alcohol, and I think rightly so. The entrance of a man, the worse for liquor, into a village is sufficient to cause all the women to run away outside.

26,558. Your argument is not quite intelligible?—I am sorry for that.

26,559. You have said, "An opium eater informed me that men who are content to eat two annas' worth of opium (which has a bitter taste) will smoke 12 annas' worth in the

same amount of time." Opium is taken in the shape of pills, is it not?—Not always. People have stated to me that they prefer to chew it.

26,560. Do you think that the suggestions thrown out by the English daily papers are likely to reach the class of people who frequent these smoking places?—Every leading statement made by the Bombay daily papers is translated into Gujarati and Marathi by the editors of the Anglo-Vernacular papers who understand both languages. I myself have continually perused newspapers in Gujarati and Marathi and Hindi, and I know that it is the fact that every remark, even a rumour, about anything that happened in China is mentioned in the Vernacular the next day.

26,561. That is so; but even accepting that, are the lower classes who have been described to us as going to the smoking places in the habit of reading Vernacular papers largely?—I have met men in these smoking places who now belong to the lower classes who were very intelligent, and who could read the various Vernaculars; and they discuss in these smoking dens the various topics of the day.

26,562. But speaking generally, the classes of people that meet there would be the lower classes, would they not?—Not at all.

26,563. I am speaking of the opium smoking dens?—They would not necessarily be all of the lower classes. I have met men of every class. They told me at one place that a European used to go there every day and then he disappeared, the inference being that he had died.

26,564. We have been told this afternoon that the people who frequent the dens are largely criminal and people of the lowest classes?—It might be so, but my observation has not been about criminality.

26,565. Do you think from your experience that much reliance can be placed upon the statements of these opium smokers when you are discussing the subject with them?—I think as much reliance is to be placed upon the statement of a native as upon that of a European.

26,566. I was not drawing a distinction between natives and Europeans, I was speaking of opium smokers—whether much reliance could be placed upon the words or statements of persons in the habit of smoking opium in these dens, who have been described to us as habitual liars and in language of that kind by a witness to-day?—My impression is that they are by no means habitual liars—they are not habitual liars any more than the inhabitants of another country. The question of whom does it benefit comes up in the matter of believing a man's testimony. If a man testifies against himself and he has nothing to gain by that testimony, and everything to lose, and that testimony has to be got from him by quiet talking and questioning, then I am inclined to believe it, but if I offer a bribe to a man I cannot believe him.

26,567. Do you think the statements of these people would generally deserve credit?—Generally on the matter of the injury of opium to themselves I think their statements deserve credit.

26,568. (Mr. Haridas Voharidas.) I suppose you know that China is supplied with opium not by India alone but by other nations?—I have heard that Persia is competing for the Chinese trade.

26,569. Persia and Turkey and other places are supplying opium to China, and perhaps you know that if there was any obligation on the part of China to accept Indian opium, it has lately been declared by a responsible secretary before Parliament that China is free to accept Indian opium or not?—My impression is that no official intimation as the outcome of the expression of Parliament has been sent to China to that effect.

26,570. That might be the case or not, but it has been declared publicly; and in that case do you think that the British Government would supply opium and ruin China in the way you have suggested?—Every word in my statement is the outcome of very serious thought. I purposely have abstained from reading the statements of other witnesses in order that I might not be biased. With regard to China, I think that whatever others nations might do England, who holds her head so high, should certainly do right first.

26,571. You are talking about England and her high standard; do you expect England to do such things?—I may explain that I am an Englishman, though Indian by adoption; I am proud of England. I am not against an Indian Government as a Government. I am against the vices.

26,572. (Mr. Mowbray.) You have stated that any man who starts a club without the permission of the opium

vendor is immediately prosecuted by the authorities; can you give any instances of prosecutions that have taken place?—I think you will find that what I said there is a record of conversation that took place. The name given to me was that of Abdulkhan; I think it will be found that one of the witnesses against him had been employed to sell opium by the opium vendor.

26,573. Did you test that statement when it was made?—I questioned it.

26,574. Can you tell me when that case was?—Without reference I could not tell you, but I will endeavour to furnish you with the information.

26,575. That is the only case, as far as you recollect, that was mentioned to you in proof of that general statement?—Many of them said, "It is all very well, we cannot come and make a statement; the Commission will be going to-morrow and these authorities with whom we have to deal will remain. We might come and give evidence to you but afterwards injury will come to us." They said that, whether rightly or wrongly.

26,576. Whether their statement was right or wrong, you asked the question and you had this one instance mentioned?—Yes.

26,577. And you cannot recollect that you had any other instance mentioned?—No.

26,578. You have told us that all the statements you have made in your evidence in chief are the outcome of serious thought; but it does not require a license in the Bombay Presidency to sell sweetmeats or food, does it?—Yes, it does require a license.

26,579. To sell sweetmeats or food?—Every Irani shop in Bombay has to be licensed by the police. A case occurred in which the Government or the police authorities refused a license for a coffee shop but granted a license for a liquor shop.

26,580. Do you really mean to tell me that there are as great restrictions upon the sale of sweetmeats and food

as there are upon the sale of opium?—Nominally there are not, practically there are.

26,581. That is your opinion?—Yes.

26,582. (Mr. Haridas Voharidas.) Perhaps you are aware that it is not the British Government who have brought opium or the consumption of opium, but that it existed before the advent of the British Government into this country?—I am not now dealing with the matter of who introduced it, any more than I would ask who introduced a snake into this room. My contention is that a snake having got in it should be got out as soon as possible.

26,583. If the snake were kept within bounds, and not free to bite many persons but only a limited number, would not that be better than if the snake were left free?—I prefer to kill the snake.

26,584. Perhaps you know that opium is grown very largely in China?—I believe it is.

26,585. If other nations did not supply China with opium, would not China grow more opium herself, and then would she not be ruined by it?—I have heard it stated that the late Viceroy of China, Li Hang Chung, said, "China is not free in the matter." If she were at liberty to refuse the trade from other nations she herself would be able to deal with the internal traffic." I understand that China is a difficult country to manage, but no doubt the Emperor of China could explain that point. I should like to make one further statement to the Commission. It is my firm conviction that many people could be got to speak against the traffic, but there is in their minds a very great fear of what we have called, whether rightly or wrongly, official pressure. When spoken to a man says, "Opium is a bad thing," but when we ask him to give evidence, he will say, "For God's sake do not mention my name." These men have a fear of the Government because they know that Government is the dealer in the drug. If any means could be taken to get at the real genuine opinion of the public on the policy of Government I shall be glad, and if I find that any of my statements are wrong I shall be only too happy to withdraw them.

The witness withdrew.

PANDIT GANESH ANANT BHIDE called in and examined.

26,586. (Chairman.) I believe you wish to make a statement to us on the opium question?—Yes. I am an inhabitant of Kihim, near Alibag in the Bombay Presidency, and have resided in the city of Bombay for fourteen years, and during that time I have been a professional teacher of Sanskrit, Marathi, Hindi, Gujarati, and Mathematics. About eight years ago I saw the body of a woman who had committed suicide by taking opium which she had purchased in the bazaar. From that time until now I have taken particular and careful interest in the opium question. By the members of the Hindu community to which I belong the taking of opium in any form, except through a medical man, and as medicine, is considered to be a very disreputable thing. When we wish to insult a man, a very sure way of doing so is to call him "aphubaj" (that is opium drunkard). Nobody ever attaches any truth to the statements of an opium eater or smoker, and he is regarded by young and old as a contemptible person. Fever and other complaints are common among us and we are acquainted with many native remedies for such complaints, but I never have known an instance in which opium was used as a protection against fever or as a remedy for any other common disease. Some of the reasons for which people of my country take opium are (1) for the supposed pleasure of abnormal sexual indulgence; (2) in order to forget some great trouble, such as the death of a dear relative, &c.; (3) by learning the habit from one's associates and taking it merely for the sake of sociability; (4) for the purpose of committing suicide, as in the case of a woman who was my neighbour two years ago. She had a disagreement with her husband, and in his absence bought some opium which she swallowed and died four or five hours afterward. For the last five years I have been a frequent visitor to the licensed opium smoking houses in this city. Though my people consider it to be a shameful thing to enter such places, still in the interests of truth and in order to ascertain the real facts I have made these places a rather special matter of study. I have conversed with the greatest freedom, with thousands of opium slaves, and have looked into their miserable condition. Some have wept when speaking to me of their moral and physical ruin, caused by the opium drug; others have expressed a fervent desire to be freed from the habit, and have begged me to give them

some kind of medicine which would enable them to give up the use of opium; all without exception have denounced the drug and the traffic, even when the opium pipe was in their mouths. Any man, medical or other, who said that opium was a thing necessary to or beneficial to the common people would be, and now is, laughed at by the entire Hindu community. Any person wishing to take opium does so always without the knowledge of his own household. If opium were the precious article of food or nourishment that some thoughtless persons have stated it to be, then its use would be open and without shame. Even the people who use opium themselves are most anxious to hide the fact from their own children. These who eat opium require a large and substantial quantity of food in order to counteract the effects of opium eating or smoking. I have marked this personally in many cases. Those who eat a large substantial quantity of food can have a healthy state but not for very long. But hundreds and thousands there are who with the greatest difficulty get one or two poor meals of very common sort, and such persons who use opium in either way soon become emaciated and useless for any work. Their thirst for opium so increases that they soon become immoral in order to get money for their vice in an easy way, or have the alternative of starvation. Food is cheap. The opium is very dear, and to say in time of famine people subsist on opium is nothing but silliness. Opium does not kill appetite but increases it, and at any rate none supposes it as an article of food, and if some do they can be placed in the same rank of Europeans who, if there be any, say that rum is an article of food, and that when famine comes people can manage to live on rum without food. Opium brings shame. Respectable and young (new) opium consumers are always ashamed if they be called aphubaja. Every one shrinks at that name. If in a family a son uses opium in any shape then he does it very secretly, and he always tries that none should know about it (young or old). If the father smokes or eats opium he also has the same idea. Opium consumers never advise their children to eat opium, but on the contrary if they hear that their sons and daughters are following the same course and copying them in using opium they abuse and rebuke them and sometimes drive them away. These very facts show that the opium is not

Mr. Mansukh Lal.

Pandit Ganesh Anant Bhide.

*Pandit
Ganesh
Anant Bhide.*

15 Feb. 1894.

an article of food and also that it is not beneficial to the human constitution. If it was, none would have been ashamed to use it and people would have circulated the use of it very widely. All Indians would have been opium consumers. No one feels ashamed to drink milk in the presence of young or old and they freely, joyfully, and persistently allow the use of milk or other similar articles of food as rice, wheat, &c., &c., so if the opium was harmless and good and profitable people would have used the opium freely and without any shame. My father is a landowner in the Alibag district, and he has some workers in his charge. They work in all seasons; none of them use opium and they do not require it. If we find a person in our service who uses opium we call him "aphubaja," and so make him leave our service. Aphubaja are looked upon contemptuously by all. No one will trust an aphubaja (opium user). I suppose opium to be far more dangerous than alcohol although alcohol is also very bad. Alcohol makes a man noisy and turbulent and the effects of liquor are quickly seen. But an opium sot simply becomes drowsy, nerveless, and stupid. The very quietness of an opium smoker's life is one of its worst features, because it remains so long unobserved, and when the results of the drug cause alarm to a man's friends, then it is too late to save him, because he has become a slave to the treacherous drug. It increases adultery. When people become slaves of this drug they become helpless and are unable to feed their wives and children, so when women are in the state of difficulty of getting food and clothing some professional female and male pimps take opportunity of inducing the tender, uneducated, pained and unfed women, or, say, girls, to the adulterous path. In which the pimps soon with very little difficulty succeed and sooner or later the poor women become tenants of rooms on a highway. Sometimes husbands themselves being in difficulty of food and clothing lead them to the adulterous path and take the place of a pimp for their own wives or daughters or sisters (this of course is seen among very poor and low class of people). I once heard in an opium den from an opium smoker's lips that he sold his wife for Rs. 20 in order to get necessary articles for himself. This I heard in the presence of one or two persons. I have heard a number of stories from the lips of opium smokers. If I were to write them all, it would take months to write them. But in short, do not remember one man in the opium den or outside who uses opium and whom I met and who said to me that opium is good, or opium makes a man healthy, or opium is an article of food, &c., &c. And on the contrary every one said that it is a curse, it is very bad, and if Government, our Maya Bapa (mother and father), stops the public sale of opium, it will do an immense lot of good, though even not to us, at least to our children. Hinduism speaks very strongly against intoxicants of all kinds, and I have seen many people offering rice, ghi, cooked food, &c., &c., to many deities, but I never saw or heard or read, any one offering to God opium. And other religions of India also speak against intoxicants. And so I come to the conclusion that opium is morally, religiously, and physically bad and it is the only desirable thing that its sale except for the medical purposes should be prohibited.

26,587. You come here to recommend that opium, the effects of which you have drawn in such dark colours, should not be sold except for medical purposes?—Yes.

26,588. You have referred to the prohibition by the Hindu religion of intoxicants of all kinds?—Yes. Opium is not mentioned in the Hindu religion, but intoxicants are mentioned.

26,589. The Hindu religion speaks, as you say, against intoxicants of all kinds?—Yes.

26,590. Would you not, therefore, recommend that the same prohibition, which you advise in the case of opium should extend to intoxicants of all kinds?—Yes; all kinds of intoxicants should be prohibited. By the articles of religion all intoxicants are prohibited.

26,591. You would like to see that religious prohibition receive the sanction of the law?—Yes.

26,592. (Mr. Fanshawe.) You say, "opium is very dear," and to say in time of famine people subsist on opium is "nothing but silliness." Has anyone made the statement that in times of famine people subsist only on opium?—

I heard so, and besides I have read in a certain book that it helps men in the time of famine.

26,593. It helps them, but it does not enable them to subsist?—Of course not, it is not food at all. It does not decrease the appetite but it increases it.

26,594. With regard to the word aphubaja, you have given the translation as "opium drunkard" in one place, and in another place "opium user"?—Aphubaja is an opium user of any kind. In whatever way he takes it he may be called aphubaja.

26,595. If a man takes opium in very small quantities is he called aphubaja?—We call him aphubaja. In our society it is not taken. I have only seen one Brahmin who takes opium and we call him aphubaja. Speaking generally, when we see a man eating or smoking opium we call him aphubaja whether he takes it in moderation or not.

26,596. We have been told that the term aphubaja is only used when the person takes opium immoderately?—Whether a man takes opium moderately or immoderately, we call him aphubaja.

26,597. With regard to your remarks about the use of opium leading to adultery, have you many or any authenticated cases of that kind?—I have personally seen many cases half-a-dozen or more. I have seen many cases of the same sort from liquor as well as from opium.

26,598. These cases were mentioned to you, did you authenticate them by inquiry?—I went myself and made inquiries. I went into the affair properly—I went into the opium dens.

26,599. Did you verify the cases where wives had been led into adultery?—Yes.

26,600. You have stated that you heard from an opium smoker's lips that he sold his wife for Rs. 20, did you verify the facts of that case and ascertain whether it was really so?—No, we did not. We simply heard a smoker saying it, that is all.

26,601. In the first part of your evidence, you state, "Nobody ever attaches any truth to the statement of an 'opium eater or smoker,'" will you explain why you should believe extraordinary statements made by an opium eater or smoker, such as you have mentioned?—Generally when they are not drunk they will say something true, but when they are drunk or when they are thirsting for opium they scarcely ever speak the truth. So we are led to say that no one can trust them.

26,602. Just so. Then why should we believe this extraordinary statement that an opium smoker had sold his wife?—We heard the statement made. We did not go and inquire about it minutely. We had no reason at that time to go into it, otherwise we would have done so.

26,603. (Mr. Mowbray.) What little book was it in which you saw about the opium famine, was it a native or an English book?—It was an English book.

26,604. You say opium is very dear, has it ever occurred to you how much of the dearness is due to the taxation which Government levies upon it?—I do not know anything about the finance question.

26,605. You are not aware that opium at present is heavily taxed?—I know this much, opium is dear and we can get food very cheap. I can get a larger amount of food for As. 2 than I can opium.

26,606. You are not aware how much of that dearness with regard to opium is the result of Government putting so heavy a tax upon it?—No.

26,607. (Mr. Pease.) Are you aware that we have had evidence that if a man had not sufficient money with which to buy himself sufficient food to eat it would still be wise for him to spend a small portion of what he had upon opium?—It would not be wise for anybody to spend any money upon opium.

26,608. I thought you might have seen that we have had evidence of that kind brought before us. I do not unite in the view?—I did not hear about it. Food is very cheap and opium is very dear. Foolish people spend money on opium that could be spent on food. Opium is very dear, and they get intoxicated.

The witness withdrew.

Surgeon-Major K. R. KIRTIKAR called in and examined.

*Surg.-Maj.
K. R. Kirtikar.*

26,609. (Chairman.) I believe you are Civil Surgeon at Thana?—I am.

26,610. To what districts of the Presidency and to what races are your observations applicable?—My observations

apply to men of all classes in Bombay, Sind, and the Thana district, and chiefly to the Hindus and the Mahomedans.

26,611. To what extent is opium used among the population of the districts to which your observations apply?—I cannot give even approximately the proportion of persons per mille using opium habitually. Such a calculation is difficult to arrive at for a general observer like myself. But from the figures obtained from the collector of Thana, showing the quantity of opium sold in the Thana district during the last ten years, it appears that opium is not much in use in this district. With regard to the people of Bombay and Sind, my remarks will be confined to those whom I have known personally either as a member of society or as a medical practitioner.

26,612. What have you to say with regard to the effect of opium upon the moral and physical condition of the user?—A moderate use of opium may be considered a luxury with some and a necessity with others. In the former, it contributes to the day's pleasures; in the latter it enables them to work. My observations will be, under this head, chiefly confined to opium eating. A moderate use of opium does not in any way prejudicially affect the moral and physical condition of the user. The latter is often improved; at any rate, if the user is subject to, or has been a sufferer from, any kind of bowel or chest complaint previous to contracting the opium habit, he is enabled by the habitual use of opium to shake off these ailments, and lead a comfortable life, and, moreover, earn his livelihood. It is a slander to even suggest that moderate consumers of opium have no moral stamina. The abuse of opium, *i.e.*, excessive use in any case, whether as a luxury or as a necessity, has decidedly a damaging effect on the body, and the mind becomes enfeebled. I cannot say, however, that every abuser of opium is an immoral man. He does not form an ordinary member of our criminal classes, as our jail statistics would show. He is his own enemy. He becomes helpless and suffers in the long run from effects of chronic opium poisoning. I know some instances of opium smokers of the excessive type, who, as men of business, are unsteady and unreliable. I know nothing of persons who smoke opium moderately.

26,613. Have you anything to add with regard to the methods of consumption and the effects of the drug?—The methods of consumption are by means of pills and watery solutions. The usual dose of solid opium is from 5 to 10 grains daily in one, two, or three pills. Watery solutions contain about the same quantity of opium per day, taken singly or in divided doses. But it varies with different individuals. The effect also varies according to the nervous or phlegmatic temperament of the user, and according to the time how long an individual has been using the drug. As a rule, in course of time, the drug ceases to take effect. The quantity has thus to be increased from time to time, according to the craving of the individual, or according as the effects of the drug are desired. As much as a drachm of solid opium has sometimes to be taken to satisfy the craving. Small doses act as excitants, such as a grain or two. Larger doses necessitate a shorter or a longer sleep with some habituels; with others the case is different; they can follow their avocations without any desire or necessity to go to sleep.

26,614. Is opium used as a prophylactic?—Opium is used as a prophylactic in many diseases, especially those of the chest and bowels. In all kinds of neuralgia, especially the headache caused by malarial poisoning, opium is very valuable. It is well known to eminent European writers on *materia medica* as an anti-periodic, and as such it is invaluable in a country like India where malaria is so much prevalent. People under the advice of vaidyas and hakims use it with advantage in the affections I have mentioned. They take to it almost instinctively. The habit is generally formed by an individual commencing the use of opium, in the first instance, for the relief of pain in some of the maladies mentioned above.

26,615. Does the use of opium as habitually indulged in by natives lead to consequences as serious as those which follow the use of alcohol?—When habituels use opium judiciously they show no bad consequences on their system as the results of such use. Every organ of a moderate habitual user of opium may be sound and he may die, not necessarily of disease resulting from the use of opium. This is exactly what may happen in a moderate consumer of alcohol. But among men who use opium in excess, diseases of the intestinal canal, of kidneys, and of the mind are prevalent. In cases where alcohol is used in excess, the liver suffers in two ways, *viz.*, either from engorgement leading to acute inflammation followed by an abscess, or from atrophy ending in abdominal dropsy. The kidneys are also affected in some cases; mania supervenes in others.

26,616. In making post-mortem examinations have you discovered any serious organic lesion, or any lesion at all, attributable to opium?—I have had a few occasions of making post-mortem examinations among men known to have been moderate users of opium, but I have never discovered any kind of lesion in any organ. I have had no opportunity of holding a post-mortem examination on any excessive user of opium, except in one or two instances where there was atrophy of the intestines, in all its coats, mucous as well as muscular.

26,617. Is it difficult for an opium consumer to give up the habit, and when given up, is it likely to result in the use or abuse of other drugs, or of alcohol?—It is not difficult for an opium eater under restraint to shake off his habit, as, for instance, when an opium eater is a prisoner in jail. Of his own accord he would perhaps not give up the habit. But in jails we do not allow opium except as medicine. He therefore out of sheer hopelessness begs for something else that would stop the craving. I have been off and on nearly eleven years in medical charge of the Thana Jail with a daily average population of from 500–600 convicts. It being a depot jail we get convicts from all parts of this Presidency. In this jail I have come across convicts who prior to their entry into the jail were habitual users of opium. When they find out that they cannot get their customary allowance, they are miserable. If at such a time they could get alcohol or any other stimulant they would certainly take it. The result of withholding opium is that sometimes such convicts become depressed mentally and physically. For some days I have to keep them on a stimulant mixture of spirits of ammonia to counteract the depression which the absence of opium brings on. If opium is withheld from the people of the country, to a certainty the use of alcohol would increase; or people would go in for bhang or ganja. Alcohol is already on the increase in this country.

26,618. What effect has the habitual use of opium on the mental faculties, and does it interfere with the consumer's ability to conduct his business successfully?—Among men who use opium moderately the drug tends to sharpen the intellect and makes a man talkative. It seldom, if ever, interferes with the consumer's ability to conduct his business. The same cannot be said of men who use large doses. Such men are helpless, unreliable, and unsteady in their habits, and they are mere wrecks as regards their physical and mental condition.

26,619. Have you any other observations which you desire to make?—The excessive use of opium in children in such quantities as send them off to sleep the whole day long, causes emaciation, bowel disorders, and loss of sight by producing opacity of the cornea. This proves that opium puts a stop to the process of nutrition in children. I have seen this during the last sixteen years of my practice. Native mothers administer a preparation called bal goli to keep them quiet. It contains opium. It does children immense harm, although it keeps them quiet and allows the mothers to follow their in-door or out-door occupations while the babes are asleep. This quiet, however, is de-r-bought, and at the expense of the children's general health and eyesight. The sale of bal goli should be stopped with a stringent hand. The damage done by it is irreparable.

26,620. (Sir William Roberts.) Do you regard the injury done by opium to children in affection of the cornea as a direct or indirect cause of starvation?—It is the result of starvation. It is the final symptom. It is when emaciation has gone on to such an extent and the absorptive power of the bowels is so far reduced that the child is unable to retain food in the stomach, and there is absolute starvation in spite of food being put into the system, that this ulceration of the cornea and disintegration takes place.

26,621. Have you ever seen cases of opacities of the cornea such as you have mentioned among the children of well-to-do classes, and those who are comparatively well off?—No.

26,622. You have only seen such cases amongst the very poor classes?—That is so. It is not always the result of children not getting sufficient food from their mothers. There may be sufficient food for the children of the lower classes, but the opium itself being given causes opacity and emaciation; so that the general starvation of the body is not on account of poverty of the mother, although the mothers are of the lower classes and earn their daily livelihood. Opacity of the cornea is attributable to balagoli and indirectly to opium—chronic opium poisoning.

26,623. (Mr. Pease.) Have you met many of these cases?—Since 1883 I have had about 63 cases in Thana

Surg.-Maj.
K. R. Kir-
tihar.

15 Feb. 1894.

*Surg.-Maj.
K. R. Kirtikar.*

15 Feb. 1894.

of affection of the cornea, as the result of chronic opium poisoning.

26,624. Mr. Prautch, in his evidence, alluded to one case?—I was not here at the time, but I heard something about it.

26,625. Mr. Prautch stated, "In answer to a question "Dr. Kirtikar said, 'I have many cases of children "dosed with opium. I register them in my books as "chronic cases of opium; they usually begin with "chronic diarrhoea, and often they lose their eyesight by "suppuration. This is very common among the natives." Do you confirm that statement?—I should modify that statement; it is not very common.

26,626. (*Sir William Roberts.*) How many patients passed through the hospital?—On an average 3,000 patients passed through the out-door dispensary in the Civil Hospital during the year. Besides that I have a daily fluctuating population of 600 or 700, or even sometimes 800, prisoners in the Thana Jail, where I get the opportunity of seeing men from different parts of the country—from Kathiawar. All the transports come from Karachi, from Hyderabad, and Kathiawar, and all the principal towns connected with the Presidency; so that every year I get an opportunity of seeing men who are opium eaters, men who take large quantities of opium. There is a man now who used to take opium before he came to jail, as much as 300 grains a day of solid opium. He was helpless after taking it. It was a case of excessive use of opium.

26,627. (*Mr. Haridas Veharidas.*) Do you know anything about the native medicines?—I have lately been studying some old Hindu works on botany.

26,628. Have you come across any mention of opium in Hindu medical books which would support your view to some extent?—Yes; I have come across a work called "Raja Nighanta," which is one of the oldest works we have. It was written by a man in Cashmere; in that book, four kinds of opium are described. There is the white opium, called "jarran," which adds to the digestive power of the stomach; then there is the black variety, called "maran," which is the killing variety. Then there is the "dharu," which prolongs life, and then there is "saran," which is of mixed colour, and is productive of diarrhoea.

26,629. (*Mr. Pease.*) As a medical man do you consider anything in that theory with regard to the different

colours of the poppy having different medical effects?—I am mentioning what this author says. I am not giving my opinion. The author, Chudamani, seems to have examined the specimens of opium prevalent during those times; that was several hundred years ago. Now we have our Malwa opium, and we speak of that. You will find a description of that in books. The best opium is considered to be the Turkish opium. This is modern. I have not any special experience of the various kinds of opium that were known in the old days.

26,630. (*Mr. Haridas Veharidas.*) In your experience do the medicinal properties correspond with those mentioned in the old books?—Yes.

26,631. So that seven or eight hundred years ago those doctors knew that there was some use in opium which is acknowledged by English doctors?—Yes. Lauder Brunton, for instance, and Dr. Ringer, who is one of the greatest authorities, consider opium to be essentially useful for the natives of India, who take large quantities of food, to enable them to get rid of the excreta formed by those large quantities of food. That is mentioned in Dr. Ringer's book, where he says something with reference to the power that opium has in expelling large quantities of food from the intestinal canal of the natives of India, who are in the habit of taking large quantities of food.

26,632. (*Mr. Fanshawe.*) Are you aware that at the beginning of last year the Bombay Government had a special inquiry made into the use of these bala golis or children's pills?—I am not aware of it. But this much I know, that of late the sale of bala goli is not quite so great. There are some restrictions here upon the sale of bala goli in Bombay; and if that is so, it is a great gain.

26,633. I understand that a number of professional men were consulted in Bombay, and that the opinions were fairly divided between the advantages and the disadvantages of the habit; are you aware of that?—I am not aware of that.

26,634. Do you think the practice of giving bala goli to children is a dangerous one?—In any case where a certain quantity is exceeded, and it is given in poisonous doses, it is dangerous. It is given by mothers to keep their children quiet, and sometimes they give such enormous doses as to almost starve the children, who are not able to take any food afterwards.

The witness withdrew.

Surgeon-Lieutenant-Colonel M. L. BARTHOLOMEUSZ, M.B., called in and examined.

[*Surg.-Lieut.-
Col. M. L.
Bartholomeusz, M.B.*

26,635. (*Chairman.*) I believe you are civil surgeon and superintendent of the Byramji Jijibhai Medical School and Lunatic Asylum at Ahmedabad?—Yes.

26,636. (*Sir William Roberts.*) To what district or districts of the Presidency and to what races are your observations applicable?—My evidence is based on personal experience gained in the performance of my official duties in Sind and Gujarat during the past 19 years. I have been civil surgeon of Ahmedabad, Nasik, and Sukkur for the last 10 years, and have had ample opportunities of judging as to the effects of the opium habit on the general population in these localities. During the six years I was in medical charge of a regiment I do not remember having ever admitted a soldier into hospital or recommended his discharge on account of the ill-effects produced by the abuse of opium, although a certain number of these men had the reputation of having been addicted to the habit of taking opium. During the whole of my professional career I do not suppose that I have come across half a dozen individuals whose constitutions were undermined by the abuse of opium.

26,637. To what extent is opium used among the population of the districts to which your observations apply?—With reference to the extent to which opium is used, I can only produce reliable statistics from the jail population in this station (Ahmedabad) for the last four years. I have invariably noted down against every prisoner's name on admission into the jail the nature and quantity of narcotic each man was addicted to; and I find that during the last four years 4,799 men and 277 women prisoners were admitted into the jail; of these 264 men and one woman were addicted to opium, or about 5·2 per cent. of the total jail population. Of these opium eaters, 10 were in bad health suffering from chronic ailments, such as partial paralysis, chronic bronchitis, enlargement of the spleen, scurvy, &c., but none of these (with one exception) were so

bad as to deserve exemption from light labour. The exemption referred to was an old man committed to the jail, I believe, for smuggling opium. His condition was so bad that he was discharged from the jail by the authorities at my recommendation. It is quite the exception for an opium eater on admission into the jail to receive any opium; yet these prisoners perform their allotted labour, partake of the jail diet, and as a rule leave the jail without having suffered in health, and apparently cured of the habit of opium eating.

26,638. What is the effect of the use and the abuse of opium on the moral and physical condition of the user?—With reference to the effect of the use and abuse of opium on the moral and physical condition of the user, I can best describe this by comparing the use and abuse of opium with the use and abuse of other stimulants, such as alcohol. The use of opium in the East may be compared to the use of alcohol in the West. That is to say, the moderate use of these stimulants after middle life and when the vital powers begin to fail is, in my opinion, conducive to long life and adds comfort and contentment to old age. The abuse of them is both pernicious and demoralizing; but the abuse of alcohol is a great deal more so than the abuse of opium, both morally and physically. I believe there is more moral and physical degradation from the abuse of alcohol than there is moral and physical degradation from the abuse of opium, although the abuse of alcohol in this country is of small extent when compared with that which prevails in the British Isles. As I have stated before, during my 19 years' professional experience in India I do not think I have met more than half a dozen cases where life was apparently shortened by the abuse of opium; even in these cases I am not in a position to give a decided opinion, as the opium habit was accompanied more or less by chronic diseases. I believe that the majority of English people have exaggerated ideas regarding the use of opium

in the East, ideas acquired no doubt after the perusal of such books as De Quincey's "Opium Eater," the use of such expressions as "opium dens," and so forth. One might travel a long distance in India and yet not meet a single individual who had abused opium as De Quincey did.

26,639. What have you to say with regard to the methods of the consumption and the effects of the drug?—Opium in the form of a watery solution is used by a large section of the Gujaratis for the same reason that a whisky and soda or a glass of sherry is used by Englishmen of culture who are neither drunkards nor total abstainers. The effect in the two cases can hardly be different. But opium is also used extensively by the natives of India to ward off pain.

26,640. Have you any other observations which you desire to make?—People living in malarious districts, as the majority of the agricultural population in Gujarat do, are subject to various ailments accompanied with neuralgic pains. Hospital experience in Gujarat will prove this. To these people living, as they do, far away from hospitals and dispensaries opium is a Godsend. A few grains of opium daily will not only ward off the pain, but, what is more important, it will enable the poor man to pursue his daily avocations and earn his daily bread. To deprive these people, who already enjoy but few comforts in this life, of their only means of relief, would be showing little consideration for their comfort and physical welfare. In fact, it would be as reasonable to deprive the sober and temperate people of the British Isles of their glass of whisky or gin by prohibiting the distillation of these spirits because a certain portion of the inhabitants stepped beyond the limits of temperance as to prevent the cultivation and manufacture of opium because a very small proportion of the people of India had their constitution shattered by the abuse of opium. Most nationalities partake of some form of stimu-

lant, and opium seems to be the drug best suited for Oriental races. Should the State interfere and prevent the growth and manufacture of opium, what substitute is the State prepared to supply in the place of opium? Surely not alcohol, and surely not Indian hemp. To have recourse to either of these as an alternative would be, to use a homely phrase, "jumping from the frying pan into the fire."

26,641. Have you seen much of the administration of opium to infants?—Not much. During my practice in Ahmedabad I have had a number of children brought to me in the out-door department more or less drugged with opium. In some cases the mothers had left the bala golis lying about and the children had got hold of them by mistake.

26,642. Did you hear what the previous witness said about ulceration of the cornea?—Yes.

26,643. Have you identified that group of cases?—I am inclined to attribute that ulceration of cornea to poverty of the blood, and not directly to opium, because the child loses its appetite after taking opium.

26,644. The incautious use of opium brings on inanition and marasmus from the imperfect assimilation of the food?—Quite so.

26,645. (Mr. Fanshawe.) A witness who has been before us this afternoon, the editor of the *Banner of Asia*, states that he has lived for some time in the villages of Gujarat, and as far as his experience went he never heard of opium being used as a remedy for fever or any other ailments; can you suggest any explanation of that?—I cannot; I think opium is a very common remedy.

26,646. Your experience is diametrically opposed to his?—Yes.

26,647. You are perfectly sure that it is a common domestic remedy throughout Gujarat?—Yes.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

At the Town Hall, Bombay.

SEVENTY-THIRD DAY.

Friday, 16th February 1894.

PRESENT:

MR. R. G. C. MOWBRAY, M.P., IN THE CHAIR.

The Right Hon. LORD BRASSEY, K.C.B.
Sir WILLIAM ROBERTS, M.D., F.R.S.
Mr. A. U. FANSHAWE.

Mr. ARTHUR PEASE.
Mr. HARIDAS VEJARIDAS DESAI.

Mr. J. PRESCOTT HEWETT, C.I.E., Secretary.

Mr. A. H. PLUNKETT called in and examined.

26,648. (Chairman.) I believe you are City Magistrate at Poona?—Yes.

26,649. What has been your service in India?—I have served for over 41 years in various parts of the Presidency including Sind, all the large towns of which I have frequently visited. I was resident deputy collector and magistrate at Karachi and Hyderabad, and eight years in Sind. I have served over 30 years as deputy collector and magistrate in Dharwar, Thana, Nasik, and Poona. I was also for some time, 1874-75, assistant and deputy commissioner of Customs, Bombay. Since 1876 I have been city magistrate in Poona, being also for nearly two years cantonment magistrate, Poona and Kirkee.

26,650. Will you give us the benefit of your experience with regard to the effect of opium consumption on the people in the districts with which you are personally acquainted?—My experience is that opium smoking prevails to a small extent in towns. The number of people

who use opium in the districts with which I am acquainted is comparatively small. As a common domestic remedy it is found in almost every household where there are young children. The villagers and poorer classes in towns use opium as a panacea for almost all diseases.

26,651. When you speak of using opium are you referring to smoking or eating, or both?—To eating. I have some experience of opium smoking, but my statement refers to eating.

26,652. What is your experience as regards the effect of opium consumption on the moral and physical condition of the people?—The moderate use of opium is, in my opinion, not harmful. Smoking to some extent affects the physical constitution, but I have seen no bad effects, either physical or moral, from opium eating in moderation. In my experience of over 30 years as a magistrate I have never known an offence committed which could be attributed to the use of opium.

Surg.-Lieut.-
Col. M. L.
Bartholomewsz, M.B.

15 Feb. 1894.

Mr. A. H.
Plunkett.

16 Feb. 1894.

Mr. A. H.
Plunkett.

16 Feb. 1894.

26,653. Have you any evidence to give as to the disposition of the people of India in regard to the use of opium for non-medical purposes and as to their willingness to bear in whole or in part the cost of prohibitive measures?—I am of opinion that the people of India would not consent to further restrictions being placed on the use of the drug, and that they would be unwilling to bear in whole or in part any of the cost of prohibitive measures.

26,654. Should, in your opinion, the sale of opium in British India be prohibited except for medical purposes?—I consider that the sale of opium, except for medical purposes, should not be prohibited in British India, and any attempt so to interfere with the use of the drug would be impolitic.

26,655. Could such prohibition be extended to Native States with which you are acquainted?—I cannot say whether prohibition could be extended to Native States. Any restrictions there would be very difficult to enforce. Even under our existing arrangements smuggling prevails, and if further restrictions were imposed on the sale or possession of the drug, it would be impossible to stop the increase of smuggling which would ensue.

26,656. Have you any further remarks that you wish to lay before the Commission?—I should like to make some observation with reference to what I heard in this room while I was here yesterday in regard to the licensing of shops and as to whether the licensing of such shops would lead to control. The main point in licensing is to provide control. The question is how can opium smoking be effectually checked. The licensing has been stopped, but it has not stopped opium smoking. It is done on the sly, as we heard yesterday.

26,657. Have you any practical suggestions to make?—I am going to make a suggestion. We have put down gaming in public. A man is punished for keeping a gaming house, and the question is whether any kind of measure can be introduced for checking the smoking of opium. I would suggest that it shall be an offence for a person to keep any place the use of which is for the common purpose of smoking opium. Gambling has been put down, and there are strict laws upon the subject.

26,658. Would you wish to see some such law as you have indicated passed with regard to smoking?—Yes; it is quite practicable.

26,659. In this room yesterday, allusion was made to a petition which was presented, I believe, to the Secretary of State with regard to smoking shops at Poona. Have you any remarks to make on that subject?—I have. The Secretary of State for India received a petition in the Marathi language, purporting to come from certain persons, the names on the petition being 73. The Secretary of State sent it to the Government of Bombay with a view to inquiry being made whether it was an original or genuine document. The Government sent it to the collector of Poona. I, as his deputy, was referred to, and I made inquiries. I have before me a few notes of the inquiry I made. 54 of the alleged signatories were traced. They were called up and questioned by me as to the circumstances under which the petition was got up, and at whose instance. The persons so examined bear the numbers from 1 to 54. All the persons traced were opium smokers, except number 54. They alleged that about 10 months ago (this was at the end of March or the beginning of April 1893) chandu shops were visited by two padre sahibs, accompanied by three natives: that the sahibs said they wished to see how chandu was smoked, and asked the people who happened to be at the shops what they would say if the chandu shops were closed, to which the chandu smokers said it was a matter for the Sirkar to decide.

They also said that their names were taken down by the padre sahibs, but that no petition was read out to them, or agreed to, or made, or sent by them. Three only admitted having affixed their signature to a paper in the belief that it was for a continuance of the chandu shops, and that they did not know that any petition was to be made for closing the opium shops. In the remaining instances, the alleged signatures of the persons who were at the chandu shop at the time they were visited by the padre sahibs were taken down. The petition is without date, but it is believed to have been made in March 1892. Two meetings were held in Poona city on the subject of opium.

26,660. Do I understand that the inquiries that you made in regard to this petition were made in consequence of the Secretary of State having referred the petition to the Government of Bombay for inquiry?—It was so.

26,661. (Mr. Pease.) Did you find out who the padre sahibs were?—They were unable to tell me. The opium smokers were called up. There was a column for their names and a column for their addresses, so that they were easily traced. The statements were taken down in Marathi and read over to them.

26,662. Have you found out who they were?—I heard Mr. Prautch say yesterday that he got the petition up, and I have found out myself that it was he who gave it to be signed.

26,663. Were the statements of the opium smokers made to yourself personally?—They were taken down in Marathi by a clerk under me and read to them, and they were stated to be correctly taken down. They were attested by me and sent to the Government. The statements are not with me now. I have not even a copy of the petition, but I have my notes here.

26,664. Did you hear Mr. Prautch's statement yesterday?—Yes.

26,665. That the signatures were taken in his presence?—They were not signatures; only three were signatures, the others were names; the people were not able to read or write. They said they were in the chandu shops when they were taken down. Mr. Prautch stated correctly when he said that he took their names down at the shops where they assembled to smoke.

26,666. I suppose it is a question of veracity between the chandu smokers and Mr. Prautch?—I dare say. I may mention that the persons who were sent for by me had no previous intimation of what they were required for. Having their names to the petition they were easily found, and I had their statements taken down and read to them in their own language. They had no idea of what they would be asked.

26,667. What you have said may account for Mr. Prautch's statement yesterday that that was the first time you had heard that any question had arisen with regard to the petition?—I have no doubt he is correct; perhaps it is so.

26,668. (Mr. Fanshawe.) You are clear that the majority of these men, that is all of them except the three you have mentioned, were unable to read or write?—Just so; the number of these opium-smoking shops at that time was seven.

26,669. (Chairman.) The statement made by Mr. Prautch as reported in yesterday's *Times of India* is to this effect: that he went to Poona to obtain the signatures of 72 men to that petition; that almost all the signatures were obtained in his presence; that only one man refused to sign because he said he was a Government servant and therefore could not sign it?—There were 73 names, but there were only three signatures, the rest were the names of the persons.

The witness withdrew.

Vaid
Parbhuram
Jivanram.

VAID PARBHURAM JIVANRAM called in and examined (through an interpreter).

26,670. (Chairman.) You are a medical practitioner according to Sanscrit medical works?—Yes.

26,671. You are practising in Bombay?—Yes.

26,672. (Sir William Roberts.) To what district or districts of the Presidency and to what races are your observations applicable?—My evidence applies to Bombay city, where I have been practising for 23 years, and to the province of Kathiawar, where I practised before I came to Bombay, and which I have often visited since on professional business.

26,673. To what extent is opium used among the population of the districts to which your observations apply?

—In Bombay the use of opium for non-medical purposes is very insignificant; not more than two or three per 1,000 use it. They take it in moderation. In Kathiawar the proportion would be about 10 per cent.

26,674. What is your experience of its effect on the moral and physical condition of the user?—Regarding excessive habitual consumption, if the consumer is a poor man not able to take with it very strong and substantial food he becomes dull, pale, and sleepy. But when the consumer is wealthy he finds opium greatly advantageous to his health. I remember the case of a rich and habitual consumer, a late chief of Manavadar in Kathiawar, who was under my treatment for several years. I was attend-

ing him when he died, at the age of 82. He habitually took 1½ tolas of opium a day, yet he was very healthy and strong, and would brave any gymnast in combat. With moderate habitual consumers the habit is contracted to cure disease of long standing, or to get relief from daily fatigue. In both these cases the habit is advantageous. It is commonly given to small children with advantage. I have never seen any bad effect from opium thus used.

26,675. What are the methods of consumption?—Opium is taken in pills mixed with musk or other fragrant and harmless materials; also as kasumba, *i.e.*, opium mixed with water. Over this mixture some cotton is placed which absorbs the pure liquid which is then squeezed out and drunk, and in the crude form as brought from the shops, as medicine by children in “bala goli.” It is considered essential for children by mothers, and I have never known harm done by these pills. The moderate habitual consumer is healthy and strong.

26,676. Is opium used as a prophylactic, and if so, for what diseases, and with what results?—People take opium as a preventive against sangrahani (a form of painless diarrhoea). I have very rarely found habitual consumers suffer from this disease or atisar (diarrhoea), or vishamaj-var (remittent fever).

26,677. Does the use of opium by natives lead to consequences as serious as those which follow the use of alcohol?—No. Alcohol when taken moderately sometimes leads to languor, diseases of the chest and liver. The moderate opium consumer is never attacked by any of these diseases. The excessive consumer of alcohol is wild and intoxicated; he sometimes goes mad, and commits horrible crimes, such as murder or suicide. The excessive opium consumer never goes mad, nor commits crime under the influence of opium.

26,678. Is the habit difficult to give up?—It is believed that it is difficult to give up the habit, but I do not think it is. I have known a case in which a friend of mine, an old Sanyasi, gave it up even in his old age. At first it is difficult, but by allowing other stimulants the habit is easily given up. If the consumer has a strong will, and is careful, the giving up of the habit does not result in taking to other drugs or to alcohol.

26,679. What effect has the habitual use of opium on the mental faculties?—The moderate habitual use of opium has no bad effect on the mental faculties of the consumer. The habit is found mostly among old men, and these do their work carefully and promptly. When they are under the influence of opium they are very zealous, vigorous, and energetic. One of the best examples I know was that of my own teacher, a great medical scholar of his time. His best lectures were delivered after he had taken his usual dose of opium.

26,680. Do you desire to make any other observations?—Opium is known to the people of India from very ancient times. The plant, seed, flowers, and the drug itself are mentioned in several Sanskrit medical books. When necessary the drug is used by all, old and young, male or female. It produces no bad effect on the morals. It is a most necessary stimulant for the natives of India. To stop its production means unforeseen harms in India, the first of which would be a free resort to alcohol. Excessive con-

sumption is now not nearly so common as it was. In Kathiawar many Rajputs have given up the habit on account of the costliness. Formerly it was generally and even now is sometimes used to show respect to one's guests, or as a means of reconciling enemies to each other. It is used in much the same way as liquor is used by Europeans in drinking each other's health at a dinner. The diminution in the use of opium is due partly to the heavy tax levied on it, and partly to the spread of education having done a good deal to prevent unnecessary consumption. This much is certain that the use of opium has no bad effects on the morals of the people.

26,681. (*Mr. Haridas Veharidas.*) Will you give us the names of the several Sanscrit medical books to which you have referred?—Yes; their names are: Raja Nighanta; Nighanta Rutnahar; Bhava Prakash; Atarka-Timira-Bhas-kara; Madav pala Nighanta; Rasendra Chintamani; Dhanvantari Nighant; Harit; Charak; Shushruta.

26,682. Will you tell me when “Raja Nighanta” was composed?—The oldest is “Dhanvantari Nighant,” and that is about a 1,000 years old. “Bhava Prakash” is the last written work and is 400 or 500 years old.

26,683. Do you mean that from very ancient times opium has been known to the people of India—a 1,000 or 1,100 years ago?—About 1,100 years ago.

26,684. Can you mention any books on medicine still older than the books you have named?—There are many.

26,685. How old are they?—In my essay on the forceps used by the ancients of India, sent to the Oriental Congress in 1892, I have proved that these works were written more than 3,000 years ago. “Charak” is the oldest of them.

26,686. Would you say from 2,000 to 3,000 years?—Yes.

26,687. Is opium mentioned in these very old books?—I do not find opium mentioned in any of them.

26,688. What deduction would you draw from this fact?—It seems to me that opium was brought to India 1,200 or 1,300 years ago by the Mahomedans.

26,689. Have you authorities from the latest Sanscrit works?—Yes.

26,690. Have you a large practice in Bombay?—Although I do not wish to say it, among the native practitioners I perhaps stand first in Bombay.

26,691. Have you also a large practice among the Kathiawar chiefs?—I was called on professional business to Wadhwan, and there often consulted Dr. Manser, who said that if the chief wanted to be treated by a native practitioner he should be under my treatment.

26,692. With regard to bala goli, you have mentioned that you use bala goli extensively?—I am against anybody making a habit of taking any stimulant, but I often give bala goli to children in cases of dysentery and diseases attendant on teething. I have had an experience of bala goli for 45 years. If children are given the doses as advised by me they are always healthy and take their food regularly.

26,692a. Can you tell us what is the proportion of opium in these bala goli pills?—One pill is as big as one and a half mustard seeds and the proportion of opium is equal to an opium seed.

The witness withdrew.

Mr. GEORGE COTTON called in and examined.

26,693. (*Chairman.*) I believe you are Chairman of the Millowner's Association, Bombay?—Yes.

26,694. Are you an owner of mills yourself?—We are agents for mills in Bombay. We manage eight mills in Bombay.

26,695. I believe you have resided in India for 30 years, half of which period has been spent in Khandesh, the Berars, and Gujarat?—Yes.

26,696. Will you give us the benefit of your experience as to the use of opium by people in your employment?—For many years I was in Broach and Gujarat, and we had some runners whom we employed to run between Broach and Jambusar, 36 miles distant. There was one man in particular, about 50 years of age, who had been a runner for many years. He would leave Broach at six o'clock in the evening and take messages to Jambusar, and he would leave Jambusar the next evening and come back to Broach on the following morning. This man used opium regularly, and so far as I could judge he was only able to undergo this great exertion because he was an opium eater. In addition to that there were two of my Jamedars whom I noticed particularly

as opium eaters. They were most reliable men, always on the alert, and most praiseworthy. In the Berars I had not noticed the use of opium to such an extent among those in my employ as I did in Broach and Gujarat, but I had very trustworthy sepoys, who were users of opium. Among my mill hands in Broach, nearly all the Mussulman weavers used opium more or less, and they seemed, so far as I could judge, to be none the worse for it; they were certainly very good workers.

26,697. With regard to the cases of the runners, had you any opportunity of comparing the physical capacity of the runners who were opium consumers with the runners who were not?—No; we had several runners. There were two Mahomedans who used opium, and there were I think two Hindus employed regularly who were not users of opium. The best man I had, and the most reliable, was this elderly man, who used opium—a man of 51 years of age. But I could not say that I drew any comparisons or that I thought of drawing any comparisons. All I can say was that he was certainly none the worse for the opium. He was the best runner that I had.

Mr.
G. Cotton.

16 Feb. 1894.

Mr.
G. Cotton.
16 Feb. 1894.

26,698. Can you tell us whether there is much consumption of opium among your mill hands in Bombay?—I cannot express any opinion that would be of any value whatever.

26,699. What is your opinion with regard to the proposal to prohibit the production and consumption of opium?—I am strongly of opinion that were it possible to prohibit the production and consumption of opium, without the gravest political and financial danger resulting, some other drug or stimulant (most probably alcohol) would come into greater use with effects more injurious to the stamina and vitality of the community than those now obtaining from the opium habit.

26,700. Will you tell us your general opinion as to whether it would be possible, if such prohibition were carried out in British India, to extend it to the Native States?—I most certainly think not.

26,701. Do you wish to make any remarks as to the effect of the loss of revenue upon the trade of India?—The direct loss of revenue would, I understand, be about five crores of rupees, or perhaps nearer seven, and it is not evident in what manner this could be made good. As it is, the Government of India will not be able to balance expenditure and income without additional taxation. The possibility of further direct taxation being fraught with great political dangers, it appears to me that the re-imposition of the import duties which, it will be remembered, were abolished in deference to Lancashire only, may be necessary, but this would probably not cover a further deficiency, such as the loss of all opium revenue would bring about. Not only that, but if we were to curtail the export of opium it would still further embarrass us financially. At present we are suffering very much because of our imports being in excess of our exports. The balance of trade for the time being is against us, and consequently the Secretary of State has been selling bills at 1s. 1½d. If we were to still further curtail our exports, the balance would be still further against us, and there is no telling what the result might be.

26,702. In your opinion the prohibition of the China trade would not only directly affect the revenue but would indirectly seriously affect the balance of trade and increase your difficulties?—Yes.

26,703. (Mr. Pease.) How did you ascertain that all your Musalman operatives at Broach were opium con-

sumers?—I did not say that they were all consumers, but the great bulk of them were. You can see by the way the men come in that they are opium eaters. There is something about an opium eater that indicates that he does take opium. There is a brightness of the eye that indicates him as being an opium user. That is the only way I could tell.

26,704. That is your general impression?—That is my general impression.

26,705. (Mr. Hariḍas Veharidas.) Have you anything to say with regard to the present unrest throughout the Empire?—At a time when much unrest exists throughout the Empire, owing to the religious differences of the two great portions of the community; when business is unsettled and trade bad, owing to the fluctuations in all values, consequent upon the closing of the mints; when the compensation granted to Government servants at enormous cost to the State is regarded by non-officials with great dissatisfaction, and when the feeling has reached strong development that the interests of India were deliberately sacrificed for the advantage of Lancashire manufacturers by the removal of the import duty, it strikes me as particularly unfortunate that measures, which could be only rendered effective at the expense of the resources of India, and at the risk of widespread trouble within her borders, should be considered or entertained at the instance of a party whose objects, however well intentioned, are distinctly mischievous in their tendency.

26,706. (Mr. Pease.) Are you aware that the effect of the opium trade has been to introduce into India annually an average of one and a half crores of rupees in silver from China, and would not that have a mock effect in depreciating the value of silver in India?—I do not think that is anything compared with the effect of the balance of trade being against us. What we want, whether in regard to China or England or any other part of the world, is to have the balance of trade in our favour. As a matter of fact we receive large shipments of gold from China. I do not know the exact figure with regard to silver.

26,707. So far as it goes it would tend to reduce the value of silver in India?—But that would be nothing in comparison with the loss that we should suffer by the balance of trade being against us; at least I take it in that way. I think we receive more gold than silver.

The witness withdrew.

Mr. W. R. SCROGGIE, L.R.C.P., M.R.C.S., called in and examined.

Mr. W. R.
Scroggie,
L.R.C.P.,
M.R.C.S.

26,708. (Chairman.) You are Civil Surgeon at Sholapur?—Yes.

26,709. (Sir William Roberts.) To what district or districts is your experience confined?—My experience is confined to the Sholapur district and relates to the natives thereof. It extends over 11 years.

26,710. To what extent is opium used among the population?—Opium is mostly consumed by male Hindu and Musalman weavers. About 166 per mille of the adult males use it to the extent of from two to eight grains per head per diem.

26,711. What effect has it on the moral and physical condition of the user?—Consumers state that the moderate use has a sustaining power, enabling them to undergo greater exertion without fatigue, deadening hunger, brightening their mental faculties, averting the effects of cold and wet, and as age advances acting as an aphrodisiac. The habit is usually begun on account of some bowel or chest complaint, and once formed is often continued, even though the disease has ceased, because of the feeling that they are the better for it. Taken in moderation no evil result, either physical or moral, appears to ensue. Taken in excess it causes a craving for the drug when the usual time for the dose arrives, and possibly then a bad moral effect might ensue by causing the consumer to do wrong in order to obtain the opium. In excess it deadens the desire for food, and the body not receiving nourishment becomes emaciated, and the mind becomes torpid. Opium in doses of from ½th to ¾ths of a grain is commonly given to infants during teething, to prevent or control disease, and to enable the mother to attend to her work or to rest for a few hours. As a rule there is no baneful effect, and many infants appear in the best of health though habituated to the drug.

26,712. What are the methods of consumption?—It is generally eaten in the crude state as sold by the dealers. When smoked as in chandul or madut the effect is more rapid and probably more deleterious.

26,713. What is your experience as to the effect of opium in malaria?—It is taken as a general prophylactic and is not confined to any particular class of diseases.

26,714. Is it used as a general protector against ailments of all sorts?—Yes.

26,715. What is your view as to the comparison of opium with alcohol?—Opium as contrasted with alcohol has a much less injurious effect. It is difficult to detect the moderate opium consumer, and I have known a case in which a man took 14 grains in one dose, but there was nothing to show that he had taken any. There is generally some sign in the breath, manner, speech, or appearance of even the moderate consumer of alcohol to show that he has taken it. Opium taken in excess induces somnolency and a desire for solitude, whereas alcohol in excess makes a man boisterous and quarrelsome, offensive to witness, and if continued may cause delirium tremens.

26,716. Have you made any post-mortem examinations of habitual opium eaters?—I have, in making post-mortem examinations, discovered no lesions directly due to opium, except in cases of opium poisoning.

26,717. Is the opium habit difficult to give up?—It is difficult for the opium consumer to give up the habit; and cases admitted into jail or hospital, where the opium was stopped, have had the result that for a few days there was distressful longing, accompanied by pain and restlessness, but after a few days these symptoms pass off.

26,718. How does opium affect the mental faculties?—Opium in moderation does not appear to do any injury to the mental faculties.

26,719. Have you had charge of the jail at Sholapur?—I have now medical charge of it. Before I was superintendent and medical officer.

26,720. Do many opium eaters come in?—Not a very large number.

26,721. What is the jail population?—Just now 20 or 30 per diem; it used to be 60 or 70.

26,722. Have you also charge of dispensaries?—With the civil hospital there is a dispensary. I am in charge of the whole district.

26,723. Have you had experience of any accidents from the practice of giving opium to infants?—Very few cases have occurred.

26,724. Were they cases of over-dosing?—Over-dosing, probably through the child getting access to the opium itself.

26,725. With fatal results?—With fatal results.

26,726. In your 11 years' experience how many fatalities of that sort have you been able to trace to the practice of giving opium to children?—I hardly think more than about six or so.

26,727. Do many children attend at the dispensary hospitals?—A great number attend.

26,728. Have you noticed that mothers have brought infants affected with marasmus that you could trace to this practice?—I cannot say so.

26,729. Have you noticed any ulceration of the cornea that you could trace to the habit?—No, I have not. I have found indigestion and diarrhoea probably due to an excess of opium, but never ulceration of the cornea among infants.

26,730. I suppose in Sholapur the people are well fed?—Fairly, I think.

26,731. Perhaps better than in most parts of India?—I do not think there is much difference in that respect.

26,732. Is it a great cotton centre?—Not now. It used to be a cotton mart, but now the cotton is brought to Bombay. The population of the town of Sholapur is 61,915.

26,733. At any rate there is not much deficiency of food?—No.

26,734. (*Mr. Pease.*) Do you think that the practice of taking opium is more prevalent among the Hindus than it is among the Mahomedans?—It is more prevalent among the weavers.

26,735. Do you draw any distinction between Hindus and Mahomedans as to the practice of taking opium?—No, I think it is about equal.

26,736. You estimate the proportion at about one-sixth?—Yes.

26,737. (*Mr. Fanshawe.*) Are the Hindu and Musalman weavers a large section of the district population, or are you speaking mainly of the town of Sholapur?—Of the town of Sholapur principally.

26,738. Speaking generally, have you come across many cases of the excessive use of opium in your experience?—

The witness withdrew.

Mr. A. J. DUNLOP called and examined.

26,752. (*Chairman.*) You are senior member of the Board of Revenue, Hyderabad State?—Yes.

26,753. And you have been deputed by His Highness the Nizam to tender evidence on the opium question?—Yes.

26,754. You hand in a *paper with regard to the administration and control of opium in the Hyderabad

The witness withdrew.

RAO BAHADUR GOVINDRAO RAMCHANDAR GARUD called in and examined.

26,756. (*Chairman.*) You are Chairman of the Bench of Magistrates at Dhulia, Khandesh, and member of the Local District Board* and Municipality?—Yes, also vice-president of those bodies.

26,757. Will you give us your experience as regards the consumption of opium by the people in the districts with which you are personally acquainted?—Being a native of Khandesh, and having had the opportunity of mixing with almost all the classes of people for nearly 50 years, I can only say from the knowledge I gained of the people using opium in this district, viz., Khandesh, that the moderate or habitual use of opium was never proved or even alleged to be the cause of injury or ill-health or moral depravity. Opium in small doses is used amongst the people of all classes, not as a luxury or for intoxication, but as a medicine, mostly by men in advanced age, to give them strength and alleviate pain, and is administered to young babes by many mothers to keep them quiet, and in either of the above cases no evil has been known to have resulted from such small doses. The use of opium is not confined to any particular classes of the community, but the drug is generally used among the lower classes much more than others.

* See Appendix XXVI, to this Volume.

No. I should like to make one other observation. I have here a copy of the *Banner of Asia* of October 1892 in which there is a photograph of a person supposed to have been brought into the condition represented through the effect of opium. In reality, this man was born an idiot and was in a deformed condition from his birth. The condition he is shown in here is not the effect of opium. The man had a sister who was born before him, and she also was in that deformed and idiotic condition.

26,739. How do you identify that particular photograph?—I knew the man well, and I often saw him.

26,740. Is this man actually living at Sholapur?—He was, and he died there.

26,741. In that way you had personal knowledge of him?—Yes.

26,742. You are satisfied that the picture represents the person to whom you are referring?—Quite satisfied.

26,743. This photograph appears from the paper in question to have been sent to the Government from a public meeting held at Sholapur on February the 26th, 1892, as an example of the evil effects of the opium traffic?—So it states.

26,744. (*Mr. Pease.*) Do you know Dr. P. B. Keskar?—Yes. I got that copy from him.

26,745. Do you know that this report was obtained from him?—Probably.

26,746. And that it is the story as told by this man's brother?—I am not sure about that.

26,747. Do you know whether Dr. Keskar accepted the truth of the statement or not?—I did not ask him. I may remark that when I got the copy I said that the man was born an idiot. There is no doubt about it, because I know persons who knew him from his very infancy.

26,748. Can you tell us what Dr. Keskar told you about the case?—I thought it was an exaggeration, and I told him that the result shown there was not the effect of opium, that the man was born an idiot and in that deformed condition.

26,749. What did the doctor say?—He said, "I do not know, but he used to take opium." The man used to take opium, but he commenced about his 18th or 20th year.

26,750. You knew that the authority of the *Banner of Asia* was Dr. Keskar?—I took it for granted that there was some reverend gentleman who went there and took the photo, and that this story with regard to the man was given to the reverend gentleman—not that Dr. Keskar wrote the history there.

26,751. Mr. Prautch says that Dr. Keskar wrote the story as recorded here?—I am not aware of that.

The witness withdrew.

Mr. W. R. Scroggie, L.R.C.P., M.R.C.S.

16 Feb. 1894.

Mr. A. J. Dunlop.

Rao Bahadur Govindrao Ramchandar Garud.

State?—Yes. I should like also to be permitted to hand in a copy of a letter which the Prime Minister wrote to the Resident containing his own views on the opium question.

26,755. (*Chairman.*) The letter will be inserted in the Appendix.† We will ask you to attend again on Monday.

26,758. What is your experience as regards the effect of such consumption on the moral and physical condition of the people?—I can say from my experience of the people that opium does not, like alcohol, either excite the brain, or stimulate animal passions, or lead to the commission of heinous offences, by persons addicted to its use. The use of opium allays anxiety and soothes pain without inducing any unnatural excitement of the powers either of the body or the mind. Taking all things into consideration I am of opinion that the effects of opium on the moral and physical condition of the people do not seem to be so injurious as they are represented to be by those who are agitating for its prohibition.

26,759. What do you say as to the disposition of the people of India in regard to the use of opium for non-medical purposes, and as to their willingness to bear in whole or in part the cost of prohibitive measures?—I am of opinion that there would be serious dissatisfaction amongst the people if the use of opium for non-medical purposes were prohibited. The people of India will not be able or willing to bear the cost, either in whole or in part, of any prohibitive measures, as they are already overloaded with taxation, both direct and indirect. The sale of opium

Ramchandrar
Garud.

16 Feb. 1894.

in British India should by no means be prohibited, not only because of the heavy loss of revenue to the exchequer, but because of the grave dissatisfaction that is likely to arise therefrom. It would, I think, be impolitic and inadvisable to prohibit the sale of opium in British India, and it would be much more so in the case of Native States such as Indore.

26,760. (Mr. Fanshawe.) Are you an elected or a nominated member of the district board?—I was elected twice.

The witness withdrew.

Mr. Dadamia
Anwarka.

Mr. DADAMIA ANWARKA called in and examined (through an interpreter).

26,764. (Chairman.) I believe you are Deshmukh of Pachora?—Yes.

26,765. What is a Deshmukh?—A Deshmukh receives a pension from the fixed land revenue. They are old officers from the Moghul Government, and still have fixed pensions from the local revenues of the town.

26,766. From the times before the British Government?—Yes. They are now only pensioners; they do not perform any services.

26,767. I suppose you have lived in the district of Khandesh all your life?—Yes, we have lived there for ten generations.

26,768. How old are you?—Sixty-two.

26,769. What is your experience as regards the consumption of opium by the different races of people in the districts with which you are personally acquainted?—In Khandesh all classes of people give opium to their infant children, and all people who become weak on account of old age also eat opium. Vicious men also eat opium, but their number is 5 per thousand.

26,770. What is your experience as regards the effect of such consumption on the moral and physical condition of the people?—Opium is considered to keep the children quiet and make them strong as their food consists of milk. Old men get sufficient energy to do their work and do not

The witness withdrew.

Mr. FAZLULLAH LUTFULLAH called in and examined.

26,773. (Chairman.) You have been Sessions Judge, I believe, at Radhanpur?—Yes.

26,774. Will you state generally what your experience has been in regard to the consumption of opium?—I have served Government for nearly nine years in the Surat and Ahmedabad districts, and have been judicial officer for nearly nine years more in a Native State in North Gujarat. I have further visited and acquired information regarding the manners and customs of Musulmans in Nasik, Khandesh, and Ahmednagar, and have specially studied the daily life and conditions of the Musulman population of the town and island of Bombay.

26,775. What is your experience as regards the effect of such consumption on the moral and physical condition of the people?—The antiquity of the use of opium in Asiatic countries is proved by the "Makhzan" or pharmacopoeia of the Yunani or Greek school of medicine, which highly extols the value of the drug. Eastern medicine recommends the habitual use of opium during infancy and after the age of 40. Hence the practice of giving pills to infants from the third or sixth day after birth to the fifth year, a custom which is almost universal in Northern India, Gujarat, and Bombay. In Malwa, where the people are amongst the healthiest and most vigorous in India, they give their children opium to eat till they are three years old. It soothes the pains of teething, the whooping cough, and measles, and prevents convulsions. It is erroneous to suppose that as a rule adults take opium from sensual motives. It is mostly taken to check some chronic or constitutional disorder, to cure coughs or chest diseases. Embroiderers and others use it to check cataract. It is in general use in Gujarat by Musulmans, Rajputs, Kunbis, Narodas, Ahirs, Kolis, and Bhils, and the greater number eat it in moderation. The effect on their physical condition is shown by the fine physique of the Gujarat opium eaters, the stalwart condition of the labourers. No province in the Bombay Presidency can show hardier or finer men than the Narodas, and Musalman Jats and Rajputs of North Gujarat, the Kathis and Rajputs of Kathiawar, and the cultivating Vohoras of Broach and Surat, the greater per-centage of whom are opium eaters. Most of the Kathiawar outlaws, whose lives involve extreme physical exertion and privation, are opium eaters. Excess is hardly known among these classes. The moral effect of the moderate use of opium is to calm the passions, tone the faculties, promote thought, and sharpen insight.

The last time I did not offer, and I wanted to resign, but the Collector put me on the nomination list, and did not allow me to resign. I was an elected member for many years.

26,761. On the last occasion the Collector nominated you as Vice-president?—Yes.

26,762. As regards the Dhulia Municipality?—I am Vice-president of both. I wanted to decline, but the Collector nominated me, and I continued.

26,763. On both boards?—Yes.

feel tired after work, and are enabled to keep good health. Opium is thus useful for children and old persons. It, however, proves injurious to the health of those who cannot afford to get sufficient food. Vicious men, including those given to resorting to houses of ill-fame, become lean and weak by the use of opium, but their life is not shortened thereby.

26,771. What is the disposition of the people of India as to the use of opium for non-medical purposes, and as to their willingness to bear in whole or in part the cost of prohibitive measures?—The people of Khandesh are poor, and both men and women have to attend to agricultural and domestic work. They cannot look after their children nor engage servants for the purpose. Opium keeps the children quiet and the parents are enabled to attend to their work. It is the belief of the people that opium eating is good as it enables old men to apply themselves with vigour to their work. There are very few persons who use it as a luxury, and in their case also opium is supposed to be taken as a tonic. Opium is useful to almost all classes of people. The people of Khandesh would not like its sale to be prohibited, nor would consent to pay the cost of such a prohibition.

26,772. (Mr. Fanshawe.) So far as your knowledge goes, do you think that the use of opium among children does harm or not?—It is advantageous.

26,776. What is your opinion as to the disposition of the people of India in regard to the use of opium for non-medical purposes and as to their willingness to bear in whole or in part the cost of prohibitive measures?—When it became known that a Royal Commission was appointed to consider whether the abolition of the use of opium was feasible, the general feeling among the people of Gujarat and Bombay was one of incredulous surprise. They consider that to stop its use would cause mortality, for which the most virulent of epidemics has seldom been responsible. Sudden and forcible deprivation of opium would be fatal to the middle-aged and old. The people would not consent to bear the cost of prohibitive measures wholly or even in part. Such prohibition would cause widespread dissatisfaction.

26,777. Should, in your opinion, the sale of opium in British India be prohibited except for medical purposes, and could such prohibition be extended to Native States with which you are acquainted?—In my opinion the sale of opium, except for medical purposes, cannot be prohibited in India. Habits of centuries cannot be uprooted by the stroke of a pen. Considering how our trained and expensive agency fails at present to stop smuggling of opium when the drug is moderately cheap and easy to obtain, it is difficult to imagine a force strong and effective enough to cope with the contraband growth and import of the drug, to obtain which thousands would make great sacrifices if it were prohibited altogether. In view of the present political temper of the country the prohibition would be unwarrantable. If it were possible to prohibit opium, Government would suffer a loss without any gain. The demand for opium would be met by illicit imports from the native seaboard of Egyptian and Persian, and across the Afghan frontier, of Khorasan opium. Difficult and ruinously expensive as the prohibition of the growth of the poppy and the sale of opium in British India would be, the prohibition or even extreme restriction in Native States would be still harder of achievement.

26,778. (Mr. Pease.) What is your present position?—I am a retired officer of the Radhanpur State; I receive a pension from the State.

26,779. Can you tell us the number of Musalmans in the town and island of Bombay?—I cannot say exactly what it is, but I think about 60,000.

Mr.
Fazlullah
Lutfullah.

26,780. Have you studied the daily life and conditions of those 60,000 people?—Not severally, but as a class.

26,781. Do you think you are justified in saying that the fine physique of the Gujaratis is the result of eating opium?—They may have a fine physique from their birth. What I mean to say is that their habit of opium eating does not affect their fine physique.

26,782. You say, "The effect on their physical condition" is shown by the fine physique of the Gujarati opium eaters"?—That is what I mean.

26,783. It does not appear correctly to represent what you mean; you mean that they have this fine physique notwithstanding the fact that they are opium eaters?—Yes.

26,784. (*Mr. Haridas Veharidas.*) You distinguish between the occasional and the daily habit in regard to the effect on the constitution?—Of course.

26,785. What would you say to a young man in good health taking opium?—If he had any tendency to chronic disease, and took it moderately, it would do him good. If he took it wantonly, or indulged in it from any other than a good motive, I think it would be wrong.

26,786. You do not take opium, I suppose?—No, I do not. I have administered opium to my children in their infancy, and I have found that it has been attended with great advantage, keeping them from colds and helping them in teething.

26,787. (*Mr. Fanshawe.*) Can you tell me the date of the pharmacopœia to which you refer?—The book is mainly taken from the writings of Avicenna, who was called the father of the present Greek School of Medicine. He lived in the 9th and 10th centuries.

26,788. You say that embroiderers are in the habit of using opium to check cataract; are you referring to any special class of embroiderers?—To the Mahomedan embroiderers with whom I have been acquainted.

The witness withdrew.

MAULVI HIDAYAT ULLA SAHEB, J.P., called in and examined (through an interpreter).

26,798. (*Chairman.*) You are a Mahomedan lawgiver, a Yunani Hakim and Maulvi?—Yes.

26,799. To what district or districts of the Presidency and to what races are your observations applicable?—They apply to Bombay only and to the Hindus and Musalmans inhabiting it.

26,800. To what extent is opium used among the population of the districts to which your observations apply?—From 4 to 5 per cent.

26,801. Will you state your opinion as to the effect of its use and abuse on the moral and physical condition of the user?—One of phlegmatic temper in a damp climate eating opium in a moderate degree will, if he takes a proper diet with it, as milk, sweets, &c., find his health rather improved thereby. If he goes to excess he will lose flesh and become debilitated. A bilious person eating it moderately, and taking sufficient quantities of milk, cream, sweets, and fresh and dry fruits will find it harmless. In case of abuse he will become debilitated sooner than a phlegmatic person. Opium eating makes a person forbearing and patient though somewhat slow.

26,802. What are the methods of consumption and the effects of the drug in each?—Opium is used in four ways: (1) as opium pure and simple, (2) as diluted with water, (3) is smoked as chandu, (4) and is smoked as madak, which last is a mixture of opium water and hemp. The effects of opium pure and simple I have already stated. Kusumbha, opium diluted with water, is but opium in a milder form, and the same effects follow its use and abuse. Chandu and madak are always injurious, and spoil both mind and body though smoked but a little.

26,803. Is opium used as a prophylactic, and if so, for what diseases and with what results?—Eating opium is good in cases of dysentery, diarrhoea, chronic and intermittent fevers, delirium, headache from biliousness, cold, &c. In cases of melancholia its proper use will generally prevent the influx of diseased thoughts. It need not be added that it is necessarily a preventive against the above diseases, and also against asthma, cough, &c.

26,804. Does the use of opium, as habitually indulged in by natives, lead to consequences as serious as those which follow the use of alcohol?—Alcohol is vastly more injurious in every way than opium. It brings on head-

26,789. In what part of India?—In Bombay, Surat, and North Gujarat.

26,790. Do you mean that their actual work puts a special tax on their eyes?—Yes.

26,791. And they take opium in connexion with that?—Yes.

26,792. You have referred also to the cultivator class, the Vohoras of Broach and Surat; are they Mahomedans?—They are Mahomedans.

26,793. Your evidence generally seems to deal with the moderate use of opium; I suppose you have come across cases of excessive use?—I have personally come across two cases of excessive use. One was a native chief of North Gujarat; but notwithstanding his excessive use he was considered to be a very sharp man in regard to his faculties, though the effect on his body was very bad. The other case was that of a beggar. My conclusion is that people who have no necessity to take trouble to win their bread—either great chiefs or beggars—do sometimes indulge in its abuse.

26,794. In your experience cases of excess have been very few?—Very few.

26,795. (*Sir William Roberts.*) You do not approve of taking opium in the same way as people take tobacco or wine in moderation, simply for a pleasurable stimulus?—People who require it as a stimulant may take it; I do not disapprove of it. In the case of cultivators and others, whose duties keep them out in the sun labouring the whole day, if they are kept without it, I think, they are not able to perform their duties as well as they do now by taking it.

26,796. (*Chairman.*) You have told us that you have given opium to your children; I suppose you did that in accordance with the common custom of your friends and neighbours where you live?—Yes.

26,797. Not under the direction of any medical man?—No.

ache, diseased liver, heart disease, impurity of blood, dysentery, diarrhoea, lunacy, palsy, the shaking palsy, piles, fistula, and seldom allows its abuser to live the natural period of his life. On the other hand, opium seldom results in premature death. While opium rather incapacitates a person from all offences of a violent kind, alcohol may be called the chief cause of them from causing hurt to another, to murdering him, and committing suicide. It leads also to licentiousness and extravagance. These are, indeed, some of the consequences of excess in the use of alcohol, and I may add that natives generally fall into such excess.

26,805. Is it difficult for an opium-consumer to give up the habit, and when given up, is it likely to result in the use or abuse of other drugs or of alcohol?—It is generally difficult, but for persons of strong resolve not really difficult to give up opium consumption in any form. Such giving up is by no means likely to be followed by one's becoming addicted to any injurious drug or alcohol.

26,806. What effect has the habitual use of opium on the mental faculties, and does it interfere with the consumer's ability to conduct his business successfully?—Opium in a solid or liquid form does not harm the mental faculties. Chandu and madak are positively injurious to them. Alcohol in excess is injurious to them, as above stated. Opium in a solid or liquid form does not interfere with one's business, while chandu and madak incapacitate a man from it.

26,807. Are there any other observations which you may desire to make?—Excessive drunkenness leads to debauchery, and when the man's blood is hot and in a state of ferment he is particularly liable to catching syphilitic diseases, which again, in his case, takes long to cure, and at times proves incurable, and these, in rare cases, bring on leprosy, but more often being handed down, make his progeny very prone to consumption and also to leprosy. This is my opinion.

26,808. How many years have you been in practice?—Twenty-five years.

26,808a. (*Sir William Roberts.*) Have you had any experience of the practice of giving opium to infants?—Personally I have not had occasion to do it, but I have seen others do it.

Mr. Fazlullah Lutfullah.

16 Feb. 1894.

Maulvi Hidayat Ulla Saheb.

Maulvi
Hidayat Ulla
Saheb.

16 Feb. 1894.

26,809. Have you had any knowledge of the injurious effects produced by that practice?—No.

26,810. Do you think it is a beneficial practice?—For the climate of this country I consider it is decidedly good.

26,811. Even for perfectly healthy children?—It will not harm them.

26,812. In what way do you think it proves useful to the children in this climate?—It is given to children mixed with other drugs, such as nutmeg, which, if there is any harm in it, deprives it of that harm.

26,813. (Mr. Pease.) Do many of the Mahomedans in this district think that opium is forbidden by the sacred books?—In the books general principles are laid down, and intoxication is a thing which is interdicted.

26,814. My question is whether there are many Mahomedans in this district who think that opium is forbidden by the sacred books?—There are.

26,815. What do you know about the smoking of chandu and madak?—I think it is bad.

26,816. Do you think that injury is done by the smoking of madak and chandu, or by the company in which it brings people?—By the smoking itself.

26,817. (Mr. Haridas Veharidas.) Do you think that the authors of those medical books to which you have referred were religious men?—They were Musalmans, and as Musalmans must be considered as religious.

26,818. Is opium prescribed as a medicine in those books?—Yes.

26,819. Is alcohol prescribed in those books as a medicine?—No.

26,820. Do you think that opium is allowed even by religious authorities?—Opium is not prohibited by the Mahomedan books of law.

The witness withdrew.

(Lord Brassey took the Chair during the remainder of the sitting.)

The Hon. W. R. MACDONNELL called in and examined.

The Hon. W.
R. Macdonnell.

26,828. (Chairman.) You are a member of the Legislative Council of Bombay and president of the Chamber of Commerce, Bombay?—Yes.

26,829. You are here to speak to us upon the financial aspect of the question submitted to this Commission?—Yes.

26,830. It has been proposed, as you are aware, to prohibit the production and consumption of opium in India except for strictly medical purposes. Such a prohibition would naturally immensely diminish the production of opium and lead to a cessation of the export trade in the drug?—Yes.

26,831. What have you to say as to the probable financial result of such a policy? First, we have to deal with the question of compensation which the Government might be called upon to pay. Have you made any estimate of the sum which might be payable by way of compensation to the Native States?—No. I found it so difficult to form any idea that I have not hazarded an estimate.

26,832. Have you anything to say to us with regard to the compensation to the Bengal ryots?—Yes. I see that the cultivation and manufacturing charges paid by the Government in the two years which I looked at, 1890-1 and 1891-2, amounted to a very large sum, Rx. 1,900,000; consequently, if prohibition were enforced and the crop not grown, a very large compensation would have to be given to the ryots.

26,833. What do you suppose the annual amount might be?—I take Rx. 2,000,000 as the amount which they would be deprived of by the prohibition of opium. No doubt they would be able to grow other crops, but I should say very much less remunerative crops, and there the difficulty of estimating what would be payable to them by way of compensation comes in.

26,834. It is almost better to confine ourselves to the fact that it would be a very large sum?—A very large sum.

26,835. And if that sum were not paid these people would probably be discontented?—Extremely discontented, I should say.

26,836. Turning to what are described as the Bengal and Bombay establishments, and the compensation for loss of occupation, can you explain what in your view might be the demand made upon the Government under that head?—You have a body of men from the Behar and

26,821. As a medicine alcohol is prohibited?—The prohibition or non-prohibition of wine as a medicine is a matter of controversy between men learned in the Mahomedan law.

26,822. Is alcohol mentioned as a medicine in these medical books?—There is a controversy as to the use of alcohol. Some say that it is allowable, and some say that it is not, even as a medicine.

26,823. (Mr. Fanshawe.) Do you say that many Mahomedans in Bombay consider that the taking of opium in moderation is forbidden?—To such an extent as to produce a flaw in the human reason—if it is taken to that extent it is prohibited.

26,824. (Mr. Pease.) My question was whether many Mahomedans in Bombay think that opium is forbidden by the sacred books?—As far as my knowledge goes, which is limited to Bombay town and island, many people must be thinking so.

26,825. (Mr. Fanshawe.) Do you mean that there are many Mahomedans in Bombay who consider that the taking of opium in moderation is forbidden?—There are many people of religious education in Bombay who think that opium if taken moderately is not forbidden.

26,826. What opinion do you wish to express in regard to the proposal to prohibit the use of opium except for medical purposes?—It is not good; many evils will be spread thereby, many ailments and diseases. There are many ailments which are stopped by opium, and if the use of opium is peremptorily stopped those diseases will return.

26,827. The question is as to prohibition except for medical purposes?—If opium is prohibited sickness will come.

Benares establishments drawing Rx. 122,000, and you deprive them of their employment.

26,837. How are they employed?—In Bombay, with the working of the department; and, on the other side, I take it that these are all Government officials employed in this business, and if you stop the business, you cease to pay them salary, consequently you must give them compensation.

26,838. You hold that there is a sort of implied contract with these men to continue their employment or to compensate them for the loss of employment?—Certainly.

26,839. Then we come to a class of men with whom you are, perhaps, in more close personal relations, namely, native and European merchants engaged in the opium trade; have you examined the question of compensation for the destruction of the trade?—My firm is not interested in buying or selling opium; we have nothing to do with it as merchants, consequently I do not come into personal contact with these traders.

26,840. They are members of the mercantile community?—In that sense I look upon them broadly as a class of men who have spent their lives in this special trade, and if you stop the trade, I think they have a very good claim for compensation.

26,841. What do you suppose is the extent of their trade, and what do you think might be the annual amount of profit in carrying on that distinctive business?—In the last three years the annual average of the exports was Rx. 9,250,000. It is one of the largest trades in the country. It is an extremely important trade, and if at one blow you sweep it away, you must destroy the livelihood of the very large number of people who are engaged in it. As to the profits, I have no means of ascertaining them, but they must be very large. I understand that opium goes through a number of hands.

26,842. It is hardly conceivable that compensation for the loss of such a trade could be dealt with by an annual payment, and it would, therefore, have to be dealt with, if at all, in the same way as we compensated the West India planters on the suppression of the slave trade, namely, by a lump sum?—Yes.

26,843. That would be a formidable question for the Government to deal with?—Extremely formidable.

26,844. Another head of charge with which the Government might have to deal would be the cost of the necessary preventive measures?—Yes.

26,845. Having regard to the wide extent of country where opium is and can be grown, you anticipate that if prevention is to be effective it must involve a very costly establishment?—Very costly.

26,846. You have not estimated the cost, I presume?—I have not.

26,847. Dealing with the loss of revenue from opium, what is your estimate of the loss which the Government would have to bear, as compared with the average of the last 10 years?—After deducting the charges, the net loss of revenue, as far as I can arrive at it from the accounts for 1890–91 and 1891–92, may be taken at Rx. 6,600,000 per annum, viz., Rx. 5,900,000 on account of provision opium, and Rx. 700,000 on account of excise. It is one of the main sources of revenue after land and salt.

26,848. In your printed statement you say that you are "unable to suggest how this deficit can be made good," bearing in mind sections 35–45 of the Herschell Committee's report." Could you develop that view a little? Perhaps you can show us how the loss of the opium trade with China would affect the position of the country commercially, because of the increased difficulty in liquidating the home charges, which we know form an important aspect of the question?—With regard to the taxes, I should mention first of all the salt tax; that is the second great source of revenue after the land. It would be possible, by doubling the salt tax, to make up for the loss of revenue which would arise from the prohibition of opium; but that, I take it, would be considered an extremely harsh measure, as affecting the very poorest classes throughout the length and breadth of India. Secondly, the salt tax has, I understand, for many years been looked upon by the Government of India as their great resource in case of exceptional financial embarrassment.

26,849. Like the income tax at home?—Like the income tax at home. Then with regard to the import duties on one great branch of traffic, the Manchester piece goods trade, you would have to put on such an enormous tax that it would be practically prohibitive. If you take the average value of imports of cotton goods at 25 millions, you will have to put on something like 25 per cent. to make up for the deficit, which, of course, is out of the question.

26,850. So heavy an import duty would make it impossible for the Lancashire manufacturers to compete with the local trade?—The trade would come to an end. There would be no articles upon which to levy a tax; the Government, therefore, would lose its chance of making a revenue. On the other hand, the consumers would have to pay a greatly enhanced price. It has been suggested that the income tax might be raised, but if you double the income tax you would only raise about a million and a half tens of rupees. That is stated in the Herschell Report. There are only two new taxes that I have seen suggested; these have come before the Finance Minister of the Government of India at various times, namely, taxes on tobacco and sugar. But there again arises a difficulty. You grow these articles all over India, and the cost of preventive measures would be so great that the taxes would be unworkable. Of course the other way of meeting the deficit would be by reducing expenditure. The Herschell Committee have, I think, made some very wise remarks on the difficulty of doing so. As civilization goes on, the demands on Government get greater and greater, and as this country gets more and more developed the demands on the Government will increase. I say nothing about the military expenditure, that is a very wide subject.

26,851. Beyond your purview?—Yes.

26,852. It is before us that there has been a considerable addition to our military expenditure. Our assumption must be that those additions were made upon such military advice as no Government would decline to accept?—Yes.

26,853. It is said that there has been considerable elasticity and development in the railway revenue?—Yes, but I fancy that no one expects that it will be sufficient to meet such a serious deficit as we are now considering.

26,854. At any rate, having regard to what you have said, the increase is not likely to be more than sufficient to meet the demands arising from an increasing civilization?—No.

26,855. Have you considered the alternative of taxation which might possibly be imposed in substitution for the opium revenue?—Perhaps you could tell us something as to the effect of the cessation of exports of opium upon

exchange?—The export trade in opium amounts to about Rx. 9,250,000 per annum. This trade is financed in a somewhat peculiar way. The bulk of it is not, like other exports, financed by the drawing of bills when the opium is shipped. I understand that as a rule the shippers take no advance, that they raise no money by bills of exchange as European merchants do in shipping the products of India to Europe; but when the opium is sold in the Straits or in China the consignee arranges through the exchange banks that they pay the proceeds of the opium in rupees in Bombay and Calcutta; consequently the exchange banks have to lay down in round numbers Rx. 9,250,000 to finance the opium trade, and they have to find these rupees either by buying council bills or in the other well-known methods of banking. I therefore hold that this large trade has the same effect upon exchange as the exports, say, of cotton to Europe. The banks have to find their rupees in the two cases in precisely the same way. Consequently, if you abolish this trade, amounting to 9½ millions, you at once alter the balance of trade.

26,856. And prejudicially affect the demand for council bills at once to that extent?—And to a great extent, because the opium crop represents about one-tenth of the total exports from India.

26,857. If the demand for council bills in connexion with the opium traffic were to cease, it would necessarily add very seriously to the financial difficulties of the Indian Government in dealing with home charges?—Enormously.

26,858. In fact it would be a most serious blow?—Yes.

26,859. Looking to the difficulties of the silver question at this particular moment you would say that the time is peculiarly inopportune for discussing the question of abolishing the opium trade?—Extremely. At the present moment, as we all know, the Government of India has to face a most serious deficit, and the whole country is in a state of alarm as to the taxes which every one foresees must be imposed, so that to sweep away one great source of revenue, or even to talk about it, seems to me most undesirable.

26,860. It there anything more you would like to say to us?—No. I hope I have made my point clear about the effect on exchange.

26,861. You are not prepared from your standpoint to consider in what way, if at all, the home charges or the military expenditure could be reduced?—No.

26,862. Looking to those home charges as being a burden which for the present must be borne, and to the fact that you cannot leave India open to the attack of an enemy, you have to accept the military expenditure and the home charges?—Yes.

26,863. And with those figures remaining as at present you see an enormous difficulty in abolishing a trade which is a very powerful factor in maintaining the demands for council bills?—Yes.

26,864. (Mr. Mowbray.) You are a member of the Legislative Council of Bombay?—Yes.

26,865. Do you hold that office by nomination from the Government or as a representative from the Chamber of Commerce?—I am elected by the Chamber of Commerce, subject to the approval of the Government.

26,866. How long have you been President of the Chamber of Commerce?—For one year, and I have been elected for another year.

26,867. May I ask your opinion as a commercial man representing the great body of commercial opinion, and practically conversant with this question of the opium trade, with regard to two statements made in the memorial presented by the Anti-Opium Society to Lord Kimberley in November 1892? It is said that "the stoppage of trade in opium with China would probably give a powerful stimulus to the exports of other Indian produce to that country;" have you any reason as a commercial man of great experience for disagreeing or agreeing with that?—I disagree with that statement.

26,868. Do you wish to make any remarks upon it?—I cannot imagine what produce they would take in addition to the articles they take already.

26,869. I should like to draw your attention also to this statement: "It" (that is the stoppage of trade in opium) "would also in all probability have a very beneficial effect on silver exchanges by putting an end to the drain of silver from China to India in payment for opium, thereby enabling the Chinese to substitute the use of silver for their present cumbersome copper coinage. It would thus tend to check the depreciation of silver, which is at the present time so serious an embarrassment in the finances

*The Hon. W.
R. Macdonnell.*

16 Feb. 1894.

"of India"?—It seems to me that the question is this. If we stop exporting opium from India the question we shall have to ask ourselves is, will the Chinamen who have hitherto bought opium buy anything else from us? Will they take more of our cotton goods, one of our principal articles of export? I can hardly imagine a Chinaman accustomed to Indian opium being satisfied with a substitute in the form of Bombay yarn. I think he would go and buy the inferior opium of his own country. From that point of view I cannot imagine how our trade can be stimulated. With regard to the second point, of course we have to bear in mind that the expression "silver exchanges" is somewhat ambiguous. So far as regards India at least there is no such thing as silver exchange. The rupee exchange is now divorced from silver; formerly it was linked with silver, but it is so no longer; consequently the expression "silver exchanges" is exceedingly ambiguous.

26,870. As put in force by recent legislation?—By recent currency legislation. The stoppage of the opium trade might have an effect in this way, that if the Chinaman ceased to import opium, and went on with his exports on the same scale as before, he would have to take the difference either in silver or in goods from England. But, as I have just said, I cannot imagine the buyers of Indian opium being satisfied either with Bombay yarns or English cutlery or cotton goods. It is therefore possible that it might lead to an increased demand for silver; but (to come back to the previous point) that does not help Indian exchange. You might improve silver and yet it might have no influence on the rupee exchange at all.

26,871. (*Chairman.*) It has been suggested, in discussing this question from the anti-opium point of view, that if the Chinaman were to abstain from spending so much of his substance upon the purchase of opium he would have more money in his pocket wherewith to buy Lancashire goods; what do you think of that?—I say, as I said before, that the man who used to buy opium will not be satisfied by an extra piece of cotton print. He wants something stronger. I take it that he would buy the inferior opium of his own country. The drain of silver from China to India is not very large. I see from the Herschell Committee's report that the imports for 1891-2 from Hongkong and the China treaty ports to India amounted to Rs. 1,700,000.

26,872. (*Mr. Mowbray.*) Is that the net import?—The net import. There are practically no exports of silver from India—they are very trifling. The amount varies. In 1870-1 it was about 1½ million. In 1875-6 it fell to 349,000. In 1880-1 it fell to 160,000. In 1885-6 it was 1,600,000; in 1890-1 it was about 2½ millions, and in 1891-2 it fell to 1½ millions. One can hardly speak of that as a serious drain upon a great country like China.

26,873. Do you regard that import of silver from China into India to which our attention has several times been drawn as insignificant in comparison with the general question of the balance of trade?—Quite insignificant.

26,874. (*Mr. Pease.*) Did you say that it was gross or net import?—I was reading the figures of the gross import, but the exports are practically nil; so trifling that they may be left out of the account.

The witness withdrew.

*Mr. Gulabrai
Durgaram
Mancharam
Mehtaji.*

MR. GULABRAI DURGARAM MANCHARAM MEHTAJI called in and examined.

26,890. (*Chairman.*) You are the sub-editor of the *Gujarati*, an Anglo-vernacular paper published in Bombay, and having a wide circulation in the city?—Yes.

26,891. As regards the feeling of the people of this country about opium, what can you say to us from your knowledge of their habits?—I can say that opium is entirely disliked by the people, and they will gladly support any legislative or administrative action that will tend to the gradual suppression of this drug except for medicinal purposes.

26,892. What is the feeling of the people in regard to intoxicants?—It is strongly against intoxication of any sort whatever, and especially against opium, alcohol, and ganja. To eat opium is considered bad, and the term *afinio* (opium eater) is always used in contempt. The sayings and the poems of the people are always a sure index of the people's feelings about the questions dealt with, and there are various sayings in which the opium habit is denounced, and among the sayings there is not a single one in which the opium habit is spoken of as good. Similarly our poets have always sung inspiring songs about the evil result of the opium habit. The question is gene-

26,875. What are the figures for 1890-1?—That is the largest year.

26,876. Have you added the Hongkong and treaty ports?—By mistake I omitted the treaty ports in the figures for 1885-6, 1890-1, and 1891-2. I will add them. Taking 1890-1, the largest year, the figures would be 3,600,000 for all China.

26,877. That was an extraordinary year?—Yes, but that of course does not represent anything like the balance of trade between the two countries. The excess of exports from India to China over imports are very much larger.

26,878. If the Chinaman consumed the same amount of Chinese opium that he at present does Indian opium, it would cost him a considerably smaller sum?—I understand that the Chinese opium is cheaper.

26,879. Therefore there would be a very much larger balance of money in his pocket?—It depends upon how much he took.

26,880. If he took the same amount of Chinese opium that he does Indian opium it would cost him a much smaller sum and he would have a larger balance in his pocket?—If he took the same amount, but if it is an inferior drug he may require to take a great deal more to give him the same sensations that he had from the Indian opium.

26,881. In so far as it cost him less he would have more money which he might spend upon cotton goods?—Possibly.

26,882. Whatever produce there was upon land at present occupied with poppy would be so much value in reduction of the 9½ millions worth of opium, would it not?—If exported.

26,883. Looking at the export trade I mean, as wealth to India?—As wealth to India—quite so.

26,884. Perhaps you noticed that Sir David Barbour stated that the net revenue from provision opium was about 4½ millions and was not likely to be more?—I did not see that.

26,885. I see Sir David Barbour says that it is possible that the revenue may be less this year by Rs. 500,000 and that at present the average may be taken at Rs. 5,000,000?—I take my figure from his own statement and the accounts of the Government of India, viz., 5,900,000.

26,886. (*Chairman.*) Made up to what date?—For the two years 1890-1 and 1891-2.

26,887. (*Mr. Pease.*) Are you aware that when there was in 1891-2 that very large quantity of silver from China it had a marked effect on the Indian Exchange?—I am not aware of it.

26,888. Do you think that the average receipt of about 1½ crores of silver from China would have any effect upon the value of silver in India?—Very little I should think.

26,889. (*Chairman.*) Virtually it comes to this, does it not, that looking at the question of exchange for India, which has to meet such heavy charges at home, it would be a very serious thing to lose the important export trade that is now done in opium with China?—Most serious.

rally asked as to how it is that Hindu shastras have strongly denounced and attached penalties against alcohol yet opium is not denounced and no penalties are attached against it. My answer to it is that in those ancient times when the shastras were written, the vice of drink must have been so widely spread that the writers of the shastras must have felt it their duty to denounce it and attach severe penalties against it. While in those ancient times opium never existed, and therefore the writers of the shastras could not denounce it and attach penalties against it. But I am positively sure that if opium had then existed and had been as widely used as it is now for intoxicating purposes the writers of the shastras would surely have denounced it and attached penalties against it. That being the case the Government should the more necessarily take such steps as would more and more lessen the opium habit to make up for the absence of any penalties in the shastras on account of the state of things mentioned above. That opium was not even known in India up till recently is best proved from the fact that in the famous Sanskrit standard medical works, Charak and Shushruta, which are known to be between 3,000 and 4,000 years old, there is absolutely no mention of opium. Opium seems to have become known in India only about

500 years ago as there is mention in a Sanskrit medical work Saragdhher and which approximately is 300 or 400 years old,

26,893. In the course of our inquiry it cannot be said that there has been any complete indication of a wide-spread popular feeling, or of eagerness to see prohibitory legislation in regard to opium; can you explain that?—Indians do not come out so readily to express their abhorrence of the opium traffic because they fear that if the use of opium is curtailed, alcohol will the more extensively take its place. If the Commission had been entrusted with the duty of inquiring about alcohol, opium, and ganja, all of them together, I am positively sure that Indians would have unanimously come forward to support the proposed curtailment and gradual abolition of the opium traffic.

26,894. You come here, I assume, to tell us that what in your view is really desirable is a prohibitory legislation which would embrace alcohol equally with, if not more absolutely than, opium?—Yes.

26,895. And you desire to see prohibitory legislation extended to all stimulants whatsoever?—Stimulants of the kind I have mentioned, opium, alcohol, and ganja; opium more especially, because in the shastras there is no prohibition against opium but there is against alcohol.

26,896. What do you say about the use of opium for the purpose of suicide?—Opium is so easy to buy from the licensed opium shops that any native woman who is dissatisfied with her domestic life from one cause or another, immediately buys it and commits suicide, which fact is plain from this, that about 80 per cent. of the suicides committed in Bombay and the Presidency general are committed with the assistance of opium.

26,897. Have you anything to say about the system of selling "balagoli"?—The system of selling balagoli in licensed opium shops is very wrong in principle, as by giving facility to ignorant women to buy, its use instead of curtailing is likely to vastly spread. The system of giving balagoli to children is considered by educated natives to be bad, and even among the ignorant people the tendency is not to give balagoli to children.

26,898. What is the general view taken by Indians of this Commission?—The Indians of the middle class look towards the Commission with a mistaken suspicion that the Commission has been appointed by the influence of English wine merchants and their sympathisers, with the deliberate motive of extending the use of alcohol by curtailing the use of opium in India. It is hardly known among these people that the anti-opium party and its leaders entirely sympathise with the temperance movement, and that they have nothing to do with any wine merchants. This mistaken impression of these people serves the Government interest greatly, as it keeps the people aloof from the Commission.

26,899. Have you anything to say with reference to possible discontent which might arise from the suppression of the opium traffic?—As regards the suppression of the opium traffic producing any general discontent among the people it is all a myth, provided, with the suppression of the opium traffic, steps were taken to check the use of alcohol by giving the right of local option to the people which they very much desire, and which the Government decline to give them, because it would diminish their revenue, which they always try to increase, even at the expense of the morals of the people. The Indian people are not in a condition to bear any further taxation that might be necessitated by the suppression of the opium traffic, as the last limit of taxation are already reached. The loss of revenue by the suppression of the opium traffic should be made up by suitable temporary assistance from the English Exchequer, by reductions in the military and civil expenditure in the administration, for which there is great room, and by stopping the perennial visits of Viceroys and Governors to the hills, and their tours, which have now become too common. These are the views which I would like to place before the Commission, which educated natives consider to be a God-send, as it would sooner or later be an instrument of saving India from the opium traffic, and in addition to that the liquor traffic.

26,900. (Mr. Fanshawe.) We have had a great deal of evidence from various classes of people from Native States in favour of opium; I suppose you will admit that they are competent to represent the feelings of the people?—Yes.

26,901. I understand you to say that there is a genuine feeling of apprehension on the part of the people in the districts with which you are acquainted that the prohibition

of opium would lead to an extension of the alcohol habit?—There is a belief.

26,902. Among the natives of the country?—Yes.

26,903. Can you give us any statistics in support of your statement about the number of suicides in the Presidency of Bombay?—I could not find any official reports, but from the reports of the newspapers, my impression is that suicides occur to the extent I have mentioned.

26,904. Do you know that Dr. Blaney told us that in 22 years there were 463 suicides in Bombay owing to opium, which is, of course, something very short of 80 per cent.?—Yes.

26,905. With regard to the term "afinio," is it used for opium eaters in moderation or only those who use it in excess, opium sots?—It is never considered whether it is taken in moderation or in excess. Anybody who eats opium is looked upon in a bad way.

26,906. We have been told that a large number of people take opium in moderation later in life, as a restorative in old age; is the term you have mentioned used with regard to such persons?—There are very few who take opium in old age, it is only the minority.

26,907. If such persons in middle or old age take opium as a restorative, is the term used with reference to them or not?—Not in the way in which it is used in the case of younger people.

26,908. (Mr. Haridas Veharidas.) Are you the son of the well-known Durgaram Mancharam, the Kathiawar reformer in Gujarat?—Yes.

26,909. You know that he always preached against these habits?—Yes.

26,910. May I ask what authority you have for saying that opium was only known in India about 500 years ago?—I inquired of the Shastras, and they say it is in Saragdhher, which is approximately 300 or 400 years old.

26,911. A previous witness, a Vaid, referred to one or two old books going back 1,100 years?—Yes.

26,912. Alcohol has always been known as prohibited?—Yes.

26,913. And it has been religiously prohibited?—Yes.

26,914. You know there are some religious persons who will not object to eat opium as a medicine, but who would have religious objection to alcohol as a medicine?—Yes.

26,915. There are many who do not go to English doctors because they know they prescribe spirits?—Yes.

26,916. They would use opium freely?—Yes.

26,917. You state that opium is not mentioned in religious books, but you say it should be first prohibited?—Yes; all people do not think that it is religiously prohibited.

26,918. How old are you?—35.

26,919. How many opium eaters have you come in contact with?—I had an uncle who was an opium eater and my experience of his opium habit was that it was very injurious.

26,920. How old was he?—He died at the age of about 58.

26,921. When did he contract the habit?—Long ago when I was a child.

26,922. How many persons in your caste do you know who take opium?—Very few; it may be two per cent.

26,923. You say that one or two per cent. of the people are opium eaters—do you generalize it for the whole of India?—I have read so much about this matter.

26,924. You form your opinion from what you have read?—Yes.

26,925. (Mr. Mowbray.) I understand you would not be in favour of the abolition of the opium trade and the revenue derived from it unless the English Government were prepared to make up the deficiency?—I have said with temporary assistance, there must be reductions in the expenditure of the country so that the loss of the opium revenue may be made up.

26,926. Are you aware that Lord Kimberley, the Secretary of State for India, on the part not only of his Government, but of any British Government, says that he does not think there is any chance of the English Government meeting you in that way?—Yes. The majority in Parliament in favour of the prohibition of opium must make Lord Kimberley or the English Government willing to help us.

Mr. Gulabrai
Durgaram
Nancharam
Mehtye.

16 Feb. 1894.

26,927. Are you aware that the Anti-Opium Association who made that suggestion to Lord Kimberley themselves, draw a distinction between making up the revenue derived from the export trade on opium and the revenue derived from the excise on opium for consumption within the country?—Yes.

26,928. Are you aware that so far as the excise revenue is concerned, they are of opinion that no substitute and no assistance from England are required in that matter?—Yes.

26,929. Let me read you an extract from a work published by the authority of the Anti-Opium Association and ask you whether you agree with it: "We need not look for substitutes. The greatest gain will undoubtedly be that derived from the people of India to whom it will be far more profitable to pay the amount of the excise revenue in the form of direct taxation than in a mode which involves the corruption and ruin of their sons, brothers, husbands and village headmen." Let me ask

you whether in your opinion the people of India or those for whom you speak, will prefer to make up the excise revenue by the payment of direct taxation?—They would be willing if they had the power to make up the loss, but as they are powerless their willingness is useless.

26,930. Which amounts to saying that they will not be able to do it?—They are not in a condition to do it.

26,931. (*Chairman.*) You mean that they have not the financial ability to do it?—Yes.

26,932. (*Mr. Haridas Veharidas.*) When you use the word "powerless," do you mean that you have not the power of curtailing the expenditure of the Government, and therefore you are not able to make up this sum?—That also.

26,933. And if you had the power to curtail in other directions, you would do so?—Yes.

The witness withdrew.

Mr. R. H.
Vincent.

Mr. R. H. VINCENT, C.I.E., called in and examined.

26,934. (*Chairman.*) What position do you occupy?—I am Acting Commissioner of Police of Bombay.

26,935. You have been in India for more than 29 years and have served in the Police Department for 25 years?—Yes.

26,936. You joined the police as a District Inspector in 1869 and served as such in the Ahmednagar and the Neesik districts for three years?—Yes; in my then position I had unusual opportunities of noticing the habits of the people, as I, so to say, lived amongst them, often not seeing a European for months at a time. In both these districts Hindus (Maharattas) are most numerous, but there is also a fairly large Musalman population, the ruling power having been for centuries of the latter faith.

26,937. You afterwards served as a Deputy Commissioner of Police in Bombay?—Yes; and as Assistant and District Superintendent in several districts of the Deccan and Sind, and again as Deputy Commissioner and occasionally as Commissioner in Bombay; later on again for years as District Superintendent of Police in Sind and the Deccan (Khandesh), for six months in Egypt as Deputy Inspector-General of Police and so on, until I was appointed to Act as Commissioner of Police from April 1893.

26,938. Your experience, therefore, extends to six districts of the Deccan, three of Sind and to the City of Bombay?—Yes.

26,939. Roughly speaking, you have had to deal with 8,000,000 of people, with 50,000 persons accused of committing more or less serious crimes, and have had the command, at various times, of an aggregate of 10,000 policemen?—Yes.

26,940. That is a very wide experience; one can hardly conceive of anybody having a wider. What has that experience taught you with regard to connection between opium and crime?—In my opinion there is no connection whatever between opium and crime. The former is not the cause of the latter, for in not one of the several thousands of serious offences which I personally investigated has it ever been noticed by me or reported by my subordinates that the consumption of opium was directly or indirectly the cause of the crime. All that can possibly be averred in this direction is that poor persons—accustomed to opium—would commit acts of petty larceny to procure money for its purchase, but the proportion is so infinitesimally small that it must be left out of consideration just as much or far more so even than acts of the same kind at home for the purpose of procuring a glass of gin.

26,941. There are more than 2,000 native police serving under you in Bombay?—Yes.

26,942. Do you see those men every month?—Yes; and many of them every day.

26,943. Is there a single native policeman in all the force who shows outwardly or inwardly any signs of opium having the slightest injurious effect upon him?—Not a single person amongst the whole lot.

26,944. What is the number of men you have had under your command during the last 25 years?—I should say about 10,000.

26,945. In all that large number how many cases can you call to mind in which men have been dismissed from the force, or given you cause of complaint for inefficiency

arising out of the use of opium?—About half-a-dozen; certainly not more.

26,946. What have you to say with regard to opium smoking in houses; do you consider that it was well to abolish those places?—I think it was a great mistake to abolish them.

26,947. Has opium smoking decreased in consequence?—I do not think it has decreased at all in consequence.

26,948. Does it result from the abolition of the licence system that the places in which the smoking does take place are less under your supervision?—They are not at all under my supervision just now. No law can, in my opinion, be invented or rather practically carried out against private opium-smoking clubs any more than against other clubs in India or Europe. When such houses were licensed the police could freely visit and inspect them, and from the habitués of such places clues to crimes and information regarding the attitude of the lower classes have frequently been obtained. Now these habitual opium smokers hire private rooms through one of their fraternity and these the police cannot enter, and thus one of the not too numerous sources of information has been stopped. The measure which closed licensed opium-smoking shops is almost on a par with a law closing all drinking bars in England, a step which it would be more than foolhardy for any European Government to adopt. Of course the person who frequent opium smoking houses in India and the evil effects of the habit on them (small and great) are as nothing compared to those who visit gin palaces, &c., in Europe, and the evils produced thereby, and it might be argued that therefore there is no reason to fear trouble or discontent. But as the final aim is to stop opium consumption entirely, the possible dangers of such a measure are almost incalculable. In fine, licensed opium houses did some good and no harm, while the opium clubs which have been substituted do no good and much harm.

26,949. (*Mr. Fanshawe.*) Your view is clear that the wiser policy would have been to retain these licensed opium shops in order that the people who visit them might be subjected to police control?—Yes.

26,950. Can you express any opinion as to the number of persons in the habit of smoking opium who might be called criminals? Is the number in Bombay large or comparatively small?—It is not so much that these persons are criminals themselves, but having supervision over these places we could obtain information. We there come in contact with the lower classes of the population and from them we hear a great many things. I do not remember a single instance in which we have arrested any of these persons, but we get a good deal of information from them. I think therefore from a police point of view that it was a very great mistake.

26,951. (*Mr. Haridas Veharidas.*) You say that the opium clubs which have been substituted for the licensed places do no good and much harm; how do they do much harm?—We have no access to them and we do not know what takes place there. These people have established their opium clubs knowing that we cannot invade them. They have gone up two or three or four or five storeys and if we had a warrant and went with it the result would be nil, for before we could get there they would have got away. Formerly we had opium shops in fixed localities

open to inspection so that any detective could go in. He cannot now go at all.

26,952. You cannot go into a private house?—No; the licensed places were very useful means of obtaining information.

26,953. If any crimes are committed there, you have no means of knowing about it?—We get no information. I do not think crimes are concocted there.

26,954. You believe that there must be something wrong and that you cannot find it?—They are a mixed class of people who congregate there just as in public houses you overhear a great deal of conversation and from that you may get a clue to crime. That source of information is now shut off.

26,955. In that way harm is done?—Yes; of course it is a good thing to obtain information with regard to criminals, and now we have not the facility for obtaining that information.

26,956. (Mr. Mowbray.) Supposing people are selling illegally preparations of opium in these places, have your men any power to go in?—None whatever.

26,957. Do you require a warrant?—You must show a very good reasonable ground for entering someone else's premises. If the case comes before the magistrates it is always the question what were the reasons.

26,958. You spoke of entering with a warrant?—I should have to issue a warrant. An ordinary police constable could not go. It would require a superior police officer to execute it.

26,959. Would that be with a view of seeing whether any illicit practices with regard to opium were going on or generally for the purpose of arresting any criminal who

might be there?—It would serve both purposes. We have no means of entering those houses; we do not know where they are. A man might say, "This is my zenana, occupied by my women folk, you cannot go in there." All these difficulties confront us.

26,960. Do you send any men in plain clothes?—They would not let them in; they know their customers too well, and they know my men too well.

26,961. I asked yesterday whether there was any law against poisons in Bombay; can you give me any information on that subject?—There is a law against poisons, and I believe that Government have it under consideration to amend the law and strengthen the hands of the police as regards poison.

26,962. What is the Act?—It is Act VIII. of 1866.

26,963. Is it enforced all through the Bombay Presidency?—Yes.

26,964. Do you find practically that you have much difficulty in enforcing that Act?—Government has called for the opinion of the officers. I was called on to report when I was in Karachi, and I explained that the Act is not workable. My predecessor, Colonel Wilson, reported against the Act. There are only 11 shops licensed to sell poisons, and their ought to be perhaps a couple of hundred. Many men who have been compounders in shops such as Treacher & Co., Kemp & Co., set up dispensaries, and they need not take out licenses; they may sell as much poison as they like.

26,965. Practically, anybody who likes can set up as a chemist, and is able to sell poison in spite of the Act, is that your experience?—Yes.

The witness withdrew.

Mr. THAKERSEY GANGARAM called in and examined.

26,966. (Chairman.) You are a justice of the peace and an opium merchant of Bombay?—Yes.

26,967. What have you to tell us with regard to the question before this Commission?—Opium is largely consumed to my knowledge in Rajputana, Malwa, Central India, Kathiawar, and Gujarat, not to speak of other minor places in this Presidency, as well as out of its jurisdiction. It is swallowed more extensively in the shape of pills as a mild stimulant by the lower classes who have to undergo hard physical labour. A small number of the higher classes also take pills (especially in old age) as a stimulant, or sip it in a liquid form called "Kusumbba" as a luxury. The smoking of it is met with in very rare instances. The consumption of the drug varies from half to two vials per head per day, very few persons consuming as much as five vials. Generally speaking, I do not consider that it acts injuriously on the moral or physical condition of the people. On the contrary I consider it to be a good stimulant, as it keeps up the spirits and energies of the working people. It is not injurious in effect as liquor is. In old age it acts as a charm in maintaining the strength and vitality of the general system both mentally and physically. The people of India do not, in my opinion, in any way look upon its use for non-medical purposes with alarm, nor do they consider any person using it as degraded in

their estimation. It is looked upon by them, in many instances, as a necessity in this climate for the poor working classes as beer is in the European climate. They do not, I opine, see the necessity of any prohibitive measures, and will, therefore, not be willing to bear in whole or in part the cost of the same. The sale of opium should on no account be prohibited in British India for other than medical purposes, as the large revenue it brings into the Government Treasury will unnecessarily be lost, and will have to be replaced by fresh taxation which the already over-taxed poor subjects are unable to bear. Moreover, it would be an undue interference with the rights of those people who are honestly engaged in its trade. When such sale is prohibited the production of the drug, to a very large extent, must naturally stop too, and thus the rights of the rayats as well as of the landholders who are honestly engaged in its production will also be unduly interfered with. For the same reasons as adduced above in respect of British India, such prohibition could not be justifiably extended to any native states, and should it be forced upon them, the inevitable result would be smuggling and adulterated drug in the market.

26,968. (Mr. Fanshawe.) Have you personal acquaintance with any Native States in the Presidency of Bombay?—No.

The witness withdrew.

Mr. SHIVMUKHRAI SUREKA called in and examined.

26,969. (Chairman.) I believe you are an opium merchant of Bombay?—Yes.

26,970. What have you to tell us with regard to the question before this Commission?—I am an inhabitant of Ramgad under Jeypur, and am acquainted with Mandasaur, Ujain, Indore, Ratlam, &c. in Malwa, as also with Jeypur, which I have visited at times. I am an opium merchant by profession, and, therefore, have knowledge of the opium trade. I have been residing in Bombay for eight years past. All those districts of Malwa, wherein opium is manufactured, are subject to Native Princes, and the manufacture of opium in those districts has been carried on for many years past. All classes of people eat opium in the above-mentioned districts. When a person goes to visit another at his house, opium is offered to the visitor as a mark of hospitality, and the latter takes as much of it as he likes. Many sick persons find it necessary to eat opium habitually when no medicine gives them relief. Again, some healthy persons eat opium for the sake of pleasure

and strength. If an opium eater gets good food his body remains strong. Further, some poor men eat opium because they have much labour to undergo. The eating of opium diminishes the effects of fatigue and flatulence, and enables men to live on scanty food. With regard to the people of all races, it may be remarked that they use opium through necessity. Moreover, in our country people know nothing about the medicines of doctors, but place themselves under the treatment of native physicians. The latter use opium in the case of certain diseases, and such use gives constant relief to the patients. No quarrels or dissensions take place in the homes of opium eaters, and they always remain contented with their lot. On the other hand, those who drink liquor are not found in a happy state, a fact which is well known to everybody. By eating opium moderately men are able to preserve their moral and physical well-being. Eating it immoderately is bad, and I have not seen many persons doing so. It is not good to prohibit the use of opium for non-medical

Mr. R. H. Vincent.

purposes, nor is it possible to prohibit the same in any way, for those who are addicted to the habit of eating opium will not give it up, and failing to obtain it honestly, they will have recourse to surreptitious means. They will import it from foreign territory, and also manufacture it in their own country. How far will Government adopt prohibitive measures? And if they attempt to do so there will be no limit to the cost. If the people of India be called upon to bear in whole or in part the cost of prohibitive measures they will regard the call as nothing but an act of oppression. In my opinion it is not proper to prohibit the sale of opium in British India. People require it as a medicine, or as a source of pleasure, or for the sake of their health. By prohibiting Native Princes from manufacturing opium Government would trample upon their rights, and, in order to remove this stigma, Government would have to pay to those Princes a very large sum

The witness withdrew.

Mr. J. M.
Campbell.

Mr. JAMES MACNABB CAMPBELL recalled and further examined.

26,971. (Chairman.) I understand you wish to make a statement for the consideration of the Commission?—I should like to do so. On the 25th October, 1893, the manager of an opium smoking club was brought before the third Presidency magistrate charged with having in his possession more than two tolas of opium. The point that possession by the manager was such possession as constituted a breach of the two tola rule broke down. Six or seven members of the club stated that a share of the opium was theirs. The two tolas to which each had a right together, amounted to the quantity in the manager's charge. The magistrate held there was no infringement of the two tola rule. He warned the inspector to be careful, or he might be punished for trespass. To check the sales of chandul in clubs and private houses, since August 1883, a special staff of eight detectives has been employed. This increase enables us to keep a detective near each group of houses or clubs in which opium is smoked. Though we have failed to procure evidence enough to justify a charge of sales, we believe we have succeeded in stopping sales in the sense of shop sales. Strangers seldom come into these houses. If a stranger comes the manager will not give him chandul. The manager knows detectives are employed to go into these houses and try to buy chandul. He is afraid to sell. The members, as a rule, do not pay at the time of smoking. They pay at some other time. What they pay is for the room, the pipes, and the cook. After the closing of the licensed smoking houses, both from inquiries from the opium staff and from inquiry in recently opened smoking houses, I satisfied myself the rule against sales was known. So far as I could judge the rule was respected. Before the Mahim Fair at the end of December I consulted with the Opium Assistant Collector and Inspector. The staff of men usually employed at the Mahim Fair was strengthened, and the necessity of special watchfulness was enforced. The Commission have had before them the issue of the *Bombay Guardian* newspaper of the 5th January, containing an article headed "Official Opiumist Fraud in Bombay." After reading this article I made fresh inquiries in case any laxness or mistake had occurred either as to allowing sales in the clubs, or in the matter of selling opium to club managers in quantities larger than two tolas at a time. I found both rules were understood. That the former did not supply opium to any manager in excess of two tolas, and that efforts were made to prevent retail sales in houses and were believed to be successful. I examined and took the statements of eight opium smokers. They knew they might smoke but might not buy chandul in the houses. I did not see what further action I could take. On the 18th of January Inspector Rustom brought the Rev. W. Prautch to my office, and said Mr. Prautch would like to make a statement before me. I asked Mr. Prautch what statement he had to make. He gave an account of visits to smoking houses with Mr. Rustom. With parts of those statements Mr. Rustom agreed, parts he differed. I asked Mr. Prautch why he had not come earlier. I said it was my duty to hear all complaints against the Opium Department. Mr. Prautch then complained that the opium staff did nothing to prevent the opening of chandul houses and clubs. I explained to Mr. Prautch we could not prevent people smoking in their houses. That as regards clubs we had taken a case into court, but it was given against us. We could not work the two tola rule so as to prove that opium in a club was in the manager's possession within the meaning of the rule. Mr. Prautch said, "they are shops not" houses or clubs, and the opium staff openly allows chandul

of money as compensation. Further, the duty on opium exported to China would no longer be realised, and Government would have to bear this loss. The people would not be able to meet the deficiency. To suppose that the people of India would cease to export opium to China, and that consequently the Chinese would give up opium eating is certainly equivalent to building castles in the air. China can obtain opium from many other countries besides India, and even in China itself opium is manufactured to a very large extent. If the manufacture of opium be prohibited in India its production in China and other countries will increase, and opium will make its way into India from China and other countries. The trade of China with India in other commodities is so extensive that if opium were surreptitiously imported into this country it would be difficult to detect it.

"to be sold and paid for." I showed him the difficulty if not hopelessness of proving a sale. Mr. Prautch seemed impressed. He said then the fault is the feebleness of the law. I said the law might or might not be feeble, but he had no right to accuse the opium staff of fraud without knowing the circumstances. He said I am not responsible for the heading Official Opiumist Fraud. It was the editor Mr. Dyer who set the headings. Mr. Prautch admitted that the heading was indefensible. Mr. Prautch further told me that at Mahim Fair opium smoking and drinking were under the protection of the opium police, who allowed sales and prevented the regular police interfering. I explained to him again we could not prevent people meeting to smoke and drink. That the opium peon at the door was to prevent sales, not to protect the sellers. What evidence of sales had he? Mr. Prautch said that after the fair was over he was in Mahim. He found a booth at which chandul was smoked. He sent two of his men, one Syed Ghos and another whose name he preferred not to give, to the booth to try and buy a smoke. Mr. Prautch went to the chief European police officer Mr. Holdway, and asked Mr. Holdway to come to the booth. On their way they met Mr. Prautch's two agents. One of the men said he had bought a smoke. I asked Mr. Prautch if he had made any inquiries regarding his agent's statement. Mr. Prautch said no. This is all my proof. Instead of any explanation of the mistaken charge of opiumist official fraud, the next *Guardian* (20th January) had a still fiercer attack under the title "Further Opiumist Official Fraud," and with special remarks regarding the protection given by the opium staff to the Mahim smoking shops. A few days later 24th January, two Musalmans, one known as Amu Mia, the other named Ajamuddin Khalifa, came before me. They presented a petition signed by 18 of 21 members of a smoking club of which Ajam-ud-din was the manager. They said they wished to be allowed to buy 42 tolas in a lump, that is the legal allowance of the 21 members. I asked them why they wished to buy in a lump. They said padres came in and interfered with them. If they had leave to buy in a lump the padres could not trouble them. I asked how they got the opium now. They said each member brings his two tolas. I said is opium ever sold in the club. They said no. We may smoke: we must not sell. We have been told this often by the opium officials. We know this. I said I saw no ground of complaint. That their petition to get a lump of 42 tolas was against the rules. That I could not sanction it. I have proof that Amu Mia the spokesman is Mr. Prautch's agent, and is the same man whom Mr. Prautch employed at Mahim and whose name Mr. Prautch preferred not to give. I have trustworthy evidence: Ajam-ud-din is also an agent of Mr. Prautch. It is remarkable that two of Mr. Prautch's informers should come before me and petition for a concession, which, and much more than which, according to Mr. Prautch's statement all managers of smoking clubs already enjoy. The petition was referred for inquiry to the Commissioner of Police. In reply Mr. Vincent stated that in his opinion the request should not be granted, and further that the petition was said to be made in the interests of certain anti-opiumists. As regards Mahim Fair Mr. Prautch admits that he was not at the fair. His information is that the opium police in their eagerness to profit the managers of the smoking houses had peons at the doors to warn off all regular police interference. How contrary to fact is the information given to Mr. Prautch is shown by the statement before me of Inspector Holdway, who was in police charge of the fair. Mr. Holdway stated

that before the fair Inspector Rustam came to him to help in detecting sales. Further, I have evidence that the Inspector of the Abkari or Liquor Police, sent one of his men as a detective to try and purchase chandul or madat. At the smoking place this man was told that neither chandul nor madat was for sale. On every night of the fair the Abkari police were present and on the look out for illicit sales of opium or its preparations. They failed to detect a single case of illicit sale. I have had three of the headmen of the Mahim smoking rooms before me. The three statements agree. They had friends from Bombay, made chandul, and smoked. They sold to no one. The opium police had warned them; you may smoke; you may not sell.

26,972. (*Mr. Fanshawe.*) You have referred in your statement to a seizure of opium at a certain club in Bombay?—Yes.

26,973. When was the case heard before the courts in Bombay?—On October 25th, 1893.

26,974. What number of tolas was seized?—I think about 14, I am not certain.

26,975. How many persons claimed to have a share in the opium seized?—Six or seven.

26,976. Was there a report of the proceedings in the newspapers at the time?—Not that I know of.

26,977. With regard to the Mahim Fair I understand you to say that you are satisfied after careful inquiry that the information given to Mr. Prautch to the effect that the opium department police were stationed near the smoking shops to keep the ordinary police from interfering and stopping illegal sales was inaccurate?—I am.

26,978. And you state as a fact that the opium department police were stationed near those shops in order to see that illegal sales were not made?—Yes.

26,979. (*Mr. Mowbray.*) Do I understand you to say that these matters referred to are now the subject of proceedings pending in the law courts?—Not directly. The plaintiff in the suit in the law courts is a different party. The plaintiff is the opium farmer. The charge is defamation in connexion with statements in the *Guardian* newspaper that the farmer sold illicit opium.

26,980. The issue will more or less raise these questions which have been referred to as being in dispute?—Yes, the case will cover a good deal of the same ground.

26,981. (*Chairman.*) In the responsible position which you occupy in relation to the question which is before us, the suppression of illicit smoking, may I take it from you that the department with which you are connected is sincerely desirous of doing everything in its power to put down the illicit smoking of chandul?—Yes, that is so. We have increased the staff and we have certainly done our best to enforce the rules.

26,982. Do you desire to tell us that your doing your best to put down what are called the smoking dens?—Yes. As far as we can.

26,983. Your difficulty, as I understand, is this, that the actual smoking is not prohibited by law, that what is prohibited is the sale of the stuff?—If we could have shown that the placing in the charge of the manager of more than two tolas was illegal, we might have succeeded in closing the clubs.

26,984. You could have brought them within the pale of the law, but you were defeated by the allegation made by six or seven persons that they each had a share in this opium?—Yes, that the opium was theirs, that possession was with them and not with the manager.

26,985. Therefore, being divided among so many the quantity which each possessed was not beyond the legal quantity?—Exactly.

26,986. I take it from you that you are doing your utmost to put an end to that which the law desires to stop?—Certainly.

26,987. (*Mr. Mowbray.*) Is it the case that the difficulty which you now find in dealing with these unlicensed places is a difficulty which you pointed out before the law was altered?—That is so.

26,988. (*Chairman.*) I believe Mr. Stoker, in his evidence before us, offered two suggestions for strengthening the law. One was a suggestion that the sale of opium smoking compounds should be prohibited, and another was that the keeping of smoking saloons should be prohibited; what do you say to those suggestions?—The question is, what would be considered an opium saloon. Could a line be drawn between an opium saloon, an opium club, and

smoking opium in a private house. In practice I think no such line can be drawn. Such a rule would compel police visits to private houses. Than this the former system of licensed and inspected smoking-houses seems to me a much less evil.

26,989. You think that perpetual domiciliary visits by the police might cause resentment, and if they were paid to places where there was no occasion to visit, it would cause resentment not unjustly?—I think there would be resentment. There would also be a great temptation to the police to levy hush-money upon people who smoke opium in their houses. This is one great danger.

26,990. It has been represented to us that the question before us involves many difficulties; that the old system under which such places were licensed gave more opportunity to the police to keep them under strict supervision, but that on the other hand it involved a recognition by the Government of a practice which all admit to be evil?—On the whole I think it is good that Government should regulate places where people meet to smoke opium.

26,991. As far as police control is concerned, you think you are better off?—Yes, certainly.

26,992. May I press further upon your consideration the suggestion which has been made, that the sale of opium-smoking compounds should be prohibited?—The sale of opium-smoking compounds is already prohibited. Further, the attempt to enforce the prohibition has so far as I am aware to a great extent been successful. At the same time the prohibition of sale has failed to secure the reduction of use. The smoking mixtures are not bought openly. My belief is they are seldom bought at all. Still the use of these compounds has increased. The explanation is that the use is confined to clubs and to private houses, where each smoker supplies his own opium. As I have stated above, payments are said to be for the room, the pipe, and the cook, not for the opium mixture. What makes prevention impossible is that the statement that the money is not paid for the opium mixture, is in many cases a true statement. If a sufficient staff of detectives could be kept up the statement would probably be true in every case.

26,993. What do you say about making it an illegal offence to sell such stuff in any way?—I have said the sale of those mixtures in any form is already prohibited. As regards the further question should the use of opium smoking mixtures be prohibited I am of opinion that it should not. I do not think the result of opium smoking in Bombay so evil as to justify so extreme a rule. Even if opium smoking were a public and widespread evil, I do not see how any rule against opium smoking could be enforced. The size of the city, the size of the houses makes prohibition of use impossible. Even if prohibition of use were possible, the enforcement of such a rule would in my mind cause much more evil than smoking causes. To allow the opium or any other police to enter private houses and interfere with domestic practices seems to me a dangerous and unbearable evil. No such rule would be worked. The risk of abuse in its working is too great.

26,994. Do you think that much chandul is smoked in Bombay?—Not much.

26,995. Six or seven hundred persons are said to be known as smokers?—That was the calculation before the licensed smoking houses were closed. Since the licensed houses have been closed the number of smokers has, I believe, doubled or trebled. But this calculation is necessarily incomplete.

26,996. (*Mr. Mowbray.*) Are there any shops in which chandul and madak are sold in their proper form?—No. The right to sell chandul and madak was a separate contract. This contract has ceased.

26,997. The only thing which is sold by a licensed vendor is the crude opium which the person takes and makes into chandul or madak himself?—Yes.

26,998. Then practically there is no such thing as the legal sale of chandul or madak, at all?—Not at all.

26,999. (*Chairman.*) Are you acquainted with a publication on the opium question by Mr. Rustomji?—Yes, I know it.

27,000. In this book it is stated that in Bombay, according to a census taken in 1890, there are 7,000 persons taking dry opium. Do you know anything about that?—I think this estimate is based on a census we had taken in 1891. This total is the estimated users of dry opium. The calculation does not refer to the users of opium smoking mixtures.

The witness withdrew.

Mr. J. M.
Campbell.

16 Feb. 1894.

The Rev. T.
M. Hudson.

16 Feb. 1894.

The Reverend THOMAS M. HUDSON called in and examined.

27,001. (*Chairman.*) You are a missionary of the Gujarati Mission of the Methodist Episcopal Church in Bombay?—Yes.

27,002. You have been in India seven and a half years?—Yes.

27,003. In the year 1888 you commenced to take an active interest in the opium question?—Yes.

27,004. Will you tell us what you have to say with regard to the question before this Commission?—I should like to say that the reason which first led me to take an interest in the opium question was that we had a servant who from being a smart useful man gradually became dull and quite useless as a servant, and had to be discharged. He himself confessed that it was through the use of opium that this change took place. During the whole of 1890 I had charge of a work, in Bombay, among ex-prisoners and the criminal classes generally. During this 12 months I had special opportunities of acquainting myself with the habits of these classes. I gave my whole time to it and carefully studied the subject. This necessarily brought me much into contact with opium eaters and smokers. I often visited the licensed opium smoking dens, and both in these places and at other times conversed with those who used opium. I should say that 90 per cent. of the opium smokers in Bombay are Mahomedans. Hindus more generally take it in other ways. I have never met a man, Hindu or Mahomedan, himself addicted to the use of opium, who said that it was a good thing when used in any other way than as a medicine. Opium smoking is looked upon as disgraceful, and they have given me this as one reason why they do not smoke at home but need some place in which to get together for the purpose. They also say that they do not wish their wives and children to learn. It is considered especially disgraceful for young men to take to smoking opium because almost without exception they do it for aphrodisiacal purposes. It has often been affirmed that opium does not, like alcohol, make men violent and thus directly lead to crime, but indirectly it leads even more surely to the same end. A man once a slave to the habit in ninety-nine cases out of every hundred, gradually loses all business capacity and bodily strength, and sinks down to beg or steal. He loses all moral sense and will do anything to obtain the drug. Public opinion among the common people is most decidedly against the use of opium. It is looked upon as a vice, but its easy accessibility and its reputation as a pain and trouble soother, as well as the stories told of its aphrodisiacal effects causes its use to spread. The suggestion of possible trouble through prohibition of the growth or manufacture of opium is ridiculed by the smokers, who although they themselves would at first be the principal sufferers have always expressed to me a great desire for this to be done. They have often begged me to try and get Government to abolish the trade, so that their ruin may be stayed. When the Government licensed smoking shops in Bombay were closed I was very thankful, though knowing what I did of the habits of the smokers, and seeing also the fact that opium was still obtainable in practically any quantity I doubted whether there would be any real benefit from the measure, as far as checking the use of the drug was concerned. Subsequent observation has confirmed me in this opinion. A number of unlicensed smoking places called clubs have been opened. These are not *bona fide* clubs. These clubs are simply gatherings of men who assemble for the purpose of smoking, and they told me that they bought the opium there on the premises, and that any man could come in and buy it and consume it there. It has often been stated to me that the opium is bought in quantity by the proprietor, manufactured into the mixture for smoking, and retailed to the consumers at a profit of two annas per tola. It is also affirmed that the Customs opium inspectors are fully aware of this state of things. The growth or manufacture of opium for any but medicinal purposes should be prohibited. I believe that a measure of this kind, not accompanied by any additional taxation, so far from exciting genuine opposition, would be welcomed by the people.

27,005. (*Mr. Fanshawe.*) Has your missionary experience of 7½ years been limited to Bombay?—I first spent 18 months in Ceylon; I then came to Bombay for three years; after that I went to Calcutta, and I have been a little in the Punjab and Northern India, and I only returned to Bombay within the last six weeks.

27,006. Am I correct in understanding that your knowledge of opium relates more to the smoking habit?—I have taken more pains to find out about that habit and I have been brought more in contact with opium smokers.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

27,007. You say "the suggestion of possible trouble through prohibition of the growth or manufacture of opium is ridiculed by the smokers, who although they themselves would at first be the principle sufferers, have always expressed to me a great desire for this to be done," that again refers to the smokers in Bombay, does it not?—Yes.

27,008. You would not apply that remark to other smokers in other parts of the country?—I can only say that those whom I have talked to about this matter have ridiculed it.

27,009. You mean the smokers you have come in contact with in Bombay?—I mean anywhere where I have talked with opium smokers. Of course it is only a short time ago that any trouble has been mentioned.

27,010. You mean political trouble?—Yes.

27,011. You also state "it is also affirmed that the Customs Opium Inspectors are fully aware of this state of things," that is, that the opium is bought from the proprietors?—When visiting the clubs I have entered into conversation with the smokers and I have asked them how they procure the opium, and they told me they procured it from the proprietor. I also asked them if the Customs officers, the police, were aware of the fact, and they told me that they were aware of it.

27,012. I presume you recognise that the opium smokers would probably be the last persons to bring themselves within the pale of the law?—I do not suppose they would bring themselves into trouble. They no doubt would tell me, knowing me to be a missionary, many things they would not tell to the Customs police.

27,013. (*Mr. Haridas Veharidas.*) You have stated that the smokers have told you that although they were taking opium they did not like the habit?—That is so.

27,014. Do not you think that, knowing you to be a missionary, and knowing you did not like the habit, that is the reason they told you they did not like it?—I have no reason to believe that; I think they spoke the truth.

27,015. You think that opium consumers hate the habit and they have told you that it is a bad thing?—When I have spoken to them, they have made unfavourable remarks about opium, and on one occasion a medical man offered to medically treat any man who could leave off the habit. I went to one of the places and told them that, and they said that it was a very good thing for any man to leave it off because it was a bad habit, and some of them wrote my name and address on the wall so that they might remember it afterwards.

27,016. Did they come to you afterwards?—No, none of those men.

27,017. Have you seen people who take opium in moderate doses in good health and none the worse for the habit?—I have seen people—generally those who have only been accustomed to the habit for a short time—but I believe in every case those who have plenty of means of obtaining good food do not appear to suffer physically.

27,018. Those men who have not sufficient to eat and who take opium to excess are the worse for it; is that what you mean?—They suffer very much.

27,019. You mean those who take opium moderately for the sake of their health are in good condition?—No, I should say that they would suffer, especially as the habit grows upon them. In every instance that I can call to mind of a man taking opium he did suffer eventually.

20,020. You have not seen a single person who has benefited by the moderate use of opium?—No.

20,021. They say that they are benefited?—I have questioned the users of opium themselves and some of them tell me that they have been cast off by their relatives; others have told me of good opportunities in life as regards business that they have lost through opium, and I have never yet had a man tell me that it was of any benefit when I talked straightforwardly with him.

27,022. (*Chairman.*) You advocate a policy of restriction by law with reference to the sale of opium?—Yes.

27,023. Would you recommend the extension of that same policy of restriction to the sale of stimulants generally, excepting for medical purposes?—Certainly, excepting that I would recommend local option in the case of alcoholic stimulants, but as regards opium I would recommend entire prohibition by Government.

At the Town Hall, Bombay.

SEVENTY-FOURTH DAY.

Saturday, 17th February 1894.

PRESENT:

Mr. R. G. C. MOWBRAY, M.P., IN THE CHAIR.

Right Hon. Lord BRASSEY, K.C.B.
 Sir JAMES B. LYALL, G.C.I.E., K.C.S.I.
 Sir WILLIAM ROBERTS, M.D., F.R.S.

Mr. A. U. FANSHAWE.
 Mr. ARTHUR PEASE.
 Mr. HARIDAS VEHARIDAS.

Mr. J. PRESCOTT-HEWETT, *Secretary*.

Mr. A. WINGATE, I.C.S., called in and examined.

Mr.
 A. Wingate.
 17 Feb. 1894.

27,024. (*Chairman*.) I believe you are at present collector of Dharwar in the Bombay Presidency?—I am.

27,025. Will you tell us what has been your experience with regard to the consumption of opium during your service in India?—I have served 24 years in various parts of India (Bombay Presidency, Mysore, Rajputana, Kashmir, &c.), but my chief experience as regards opium has been acquired in Meywar, a Native State of Rajputana, where I have been engaged in settlement and revenue work for about nine years. In Meywar the Rajputs are the largest consumers of opium. Next to them the cultivating classes, especially the Jats, who have the reputation of being the finest cultivators in Meywar. With individual exceptions, the consumption is moderate. With falling prices and consequent curtailed area of cultivation of poppy, I believe consumption to be decreasing among cultivators. Of adult males, not more than 20 per cent. in Meywar, excluding Bhils, take opium, probably less, and of females 3 per cent. It is usually used with great caution. Three tolas a month are seldom exceeded. I should put the total local consumption of the State in cheap years at about 600 chests, and in dear years at about 800 chests per annum.

27,026. You have given us some statistics of the consumption in Meywar, do they include the Bhil population in Meywar?—They exclude it. I should like to mention that I have read the evidence of the Prime Minister of Meywar, at least of people speaking in his name, and I see that they have put the consumption at 1,600 or 1,700 chests, that is about 3,000 maunds per annum; but if their statistics are worked out (they say I think that the percentage of consumers is 12 per cent. of males and 3 per cent. of females of the whole population). I make the result come to about 675 chests per annum. That would point to one of two things—that either the area under opium has been a great deal over-calculated (which I think is in part true), or that there is considerable smuggling from Meywar, which may also be in part true. Compared with the consumption of opium in the great provinces of India the consumption as stated for Meywar is probably large.

27,027. You, yourself, were the settlement officer in Meywar employed to fix the rates on land in Meywar—did you fix any special rate upon poppy land?—I fixed my settlement in Meywar on the assumption that poppy could not be calculated upon as a safe basis for settling the revenue. At the same time, in the opium-producing districts, one is bound to take into consideration in a Native State the revenue which they are at present getting; and, therefore, if opium were to be taken away from Meywar you would as undoubtedly have to have a new settlement as you would if you stopped cotton in the Bombay districts.

27,028. Do I understand that you fixed no special rate for poppy land, but that you fixed general rates rather higher than otherwise you would have done on the assumption that poppy would be grown on a certain portion of the land?—I think that if poppy were not grown there you could not have the same prosperity which there is now, and, therefore, what you say would be correct; but that would not imply that if poppy disappeared by natural

causes that in process of time other valuable and exportable crops would not take its place, though it would require a very long period of time.

27,029. You draw a distinction between the poppy cultivation coming to an end from natural causes and an interruption of the poppy growth by the interference of the State?—Quite so. I think an interruption of the poppy growth would lead to widespread ruin and distress, and would be wholly impossible; but if it came about from natural causes and gradually, a certain class lose and the other class gain. The irrigated rate is the same for all land, whether it is wheat, sugar, poppy, or barley. Whatever is grown, there is one general rate now. In Meywar my highest rate was Rs. 8 (Udaipuri), a bigha, but in Chodisadre, where opium is the main crop, that is to say, half the irrigated land is under poppy, or was, at the time I was there, 10 years ago, I have put Rs. 10 on.

27,030. May I take it that your opinion is that if the growth of poppy were interfered with by law there would have to be a revision of the rates and a reduction of the assessment on irrigated land?—In the opium-producing pergunnas I think it would probably take a quarter off.

27,031. Would you kindly give us your experience as regards the effects of the consumption of opium on the moral and physical condition of the people with whom you have been brought into contact?—The effect on the moral and physical condition of the people (excluding the few who exceed) is not noticeable. This may be because the people do not smoke opium, taking it mixed with water, or because the use is moderate. Whatever the reason, the fact remains that, so far as my experience of India extends, I have seen no reason to suppose that opium, as I have seen it used, does harm. It seems to give the cultivators strength and perseverance to endure fatigue and overcome difficulty. At the same time I have seen cultivators in other parts of India get along quite as well without opium. The same thing might be said of other articles. I have seen Rajputs who take too much. The same men would drink too much were their opium stopped.

27,032. Have you noticed any tendency in Meywar to diminish the use of opium in your experience of late?—I have heard it said that in Meywar the practice of using opium is of late years falling into disrepute. But years of high prices would have to return before it could be accepted that the present curtailment of consumption is due to anything better than necessity for economy, just as the liquor bill varies in the United Kingdom. That the higher classes are preferring liquor is probably a fact, and points to the conclusion that as opium goes out liquor will come in. There has always been in Meywar some prejudice against putting land under opium, and various inoperative prohibitive orders might be quoted, the usual form being that only one bigha of opium must be cultivated to so many bighas of grain. The prejudice is partly moral but chiefly due to fear of famine. There is the same prejudice against cotton and against export of grain. These prejudices in years of scarcity grow strong among officials and the superior classes, but seldom find favour with cultivators. There are, however, traces of them. It is thought, for example, unlucky to be the first cultivator to incise a poppy, and the crop is not easily introduced

Mr.
A Wingate.
17 Feb. 1894.

into villages where it has not been hitherto grown. The repression of opium growing would, therefore, not be contrary to the sentiment of certain classes, but it would be resented by cultivators, merchants, the State itself, and all consumers, while the sentiment itself is weak, nor is there any abuse in the use of opium in this country on a scale to fan any sentiment that exists. What the sentiment is worth may be gauged by the fact that these very people probably give it to their children. That is the only direction in which I suspect opium is harmful to the race. This can only be stopped by the spread of common sense.

27,033. Have you any direct experience as to harm being done by the practice of giving opium to children, or do you only give us your general impression?—It is only my impression. We should not give it to our own children; I should consider it extremely harmful in that way.

27,034. You have no facts which you wish to bring before the Commission on that point?—None.

27,035. Have you any opinion to express as to the willingness of the people to bear in whole or in part the cost of prohibitive measures?—I doubt if any large number of even individuals would subscribe any appreciable sum towards prohibitive measures, while the whole country would resent being saddled with any part of the cost of measures intended to prohibit a practice of the alleged evil effects of which they know little or nothing. A gradual disappearance of opium due to natural causes would not be a general loss, because other exportable commodities would replace it. The following is an extract from a report which I wrote in 1882, showing how the people themselves regard opium:—"The people will reply thus, 'when asked if opium is a valuable crop: It is a troublesome crop, they will say, to grow; it is a great strain on our manure, and hard work for ourselves: but we get money advances from the Mahajans for many things that are necessary, and we must give him some produce that will pay off these drawings. Now, nothing we can grow does this like a good opium crop. Opium digs our wells, buys our bullocks and our clothing, and pays for births, marriages, and deaths. If the opium is plentiful and the price good we have a year of fat things; if the season has been unfavourable, we must pinch, the debt is not reduced, the bullock is not bought, clothing must be economised, and for domestic events we can hardly get a decent advance: it is a year of tears; sugar, cotton, wheat, help, but nothing can equal the steady demand and good value for the opium. That is the great advantage of a bigha of opium to the rayat. It is his ready cash.'"

27,036. Will you give your opinion generally as to whether there is any cause to prohibit the sale of opium in India except for medical purposes?—I am of opinion that there is no cause to prohibit the sale of opium in British India. It is used moderately, and the sale being under strict supervision the sentiment against opium is growing stronger than in native States. The demand for opium must be met for the same reason that the demand for liquor in the United Kingdom is met. I do not think we can deprive people of their indulgences by force. If the growth of opium is prohibited opium will be imported. If that, too, were prevented, the usual result of repressive legislation would follow,—increased depravity and dangerous discontent. Opium is as deeply rooted in India as tobacco in Germany, beer in England, and whisky in Scotland.

27,037. Supposing such a prohibition as has been suggested were carried out in British India, what is your opinion as to the possibility of extending such a prohibition to the Native States with which you are acquainted?—I think the proposed measure in the Native States is uncalled for impolitic. I was in Rajputana at the time the price of salt was suddenly raised, and although there was the sympathy, more or less, of the Native and European officers, and although it was possible to give the people a proper reason for the increase, there undoubtedly was much discontent. If opium were suddenly cut off from producer and consumer we should not have the sympathies of the officers on our side, and the people would certainly not understand it. The chiefs would not understand why it was right for England to use and trade in alcohol and for their States to be denied to use and trade in opium, while the people would feel that a great wrong had been done to their pockets and habits, and they would rebel against any increased taxation from their straitened resources. There is only one way in which the Government can approach the people of India, and that is by first abstaining themselves and by giving compensation to the natives of India, and with these two things in their hands they might then appeal to the natives to give up opium.

27,038. I rather take it from you that you regard opium with a certain amount of dislike, but that in the present condition of this country you consider it would be impracticable to interfere with it or to prohibit it by law?—I am somewhat in sympathy with those who would try to improve men in every direction. I would not say that I am any more against opium than I am against things which I take myself; but I think it would be utterly impossible to interfere with the people of India in their domestic and acquired habits.

27,039. Supposing, for the reasons you have given, that total prohibition is impracticable, can you suggest any change in the system at present followed for regulating and restricting the opium traffic and raising a revenue therefrom?—Regarding changes in the present system, a withdrawal from the Bengal system of dealing with opium would doubtless place Government in a less obnoxious position in the eyes of anti-opiumists, but might increase the evil. On the other hand, the introduction of a system of control and excise in Native State territory would bring consumption within narrower limits and so be of more practical use. If something like the Bengal system were adopted for Malwa, the price in Native States might be gradually raised to that in British districts with advantage to their revenue and to our preventive establishments. The growth of the poppy might be confined to the parganas producing the best qualities and most dependent on it, and manufacture permitted only at centres under supervision.

27,040. I suppose any such change as you suggest could only be carried out by the agency of the Native Governments themselves, although it might result from the initiative of the British Government?—I would only advise it through the agency of the chiefs. I think, for instance, if we gave to Meywar their 600 or 800, or whatever it might be, chests of opium free, and advised the chief to tax that opium as is done in almost all the Bombay Native States that that would gradually raise the price of opium in the State and gradually tend to decrease the consumption. The cultivators would not be touched, the people who manufacture opium would not be touched, the chief would get an increased income, and it would be generally advantageous to us because it would check smuggling, which is our great trouble.

27,041. Are you acquainted with the system of opium in Baroda?—Partially.

27,042. I asked the question because I wanted to know whether you had in your mind something like the system which appears to prevail in Baroda?—Something like that; but then I believe the State has the manufacture. In my idea, I would have my centre and get the merchants who manufacture opium to come into that centre, buy the juice from the cultivator, and manufacture it up themselves in that centre, and pass it out under our Excise system. I would have no interference either in cultivation or manufacture beyond having it at a certain place under proper supervision, so as to utterly stop smuggling.

27,043. Would you suggest that that centre should be under the management of the British Government, or, as in Baroda, under the management of the State Government?—It should be under our Government, the excise part of it; but the Native State authorities would be perfectly free inside the enclosure. The only part I would have belonging to our Government would be the people who guard it; but the whole could be under the State.

27,044. (Sir James Lyall.) What inducement could we offer to the native Governments in the way of advantage?—They would get the 600 or 800 chests of opium handed over to them free, and they could tax on that. They now get Rs. 60 (Udaipuri) in Meywar per chest on exported opium, and I would increase that up to, say, Rs. 100, and in the two ways they would get an advantage. I would be prepared to pay them so that it should be an advantage.

27,045. Pay them in what way?—In that way, by increasing the tax which they now have on every chest of opium which is exported.

27,046. That would involve reducing the transit duty. As it is the trade only just pays with the present transit duty?—It pays, but there is a considerable profit inside Meywar. The cost of producing opium in Bengal, I should say, is more expensive than the cost of producing it in Meywar. There is an increased profit in Meywar on the opium. However, the chief advantage would be that they could tax opium in the State which is now perfectly free.

27,047. You mean they could tax the local consumption?—Yes.

27,048. They would require an establishment like the establishment we have under the Bengal Opium Agency, to carefully prevent the cultivator from keeping back the opium, would they not?—They would require, as I said, to have something of the sort of the Bengal plan introduced. The only point is that opium is now free in the Native States, and, I think, it could be taxed.

27,049. It is very heavily taxed in most of the Native States by the land revenue rates?—In some places that is so.

27,050. Why is it that in Meywar you fix the rates at only Rs. 8 and Rs. 10, whereas they are so much higher in many other Rajput States?—The Udaipuri rupee is only a rupee of 12 annas, and the bigha is approximately half an acre. Therefore you would have to take about Rs. 12 an acre, which would be about Udaipuri Rs. 8 a bigha, roughly speaking.

27,051. Why is it that those rates are so much lower than they are in most of the Rajputana States? We have had evidence in one State that it went up as high as Rs. 50 an acre?—It would depend on whether the assessment has been properly fixed. I found rates in Meywar as high as Rs. 16 and higher per bigha; but when I came to take the amount of area in the man's occupation and divide it by the assessment he actually paid, I often found it was only Rs. 6 or Rs. 8 a bigha instead of Rs. 16, sometimes it was Rs. 12, sometimes Rs. 10, sometimes more. But down in Indore the land is extremely valuable. Up in Meywar they only get a corner of the black soil, the opium is confined to the south-east corner of Meywar, and they have only got a fringe there.

27,052. What was the system in Meywar before you fixed the land rate?—Grain was divided by weight, and cotton, opium, and sugar cane paid a cash rate per bigha.

27,053. Do you remember what the rate on poppy was?—Rs. 8, as a rule, per bigha. Then they have two crops off the bigha. They have generally a crop of Indian corn, and the State would take half the Indian corn, and the cash rate per bigha for the opium. Then on very dry soil they commonly assessed a rupee a bigha; they get a rupee on all land however bad, and all that was paid out of the opium lands. But dry-soil land was under estimated as well.

27,054. Was opium separately taxed in those days in any way besides those Rs. 8 a bigha?—They have a transit duty in Meywar, and they have an octroi duty also—not a very heavy one—not more than 2 per cent., and sometimes 2½ per cent.

27,055. (Mr. Fanshawe.) We were told in Rajputana that if the poppy cultivation were prohibited wheat would be the crop that would generally have to be substituted for it, do you agree with that?—Wheat, cotton, and sugar would all come in, because they are all exportable.

27,056. We were told that the water supply was hardly of a character to enable cultivators to irrigate sugar cane to any large extent, so as to allow that crop to take the place of poppy generally; would that be your experience?—The difficulty with sugar is that it exhausts the cultivator's cattle; it goes on during the hot weather. There is no other trouble, I think. It is a very exhausting crop both to the cultivator and to his cattle.

The witness withdrew.

(Sir James Ljall here took the Chair.)

Mr. D. McLAUGHLAN SLATER, F.I.A., recalled and further examined.

27,068. (Chairman.) I understand you wish to read a statement in reply to something contained in the Rev. A. W. Prutch's evidence?—I do.

27,069. We shall be happy to hear it?—I observe in the local papers to-day that the Rev. A. W. Prutch, in his evidence on the 16th of February, before the Royal Commission on Opium, states that the Oriental Life Assurance Company contested a claim from Calcutta because the deceased took opium. This statement is entirely misleading. The real contention of the company was that the policies were obtained through fraud and misrepresentation. Amongst the various matters constituting such misrepresentation was the fact that the assured in his personal statement had not mentioned that he was a confirmed opium eater. If he had stated this circumstance it would have led to inquiry as to what extent the habit was indulged in. If the result of such inquiry had been

27,057. Referring more particularly to the water supply, do you think that the wells would retain sufficient water during the hot weather for sugar-cane irrigation?—Not as a rule; certainly not.

27,058. I take it to be your view that on the whole the opium crop is distinctly valuable to the cultivators in these pergunnas where opium is grown more largely?—I think it is so valuable that if you take it away you would absolutely ruin the pergunnas.

27,059. (Mr. Haridas Veharidas.) Unless some political influence is brought to bear on the State authorities would the proposed arrangement with regard to the manufacture of opium in Meywar be welcome to the State without prejudicing its status or prestige?—It would only be welcome if you could show them it is to their pecuniary advantage.

27,060. Unless some political influence is brought to bear on them?—Very likely.

27,061. They would not do it if a merchant were to go to them and propose the arrangement?—A native chief would not care to tax the people, but if he got the advantage of throwing the odium on our shoulders a little he would not mind.

27,062. Upon what basis of calculation did you arrive at the three tolas a month; is it only a guess?—When I was settlement officer I was in about eight or nine hundred villages in Meywar, and I studied the people carefully. I used in the early days to ask how many opium eaters there were in the village and what quantity they consumed, and that estimate of mine is the result of a large quantity of answers.

27,063. Your official duties placed you in a special position to arrive at a right estimate?—Quite so. Nearly everybody there carries a small case. I have taken those cases and inquired the quantity in them, and asked the men how often they replenished them, and so on.

27,064. Do you agree with the State officials as to the quantity?—The State officials and I agree. They say, I believe, 2½ tolas, which I am perfectly prepared to admit. They and I say exactly the same quantity—in fact.

27,065. (Mr. Pease.) When you say the giving of opium to children is the only direction in which you suspect it is harmful to the race, do you include smoking?—In all my experience of India I have seen no smoking. There is no smoking up country; it is absolutely unknown.

27,066. You speak of England trading in liquor; of course you are aware that England does not trade in liquor in the sense in which India trades in opium?—I think you mean the Bengal system of opium, not the system of which I am now talking.

27,067. England does not trade in liquor, does she?—I think she trades in liquor exactly the same as the people of Rajputana trade in opium. They buy and sell for trade. I think that the people of India object to alcohol a great deal more than they object to opium, and I think they would resent alcohol being increased very strongly. The native anti-opiumists are far more anti-alcoholists than we have any notion of. I think there is no objection to opium, and I think there is a strong objection to alcohol—I mean among natives who do not use either opium or alcohol.

Mr.
A. Wingate.

17 Feb. 1894.

Mr. D. McL.
Slater, F.I.A.

that he was an immoderate opium eater, the company would have hesitated before accepting the risk. The case was based upon entirely different circumstances. The point of opium eating had very little to do with the acceptance of the life (or refusal to pay the claim), which we contended was secured through personation, fraud, and gross misrepresentation as to the assured's age, which the company contended had been, not 52 as alleged, but considerably over 65. It may be added that though judgment has been given against the company, we have been strongly advised to appeal. The company's defence showed that the concealment of the fact of opium eating was only a minor circumstance. This the Rev. Prutch could easily have ascertained from the company's statement filed in the court and published in the public journals. We have 24,016 policies on our registers, as per policy register No. 16 herewith submitted (register produced). Taking the

Mr. D. McL.
Slater, F.I.A.

17 Feb. 1894.

ratio of English and Eurasian lives to native as one in seven, there would be 20,576 native assured lives, instead of 20,000. With regard to the number of policies given by the Rev. Prautch, he only gives the numbers in force at 31st December 1892, whereas my figures include all policies that were issued by the company up to the date of my substantiating the evidence of Sir William Moore before the Commission in London. For the purpose of arriving at a correct ratio of opium eaters it is necessary to take into account lapsed, surrendered, and claimed policies, which the Rev. Prautch, in his ignorance of actuarial matters, has not done. Is not the Padri following the precedent usually ascribed to another profession, and abusing his opponents because he has no case himself.

27,070. (Mr. Mowbray.) Do I understand the statement to be that in your evidence you were speaking of all the native policies which you had issued at various times, whereas the figure given in the report was the figure representing the policies which were actually outstanding on the 31st December 1892?—Precisely so.

27,071. You were giving the results of the whole experience of your office with regard to native lives?—Yes.

27,072. (Mr. Pease.) You say you have at the present time 20,576 native assured lives?—Yes.

27,073. That is not 20,576 policies, but 20,576 lives?—These are policies.

27,074. Is it true that it is the practice of the natives often to take out several policies?—Yes; perhaps the lives are not quite so many as 20,576. They may take out two or three policies, but they do not do this to any great extent.

27,075. Does a native take out as many as 10 policies?—Perhaps he does sometimes. Unfortunately he sometimes divides 10,000% into policies of 1,000% each. But this is not often done.

27,076. Do not you think that would have an appreciable effect in reducing the total number?—No, I should think the 500 odd we have on the registers beyond the 20,000 would compensate for that. The reverend gentleman saw most clearly that it was policies in force. In fact the number "in force" is given in italics. Up to that time we had a good number of claims, surrenders and lapses, and we put down the actual number of policies in force at that date according to the books of the company. That shows our responsibilities as to the assurances.

27,077. I understand you to say that at the present time you have 20,000 native lives assured, you have 25,000 policies which you believe represent 20,000 native lives assured?—No; I have stated that we have on our registers 24,016 policies, and out of that number I believe we have 20,000 native lives assured, because we actually have on the books 20,576 native lives. That is my statement.

The witness withdrew.

Mr. RUSTOMJI PESTONJI JEHANGIR called in and examined.

27,087. (Chairman.) You are chief inspector of the Bombay Opium Department?—Yes.

27,088. As certain statements were made respecting you in the Rev. W. Prautch's evidence we thought you might wish to make some answer with regard to it, and therefore we asked you to appear before us to-day. Are you prepared to make any statement?—Yes.

27,089. We shall be glad to hear what you have to say?—On the 25th October 1893, one Abdoolakhan, the manager of a private opium smoking club, was placed before Mr. Webb, third Presidency magistrate, charged with having in his possession more than two tolas of opium. The point that possession by the manager was such possession as constituted a breach of the two-tola rule broke down. Six or seven members of the club stated that a share of the opium was theirs. The two tolas to which each of them was entitled amounted in all to the quantity in Abdoolakhan's possession. The magistrate held there was no infringement of the rule, and warned me to be careful as I might be punished for trespass. I have a large staff of detectives under me to check illicit sales of opium and its preparations. Our difficulty is not in detecting a case, but in proving the illicit sale when one is detected. If a stranger went to a private smoking house he would not get madat or chandu. The managers of clubs know that detectives are employed to watch them. During the last Mahim fair the staff of men usually employed was strengthened. I had stationed one inspector, one sub-

27,078. How do you explain the difference between 20,000 and 14,000?—The 14,000 at that date, 31st December 1892, were policies that had existed; but these are not the actual policies now in force on the books of the company, because some policies have lapsed, some surrendered, and some were claimed; also we have added a considerable number of policies between 1st January 1893 and 16th February 1894. As I said in my statement, "For the purpose of arriving at a correct ratio of opium eaters it is necessary to take into account lapsed, surrendered, and claimed policies, which the Rev. Prautch, in his ignorance of actuarial matters, has not done."

27,079. The 20,000 which you have on the books includes a number of lapsed policies?—I am giving you the policies which were actually on the registers of the company from its commencement. To obtain the ratio you must go back to the beginning of the company.

27,080. (Mr. Mowbray.) Do these 24,016 policies represent all the policies on the books since the company has been running?—Yes.

27,081. And you say that out of those there were 14,967 in force on the 31st December 1892?—Yes, as clearly stated in the report.

27,082. You should have said, "We have had 20,000 natives lives, and we have 14,967 lives including Europeans and Eurasians"?—I did not take the 14,000 into consideration at all. I said that they do not bear any proper proportion in arriving at a correct ratio.

27,083. The 14,000 includes Europeans and Eurasians?—Yes. The 24,016 also includes Europeans, Eurasians, and natives. I have stated that the proportion is one European and Eurasian to seven natives.

27,084. Does the 14,967 include all the European, Eurasians, and natives in force at that date?—Yes. I should like to make a further statement with regard to the reverend gentleman who has been questioning my statistics. I wish to impeach the reverend gentleman, he having gone to some of the leading European and native journals in Bombay, with the object of getting them to publish a scurrilous letter reflecting on myself and the company. They unanimously refused to publish the letter, as it would have appeared the same day as my evidence before the Commission. No doubt he was aware of the great value of statistical evidence, and his desire was, if possible, to detract from and damage it. Comment on such conduct is unnecessary.

27,085. (Mr. Pease.) Have you got that letter?—I have not got the letter, I was only informed about it when I came to the Commission this morning, or I should have taken notice of it in my statement.

27,086. Will you give us the name of the person who has seen the scurrilous letter?—I could give it to you in confidence. (The witness then gave the name of his informant to Mr. Pease in confidence.)

Mr. R. P.
Jehangir.

inspector, and ten detectives there night and day. Attempts were made to get to book some managers of the clubs, but failed. In fact, two men were brought before me, but I had to let them go because I found it would be impossible to prove the sale of opium. The Abkari police did all they could to detect illicit sales of chandu and madak in the Mahim fair, but their efforts also failed. On the 10th of January I took Rev. Prautch to Mr. Campbell. Mr. Prautch made a long statement to Mr. Campbell, who explained to him my difficulties. Mr. Prautch admitted that the fault lay in the feebleness of the law. I then begged of Mr. Prautch to bring any irregularity he might observe to my notice. I asked him to help me in detecting cases. He said he was satisfied that the clubs were like ordinary shops, where any one could go and purchase chandu. I said I had tried and failed, and asked him to give me one of his informers. I asked him more than half a dozen times, but each time he refused to help me. I thought he was satisfied of my difficulties and would apologise, but instead of that the *Guardian* of 20th January last contained a fiercer attack on me than the one in a previous issue. Mr. Prautch has never inquired into a case personally. He has paid agents, men of disreputable characters on whose testimony he relies. Mr. Prautch thinks all opium consumers are born liars and jail birds, but when these same men echo Mr. Prautch's views he considers them truthful. I and my assistants do all we can to carry out Government orders. Mr. Prautch tells me that I am conniving at these

unlicensed houses, but he forgets that by doing so I would bring discredit on myself. My superiors and Government, far from thinking it a service, would consider that I brought disgrace on them.

27,090. Is that the whole of the statement you wish to make?—Yes. I was present when Mr. Prautch gave his evidence here, when he said that about a year ago I accompanied him with two other missionaries to a number of smoking houses. He went on to say: "Mr. Rustomji undertook to show that the anti-opiumists had overstated the facts, and I undertook to show that they had understated the evil. Our plan was to enter into conversation with a group of from 10 to 30 smokers. Then Mr. Rustomji would ask, 'How would you like to have the smoking houses closed and what would happen?' Usually a chorus of voices would say, 'We would die,' 'Our blood is dried up,' 'We must have opium,' &c. Then I would put the question in another way, stating that as nearly all present had been in jail, what did they do then? Did you die? And if there would be a lock on the door to-morrow morning, what would you do? 'It is true in jail we get no opium and live, and if the door was locked we would learn to do without it, and 'it would be good for us'; and then we would hear of their former prosperity and present ruin through opium. In Mr. Rustomji's presence I asked regarding the statement I had always heard that many began the use of opium to stimulate sexual vice. This was generally admitted, with the qualification that after a year or two the user becomes 'useless' or 'dried up.' The conversation varied, but in every instance the smokers condemned the habit, pronounced it bad, and expressed sorrow that they were smokers. Mr. Rustomji admitted that the smokers held that position towards smoking, and stated so clearly before Mr. Madden, Mr. King, and myself. He stated that he was publishing a history of 80 opium smokers. I asked him to incorporate what he heard to-night (but he did not); he said he was personally paying for the printing of the book and doing it in the interests of philanthropy, that he had only returned from England a few weeks before, and he that night told me he was going home to England again shortly. He went and published the book." With regard to that statement I should like to say that about a year ago I took with me the Rev. Prautch and two other missionaries to a number of opium smoking houses in Bombay. We put a number of questions to the opium smokers there, and the answers given were generally invariably the same, viz., "Why should we give up opium?" "Why do not you give up your liquor?" "Opium has done us no harm excepting to those who, without sufficient food, have taken the drug in excess. If you stop the use of opium we shall die." I remember a hale and hearty old man of about 75 telling me to ask Government to build a few hospitals first before stopping the use of opium. I remember asking Mr. Prautch to take notice of what had passed, but he did not. He said such replies were given because they were afraid of my presence. It could not have been so for they were in no way under my orders. I remember Mr. Prautch making a desperate attempt to get replies according to his wishes, but he failed.

27,091. What have you to say with reference to the statement that the shops at the Mahim fair were kept open by the police keeping the ordinary police from interfering with the shops; was there anything to lead Mr. Prautch to suppose your police were put there to interfere with the other police?—So far as saying there were some of my police there Mr. Prautch is right. Every year I place some detectives to watch that no illicit sale takes place, and this year there being no licensed shops, I thought that the private clubs would be open and that persons would be selling illicitly, so I put on more men than I usually do every year. That is the reason why there were opium police stationed there; they were not there for the purpose of giving the illicit clubs any protection.

27,092. Were the ordinary police at the fair as well?—Yes, they were there as well. I asked Mr. Holway, the police inspector, to give any assistance that my men wanted in detecting cases, and I told him that I would give any assistance that the police wanted.

27,092a. (Mr. Mowbray.) Is it any part of the business of the ordinary police to look after illicit dealings in opium, or does that rest exclusively with the Customs police?—They are empowered under the Opium Act; they have the same powers as the opium officials.

27,092b. (Mr. Pease.) Will you tell us what your connexion has been with regard to the inquiry about the native doctors, as to their signatures to the petition?—I was asked by Mr. Campbell. He had given me a book, and I was asked to take that book round to the medical gentle-

men and show them what was written on the title page, and ask them if they would sign the petition, or if they had anything to say. I did nothing more than to show them the petition which appeared in the *Anti-Opium News* for September 1892. I did not do anything more than show them that petition, and they put down what they wished to say.

27,093. All the statements made by these medical men were written down in their hand-writing in your presence? Some of them were, but a few wrote to me as I had no time to go to them personally.

27,094. Are you the author of this book,* "Lives of Bombay Opium Smokers"?—Yes.

27,095. One statement in this book has caught my attention; you say, "the population of India has increased during recent years to a great extent. These facts do not prove that opium causes sterility." Do they on the other hand prove the reverse?—These facts do not prove that opium causes sterility.

27,096. Do they, on the other hand, prove that opium does not cause sterility?—Yes, from the histories of the smokers. I chiefly rely on their statements. Most of them told me that they were married and had children.

27,097. I suppose you are aware that it is a fact that married women of child-bearing age in India do not have the same number of children as those in England?—I do know that.

27,098. What is your own view with regard to the practice of smoking opium?—I have seen that opium smoking or opium eating in moderation has done no harm.

27,099. You have published the opinion of some leading medical men in this book, four gentlemen in all; do you unite in the views that they express?—I do.

27,100. They say, "A few men looked dissipated and withered. The cause of it was insufficient food and excessive indulgence in opium, as also in ganja, bhang, and liquor"?—I quite agree. I asked a number of those men who looked dissipated and withered and I found out from their replies that if a person earned about eight annas he would spend about five annas in opium, and in addition to that he would be taking liquor or bhang.

27,101. The injury to his health was in part caused by the opium?—It is impossible to find out whether it was due to opium or to something else.

27,102. Further on in their report they say, "The smokers seemed to be unanimous on one point, namely, that opium smoking or eating does not injure those who are well fed as it injures the starving"?—Yes, many of them made statements that it injures especially those that are starving and ill fed.

27,103. Many of those whom you have selected also made a statement, did they not, which showed they were suffering?—Yes, from starvation.

27,104. From various things?—One of these men said, "I feel very miserable and sick."

27,104a. (Sir William Roberts.) How did you get these notes of these biographies of the opium smokers?—They were taken down by an expert shorthand writer, Mr. Hughes.

27,105. Who went round?—I was present. Dr. Da Cunha and others were present, and also one or two detectives of the Opium Department. The notes were taken down in the presence of a large number of men, among whom was Dr. M. Da Cunha.

27,106. (Mr. Mowbray.) Was he present on all the occasions when these statements were made?—On almost every occasion.

27,107. (Sir William Roberts.) Were you present yourself on every occasion when these statements were taken down?—Yes, on every occasion.

27,108. Then you regard yourself as personally responsible for the authenticity of these accounts?—Yes.

27,109. Are you prepared to take the responsibility of their being absolutely authentic?—Certainly.

27,110. (Mr. Pease.) Do the police inspectors of Bombay consider it a part of their duty to watch over the opium smoking shops?—Yes, it is part of their duty.

27,111. Do they neglect their duty?—Not in any way.

27,112. You say in a letter you address to the *Daily Graphic* that the police inspector could not be considered an authority?—I thought you were asking about the Mahim fair.

Mr. R. P.
Jehangir.

17 Feb. 1894.

* For extracts from this book, see Appendix XXII. to this Volume.

Mr. R. P.
Jehangir.

17 Feb. 1894.

27,113. I was asking you whether the police inspectors of Bombay consider it their duty to watch over the conduct of the opium smoking shops?—Not to watch over the conduct of the opium smoking shops. If they have any information they can go to the shops.

27,114. Was it not their duty to watch over the conduct of licensed houses?—If they have any information they go there.

27,115. That is not an answer to my question?—They are empowered under the Opium Act, and when they have to get any information they go to these places.

27,116. I asked whether it was a part of their duty to watch over the conduct of licensed opium shops?—Yes, it is a part of their duty.

27,117. You say, "A police inspector cannot be considered an authority on opium smoking, for he has few opportunities of forming an accurate opinion about the matter. He only visits opium dens when he has some inquiry to make;" that is a charge against a police inspector that they neglect their duty?—I made this statement particularly against the Ahmedabad police inspector.

27,118. I would like to ask your opinion with regard to the native medical gentlemen of Bombay. Is this your view, "The opinion expressed by 49 qualified medical men of Bombay, comprising leading native practitioners of that place, is not worthy of much attention." It can hardly be denied that native medical practitioners, with very few exceptions, have little or no practice, and the few that have large practices rarely have opium smokers as their patients?—Yes. When I read the letter that appeared over Mr. Alexander's signature in England I went through the list of the names of 49 medical men. I knew them, some personally and some by name. I went through the list, and found that there were many who had not much practice, and so I thought that their opinion was not of much importance.

The witness withdrew.

Mr. C. F.
Underwood,
M.D.,
L.K.Q.C.P.I.,
L.R.C.P.E.

M. C. FREEMAN UNDERWOOD, M.D., L.K.Q.C.P.I., L.R.C.P.E., &c., called in and examined.

27,127. (Chairman.) Will you tell us where you received your medical education?—I received it in Bombay and also at Dublin.

27,128. Of what place are you an M.D.?—Brussels; and I am a Licentiate of the King's and Queen's College of Physicians, Ireland. I am a Licentiate of the College of Physicians, Edinburgh, and I have other qualifications besides.

27,129. When did you begin practice in India?—After I qualified. I was in Government service in 1875, and I qualified at the Grant College in 1875.

27,130. Did you practice in the Maratha country then?—I was stationed at Satara, where I had a great deal to do with Marathas and others. I was located there.

27,131. You have lately been practising in Bombay?—Yes, for the past five years. After I qualified in Europe I left the Government service and practised in Bombay.

27,132. Will you tell us to what extent opium is consumed in Bombay?—Taking into consideration the habits of the domiciled representatives of the races of Hindustan, I should remark that the following table would approximately represent the proportion of habitual opium eaters per mille amongst the various castes.

Mahomedans 250 to 300 per mille of adult males.

Rajputs	- 800	"	"
Sikhs	- 350	"	"
Bhattias	- 75 to 100	"	"
Lohanas	- 200	"	"
Banias	- 50	"	"
Marwaris	- 5 to 8	"	"
Parsis	- 5	"	"

27,133. What castes do you include in the name Maratha?—I do not mean the Brahmins, I exclude them. I mean the Marathas pure and simple.

27,134. The Kunbis?—Yes; these, as I have observed, are at best approximate calculations, and certain districts, low-lying, damp, and malarial, will give decidedly higher figures.

27,135. What is the effect of the use of opium so far as you have observed?—Opium has for centuries been used as a household remedy for young men and old—it has been given almost from birth to infants. It is also given as a prophylactic against disorders of the lungs and bowels

27,119. You say, "Native medical gentlemen with very few exceptions have little or no practice." is that a fact?—Yes. When I say "native" I mean out of those 49 medical men.

27,120. You do not say so?—That is what I mean.

27,120a. (Mr. Haridas Voharidas.) Did you take pains to examine the rest of the opium smokers besides those which are shown in this book, and did you find on examination that they were benefited by the smoking, or otherwise?—They were benefited.

27,121. In the way you have shown in the book?—Yes.

27,122. So that you can say you have some knowledge that all the 600 opium smokers in Bombay were benefited by opium smoking?—Yes, they were benefited by opium smoking. Those who were emaciated, opium was not the cause of it. I have given illustrations in the book.

27,123. According to your opinion opium smoking was a great advantage to their health?—Yes, to this class of people.

27,124. (Mr. Fanshawe.) As regards the Mahim fair, I understand you to say that the Opium Department police were not in any way stationed near the smoking shops for the purpose of keeping the ordinary police away?—No. The ordinary police are not under our control in any way; they are quite independent of us.

27,125. You have spoken of producing your book, "Lives of Bombay Opium Smokers," at your own expense; was that actually the case?—Yes, at my own expense.

27,126. Can you tell me the nature of the legal proceedings in which Mr. Prautch is engaged; they were mentioned the other day, but we did not have the actual facts?—Mr. Prautch has taken out summonses against eight opium consumers of Bombay for defamation, and the Bombay opium farmer's manager has taken out a summons against Mr. Prautch and three others for defamation.

and the troubles which accompany disturbed dentition. It is also much in vogue as a prophylactic against malarious fevers, neuralgia, dyspepsia, and diseases incidental to life in malarious districts. Opium again is habitually resorted to for alleviation of all pain, and in the hands of the poor, who are removed from medical aid, for instance, in the country it is considered by them as "one of Heaven's choicest blessings"—"a gift from the gods for the alleviation of suffering." Opium has been much used, and with notable results, in the treatment of diabetes, diarrhoea, dysentery, cholera, colic, acute and chronic disorders of the bowels, rheumatism, acute and chronic lung complaints, and last, but not least, the prophylactic treatment of fevers. Symptomatically, opium is used to relieve pain and irritation, to allay and relax spasm, and by reason of its soporific properties, to induce sleep, to check morbid secretions, and to influence nutrition. Opium is so efficient and convenient in the treatment of all forms of pain that the habit of indulgence is readily formed. When used in moderation, as is almost universally the case, opium is a stimulant and tonic; under its influence the action of the heart becomes stronger and the arterial tension is raised, sense of fatigue vanishes, and muscular movements become more rapid and easy; there is a slight flushing of the face, the expression of the eye becomes more brilliant and the pupil is slightly contracted; there is in fact a condition of exalted cerebration and ideation, which imperceptibly wanes till the exhibition of the customary allowance.

27,136. What have you seen of the abuse of opium?—I have never come across any individual case of abuse of the drug, and can confidently assert that I have never seen moral perversion to adequately account for criminal capability. Opium habits are characterised by shrewdness, aptitude for business, and great powers of endurance; and as a rule are law-abiding and peaceable citizens. The deplorable and exaggerated word pictures painted by the anti-opiumists are mere vagaries of thought, and figures of speech, which have no existence, or tenable grounds for existence, except in the inner consciousness of the individuals by whom they were evolved.

27,137. What are the usual doses?—The usual methods of exhibition are—For infants.—(a.) A minute quantity of the crude drug. (b.) Bala goli, where the drug is in combination with carminatives. For adults.—(a.) The crude drug in doses varying from 1 grain to 6, and even

15 grains—180 grains being the largest quantity I have observed taken in the 24 hours. (b.) Kasumbha (which contains a large per-centage of morphia) is prepared by repeated washings and percolations of the crude drug. This preparation, at the gathering of the better classes in Kathiawar and Gujarat, is passed round as a luxury in the same manner as sherbet or wine. Chandul is prepared by dissolving the crude drug in water, straining it two or three times through muslin, and then evaporating the liquor to a syrupy consistence. This is used for smoking purposes. Madat is a weaker chandul mixed with the carbonised husk of mung dhal (phaseolus mungo) (Roxburgh), and is made into small balls and dried. This preparation is smoked through the ordinary native hookah with a minute bowl.

27,138. What is the effect on the habitual consumer of opium if he is deprived of his dose?—Opium habitués if suddenly deprived of their daily allowance are liable to a sense of fatigue, weakened muscularity, and diarrhoea. If the regular dose has been a large one its cessation is followed by a feeling of unrest, partial incoherence of idea, muscular tremors, and diarrhoea. The deleterious effects usually written about are almost invariably due to pre-existent disease or the complaint for which opium was resorted to as a remedy. Of the opium smokers in Bombay the majority belong to the mendicant and working classes.

27,139. Are the consequences of the habitual use of opium serious, and how do you compare those consequences with the consequences which follow the use of alcohol?—They certainly are not. The moral influences of the two are so peculiarly and diametrically opposite. In the opium habitué there is no particular and peculiar perversion of morality, but with indulgence in alcohol there certainly is, leaving apart the criminal capability educed in those who indulge too freely. Having already referred at length to the effects of opium I do not consider it necessary to recapitulate my ideas thereon. Upon the nervous system alcohol first has an exciting effect, followed by narcotism or coma in proportion to dosage. The arterioles are dilated, thus admitting more blood to the brain, and this is succeeded by diminished mental activity owing to the effects of alcohol on the ganglion cells. The reflex action of the spinal cord is reduced, and the power of co-ordination impaired, so that walking is by a staggering gait, and finally the knees will no longer support the body. The action upon the centres in the medulla is seen in the lowered temperature, the slowing of the pulse after a preliminary acceleration, and the sighing respiration or stertor. Death is due to respiratory paralysis and lowering of the body heat. In small doses it increases the appetite and digestive power, causing increased flow of gastric juice. If taken in larger quantities appetite is lost, nausea appears, and the digestive power is suspended. Long continued indulgence in alcohol induces structural changes in the stomach, new areolar tissue being formed, which by its subsequent contraction strangulates the gastric follicles, hence dyspepsia and gastric catarrh, with morning vomiting, are very common amongst drunkards. The alcoholic habit induces pernicious tissue change in almost every organ in the human economy, which ultimately leads to the most disastrous results. Among the "results" of the abuse of alcohol may be mentioned delirium tremens, insanity, paraplegia, anæmia of the brain, chronic catarrhal pneumonia, fibroid phthisis, cirrhosis, and other conditions of the liver from tissue change, and — a sclerosis of more or less all the organs.

27,140. Have you ever made post mortems of habitual consumers of opium, and if so, have you discovered any serious organic injuries?—In connexion with making autopsies generally I have made post-mortem examinations of opium consumers, but I have found nothing particular.

27,141. Is it very difficult for an opium consumer to give up the habit?—A great deal depends on the wish and resolution of the party concerned to give up the habit; but with a little perseverance and tact in treatment, it is easily overcome. The opium habit is gradually and only too surely being replaced by indulgence in alcohol.

27,142. What are the effects of the habitual use of opium on the mental faculties?—Opium in moderation does not appear to do any injury to the mental faculties?

27,143. Have you any other observations you would like to make?—I think that the sale of opium should be restricted to smaller quantities than that now sold to individual purchasers, having in view the prevention of opium poisoning. The total prohibition of opium would be disastrous to the poor and alcohol would never supply its place.

27,144. What do you mean by "opium poisoning," do you mean suicide?—Yes, suicide.

O 82588.

27,145. A very little opium would kill a man if he were not habituated to it, would it not?—Yes.

27,146. So that you can hardly stop that by reducing the quantity sold?—I believe 120 grains is the maximum allowed to be sold to an individual just now, but I am not quite certain on that point.

27,147. (Mr. Mowbray.) I understand you have come here to-day voluntarily in consequence of a notice issued by the Commission inviting anybody to attend?—I was invited to represent the Anglo-Indian and Western Eurasian Association of India.

27,148. What are the objects of the association which you represent?—It is an association to represent adequately to the authorities the wants of the Eurasian and Anglo-Indian communities. It is formed on the principle of the old saying that "unity is strength." It is to help one another in case of difficulty, to promote education, and to look after the well-being of the Anglo-Indians and Western Eurasians in general.

27,149. It is not a medical association?—No.

27,150. (Lord Brassey.) I suppose it is the same sort of association as there is in Calcutta?—Yes.

27,151. (Chairman.) How far does it extend?—Our branch extends to Western India only. The Calcutta and Madras branches are separate. Of course we have correspondence with them.

27,152. How many branches are there in India?—There are branches in Poona and the different large towns—Karachi, Hyderabad, Kotri, and other towns along the railway.

27,153. How many branches are there?—I could not tell you for certain.

27,154. Are there as many as 500?—I should say there are rather over a 1,000, but I could not correctly state the number.

27,155. (Mr. Mowbray.) Do I understand that it was the wish of the association that their views should be represented to the Commission and that they therefore asked you to come here to represent their views?—I do not represent their views. They asked me as an independent witness, as a member of the Eurasian community, to give my views on the subject.

27,156. May your views be taken to be typical of the views of the society which asked you to attend here?—I could not answer that question in the affirmative.

27,157. At any rate the society trusted you sufficiently to ask you to come here; and we may conclude they would not have asked you to come here if they expected you to say anything in which they do not concur?—That is so.

27,158. (Sir William Roberts.) I suppose the views which you express as a medical man are your own views and nobody else's?—They are my own views.

27,159. I presume your estimate of opium habitués which you have given us is rather a loose estimate?—It is as near as I could possibly get it from contact with these people professionally and otherwise extending over 12 years in Bombay alone.

27,160. Have you had much personal experience of opium eaters?—I come into contact with them nearly every day. In my practice I come across a large per-centage of opium eaters.

27,161. You have made some remarks which are obviously theoretical; you say, "There is a slight flushing of the face, the expression of the eye becomes more brilliant, and the pupil becomes slightly contracted." We have been told again and again that it was impossible to distinguish the moderate opium eater from the people who do not eat opium?—When I have seen them after the effects of the doses have passed over they have been in a languid condition and their eyes have been dull. But when I have seen them under the influence of opium their eyes have assumed quite a brilliant and bright appearance.

27,162. You mean that when they are under the influence of opium that dull appearance of the eyes is removed, you do not mean that their eyes become more bright than the eyes of other people?—No.

27,163. You give us the impression by your remarks that you mean the eyes of opium eaters becomes more brilliant than those who are not opium eaters?—I do not mean that.

27,164. You mean that when the opium is taken away the eyes become dull?—The appearance of the eyes is not so bright as when they are under the influence of opium.

Mr. C. F.
Underwood,
M.D.,
L.K.Q.C.P.I.,
L.R.C.P.E.,
&c.

17 Feb. 1894.

T t

Mr. C. F.
Underwood,
M.D.,
L.K.Q.C.P.I.,
L.R.C.P.E.,
&c.

17 Feb. 1894,

27,165. You do not mean more than that?—No.

27,166. (Mr. Haridas Veharidas.) You say that the prohibition of opium would be disastrous to the poor, and alcohol would never supply its place; you mean it would not supply its place in spite of its good merits?—Yes, in spite of its good merits of relieving pain.

27,167. Would not alcohol more than supply its place in point of its bad merits?—Yes, it would.

The witness withdrew.

The Rev. M. B. FULLER, M.A., B.D., called in and examined.

27,171. (Chairman.) I believe you are a missionary?—I am.

27,172. Of what church are you a missionary?—I am superintendent of the Mission of the International Alliance in Berar, Khandesh, and Gujarat.

27,173. Does that include several churches?—Yes, it is inter-denominational; the Church of England and Dissenting missionaries are working together.

27,174. I believe you are a M.A.?—I am.

27,175. Of what university are you a M.A.?—Of Oberlin College, Ohio.

27,176. Will you tell us what classes, races, or castes you have had experience among?—Amongst Hindus of all castes, and Mahomedans, as found in Berar.

27,177. How many years have you had experience there?—Eleven years.

27,178. What special opportunities have you had of observation?—I have made opportunities by visiting the places where opium is sold and smoked, and I have talked with the smokers about it and tried to persuade them to get rid of the habit. I have visited them a great many times and am known among them.

27,179. Among what classes is the opium habit most prevalent?—Among the Mahomedans opium smoking and eating are the most prevalent. I am not so much acquainted with opium drinking. That is confined more to the Marwaris and well-to-do classes. It is hard to find out, because it is carried on at their homes. Smoking is considered much worse than eating or drinking, but among adults smoking is more prevalent than eating when they have the conveniences for it, otherwise they eat it. There are a great many more who eat opium than smoke it, but the places with which I have had to do are places where it is smoked. The smokers tell me that they eat it when they go to the villages, where they have not the conveniences for smoking.

27,180. What place are you speaking of?—Akola.

27,181. Is that the only place?—That is the only place near.

27,182. Have you seen any other smoking place besides Akola?—I have seen smoking at Akoti.

27,183. Where is that?—Twenty-eight miles north of Akola, in Berar. I have seen places in some of the smaller towns, but I have not given it so much attention there. I have seen it at little huts in the villages.

27,184. Can you tell us what is the per-centage of opium consumers, and at what age the habit is acquired?—I have found it difficult to form an estimate of the per-centage. I suppose there may be something over 100 regular smokers at Akola, where there are two smoking shops, one in the city and one in the new part of the town, but I am told various per-centages by the people themselves. Some put it as high as one-third. Perhaps that is due to the Mahomedans, who eat it or take it in some form, but I found it difficult to form a per-centage, and I have not made an attempt to estimate it. It is generally acquired by men from 15 to 25 years of age.

27,185. You are speaking of the smoking habit?—Yes. I found it much more difficult to inquire into the habit of eating; it is not so easily noticeable.

27,186. Do you know what the motive is that induces people to form the opium smoking habit?—The almost universal motive given by the smokers themselves is that it is a wonderful aphrodisiac. All agree that it is ruinous and leads to sterility. If the testimony of the smokers is questioned I can give you the names of respectable Mahomedan merchants in Akola who tell me the same thing. I ought perhaps to say that the testimony of smokers was questioned here the other day, and it was said that the man who begins to smoke for the purpose of lust is already an immoral man whose evidence cannot be taken. If that

27,168. (Mr. Fanshawe.) I understand you to say that you think the prohibition of opium would lead to an increased consumption of alcohol?—I think so.

27,169. (Chairman.) With reference to the names of these castes that you have mentioned, I suppose the Marathas you refer to are at Satara?—I meet them in Bombay also.

27,170. Do you meet those Lohanas as well?—Yes, they are Hindus from Cutch.

is true perhaps it would be hard to believe the evidence that the Commissioners have already received if we are to enter into the morality of all the witnesses. But I have another thought, and that is one that has not been brought up yet, so far as I have noticed. That is, that many of these men are not immoral in that sense when they begin smoking for the purpose of lust. They are men who, being Mahomedans or low caste Hindus, have two or often three wives, and they consider it perfectly legitimate to increase the pleasure as long as they keep within the bounds of legality, so that we cannot charge them with immorality. Many of them, however, only have one wife. I am often told by respectable Mahomedan merchants that when the husband takes to opium smoking that in a few months the wife refuses to be tormented any longer, and leaves her husband and family, and the home is broken up.

27,187. According to that theory of yours it must be the most powerful aphrodisiac ever heard of?—I tell you what the respectable natives themselves told me. If you want the exact facts I can give them to you, but it is rather disgusting.

27,188. Do you think it is the most powerful aphrodisiac ever heard of?—I can give you the names of several respectable members of the Mahomedan community of Akola, who do not use it themselves, who have given me these facts.

27,189. You have explained why it cannot be assumed that these men are immoral because they take opium for this purpose, but I think you will allow that it is rather shameless for them to give this reason to a stranger when he goes into a public saloon and asks them why they take to the habit?—I can hardly admit that it is shameless. These men know me. I have been there for nine or 10 years. I talk to them kindly, and question them, and they finally confess that they were deluded, and that they took this thing on the advice of others, and they have repented that they have ruined themselves and their families.

27,190. Do you suggest the reason to them?—No, I simply ask them the reason.

27,191. You say they finally confessed, that looks rather as if you suggested it to them?—Not always. Sometimes I have asked a man frankly whether that was the reason, and he has been candid about it and told me that it was, but I have asked him kindly.

27,192. Do not you think that if you examined a native like that he would, to save trouble, admit what you suggest?—My experience is that all natives are not liars, and that all liars are not natives.

27,193. But if he is cross-examined in that way will not he eventually admit what you say to save your troubling him?—It is not a matter of cross-examination, because he realises that I have no authority. I go to them as a friend and as a missionary. I talk to them as I would to anyone, and try to get them to forsake the wrong.

27,194. I suppose it is not a very pleasant conversation, is it? He has gone there for pleasure and calm, and you go in and cross-examine him and finally get him to admit something?—Many of them do not go there for pleasure. All pleasure has ceased years ago. They go there to drive away the unbearable torment they suffer when they are without it. They do not expect any pleasure. They expect to get enough opium to drive off the effects caused by being without it. They are wrecked men and tell a sad story. I can believe their testimony when I know it is against themselves, and when I know it is not to their advantage to tell a lie. They could deny it without any thought of harm from me. I would say, moreover, that I have never heard this contradicted.

27,195. Are you aware that the medical profession generally think that it is an entire delusion that opium has an aphrodisiac effect?—I would not say the profession

generally have any such idea. Perhaps doctors could be persuaded to give any answer that is wanted if the natives can be. Whether these doctors are natives or not, I refuse to draw a line between the truthfulness of natives and Europeans.

27,196. I was not drawing lines. I was referring more to European doctors?—I have had a good deal of experience in dealing with men, and I think I know when they are telling me the truth.

27,197. Can you give us any other observations upon the effects of the opium habit?—The habit is broken in the jails without injury, but few men have courage or determination enough to break it (outside of jails) though some do by degrees, I mean outside the jail. There are many who eat a little regularly for a long time before it becomes noticeable, and no clear line can be drawn between moderation and excess. The moderates becomes excessive.

27,198. What proportion of their income do the habitual consumers spend on opium?—From one-eighth to one-half. Some tell me even more than that. Smokers often spend one-half or one-third. Eaters consume much less.

27,199. Do you mean the smokers consume one-eighth to one half?—No, smokers consume one-half or one-third.

27,200. Do you think that no eater consumes less than one-eighth of his income?—I think you would find very few. Three or four pice worth a day is considered not much for a man who eats opium.

27,201. This answer refers to very poor people?—Yes, this applies more to the labouring classes. Of course I do not speak of Marwaris. I have had less experience of them.

27,202. Is there a general tendency to increase the dose?—There is. The longer opium is used the more it requires to produce a given effect. Those who began smoking 2 pice worth get to smoking 2 annas or more daily.

27,203. What are the results of the habit physically, mentally, and morally?—Physically it makes men impotent and sterile, reduces the flesh, till many are mere skeletons, and they are unable to do any work without it. They cannot eat much food. Mentally they become stupid except when excited by opium. Morally, they seem to have little moral sense left. There is a shamelessness about their conversation that is exceedingly painful.

27,204. This all refers, I suppose, to opium smokers?—Principally to the men that I find at the opium smoking shops.

27,205. This description you have given also refers, I suppose, to excessive smoking, does it not?—Young men, who have smoked, perhaps, only a little time, tell me that it begins very soon to affect the appetite so that they can eat little food, yet I have never heard a man say that 4 pice worth of opium did him more good than 4 pice worth of food, so that the argument that opium is cheaper than food for the poor breaks down.

27,206. In what proportion of cases are these injurious results apparent?—It is difficult to determine. It has had decidedly injurious effects on nearly all the scores whom I have known about the dens. There may be many more than I realise who eat it moderately and do not show the effect so much.

27,207. The question has been raised whether opium is a protective against fever, or whether it is believed by the people in any part of the country to be a protective against fever; what do you know about that?—I have never heard of its use for fever. It is only lately that I have heard it talked of.

27,208. Do you think it is a preventive?—I do not.

27,209. Do you think any people in any part of the country believe it to be a protective?—I know what people say, I do not know what they believe.

27,210. What do they say?—Some say it is a protective, it is a disputed question.

27,211. Do you mean some of the natives in Berar say so, or where are you talking about?—I suppose there are some who say it is in Berar.

27,212. You do not know whether natives do say so in Berar?—I have never heard of it until lately. I have been there a long time, and I have given a good deal of medicine for cholera and fevers.

27,213. Have you, or have you not, heard lately that some people in Berar do consider it to be a protective?—I have talked with a native assistant at a hospital lately about it, and he spoke of it being used up in the moun-

tainous parts sometimes, but he said it had no effect upon the people living there; it was only a protective for strangers when they came there.

27,214. Are there people who believe in it there?—I suppose there are some who think so.

27,215. Among the natives of Berar whom you know is the habit of smoking opium considered disgraceful?—Most decidedly so.

27,216. Is the habit of eating opium thought disgraceful?—Yes. The terms "aphimi" and "aphubaz" are both terms of reproach.

27,217. Will you tell us what, in your opinion, ought to be done, what improvements ought to be made in the present system. Have you any suggestions to make to improve the present system?—I have said that the improvement I would suggest is the prohibition of opium except for medical purposes.

27,218. That it should not be supplied to anybody without a doctor's certificate, or how?—I suppose something like the methods adopted in America or England for protection against poisons of other kinds.

27,219. I do not know what the method is in America, but in England there is no real protection. The only thing is that it is sold at druggists' shops labelled "poison" instead of being sold at an opium shop?—I suppose I could go and buy a tola of opium in this country without any questions being asked, but I could not do so in America. I should have to get some certificate, something to show that I had a right to get it.

27,220. Who would give the certificate?—I suppose a doctor would. I am not quite sure; I have been out of America for some years, and I have had no occasion to get it. I know it is very carefully guarded. A man has to give reasons for asking for strychnine and opium.

27,221. He would have to give reasons for getting strychnine in England, but not for getting opium. You do not quite understand the American system, perhaps?—I cannot speak positively.

27,222. Do you think the closing of the licensed shops for opium smoking has had any good effect?—I have visited these shops several times since. I have always found some men there smoking, but not nearly so many as before. One of the shops is in the same place, but they are cautious.

27,223. You say that you have only seen two shops altogether?—That is in Akola itself.

27,224. Are the shops still in the same place?—One of them has been removed to another place. I have not succeeded in getting into the back part of it yet. I used to go there freely when there were 60 or 70 people there.

27,225. Is the other shop in the same place?—The other shop is in the same place. I have found people there, but they are very cautious lately. If they see me coming they say, "Be careful," and yet the men ask me every time how soon this thing is going to be shut up.

27,226. (*Mr. Moubray.*) Have you been there since the shops have been closed?—Yes, since the shops were supposed to be closed.

27,227. When was that?—The end of July; I think it was the 31st of July.

27,228. I have a particular reason for asking that question. I am quite aware that the Government of India ordered the shops to be closed in 1893. You are speaking of the district of Berar, and in the papers presented to Parliament I find—it is dated March 1891—"The Resident has now directed that in all future licenses for the retail sale of "drugs and liquor that no smoking of drugs shall be "permitted on the premises." Therefore according to that the closing of smoking shops in Berar was done or ordered to be done by the Resident of Haidarabad some time before it was enforced generally by the Government of India. That is why I asked the question?—I would only say that since I returned from America, about 17 months ago, I have found people smoking at this shop; not the numbers that I used to find, however. Since I returned from America I have not given so much time to it. I went to America in 1891 and came back in 1892, and I have not given the same amount of time to it. I used to go and preach and talk to them.

27,229. You may have been away at the time the order was issued for the closing of the shops in Berar?—I was away for a year, from October 1891 to October 1892. One of the shops in the new town has been removed from an out-of-the-way place to a more public place, and I have not yet got into the back room, if there is one.

*The Rev.
M.B. Fuller,
M.A., B.D.*

17 Feb. 1894.

The Rev.
M. B. Fuller,
M.A., B.D.
17 Feb. 1894.

27,230. (Mr. Fanshawe.) Does the smoking go on in a licensed shop now, or in what you would call a private smoking den?—It is the shop in the old town, a little place where opium is sold and smoked. The room is about 8 ft. by 10 ft. square. There are two little rooms at the back.

27,231. (Mr. Mowbray.) I understand you are speaking of what is going on at the present time?—Yes.

27,232. Have you drawn the attention of the police to this sale of opium which you say is going on in places where opium is being smoked?—I am not sure that I have. I have called the attention of the native police to it, but I have not taken the matter to the superintendent of police. When I go to the places there is always a crowd gathered there, policemen and others.

27,233. Do you mean because you go there?—Yes; I am known to the opium smokers as an agitator for the shutting up of the shops, and they are begging me to do it. The Mahomedan community are watching with great interest to see how soon they will be shut up. They say, "This sahib is trying to do a good thing, trying to shut up the shops." It is not only the smokers but many respectable non-smokers who gather there.

27,234. Why do not some of these smokers go to the police and tell them that something illegal is going on? Perhaps the police might assist them in closing the houses?—I think the police know it. I do not think I could have gone to the place, and have seen the people smoking, and the police not know it. The policemen have seen me there.

27,235. I do not doubt for a moment you have seen people smoking opium, but the technical offence is selling opium, and that seems to me only capable of being decided in a law court, and I have suggested to you that both these smokers and you being anxious to have the dens closed, why do not you have the question decided in a court of law as to whether it is illegal or not. If it is illegal you can have the dens closed, and if it is not illegal then comes the question whether the law ought to be strengthened. Can you give me any idea as to the number of doctors there are in Berar practising according to European methods?—I do not think I could.

27,236. Have you any idea?—There are six civil surgeons, and under them there are hospital assistants in perhaps 25 Government hospitals. There is one dispensary at each taluk, and there are 22 taluks in the province.

27,237. I suppose there are a great many native practitioners?—Yes, a great many who have studied in the European schools, in the Grant Medical College, and other colleges.

27,238. Is there anything to prevent a man setting up as a medical practitioner in Berar?—I do not think that there is.

27,239. If opium is only to be sold on the certificate of a medical man you would have to go a step further and define what a medical man was in Berar, would you not?—I suppose Government would have to determine for itself whom it could entrust with that work.

27,240. The mere fact of saying that he was a medical man would not be sufficient, would it?—It would not be much.

27,241. I suppose you will admit also that there is a considerable difference in the conditions in Berar and the conditions in England with regard to the existence of chemists' shops?—Yes, I know that.

27,242. Therefore it does not solve the question by saying that there ought to be some sort of method like they have in England when the conditions are so dissimilar?—I suppose the same argument would apply to arsenic and strychnine, which can also be bought in the streets of Akola—at any rate, arsenic can—in any quantity.

27,243. I suppose there are not a great many people who are anxious to get arsenic and strychnine continually like there are people anxious to get opium?—I suppose not.

27,244. Therefore it is more easy to make restrictions with regard to strychnine and arsenic, which are not things in ordinary everyday demand, as opium is among certain classes of the community in India?—In the part of India where I live there are a large number of people who wish to get their living by making salt, and that is an article in very common use, and the Government has undertaken to stop it, or rather it is prohibited, but whether that prohibition has succeeded or not I am not able to say.

27,245. That is hardly an answer to my question with regard to strychnine and arsenic?—I suppose it would not be very difficult to prohibit either.

27,246. Do you mean either strychnine or arsenic?—Strychnine and arsenic on the one side and opium on the other. It would not be difficult if Government wanted to prohibit it, as they have prohibited the manufacture of salt.

27,247. They have prohibited the manufacture of salt, but they have another method of providing it. They prohibit the growth of opium in Berar, but they take measures to provide it in another way. You are asking that they may prohibit it altogether. That is a different thing, is it not?—It may be a difference in degree, but I would not accept it as an impossibility by any means.

27,248. (Chairman.) You say that arsenic and strychnine can be bought in any quantity?—I withdrew strychnine afterwards, and I said that I could only obtain that by going to the hospital, but I can buy raw arsenic any time I want it in the shops on the streets.

27,249. There is a much greater restriction upon opium than there is upon arsenic?—There is no occasion for restriction as long as there are plenty of shops within reach where opium is sold without any restriction except that the money must be paid for it.

27,250. (Sir William Roberts.) Is opium a common household remedy in Berar?—I should say not.

27,251. It is not found in every house?—It is used for children, and in that sense it may be in most of the houses, but I have heard very little of its use as a medicine. When I had a great experience of cholera—perhaps 30 cases a day—I did not use opium, and I was warned against the use of opium as a remedy for cholera.

27,252. You are not a medical man?—I am not; but I have been called upon to do a great deal of work, especially in cholera cases, and I was warned against preparations which contained laudanum or opium, and I did not use them.

27,253. Where did the warning come from?—It came from things that I found in papers issued by some Government surgeon-general, or some medical officer. The remedies I saw prescribed and which I used mostly were recommended by some surgeon-general or some official, and also by Lorbier, who has a noted cholera remedy.

27,254. (Mr. Pease.) What is your view as to whether opium could be purchased in the crude form in any chemist's shop in England?—I understand that it could not be purchased by anyone who pleased to call for it, that it is labelled "Poison," and, I suppose, it is protected as such.

27,255. I believe that is so, that it is left to the discretion of the druggist, and he would not supply it if he thought it was obtained for the purpose of crime. He would not give any large quantity, and the person would have to write his name in a book?—I think that is so, and I think it is the same in America. If there was a suspicion in the mind of the chemist, I think he would require a signature before giving it. If the man were a clergyman or a respectable inhabitant in the place, he might be asked no questions about it or to give his signature. The chemist who sells it is supposed to use his discretion.

27,256. (Lord Brassey.) For the reasons that you have set out for the consideration of the Commission you have advocated that the sale of opium should only be permitted for medical use, is that so?—Yes.

27,257. Would you for somewhat similar considerations make a similar recommendation with regard to the sale of alcohol?—I would. I would say, with regard to opium, that if it is a good thing, the cheapest of food, and the best thing for poor people, the tax should be taken off, and it should be supplied as cheaply as possible, like wheat; but if it is a thing that is to be interfered with so seriously, I should prohibit it.

27,258. (Mr. Haridas Veharidas.) Do you consider the use of alcohol more injurious than the use of opium?—I have no experience of either, and I find there is very little to choose between them. I am as strongly against alcohol as against opium.

27,259. Have you seen drunkards in the condition that they have been violent to others?—Yes.

27,260. Have you seen opium eaters in the same condition?—No.

27,261. Do not you make a difference in that way so far as the violence is concerned?—Yes, there is a certain

boisterousness about a liquor shop that there is not about an opium den.

27,262. And so far you consider alcohol is more injurious than opium?—I should hate to choose either, but I would admit that alcohol is doing more harm in India at present than opium.

27,263. Do you not think that if any steps were taken they should be taken for the suppression of alcohol first?—I wish steps could be taken to include both. Perhaps from the absolute harm there is being done now I should put alcohol first, and opium as close after it as possible.

27,263a. (Mr. Fanshawe.) In your evidence you refer principally to opium smoking?—Yes.

27,264. That is at Akola and one or two other places?—Yes, and about the district of Western Berar.

27,265. Have you been in the habit of travelling in the districts much?—Yes, a great deal.

27,266. You rather limit your actual experience to Akola and one or two other places?—Yes. In the Akola district there are about 600,000 people, and I have made it my business to preach in those villages—several hundred villages. I have seen some of the smaller opium shops in the villages. When I see people smoking I talk to them. I have never made it any secret; they know me and I preach to them about it as I would about anything else which I think is doing them harm.

27,267. What was and is still smoked in Berar is madak, is it not?—Yes.

27,268. Not chandu?—I do not know much about chandu, madak is the name which is used.

27,269. You speak especially of Mahomedans, what class of Mahomedans do you refer to?—In Akola many of the Mahomedans are what are called the Baid sect.

27,270. Are they day labourers?—Yes, and small shopkeepers, and men who go about the bazaars with their wares, and some artizans. They are the poor Mahomedan classes—many of them are coolies and labourers.

27,271. Are you aware that among certain classes of people in this country the use of what are believed to be aphrodisiacs is very common?—I am.

27,272. So that opium, whatever effect it may have in that direction, is only one of many other substances which are taken for that purpose?—I am aware of that.

The witness withdrew.

Mr. RUSTOMJI PESTONJI JEHangIR recalled and examined.

27,279. (Chairman.) You wish to make a correction in regard to a portion in your evidence?—Yes, I wish to say that only Abdoola Khan and four others, five men in all, were placed before Mr. Webb, and ten tolas of opium were seized.

The witness withdrew.

(Lord Brassey took the Chair during the remainder of the sitting.)

Mr. DHANJIBHAI DORABJI GILDER called in and examined.

27,281. (Chairman.) You are an assistant teacher of the New High School, editor of the "Student's Friend," and Joint Honorary Secretary of the Indian Temperance Association, Bombay?—Yes.

27,282. (Mr. Pease.) You wish to give us some information which you have gathered from visiting the opium dens. We shall be glad to hear what you have to say?—I have visited opium dens and opium shops and made special inquiries among the consumers of the drug. The habit is generally formed from vicious motives; only occasionally do people resort to it as a medicine. So far as my investigations prove, the habit is rather difficult to be given up; but there have been cases in which it has been given up. In 90 cases out of a hundred, what is called "moderation" in the use of this drug, leads on to excess. Besides, what is a "moderate" dose for a habitual consumer will be strong enough to kill half-a-dozen non-users. It is believed to be necessary to enable working people to get through their daily toil. It appears to paralyse the nerves of feeling, and so the workmen does not feel fatigued. He becomes oblivious to the pangs of hunger by taking opium. The habit of taking opium is looked upon as very disgraceful. To be called an opium eater is a strong term of reproach. The closing of licensed opium shops, enforced here in August last, has not, so far as my knowledge

27,273. Are you quite sure you are correct in saying that the age at which people begin to smoke opium is from 15 to 25. You place it earlier than the other evidence which we have had?—I have inferred it from the people as near as I could judge of the ages.

27,274. It seems a very early age, 15 to 25,—do you still think that this is the usual age at which opium smoking is begun?—Perhaps for an average it would be too early. Perhaps 20 to 30 would be more correct. I only took their names, and I had to make my own estimate of their ages, and they told me as nearly as they could how long they had used it. I only inferred it. It is early manhood. Many of the Mahomedans are married at 16, 18, and 20 years of age. I speak of the Mahomedan community I have had most to do with. I know there are a few Hindus who were once respectable among the smokers.

27,275. You have given us a very unqualified statement of the physical, mental, and moral effects of the opium habit, do you refer to opium smoking only?—Principally smoking.

27,276. Do you wish us to understand that opium smoking always involves those consequences?—I have had it not only from the smokers, but from the respectable members of the community, that these are the most noticeable effects.

27,277. The question is whether opium smoking always leads to these results. We have had evidence that mechanics and others go on smoking opium without its having any such marked effects as you have described, do you wish your remarks to apply to all smokers?—That is how I found them. They are men about the shops, men whom I know personally, who do coolie work and other work for their living. I found them at the shop morning and evening. Of course, not all these effects follow at once.

27,278. You think your remarks are generally applicable?—Yes, I do. It is very noticeable in Mr. Pestonji's book referring to opium smokers, that he takes pains to note that several of them are married and have children, but he did not take pains to note the number who said they had no children. I should like to have seen that noted. Some had children before they began the habit, and some have not smoked long enough to reach these effects.

27,280. You stated before that there were six or seven men altogether?—Yes. There were only five men in all, and I wish to make this correction.

goes, produced beneficial results. It is necessary, in order to give effect to the policy of discountenancing opium smoking, to prohibit the manufacture and sale of the raw drug, except for medical purposes. Public opinion would undoubtedly favour the adoption of this measure, provided no new burden in the shape of taxation is put upon the heads of the people of India, who are already groaning under a weight they cannot bear. In connection with this I should like, with the permission of the Commission, to put in a copy of the "Jam-e-Jamshed" of the 17th of February. There is an open letter in that paper to Lord Brassey and the members of the Opium Commission. It gives a good idea of the native view of opium. It calls upon us by name to come before the Commission and give evidence.

27,282a. (Chairman.) You have responded to that call?—Yes.

27,282b. (Mr. Pease.) We shall be glad to have your further remarks on this question?—It would be desirable to make special provision, by establishing a register of habitual consumers above the age of 40 and the drug might be sold to them for five years in doses which would get smaller every six months. Only medical graduates of the local and other universities and reputable native hakims

The Rev.
M. B. Fuller,
M.A., B.D.

17 Feb. 1894.

Mr. R. P.
Jehangir.

Mr.
D. D. Gilder.

Mr.
D. D. Gilder.

17 Feb. 1894.

or voids should be entrusted with the sale for the wants of their patients.

27,283. What is the effect of opium upon the people?—The generality of people who use opium in any form become thin and emaciated. They soon lose flesh. Their dull, heavy eyes, pale, sallow faces, sunken cheeks, and haggard looks, betray the poor victims of the drug. In short, some of them are just like living skeletons, as published in my description of a visit to opium dens, on page 150 of the *Abkari* for October, 1892.

27,284. Will you give us a description of your visits to these opium dens?—These dens having been so often described I need not take up the time of the Commission by a further description of them. Suffice it to say, that those frequenting them were so anxious to have them closed for ever, that they put us question upon question as to when the Government would close these "living hells," as one of them termed these dens. On another occasion I visited the opium-smoking clubs that have been started since the closing of the licensed shops. Each club occupied a room on the first floor of a very long chawl. The same old familiar sight met our eyes—persons in various stages of emaciation, lying together in hoards like beasts. On inquiry, we were told that very few of them took to the use of opium as a medicine, but the majority took it as an aphrodisiac. They continued its use for a length of time for the same object; but latterly they had to continue the practice in order to overcome the lassitude and the feeling of pain they felt after their debauch. I was accompanied on these visits by Mr. Earle Simmons, an assistant at Messrs. Gostling and Morris, Engineers; and Mr. Framji Dadabhai Master, B.A., late Assistant Teacher, the New High School, and at present an assistant at St. Xavier's High School.

27,285. Will you give us your opinion as to how the revenue derived from opium might be recouped?—The moral law is equally binding upon nations and individuals. If it is bad for an individual to do a wrong thing; it is equally bad for a nation to do so. Hence, if the British Government desire to do right, in other words, to observe the golden rule, they should at once give up the opium traffic, Indian and Chinese, without minding the question of revenue, which will surely recoup itself in a short time. Among other measures may be mentioned retrenchment. By retrenchment I do not mean the dismissal of a dozen peons or half a dozen petty clerks, but retrenchment in its true sense, *viz.*, reduction in the heavy items of expenditure, such as the Home charges, the ever-increasing military expenditure, the exchange compensation, &c. Let the salaries of all those who draw more than 300 rupees per mensem be reduced by a small per-centage. Revenue lost will be made good without any additional burden on the already heavily-laden taxpayer. But the question is, "Is not the so-called revenue already lost even when it is available?" What is the usefulness of the China Fleet? Why should India pay for the British Ambassador at Peking? Mr. Dadabhai Navrojee said the truth when he wrote, "India derives not a particle of benefit. All India's profits of trade and several millions from her very produce, and with these all the profit of opium, go the same way of the drain to England. Only India shares the curse of the Chinese race. Had this cursed opium trade not existed, India's miseries would have much sooner come to the surface, and relief and redress would have come to her long ago. But this trade has prolonged the agonies of India." Also see the "Consumption of Opium in India," page 25; sub-section 2, in answer to argument (c) in para. 3, beginning with "The consequent loss," up to "prohibition."

27,286. You wish to draw the attention of the Commission to a book published in Gujarati in 1854?—Yes, I have to draw the attention of the Commission to a book published in Gujarati in 1854 when the anti-opium agitation was not even dreamt of. It is called "The Opium Trade: its History, Limits, Morals, and Political Effects." It contains a number of opinions of eminent scientific men, missionaries, and even Government officials on the ruin and devastation caused by opium in Assam and China. What is a poison in China cannot be a food in India, hence the application of the same arguments with equal force to India.

27,287. (Chairman.) You have compiled some tables for the information of the Commission, were these tables compiled from the official statistics?—Yes, from the administration reports.

27,288. Have you any observations to make upon the tables?—Yes. It may be mentioned that there is a discrepancy in the figures for 1889-90, as given in the administration report for that year, and the one for

1890-91. I give both. These figures show that while the population of Bombay has increased by only 6 per cent., the consumption of opium has increased by 84 per cent.; and that throughout the Bombay Presidency, while the population has increased 14 per cent., the sale of opium has gone up 60 per cent. during the last decade. The increased consumption of the drug will be self-evident from the fact only that Bombay town consumed in 1892-23 nearly three-fourths of the quantity required for the whole presidency in 1876-77. Tables A. and B. show that the consumption of opium has been increasing by leaps and bounds throughout the British territory as well as the Native States in the Bombay Presidency. Statement C. shows that while the export trade in opium between Bombay and China has fallen 39.1 per cent. during the last 20 years, the home consumption of the drug has increased 1,191.1 per cent. I would like to withdraw Table D. altogether.

27,289. (Mr. Haridas Voharidas.) I presume that you are aware that before these restrictive measures were introduced there was a great deal of opium smuggling from the Native States going on, and therefore these figures do not show the correct consumption of opium?—They appear in the Government Blue Books, and we have to depend upon Government Blue Books for these figures.

27,290. But there is the fact that a great deal of opium smuggling was carried on. Many people are aware of that and even the authorities say that there was an increase, but it was an apparent increase and not an actual increase. When the former consumption shown on paper be added to that of the smuggled opium it would amount to what is now shown?—I quite admit that if it were believable, but it is human nature to take credit for good things, and when bad things occur to lay the blame on the shoulders of others, and so in the same way when the consumption of opium increases Government Blue Books say that it is owing to prevention of smuggling, and when the consumption decreases they say opium is smuggled; besides this, the administration reports show that on an average about 2,000 lbs. have been annually seized as smuggled opium, not more than 2,000 lbs.

27,290a. They have not got the data to show how much smuggled opium was brought into the British territory, and so they cannot say what the amount was, but you must make some allowance for the increase?—I would like to draw your attention to the consumption in 1876-77, when it was 919 lbs. and last year it was 18,000 lbs.

27,291. You must take the smuggling into account?—We must take it into account and make certain deductions but not so much as the increase shown in these tables.

27,292. (Sir James Lyall.) Are you aware that when the Commission was in the Gujarat country we examined large numbers of witnesses from Gujarat and Kathiawar and nearly all of them said that the consumption of opium had fallen off since 1878-79, that it had become much dearer than it used to be, and therefore the consumption had fallen off. You draw exactly the contrary conclusions from the statistics?—Yes.

27,293. They said that before 1878-79 opium could be bought more cheaply, but that since the arrangements made in 1878-78 it had got much dearer. They all said that, and that the consumption of opium had fallen off. Do you believe that they were all speaking falsehoods?—I would not say so at once; I have only Government statistics to show that the consumption has been increasing.

27,294. If smuggling largely existed before, and has been since stopped, the statistics would prove nothing?—Statistics can be made to prove anything that the Government or anybody else wishes.

27,295. Exactly, do you believe that the conclusion you have drawn from the statistics are more reliable than the evidence of a great many people who know the country, and who say contrary to your conclusion that opium has fallen off because it has become much dearer?—It is for the Commission to decide whether they will believe the statistics or the people.

27,296. The statistics I have no doubt are correct as far as they can be made so, but are we to believe your conclusions derived from statistics which you say can be made to prove anything you like, or are we to believe the evidence of a great number of people from all parts of the country who say exactly the contrary?—My conclusions have been derived from the statistics and if the statistics are right you must believe my conclusions.

27,297. (Mr. Fanshawe.) I believe you are editor of the *Student's Friend*?—Yes.

27,298. Will you tell us what class of periodical that is?—It is an educational paper.

27,299. Is it published weekly?—It is published every month.

27,300. Is it issued chiefly amongst students?—Yes, only amongst students.

27,301. Is the new High School a Parsi school?—It is conducted by Parsis, but it is open to all classes of people.

27,302. Has it been opened long?—About three years ago.

27,303. Is it a large school?—It has 1,200 boys—it is the largest native High School in Bombay.

27,304. As regards the effect of opium, you say “The generality of people who use opium in any form become thin and emaciated,” what is your authority for making such an unqualified statement as that?—It is not an unqualified statement; I have seen people smoking and eating opium.

27,305. You say “The generality of people who use opium in any form become thin and emaciated”?—I have seen opium eaters and opium smokers.

27,306. Do you think your experience has been such as to enable you to make such an unqualified statement as that?—I think so.

27,307. We have seen 50 or 60 men ourselves who were opium eaters and who were certainly not thin and emaciated?—I have already answered that question—“If opium eaters and smokers who are well fed are strong and healthy, their strength and health can be attributed rather to their food than to the drug.”

27,308. You qualify that general statement then?—Yes.

27,309. With regard to the Gujarati book referring to the consumption in Assam, are you aware that in 1854 poppy cultivation was free in Assam, and that there was no excise on opium?—I was not born then so I cannot say.

27,310. Are you aware that during the last 25 years the number of opium shops in Assam has been greatly reduced—from 5,000 to 800?—I cannot say, I do not know that part of India.

27,311. You will recognise, therefore, that any conclusions that might be applicable to Assam in 1854 are not

necessarily applicable in 1894?—The detailed conclusions as to the quantity may not be applicable, but the general conclusions as to the evil effects of the drug are applicable.

27,312. When the shops have been reduced from 5,000 to 800, and the price of opium raised to Rs. 37 per seer, the highest price in India, the consumption must surely have been reduced considerably?—I do not believe in restriction by lessening the number of shops because another shop may get all the customers and the consumption will be the same.

27,313. Do you believe that people will travel 50 and 100 miles to a shop to get opium?—If they have friends who go there they will ask them to get opium for them.

27,314. You will admit the force of the argument, that what may be applicable with regard to opium in 1854 may not necessarily be applicable in 1894 when the conditions are so different?—With regard to the quantity consumed the conditions will not be applicable, but the other deductions may be applicable.

27,315. (*Chairman.*) I believe you are Honorary Secretary to the Indian Temperance Association?—Yes.

27,316. Your Association is established with a view to promoting total abstinence?—Yes.

27,317. That total abstinence extends to all stimulants, does it not?—Yes.

27,318. (*Sir James Lyall.*) You say that you have visited opium dens on two occasions?—Yes, one visit was in the evening about nine o'clock, and on the second occasion it was half-past-five or six.

27,319. On one occasion you say the consumers put question after question as to when Government would close the “living hells.” Will you tell us what was the vernacular term used for “living hells”?—Jivatū Dojakh.

27,320. (*Mr. Haridas Veharidas.*) Do you think that there are more cases of suicide from opium than those which appear on the police records. The statistics do not show the actual state of things so that the Commission should take the same precaution in believing the Police Records?—The Government brings forward statistics. They say whenever you want anything “these are the real facts, you can depend on the hard and dry facts.” In the same way I have brought forward these Government statistics. They are not my own.

27,321. We have had evidence that the figures shown by the Police Records were not the actual figures?—Many cases of suicide are suppressed.

The witness withdrew.

The REV. SUMANT VISHNU KARMARKAR, B.D., called in and examined.

27,322. (*Chairman.*) I believe you are a Missionary of the American Maratha Mission at Bassein, Thana District, and you have lived in Bombay all your life?—Yes.

27,323. What have you to tell us with regard to the effects of the opium habit?—I have seen opium smokers and eaters and have no hesitation in saying that the habit is bad. Many are visibly affected by the habit. Mendicants and Hindu “bairagis” are especially addicted to opium using. It has the effect of deadening their moral sensibilities, and this enables them to follow the teachings of “Vedantism.” The idea of duality, I and thou, is eliminated by the stupor, and this fact helps them to commit all manner of vices. My observation is that usually the opium dose is increased when once began, and the users seldom stop it. The selling of bal golis (children's pills) and opium for the stupification of children ought to be strictly prohibited as the effect is evil. The entire stoppage of the sale of opium except for medicine would have a most beneficial effect on the present users and the future generations. There is no ground for supposing that there will be dissatisfaction among the people of this part of India. I have seen women giving these bala golis to their children, and I have sat in the bazaars where they sell these bala golis and I have seen hundreds of women buying opium. It is a sight which is very saddening to see, these ignorant women buying these bala golis and giving them to their children, and thereby entirely spoiling their height and health.

27,324. (*Mr. Fanshawe.*) I suppose you have not any statistics to put before the Commission as to the ill-effects of bala goli?—I have no statistics.

27,325. You are speaking from your general impression on the subject?—I am speaking from what I have seen.

27,326. You are aware that the Bombay Government had a special enquiry made into the matter and consulted a large number of practitioners in Bombay who expressed different opinions on the subject?—Yes, I am aware of it.

The witness withdrew.

Mr. D. D.
Gilder.

17 Feb. 1894.

The Rev. S.
V. Karmarkar,
B.D.

27,327. (*Mr. Haridas Veharidas.*) Do you mean to say that “Bairagis” are in the habit of taking opium and not ganja?—I do not want to say anything about ganja. They do take ganja, but they also take opium.

27,328. Is it not rare for these men to take opium and ganja as well?—Those who take ganja take opium as well. I have seen them.

27,329. Do not you make some difference among the bairagis between the opium and ganja eaters, you say, “the entire stoppage of the sale of opium except for medicine would have a most beneficial effect.” Is not the use of alcohol spreading very much?—I object to alcohol, I am a total abstinence man.

27,330. If you had your choice which would you abolish?—I would abolish both.

27,331. We must take a practical view of the matter, we cannot work on theory?—I say that now this Opium Commission has started deal with opium first, and when a commission on alcohol is started you can deal with that also.

27,332. Is opium a lesser evil than alcohol in your opinion?—I think opium is more injurious than alcohol in this respect, that opium has a tendency to deprive you of your will power while alcohol has not got that tendency. I mean to say that it does have that tendency but a person can be reclaimed from it.

27,333. Alcohol makes you mischievous and violent to others whereas opium does not do that?—Opium removes that moral sensibility which a man has, the will power, n him is lessened at first and afterwards it is deadened.

27,334. It is just the same in the case of alcohol during the time a man is intoxicated?—Persons under the influence of opium very often commit suicide.

27,335. Do you say that alcohol is less injurious than opium?—Yes.

27,336. So that you would like to deal with opium first?—Yes.

*Meruji Dosaji
Chudasama
and
Sardarsinhji
Rana*

17 Feb. 1894

MERUJI DOSAJI CHUDASAMA and SARDARSINHJI RANA called in and examined.

27,337. (*Chairman to Meruji Dosaji Chudasama.*) You are a native of Gondal, of the Girasia caste of Kathiawar and you live in Bombay?—Yes.

27,338. (*To Sardarsinhji Rana.*) You are a native of Kantharia in Limri State, you belong to the Girasia caste of Kathiawar and you live in Bombay?—Yes.

27,339. (*To Meruji Dosaji Chudasama.*) What have you to tell us with regard to the question before this Commission?—Opium eating is very common in our caste. It is the greatest curse to our people, and many of our relations and friends deplore that they ever formed the habit. We and they would be very thankful to Government if it would stop this bad practice, by totally prohibiting the sale of opium, except for medical use. It would, however, be necessary to make an exception for those who have already formed the habit; otherwise they would grumble. According to our customs, moderate eating cannot but lead to immoderate eating. We can give instances, if required, of friends and relations who have ruined themselves and lost their estates through opium.

27,340. (*To Sardarsinhji Rana.*) Do you agree with those remarks?—Yes.

27,341. (*Sir James Lyall to Meruji Dosaji Chudasama.*) Do you come here of your own accord, or are you sent by the Thakur?—We are students in the college.

27,342. You come here of your own accord, you are not sent by anyone?—No.

27,343. Are you studying at Elphinstone College?—Yes.

27,344. (*Mr. Haridas Veharidas to Sardarsinhji Rana.*) Do not you know cases in which deaths have occurred from the alcohol habit. Can you give us one single instance where a death has occurred on account of opium?—Yes, at Limri.

27,345. (*To Meruji Dosaji Chudasama.*) Can you give us an instance of a death occurring through the habit of opium?—Yes, there was one poor man living in Gondal who used to take four or five ounces of opium daily and it so happened that he could not get any opium and he died.

27,346. That was not from the direct effect of opium. He died because he could not get opium; if he had got opium he would not have died. Have you known people who died on account of taking alcohol?—Yes.

27,347. And you do not know of cases of people dying through the habit of opium?—No.

27,348. In such cases would you not say that opium is a lesser evil than that of alcohol?—Yes, of course.

27,349. If restrictive measures are necessary you would prefer to see alcohol suppressed first?—Yes.

27,350. Then if necessary you might deal with opium?—Yes. But why should we bring in the question of alcohol when we are considering the question of opium.

27,351. If opium were stopped would there not be more alcohol users in Kathiawar than there are at present?—No, I do not think so because they can get opium more easily. They come from the villages to Gondal to get alcohol. There are Girasias in almost all the villages.

27,352. But when the opium shops are closed there will be a demand for alcohol and a shop which is at Gondal will have branches in the district?—But their religion would come in the way whereas it does not come in the way in the case of opium. There are many Girasias who are religious people, they believe in their religion and they take opium but who would never take wine on account of religious scruples. So many people have been ruined through the habit. Some of our relations have been ruined and they have lost their estates.

27,353. (*To Sardarsinhji Rana.*) Do you agree with these views?—Yes.

27,354. Your father has a village, has he not?—Yes.

27,355. What village?—Kantharia.

27,356. Does the whole village belong to your father?—No, he has a share of it.

27,357. A Girasia means one who has received land from the State?—Yes.

27,358. (*Mr. Pease to Sardarsinhji Rana.*) I believe you wish to make a statement with regard to parents selling their children?—Yes.

27,359. We shall be glad to hear what you have to say?—I have seen a girl sold for five tolas of opium and half a mound of wheat.

27,360. You wish to tell us about the views of the people of your village?—Yes.

27,361-2. We shall be glad to hear what you have to say?—During last September when I was at my village I informed many of my relatives who are opium eaters that a Royal Commission had been appointed by the British Government to see whether the abolition of the opium trade was feasible. In order to see what their feelings were I added that most probably the opium trade would be put a stop to. To my surprise and astonishment they were very glad to hear this news. They said that this step of the Government was the wisest one. They expressed the opinion that they would be grateful to the Government for removing this great evil. I say that these were the feelings of those who took opium. If the Government will make a necessary provision for those who are already opium eaters there will remain no cause of complaint or discontent among the Girasias. They are tired of taking opium. (*Meruji Dosaji Chudasama.*) I agree with my friend in those views. I have also spoken to my friends about it.

27,363. (*Mr. Pease to Meruji Dosaji Chudasama.*) You wish to tell us about the effect of opium upon a school-fellow of yours?—Yes. I can cite an instance of a Girasia friend of mine who was one of my fellow students when I was doing my vernacular at one of the schools. He was then considered one of the best boys of the class and he never missed a prize at the annual examination. Unfortunately he happened to be the son of a father who was a great consumer of opium and who could not understand the good of his son. My friend left the school when he was 15 after going through some five Gujarati books. That kind of education is considered the highest in our class (Rajputs), which I can say without the least hesitation is one of the most backward classes of India. Education is a word which has hardly reached their ears till now. Thus opium makes a man leave his mental faculties totally uncultivated. The boy from the time of leaving the school had addicted himself to opium drinking as he was surrounded by his relatives and friends who were consumers of opium. He now almost forgets what he learnt at the school and can hardly read or write.

27,364. You also wish to tell us something about a man who became a thief through taking opium?—I remember the case of a man who being short of money stole some articles and clothes from the house of his neighbour. He being apprehended by the police was sent before the magistrate who sentenced him for three months. I need not give the name of the gentleman, but he was a Rajput by caste and was a landed proprietor. Really the treatment he met at the hands of the law was disgracing to himself and to his class, but he could not help it on account of the opium habit. I think, therefore, that opium makes a man entirely forgetful of his moral nature.

27,365. (*Sir James Lyall to Meruji Dosaji Chudasama.*) How long have you been a student in the college?—For the last four years.

27,366. (*To Sardarsinhji Rana.*) How long have you been a student in the college?—For the last two years.

27,367. (*To Meruji Dosaji Chudasama.*) What is your age?—Twenty-four.

27,368. (*To Sardarsinhji Rana.*) What is your age?—Twenty-four.

27,369. You say that you saw a girl sold for some wheat and opium, in what part of the country was that?—In the east of Kathiawar.

27,370. In what state?—Limri.

27,371. Who was the man who sold the girl, her father or who?—Her father.

27,372. What caste did he belong to?—Kumbhar, the potter caste.

27,373. Did you see it yourself, or did you only hear of it?—I saw it with my own eyes.

27,374. Were you present when the wheat and opium were paid?—Yes.

27,375. Was it a sudden bargain or how was the bargain made?—It was a sudden bargain.

27,376. Was the buyer a Girasia?—Yes.

27,377. What did he buy the girl for?—To give her to his daughter as a maidservant.

27,378. When these Kumbhars marry their daughters the man who gives in marriage his daughter takes a sum of money from the father of the bridegroom, does he not?—Yes.

The witnesses withdrew.

Adjourned to Monday next at 11 o'clock.

At the Town Hall, Bombay.

SEVENTY-FIFTH DAY.

Monday, 19th February 1894.

PRESENT :

THE RIGHT HON. LORD BRASSEY, K.C.B., CHAIRMAN, PRESIDING.

Sir JAMES B. LYALL, G.C.I.E., K.C.I.E.
The Hon. Sir LACHHMEESWAR SING BAHADUR,
Maharaja of Darbhanga, K.C.S.I.
Sir WILLIAM ROBERTS, M.D., F.R.S.
Mr. R. G. C. MOWBRAY, M.P.

Mr. A. U. FANSHAWE.
Mr. A. ARTHUR PEASE.
Mr. HARIDAS VECHARIDAS.
Mr. H. J. WILSON, M.P.

Mr. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

Mr. J. PRESCOTT-HEWETT called in.

Mr. J. P.
Hewett.

27,379. (*Chairman*.) I believe you have a statement that you desire to make to the Commission?—On Saturday I received the following letter from Mr. Alexander. “February 16, 1894. Dear Mr. Hewett,—As you will see from enclosed, which was awaiting me on my return from the Commission this afternoon, Dr. Valentine’s prediction is realised, and now four witnesses at Jeypore are all in prison. One of them (the old opium eater) came after us to Ajmere, and said he was afraid to go to his house as the police were after him; but after some inquiries we doubted his story, and I gave him a rupee to pay his way home. As to the other three, you may have seen the correspondence in the *Bombay Gazette*. They all four came to us at the dak bungalow the same evening, telling us the police had been asking where they lived, and they expected all to be taken up. It was then we gave them money as mentioned by Mr. Prautch in his letter to the *Gazette* to enable him to communicate with us if the police apprehended them. The writer of this letter is Dr. Henry Phillips, Dr. Valentine’s right-hand man, a native Christian, the father and grandfather were such before him. He is a native of Jeypore and absolutely reliable, one of the best and nicest young fellows I have ever met. I hope you will wire at once to the Resident at Jeypore and make inquiries and get the poor fellows set at liberty.—Yours truly, JOSEPH G. ALEXANDER.”

“M. M. T. Institution, Agra, February 13, 1894.
“My dear Sir,—I had a letter from a friend in Jeypore that four men who gave evidence in Opium Commission have been put in jail by the Raj authorities. The friend who wrote to me is one whom I can trust. It might be as well for you to communicate with the Political Resident of Jeypore. Dr. Sahib has finished his paper, and hopes to send it to-morrow. With my profound regards.—Yours, &c., HENRY PHILLIPS.”

19 Feb. 1894.

In accordance, my lord, with your directions I telegraphed to the Resident at Jeypore as follows:—

“Resident, Bombay,
Jeypore. 17th Feb. 1894.

“It has been reported to Commission that four anti-opiumist witnesses have been put in jail by the Raj authorities. Please wire whether this statement is well founded.”

I have received the following reply:—

“From Resident at Jeypore, to Secretary, Opium Commission, Byculla Club.

“In reply to your telegram regarding alleged imprisonment of anti-opiumist witnesses, I am assured by the Jeypore Durbar that the statements are utterly groundless.”

The witness withdrew.

Dr. R. N. RANINA re-called and further examined.

Dr. R. N.
Ranina.

27,380. (*Chairman*.) You are here, I believe, to make a statement in respect of the Bombay petition?—Yes.

(*Chairman*.) I may say to you from the chair that in our Report the Commission will deal with the Bombay peti-

tion, and that in regard to what you have said to us with reference to signatures for which you hold yourself personally responsible we do not impugn your statement.

(*Witness*.) I am very much obliged.

The witness withdrew.

Mr. J. G. ALEXANDER re-called and further examined.

Mr. J. G.
Alexander.

27,381. (*Chairman*.) I believe you have a statement to make to us?—I have received a letter from Miss Sunderbai H. Powar. I told the Commission in Calcutta, in reply to Sir James Lyall, that she would come before the Commission here or at Poona and give her evidence. She now says: “I would have come to Bombay to give evidence before the Royal Commission, but now I am not well at all. I had a severe attack of influenza and it left me very weak. I am under the doctor’s treatment.” Under these circumstances she has sent me a very brief statement which I ask to be allowed to put in and read.

The room was cleared. On the re-admission of the public,

(*Sir James Lyall*.) I object to Miss Powar’s evidence being read. I do not think that a lady who has published statements of the character of those made by her should be

allowed to give evidence which cannot be cross-examined. The statements she has made seem to me to be full of the greatest exaggeration and of false imputations, and I object to any evidence of hers being read, now that she is not present to be cross-examined.

(*Chairman*.) I think the best course will be for you to hand in the statement to me. I will take care that it is circulated among the members of the Commission, and we will consider how to deal with it, whether by printing it in the Appendix or not.

(*Witness*.) There is practically nothing more in it except that she says she wishes to present copies of her pamphlets.

(*Sir James Lyall*.) I object to these pamphlets being presented without any cross-examination.

Mr. J. G.
Alexander.

19 Feb. 1894.

(Mr. Fanshawe.) I accept without the least reservation the statement made by Miss Sunderbai Powar that she is unable to attend on account of illness, but I think it right to ask you whether it is not the fact that she has been unwilling to appear hitherto?

(Witness.) I do not think I can positively answer that question. I will quite honestly say that I was given to think when I arrived at Bombay that she probably was unwilling. It only reached me in a roundabout way. Upon receiving that information I at once wrote to her, and I read the extract from her reply, which states that she is unwell or that she otherwise would have come.*

27,382. I think you will remember that on Friday last you stated openly to me that you were anxious that she should appear, but you understood that she was unwilling; am I correct in that?—I am not quite sure how I put it. I have just now put the facts as I know them. I have also to make an application with regard to a letter from Mr. Hanbury, which you have seen. I may be permitted to state the circumstances before the Commission considers whether it should receive the letter. Mr. Hanbury's name has been mentioned to the Commission before. I think you are aware that he is a merchant who lived 13 years in

The witness withdrew.

Brigade-Surgeon-Lieutenant-Colonel J. B. GAFFNEY called in and examined.

Brig.-Surg.-
Lieut.-Col.
J. B. Gaffney.

27,385. (Sir William Roberts.) I believe you are civil surgeon at Jabalpure?—Yes.

27,386. Will you tell us what opportunity you have had of studying the effect of the habitual use of opium on the natives of India?—I have been a civil surgeon and superintendent of jails in the Central Provinces for more than 25 years, and have had considerable experience in the use and abuse of opium (a) generally as regards its use by prisoners before admission to jail, and (b) specially in the Upper Godavery district, where some 20 years ago I made a special inquiry as to the consumption of opium and ganja as affected by the increase or decrease of the duty on country liquor. I have also had special experience as a magistrate for about 15 years, when I had to deal with many cases of breach of the Opium Act and the illicit manufacture of madak. I have thus had both medical and judicial experience of the use of opium and its preparations in several districts.

27,387. What opinion have you formed as to the effects of the opium habit on the moral and physical condition of the people?—The opinion I have been led to form regarding the effects of opium on the moral and physical condition of the people who habitually use it, is that the habitual eating of opium is harmless, except when the eater is completely deprived of his usual supply. I have known men of all classes who have taken opium daily and on whom it had no prejudicial effects. Many of these have come before me as prisoners, and I have found the sudden deprivation of the drug cause the greatest prostration; diarrhoea almost invariably occurs, with loss of appetite and weight. It has been my custom in these cases to give small doses of opium gradually diminished; the unfavourable symptoms soon disappear, and the prisoner regains his former condition, and no longer feels the want of his accustomed dose of opium.

27,388. What has been your experience with regard to opium smoking?—As regards opium smoking, I have had experience of madak smoking only. On this subject I obtained much information in the Seoni district, where smoking is more general than in any other district in which I have served. I consider madak smoking as hurtful as opium eating is harmless, and am of opinion that madak smoking is one of the most pernicious and demoralizing practices in India; it ruins the health, lowers both the moral and physical condition of the smoker, and the

* The following letter was subsequently received from the witness:—

Bombay, 20 Feb. 1894.

Dear Lord Brassey,

On reading the report of yesterday's proceedings in this morning's paper, I perceive that I have done injustice to Miss Sunderbai by leaving her open to the imputation that she was unwilling to be cross-examined on her statements. I have not the slightest reason to suppose that this was the case; on the contrary, from my personal knowledge of her, I feel convinced that there are very few ladies, in England or India, who would more readily submit to have her statements publicly tested.

The unwillingness to come before the Commission which I was led to believe she entertained was, according to the information I received, due to entirely different grounds.

I shall be obliged if you will allow me to read the above statement, or if in some other way it may be made as public as the answer I gave to Mr. Fanshawe yesterday.

Yours truly,
JOSEPH G. ALEXANDER.

China. He left London to re-visit China after many years of absence, with some of his children, two or three weeks before the Commission began its sittings in London, and he gave me some hope that he might be able to give evidence personally before the Commission in India on his return. I have received a letter from him in which he says:—"I am on my way to England with my two sons —"

27,383. (Chairman.) Is this a statement that he is not coming before us?—Quite so.

27,384. Then I think if he has any testimony to communicate, and cannot appear here personally to do so, his proper course is to address a letter to the public journals or in some other channel than that of the Commission, in order to make known his views. Everybody knows his connexion with China, and would receive his respect in statements made by him with reference to the question submitted to this Commission. If he cannot appear before us as a witness I think the proper way of making his contribution to the solution of the question will be, not by a letter to the Commission, which we cannot cross-examine upon, but by an appeal directly to the public?—I quite accept that decision.

practice furnishes a large proportion of prisoners to the jail in any district where smoking is prevalent.

27,389. What do you know of the manufacture of madak?—As a magistrate in the Seoni district very many cases of illicit manufacture of madak were brought before me. To properly understand the subject, I made careful inquiries into the process of manufacture of madak, and as I am not aware of any published description of the process, I shall fully describe it. Opium, either smuggled or purchased from the licensed vendor, is placed in a small brass vessel, called a kuttori, water is added, and the mixture is slowly boiled over a charcoal fire; when the mixture becomes rather thick, it is strained through cotton wool, and the product again boiled and strained; this process is carried out three times. Then babul (*Accacia arabica*) leaves are taken, the leaflets stripped off and roasted till carbonized in a piece of an earthen chattie; the product is mixed with the opium till a sufficiently solid substance is formed to make into pills rather larger than an ordinary 5 grain pill. These pills when dry are smoked in a specially constructed pipe—choongi—made of stone or brass with a reed or wooden stem; a small cup receives the pill, which is smoked by applying lighted charcoal, no tobacco or other substance being added.

27,390. Did you ascertain the proportion of opium in the madak?—No; it is sufficient to make it of the consistence of a pill.

27,391. What is the cause of the difference between madak smoking and opium eating?—I have never been able satisfactorily to account for the vast difference in effects between eating opium and smoking it as madak; in the latter form crude opium is converted into a very pure "watery extract of opium." It is probably owing to the concentration of the active principles of opium by repeated boiling that the product becomes infinitely more powerful than opium, just as absolute alcohol is a poison, but when sufficiently diluted is harmless.

27,392. In madak smoking there is complete combustion I assume?—Yes.

27,393. And what the smoker would get would not be unaltered constituents of the opium, but the heat products?—Yes. Very little that I know of has been published regarding the deleterious effects of madak smoking. Sir W. Moore does not condemn it; he may not have seen it used in the Bombay Presidency, or he could not have failed to observe its baneful effects on its victims. In a report, dated the 29th May 1893, I reported to the deputy surgeon-general on the administration of opium to children. The general conclusion I arrived at was that the practice of giving opium to children was almost universal, and according to my experience it produced no deleterious effects. I mentioned in a previous report the custom I found prevailing in the Telugu country of administering opium to children from the time of birth till they learned to smoke tobacco.

27,394. Is opium eating considered a vice among the population of your district?—Amongst the natives with whom I am familiar opium eating is not considered a vice or even a bad habit; those who do not use it seem rather

pleased that they can do without it. I have never known them to censure anyone for opium eating, although they condemn madak smoking as a low and degrading vice.

27,395. Have you seen any evil results following the practice of opium eating?—Beyond occasional cases of poisoning by opium I have known of no evil effects following its use.

27,396. Will you now express your views generally?—I am very strongly of opinion that not only is it unnecessary and undesirable to interfere with the production and sale of opium, but that a serious wrong and a great and deplorable mistake would be made in interfering with the consumption of opium by the natives of India. It would be about as irrational and hopeless as to attempt to prohibit the manufacture and consumption of beer in England. I am familiar with the system of sale of opium in the Central Provinces, where it is not manufactured. I think any attempt to prohibit the sale of opium except for medicinal purposes would be a disastrous failure. I consider it the duty of all Governments when dealing with vice to regulate what they cannot prevent. The present system of licensing endeavours to realise the largest income from the sale of opium and so check its consumption, but it cannot go beyond that point when smuggling would naturally result if rates were made prohibitive.

27,397. As regards madak?—As regards madak, I think it would be desirable to take every means, short of absolute prohibition, to check its consumption; but here the question of the liberty and rights of the people comes in. If you sell opium to the people, it appears scarcely justifiable to dictate to them the manner in which they must consume it. No man would submit to interference with the manner in which he consumes either tobacco or brandy on which he has paid Government duty. The sale of madak might be wholly prohibited, in which case private manufacture might be permitted for individual consumption; the consumption of madak would then probably decline, as there would be no place of meeting for dissolute madak smokers.

27,398. What do you think of the prospect of further taxation?—I am of opinion that further taxation at the present time could not be borne, and that increased taxation to compensate Government for its loss of income by the abolition of an almost universal custom would be an infliction that would not be borne by the people, and could not meet with the approval of any officer of experience in India.

27,399. (*Mr. Pease.*) What proportion of adult males in your neighbourhood do you estimate are consumers of opium?—I could only venture on a guess. I could not calculate actually.

27,400. In using the expression "universal custom," do you imply that it is the custom of men, women, and children to take opium?—I should say it is customary in almost all families to use it.

27,401. As a luxury?—As more of necessity; it is considered so.

27,402. You mean for health?—As medicine for children, for their health.

27,403. Then your expression "universal" refers only to the use of opium for children?—Universal in families and households I will say.

27,404. In the same way as laudanum and so forth are universal in families in England?—Yes; only more extensively so.

27,405. You have used very strong terms with regard to smoking; do you think that the taking of opium by young persons in health is a good habit?—Eating opium is not a good habit when it is unnecessary.

27,406. Have you met with many cases in which persons, who having taken to the habit, have been unable to throw it off?—In jail I have seen many who thrive without it after a certain time—confirmed opium eaters.

27,407. In those cases you compel them to give it up?—Yes.

27,408. Do you find any difficulty in their cases?—At first the system is a great deal affected for want of the customary drug. They suffer a great deal, but when small doses are administered to them they recover completely.

27,409. You continue to give them opium or morphia?—For a short time, when the symptoms require it.

27,410. (*Mr. Mowbray.*) What do you mean by the illicit manufacture of madak?—There are licensed contractors who manufacture and sell opium, and anyone who manufactures or purchases madak, except through licensed contractors, commits a penal offence.

27,411. You mean that the offence is the purchase or the preparation of madak from shops other than those of the licensed vendor?—Yes; it can only be used if purchased from a licensed vendor. Under the Act the manufacture of any preparation of opium is punishable.

27,412. These were cases where somebody, who was not a licensed vendor, manufactured madak and sold it?—Yes.

27,413. There is no restriction, I suppose, in the Central Provinces, to a man buying crude opium and manufacturing it into madak for his own consumption?—He cannot make it for his own consumption; the manufacture is illegal, except by a licensed vendor.

27,414. Are you sure of that?—I think so; in the Act the manufacture of opium is punishable.

27,415. I understand that there are still licensed shops open for the sale of madak in the Central Provinces?—Yes.

27,416. That is the only way in which madak can be obtained legally?—Yes.

27,417. Is the law with regard to stopping smoking on licensed premises strictly carried out as far as you know in the Central Provinces?—I cannot answer the question.

27,418. (*Mr. Fanshawe.*) You have referred to your experience in the Upper Godavery district; did you there find the belief prevalent that the use of opium was a protection against chills and malarial influences?—Yes.

27,419. Can you give me any explanation of the diffusion of the madak smoking habit in the Seoni district?—I understand that it has existed a long time, but only the low-class Mahomedans adopt it.

27,420. Beyond the fact that you know that it is an old practice, you can suggest no special reason why it should be followed more there than in other districts?—No, except that it is a very old Mahomedan place, and there are a lot of low-class Mahomedans there.

27,421. Has it been your experience that the opium habit is one that is adopted by young men, or more generally by men later in life?—I cannot say from my own personal knowledge; but from what I have heard, men advanced in life take it to gain fresh strength and vigour, and they find it effectual. Young men would take to it, first from medical advice, or perhaps to ease pains, or when suffering from fever or other diseases, such as diarrhoea or dysentery, and so might contract the habit.

27,422. Has it been your experience that the habitual use of opium has very often grown out of the necessity of taking it in connexion with some disease?—I should say that it frequently is so.

27,423. (*Mr. Wilson.*) You speak of any attempt to prevent the consumption of opium as being as irrational as an attempt to prevent the consumption of beer in England. I suppose you are aware that there are very serious proposals made in England by Her Majesty's Government to interfere with the consumption of beer?—I am not aware of it.

27,424. You have not heard of any prohibitive legislation under the system of local option?—Yes, I have heard of it, but I do not know much about it. I have been half of my life out in India.

The witness withdrew.

Brig.-Surg.
Lieut.-Col.
J. B. Gaffney.

19 Feb. 1894.

Surgeon-Major W. A. QUAYLE called in and examined.

*Surg. Major
W. A. Quayle.*
19 Feb. 1894.

27,425. (*Chairman.*) You are civil surgeon at Nimar?—Yes.

27,425a. (*Sir William Roberts.*) Will you kindly tell us what opportunities you have had of making yourself acquainted with the effect of the opium habit on the natives of India?—As a civil surgeon and superintendent of a jail in the Central Provinces during the past eight years I have had opportunities of becoming acquainted with the habits of the civil population with respect to the consumption of opium.

27,426. Does that complete your experience?—Yes. As sanitary and vaccination officer I have had to go through the district every year, and have seen all sorts of people.

27,427. What has been the result of your observation?—In this district, Nimar, opium is given to children from the age of two weeks until that of two years. The poorer classes give it very generally in order to keep their children quiet; the richer classes, as a matter of custom.

27,428. Is it given almost universally?—Yes; it is almost universal among the poorer classes. In every village you will find a few elderly persons who take opium to relieve the pains of neuralgia and chronic rheumatism. Some also indulge in it as a remedy for diarrhoea and dysentery to which they are subject. The valley of the Tapti and the jungles of Nimar generally are very malarious tracts; and nervous and muscular pains, together with diarrhoea and dysentery, are frequent sequences of malarial fevers, and to relieve these opium is the only remedy within the reach of all, and many even cannot afford to purchase it, its price being so prohibitive.

27,429. What opinion have you formed as to the effect of the opium habit?—No evidence has come within my knowledge to induce me to believe that opium in moderate doses exerts baneful effects on the constitution, morally or physically. No case of insanity arising from the use of opium has come under my observation. With regard to the excessive use of the drug, I have seen a few old opium smugglers in jail who have certainly physically deteriorated under its use, but it is only fair to say that these men, as a rule, lead vicious and dissipated lives. Except in the large town of Burhanpur, there are, I am informed, but few opium smokers in the district; I have therefore no personal acquaintance with them. They are said to be among those who indulge excessively and suffer most, their physical deterioration being rapid.

27,430. In what light do people look upon the habit of taking opium?—Natives do not look on the moderate use of opium, even when not taken medicinally, as a degrading habit. Opium smokers and those who consume the drug excessively and neglect their duties are naturally not considered reputable members of society.

27,431. What do you think is the opinion generally held as to measures for the prohibition of the use of opium?—Although it would matter little to the majority of the people whether the growth of opium was prohibited or not, except for medicinal purposes, yet public opinion would be decidedly adverse to such prohibition.

27,432. Do you make that statement because the practice of the use of opium is not very widely spread in your district?—Yes.

27,433. Do you consider it possible to suppress the use of opium?—I do not see how it would be possible to entirely prohibit the growth of the poppy and the production

and sale of opium except for medicinal purposes. In order to be at hand for these latter purposes, opium shops would still be necessary throughout the district, and there could be no efficient check as to whether a person really bought the opium for medical purposes or not. To raise the price of the drug, and thus further limit consumption, would be to take out of the reach of the poorest the only means they have for the relief of much pain and suffering. I do not see how the existing Government system can be modified without raising the price, and thus putting the drug altogether out of the reach of the people. I do not think that the people would be willing to bear such extra taxation as would be involved by the prohibition or further restriction of the sale of opium, seeing that the wish of the public is not in this direction.

27,434. Is your district a malarial one?—It is very malarial.

27,435. Is there a current belief among the people that opium is good for malarial fever?—There is.

27,436. You have referred to neuralgia and rheumatism; is there a belief that opium is good for ague?—It is generally taken after ague.

27,437. Not as a prophylactic?—No, not as a prophylactic.

27,438. But to mitigate the symptoms?—The sequences, diarrhoea, dysentery, neuralgia, and muscular pains.

27,439. As far as you know, is opium really effective as a febrifuge?—I have no experience.

27,440. (*Mr. Pease.*) You say you have seen a few opium smugglers in jail; are they specially addicted to consuming opium?—Yes.

27,441. Have you seen no one in jail deteriorate under its use except smugglers?—Yes, I have. But they were chiefly smugglers.

27,442. (*Mr. Mowbray.*) Your district borders on Malwa?—On Indore.

27,443. Is there much smuggling across the frontier?—A good deal.

27,444. Does that account for your seeing opium smugglers in jail?—Yes.

27,445. I suppose you use opium medicinally?—Yes.

27,446. How do you obtain the opium you use medicinally?—From Government.

27,447. (*Mr. Haridas Veharidas.*) You are a Government servant?—Yes.

27,448. You are not required to have a license?—No.

27,449. (*Mr. Wilson.*) I do not quite understand whether upon the whole you think the habit of eating opium good or bad?—I do not see any evil in it. It is a stimulant, the same as beer or whisky, or anything of that kind.

27,450. If all your hospital assistants took it you would not mind; you would be indifferent on the subject?—If they took it in very moderate doses I should not mind.

27,451. What do you call a very moderate dose?—From two to eight grains daily.

27,452. You would not be afraid of its leading them further?—No. It does not generally lead further, in my experience.

The witness withdrew.

Mr. HARIDAS CHATTERJI called in and examined.

*Mr. Haridas
Chatterji.*

27,453. (*Chairman.*) You are a pleader living in Khandwa?—Yes.

27,454. You have been 15 years in practice there?—Yes.

27,455. And in your professional avocations you have been brought into contact with people inhabiting the poppy growing districts of Malwa, Indore, Mhow, and one or two Native States within the Central India Agency?—Yes.

27,456. Is Khandwa an important centre of the opium trade?—Not of the opium trade. It is a rising town of commerce.

27,457. It is a centre of trade, is it not?—Yes.

27,458. The Khandwa courts deal, do they not, rather extensively with opium smuggling cases?—They do. They give exemplary sentences.

27,459. In your profession you have had a good deal to do with these cases?—Yes; many cases come to us.

27,460. You are a native of Bengal?—Yes.

27,461. Comparing your observation as to the effect of opium at Khandwa with what you know of Bengal, what is your impression?—My impression is not unfavourable at all as regards the effects of opium. First, only a very small per-centage of people take to it—only those who are advanced in age and feel the effects of it; they take small doses with not very harmful effects; on the contrary, I

have seen instances in which they feel the good effects of small doses.

27,462. What do you say as to the moral aspect of the question?—As regards the moral and, I may add, social aspect of the question, I cannot say that (other exciting causes being absent) moral depravity or social degradation has ever sprung from the use of opium. Rich or poor, high or low, I do not think that any opium eater I have ever known has lost an inch of his position in the scale of social estimation, or that his habitual dose of opium has ever led him to any act of immorality. In one word, I know no distinction, socially or morally, between two individuals, one an abstainer and the other a consumer of opium—of course, *ceteris paribus*. On the physical and moral aspect of the question there are one or two points which deserve notice. The much maligned abuse of opium as an allurement for vice, and for what I may call sexual endurance, is what I had barely heard of, and I have now read a good deal since the sitting of the Commission. The detractors of opium made capital out of this. I confess I have no experience on this point, and I dismiss it with an observation that this is an instance of abuse of opium, and that even in that respect I have reasons to think that the picture has been considerably overdrawn. We have no right to take an instance of abuse and to condemn an otherwise useful necessary for human life.

27,463. Is the opium habit extensively adopted in the district of which you speak?—Not very extensively, though the facilities for using opium are very great. As a matter of fact, in many of the villages in the district, and in the adjoining districts, opium grows abundantly; still I do not find that, compared with Bengal, the per-centage of consumption in Khandwa is appreciably higher.

27,464. Is the administration of opium to children extensively resorted to in your district?—Yes. Since I have come into this part of the country I have found that it is more freely used than in Bengal.

27,465. In small doses without ill effects?—Yes.

27,466. What is the result of your observations as to smoking opium?—I do not claim much experience in regard to the results of smoking opium on the moral and physical man. For the little I have seen I have not a single good word to speak in its favour.

27,467. It is a bad thing?—Yes, it is universally condemned in our district.

27,468. What is the state of public feeling in the district for which you speak with reference to the use of opium otherwise than for the purposes of medicine?—The natives of this country with whom I am familiar think of opium more or less in the light I have expressed. Since the commencement of the present agitation and crusade against opium I have made it a point to study the opium literature published in papers, and to test and to take the sense of the native population here of all ranks with whom I have come in contact, and I have invariably found that public feeling is by no means adverse to the use of opium other than for the purposes of medicine. Its abolition is dreaded by the people with horror, and they consider that any attempt to restrict its consumption to cases certified by medical men would be a cruel instance of tyranny of the majority over the minority.

27,469. What would you say with reference to the smuggling which would be involved in the adoption of a prohibitive policy?—Under the circumstances described in the question, illicit trade in opium, of which I have an extensive experience in this district, will, I apprehend, increase many fold with the entire prohibition of the growth, production, and sale of opium. Opium is a self-prescribed medicine, and the habits of the people in this respect have become so deep-rooted that nature will assert itself and there would not be the least possibility of control. As compared with alcoholic drinks, opium is comparatively cheaper, and with all the stringent law and rules regulating its manufacture, import, export and sale, smuggling thereof, on various scales, is going on more or less throughout the country. By any prohibitive measure you cannot and will not be able to restrict the cultivation and growth of opium in the extensive Native States in Malwa and elsewhere. The decided feeling throughout the Central India Native States, in one of which I had recently been, is in favour of opium cultivation. Both the cultivators and the State profit by it, and this I know would be the unanimous testimony of all the Native Chiefs and Rajas who have been interrogated on the subject. The detractors of opium traffic would do well to remember what would be the necessary and the natural consequence of unrestricted or clandestine growth of opium in one part of the country and a keen hankering for the drug in another. Nature

will revolt against an administrative measure that seeks to divide and keep asunder these powerful attractions.

27,470. You do not recommend that the Government monopoly and advance for the growth and manufacture of opium should be discontinued?—It should be restricted.

27,471. You do not recommend any change with regard to monopoly and purchase?—I think the present system works very well.

27,472. But you do recommend, I understand, that the excise system being retained, some further restrictions should be adopted?—In view of the fact that, whereas a general prohibition of the growth, manufacture, and sale of opium will, while entailing a serious and needless loss of Government revenue, impose an additional burden of expenditure in the shape of an espionage and suppressing establishment all over the country, I would suggest that the whole excise system, and therefore the Government revenue, being retained, some restrictions should be imposed upon the free and unrestricted retail vend of opium to prevent the abuse or the occasional debauch with it, for criminal or suicidal purposes, and that these restrictions should be further extended, almost to the extent of prohibitive measures, against the licensing the manufacture and sale of opium in the form of chandu and madak. These restrictive and prohibitive steps will necessarily entail a slight fall of revenue.

27,473. Would the people be willing to bear the cost of prohibitory measures?—I am afraid not.

27,474. (*Mr. Pease*.) You state that in cross-examining a witness you find it useful and successful to charge him with being an opium smoker. Is that in cases where the quantity he smokes is comparatively small, or only where he smokes to excess?—The more a man is addicted to smoking the more he is unreliable.

27,475. You make this charge of a man being unreliable even when he does not smoke to any extent?—If he smokes chandu or madak he is more or less unreliable.

27,476. Do you always confine this charge to smoking, or are opium eaters sometimes charged in the same way as being "afimchis" or "afimkhors"?—That relates to consumers of large doses. Those in favour of whom I have spoken are those who take small doses to counteract the effects of advancing age.

27,477. I asked you whether the charge of being opium consumers was not sometimes made by pleaders against persons who ate opium, and did not smoke it?—Sometimes.

27,478. With a view to shake their credit?—Yes.

27,479. (*Mr. Mowbray*.) What is the retail price of opium in the bazars in Khandwa?—I am not quite sure; I think from six to eight annas per tola.

27,480. Do you know what it is over the border in Indore?—About four rupees a seer.

27,481. From the papers put in by the Government it appears that the price at which it is issued to licensed vendors in the Central Provinces is 22 rupees per seer?—Yes.

27,482. And you say that the retail selling price is about six or eight annas per tola?—Yes.

27,483. I may take it, then, that there is a very large difference between the retail price in Indore and in Khandwa?—A great difference.

27,484. Do you not think that that is a restriction upon the retail vend of opium in Khandwa?—It is sufficiently restricted as it is; but in order to prevent the occasional abuse of large doses being taken for the purposes of committing suicide, and so forth, we might put a further restriction if possible.

27,485. What have you in your mind when you speak of further restrictions?—I have not considered what the mode of restriction should be.

27,486. (*Mr. Haridas Veharidas*.) You say that you have invariably found that public feeling is by no means adverse to the use of opium other than for the purposes of medicine, I suppose you mean opium eating, not opium smoking?—No.

27,487. Would you qualify it by saying the moderate use?—The moderate use I mean.

27,488. Would you say that for a young man in good health to habituate himself to taking a moderate dose is a good habit?—Not for a young man, when there is no necessity for it, I do not think so.

27,489. (*Mr. Fanshawe*.) I understand that when you ask witnesses questions as to their opium eating with a

Mr. Haridas Chatterji.

19 Feb. 1894.

Mr. Haridas
Chatterji.

19 Feb. 1894.

view to shake their credit, you only do this if you have reason to believe that they eat opium in excess?—In excess.

27,490. The experience you have had is in the main the experience of eating opium in moderation, as I gather from your evidence?—Yes.

27,491. And the moderate use of opium is the rule and the excessive use is the exception?—Yes.

27,492. Can you tell me from what class of life chandu and madak smokers in the Nimar district are mainly drawn?—They are generally the lower order of Mahomedans in Burhanpur.

27,493. Is the taking of opium, in your experience, at all a common method of committing suicide in Nimar?—Not in that district.

27,494. When you speak of opium being used for criminal purposes, to what purposes are you referring?—Murdering and disabling people.

27,495. Have you any experience of its being used largely by regular poisoners or any class of criminals?—I have very little experience of that in the district. What I have stated has been gathered chiefly from the papers and from stories on the Bengal side, not in Nimar.

27,496. You are a Bengali yourself?—Yes.

27,497. And you have lived in the Nimar district for the last 15 years?—Yes.

27,498. In the discharge of your professional duties?—Yes.

27,499. (Mr. Wilson.) When did you begin to pay special attention to the opium question?—In my professional capacity I used to get large numbers of smuggling cases before me. It was a time when smuggling was going on extensively in Khandwa. The courts were rather lenient at first, at the commencement of my practice, and that leniency tended to smuggling going on very rapidly for some years. Since then I have not studied the opium question in its social aspect, but I think that the demand for opium, and the difference in price in the Native States and the British territories, produced very much smuggling. Eventually it was punished with exemplary sentences, and then it began to fall off. Since the sitting of the Commission I have studied the question to some extent, and I have

made inquiries among the people of all classes in the district.

27,500. In reference to opium smuggling cases, is it your impression that those are *bonâ fide* cases of smuggling or that they are cases of false accusation?—I am afraid that there are some cases of false accusation as well. There have been some cases in which false charges have been made, and the accused have been let off. Ample rewards were given, and probably in some instances that led persons to invent cases.

27,501. Whether rightly or wrongly, is it not a common belief in Khandwa that there is an enormous amount of corruption and false accusation in connexion with opium smuggling?—Three or four or five years ago that impression was abroad, but now it has died out. Even in the earlier days the false cases were not numerous; there were some.

27,502. Can you give me your idea of the proportion of adult males in Khandwa and the district to which you are referring who are in the habit of eating opium?—I am not exactly sure of the proportion.

27,503. Do you think it is 5 or 10 or 20 per cent.?—Hardly five per cent., perhaps just about five.

27,504. The rest of the people manage to live without it?—Yes.

27,505. Without suffering, as far as you can see?—Without any necessity for opium. I am not sure about the per-centage.

27,506. Should you say, upon the whole, that the habit of taking opium by persons in good health is a good or bad habit?—Without necessity it is, of course, a bad habit.

27,507. (Sir James Lyall.) Do you think it is a good habit for young men in good health to smoke tobacco?—It is not a good habit.

27,508. In your experience do the Central Province farmers and licensed vendors who have the monopoly in their circles help the collectors to detect opium smuggling?—They do.

27,509. Do any other people help to detect smuggling?—Besides those there are others who get rewards.

27,510. Informers?—Informers. They generally go up in the trains to Indore, and there they try to find it out.

The witness withdrew.

Mr. W. J.
Gladwin.

Mr. WALLACE J. GLADWIN called in and examined.

27,511. (Chairman.) Will you make the statement that you are prepared to lay before us?—Twenty-two years ago I came to India as a missionary. I have laboured in various parts of India and Ceylon. The opium habit was forced upon my attention the first year, as one of my Indian preachers was suspected by his brother Indian preachers of using it. They insisted that he should be put to the "opium test," i.e., closely watched 24 hours. It was stated that a confirmed opium user, when deprived of the drug, would within 24 hours show such nervous depression as would betray the habit. I noticed the absolute condemnation of this vicious habit by all the natives who spoke of it. It was especially affirmed that opium blunted the moral sense, and made people dishonest. Several times I have visited the opium dens of Bombay and elsewhere. Talking freely with the inmates I have heard only unqualified regret at the slavery which bound them. Most remarkable is the despair which all express. Other vices they say can be given up, but opium never. In 1891 I had much correspondence with newspapers in India upon the subject of the opium traffic. I sent circulars of inquiries to many editors of papers, who were Indians, and as far as opinions were expressed they were unanimous in their condemnation, not of the opium habit merely, but of the traffic which so mightily facilitates and promotes the use of that poison. In London three years ago—by way of testing the subject—I attempted to purchase a small quantity of opium. At every place I was refused, except one druggist, who hinted that I might get some clandestinely. Returning to India I tried to see how easily opium was available, and how much could be procured. I saw little children of 10 years of age purchase it at the open stalls in the Crawford Market and Null Bazaar. The quantity was practically unlimited. Though only 10 tolas were allowed to be sold to one person (I have been since informed that it was reduced to two tolas in 1892), yet the opium vendors told me that if I wanted more, to call together some of the bystanders and they would let me have 10 tolas for each one. The

same questions were asked by others, and the vendors freely offered to sell any quantity that might be wished in this manner. Considering how much testimony has recently been given in India in favour of the use of opium not only as to its being innocent and harmless, but actually useful in many ways, it is evident that some great change of public opinion must ensue. If this proposition is believed, then British law is utterly wrong in depriving the people of the United Kingdom of an article so very useful, and which at its worst is only a comforting luxury. In Colombo I was told, when talking with men in the opium dens, that they took up the habit in connexion with diseases brought on by immorality. I have here a statement by John Dudgeon, M.D., surgeon to the Pekin Hospital, which I should like to read.

27,512. This is a statement by another gentleman?—It is an extract from the "Transactions of the Social Science Association at the Liverpool meeting, 1876."

27,513. (Chairman.) Unless we put some limitation upon the reading of extracts from the writings of other persons, and limit the evidence as far as possible to the testimony of witnesses to facts coming under their own observation, an indefinite extension may be given to our labours.

27,514. (Sir William Roberts.) In connexion with what society are you labouring?—I am labouring as an independent missionary under no society.

27,515. By yourself?—Yes.

27,516. Do you take the same attitude with regard to alcohol as you do with regard to opium?—Very much the same; but I believe that opium is, under the circumstances, more of a danger because of its seductive influence upon the people.

27,517. Do you look upon the moderate use of alcohol in Europe as an evil?—Yes, I have long been of that opinion.

27,518. And a thing to be suppressed by law?—I think it would be better if there were some sort of suppression.

27,519. (*Mr. Mowbray.*) Do you say that you have seen opium sold at the open stalls in Crawford Market and Null Bazaar in Bombay?—Yes, I have seen opium sold.

27,520. How many of these opium stalls did you see?—I visited a large stall in Null Bazaar and another in Crawford Market. I visited one stall in each market.

27,521. Did you notice whether there was any license board where the opium was being sold?—I think there was, but I am not sure.

27,522. Did you ever think of inquiring?—No. The people were there strolling about and buying opium very largely.

27,523. They would hardly be doing that, I suppose, if it had not been a licensed shop?—I should think not if the opium department were wide awake.

27,524. I thought from your statement that you had seen it in many cases, but you now say that you saw one stall in Crawford Market and one in Null Bazaar?—For public sale. The dens using it is another matter.

27,525. When did you see the opium dens, within the last six months?—Not so recently. It has been during several years observation.

27,526. (*Mr. Haridas Veharidas.*) Do you know that the amount of opium that can be sold has been lately reduced from 10 tolas to two tolas?—Yes.

27,527. Then your remark would be so far modified?—Yes. I so stated.

27,528. Four friends could buy eight tolas, two tolas each?—Yes.

27,529. Do you think they would do that for you, and give you all that was sold?—They freely offered to let me have it if I could only get the coolies to come for it.

27,530. Did you accept the 10 tolas from each of these four or five persons?—I believe the men meant what they said; they offered it freely.

27,531. But you did not try it practically; you did not get the 10 tolas?—No. I fully believed their statement, but I did not put it to the test.

27,532. (*Mr. Fanshawe.*) In what parts of India have you had experience? You mention Ceylon?—In the North-west Provinces, Madras, and Ceylon, and more especially in Bombay.

27,533. Is your missionary work still carried on in Bombay?—Yes.

27,534. You have been here some years?—Yes.

27,535. Eight or ten years?—Yes.

27,536. I understand your evidence to relate more particularly to opium smoking?—Both smoking and chewing it. The first case that I mentioned was that of a man who swallowed opium.

27,537. Chewing is one thing, taking a pill is another. You mean swallowing?—Yes.

27,538. Has it come within your experience that opium is used as a domestic remedy, and also as a restorative by men in older life?—I have known it frequently used to put children to sleep while the mothers are at work, not otherwise.

27,539. Those uses have not come within your experience?—Not as a medicine, except in cases such as I mentioned where persons took it to get relief for diseases brought on by immorality.

27,540. You never heard of its being used to give relief in cases of rheumatism, pains, cold, and so on?—No. I suppose it is sometimes used as such.

27,541. You never heard of its being used as a restorative by men after 35 or 40?—No, I have not.

27,542. (*Sir James Lyall.*) What was the result of the test you applied to the Indian preacher?—He refused to be put to the test, and left the mission.

27,543. Does your church make abstinence from alcohol as well as opium a rule of faith?—I came to India as a missionary of the American Methodists, but I am not under their direction now. I am labouring independently. They try to enforce total abstinence.

27,544. With reference to the answers you say you received at the opium dens, do you not think that if an English gentleman spoke to arrack drinkers they also would say that it was a very bad custom?—Some do, and some do not; some defend it, as our countrymen do.

27,545. It is not the general way in which natives will answer you when you speak to them? They do the thing, and yet do not defend it?—I think not, as a general rule. I felt that they were honest in their remarks.

27,546. Are you quite sure that you correctly remember the facts in the story you told about going to a number of druggist shops in London and trying to purchase opium?—Yes.

27,547. What reason did the druggists give for refusing to sell opium?—In Holborn they simply said they could not do it. The druggist in Camden Road showed me the law, and said I must get a prescription. Almost all asked me if I had got a prescription.

27,548. Are you aware that there is no law requiring a prescription?—I saw the law. They seemed to fear selling it without some medical authority.

27,549. Are you aware that there is no such law as you state, and that there is no such general practice?—I am not aware of it.

27,550. That as a rule druggists supply any man who asks with opium or with laudanum?—I was not aware of that; it is news to me.

27,551. That makes me very much astonished at your story. What did you say? Did you simply ask for so much opium?—I asked if I could purchase some opium.

27,552. How much did you ask for?—I did not ask for any quantity at first. One or two asked me how much I wanted, and I said "a small quantity." It struck me with surprise that druggists themselves seemed to be so much afraid of selling it.

27,553. Are you aware that in some parts of England where opium eating is common the opium is made up in packets and put on the counter on fair days and market days?—I am not aware of it. I have read on what I believe to be good authority that there are opium dens in London where people can get it.

27,554. I think you said that you considered opium more seductive than alcohol?—Yes.

27,555. In the case of alcohol are not taste and the pleasure of drinking in company large items of seduction?—I suppose they are.

27,556. And are not those items entirely absent in the case of opium eating?—They may be so. It seems to be more of a slavery to the habit; it seems to come any way, whether there are friends or not.

27,557. (*Mr. Wilson.*) You have referred to what you learned 22 years ago. You have not told us whether your view is the same still, whether your observation has lasted to the present time?—Only changed to be more decidedly against the habit.

27,558. Has your more recent observation tended to confirm what you then learned?—Yes, indeed I may say more than confirmed what I then learned.

27,559. What would you say as to the general opinion of the people of Bombay at large in reference to the opium habit?—I have heard it always condemned except where people apologise in the way they do sometimes for a bad habit, saying that they must do it, and that they rather like it, but more or less in terms of condemnation.

27,560. With reference to your experience in England, are you aware that if the chemist had consented to sell the opium to you he would have had to label it "poison"?—I so understood. I procured a small pill in Camden Road, and it was labelled "poison."

27,561. Are you also aware that, as a matter of fact, all respectable chemists and druggists exercise a very careful scrutiny over the persons to whom they sell opium?—I understand that as a matter of common repute.

27,562. And are you aware that in some large towns there is an honourable understanding among all respectable chemists and druggists to limit and restrict the sale as far as they possibly can?—I was not aware of that, but I have read in some articles of the Chemists and Druggists' Society that they were bound by law to a very exclusive policy—the members of the Association.

27,563. (*Mr. Mowbray.*) Can you tell me how many chemists and druggists there are in India of the same class as the chemists and druggists in England?—I do not know. I should think there were but few, because so much work is in the hands of the official departments, but little independent practice apparently.

The witness withdrew.

Mr. W. J. Gladwin.

19 Feb. 1894.

Mr. Kalidas
Chaudhri.

19 Feb. 1894.

Mr. KALIDAS CHAUDHRI called in and examined.

27,564. (Mr. Fanshawe.) I believe you are a pleader at Hoshangabad, in the Central Provinces?—Yes.

27,565. Will you tell us what opportunities you have had of learning about the opium habit in that district?—I have been a pleader in active practice in this district for the past 1 years. In my professional business, and in my capacity as a member of the local board, district council and municipality, at different times of my life, I have had innumerable opportunities of coming in contact with various classes of people, and though I never made a special study of the subject of the use and effects of opium, yet I can safely say that I possess a general knowledge of the subject with reference to a large portion of my countrymen.

27,566. What opinion have you formed as to the effects of the opium habit on the moral character of the people to whom you are referring?—I have been led to form no adverse opinion regarding the effects of opium on the moral condition of the people who habitually use it. In fact, I consider the two questions are quite independent of each other. I do not know of a single case where I pleaded that a crime was committed because the offender was under the influence of opium, nor do I remember any of my professional brethren having raised such a plea in any case. I think it would not be irrelevant if I were to say here that an opium eater is quite inoffensive and uninjurious to society, unlike people who are given to the habit of drunkenness. Society is quite indifferent as to whether a man takes opium or not. It condemns and excommunicates a drunkard, but an opium eater or smoker is never noticed even.

27,567. What have you to say as regards the physical effects of the habit?—As regards its effects on the physical condition, I have never taken opium myself in any shape, but I have heard from a great many people who take it moderately and habitually that it acts as a preventive against many diseases, and checks the progress of the effects of age. The common saying is “jis umar men ‘khali usi umar men rahe’” (one remains at the same age at which one begins to eat opium). The undisputable facts are that when moderately taken, opium does no harm to the physical constitution, and that its prophylactic and curative virtues are recognised by all those who take it. The Marwaris, for instance, take opium almost without exception, and habitually, and yet they are the best accountants and men of business. Similarly the Sikhs use it, and yet they are the best soldiers in India. To say the least, opium does not make the user an inefficient and immoral member of society. It does not muddle his head or make him an unfit workman. But this is only when opium is moderately used.

27,568. What is the result of opium taking in excess?—When excessively taken, which is exceptional, it makes him physically weak, and renders him unfit for the performance of his usual work.

27,569. What is the opinion of the natives, with whom you are familiar, with regard to the use of opium?—The general impression is that, whether in eating or smoking, the invariable accompaniment of the use of opium should be good nourishing food. Those who can afford to live well do not at all feel the evil effects of opium on the physique. Such people are, on the contrary, very healthy looking and active in business matters. But without nourishing food opium does harm, especially the using of it by smoking. Without good food, the opium eater and smoker deteriorates both physically and mentally. But this is only an impression which may or may not have a sound reasonable basis.

27,570. In saying that this is only an impression, you mean us to understand that you have no knowledge personally of these effects?—I have not myself taken it. The opium eaters and smokers to an excessive extent, who are a cause of anxiety to the society and to the State, are very few compared with the vast number of people who take it moderately or do not take it at all. Briefly my answer to the question is, that the use of opium has no connexion whatever with the moral condition of the user; that a moderate use does not tell upon the physical constitution; that excessive use renders the user unfit as a member of society, both physically and mentally, but happily the number of such users is very limited; that the use of opium by smoking is more injurious than its use by eating.

27,571. I suppose you mean that the use of opium in moderation has no connexion with the moral condition of the user?—Yes.

27,572. What is the opinion of the natives of the Hoshangabad district on the subject of opium consumption generally?—I am familiar with the natives of this district, and I am not aware that they hold an adverse opinion regarding the use of opium. The use of madak is more resorted to by the lower classes of the society, and this is a reason, I believe, why opium smoking is now and then found to be condemned, for in a country where the caste system has taken a firm root, anything that is done by the people of the lower order is condemned, not because the thing itself is bad, but because the lower classes do it. As opium is used by the high and the low in most cases moderately, and in very exceptional cases excessively, without any condemnation from society, there is no strong public opinion adverse to its use.

27,573. We have been told by a number of persons that the term “afimi” is used as a term of reproach; in your experience, would it mean an opium consumer in excess or an opium consumer in moderation as well?—The expression is used in regard to those who take it excessively.

27,574. Do you think it would be possible to entirely prohibit the growth of poppy or the sale of opium except for medical purposes?—I do not think it is possible to entirely prohibit the growth of the poppy and the production and sale of opium, except for medical purposes, in this part of India, or, for the matter of that, anywhere in India. Opium is considered to be a necessity in many localities, especially in malarious localities, and even if it were possible to prohibit the growth of poppy and sale of opium in India by means of a legislative measure and treaties with the Native States, the prohibition would produce such an immense dissatisfaction (not amounting to political danger) and discomfort amongst the people, that such a measure would not last for a day even, but Government will be compelled to restore matters to their original state immediately. If such a measure were adopted there is every likelihood of the people taking to cheap alcohol which is more injurious than opium.

27,575. You have spoken of the use of opium in malarious localities, am I to understand that the prevalence of a belief to that effect is within your personal knowledge?—It is not within my personal knowledge; I have simply heard of it.

27,576. Do you think that any further restrictions or modifications of the present system are desirable?—The Chief Commissioner's Circular No. 4, of 1890, has introduced very useful changes in the system regulating the sale and manufacture of opium. It has prohibited the conversion of opium shops into dens for opium smoking, and has further directed, as an ordinary rule, to grant madak licenses only at large centres of population where there is a considerable demand for its preparation. This has placed a healthy check on the consumption of madak which is undoubtedly more injurious than the eating of opium. This will, of course, reduce the consumption of opium generally. I think this check is quite sufficient for the present, as the spread of education and civilisation is also working towards its reduction to a minimum.

27,577. Is the practice of smoking madak at all common in the Hoshangabad district?—I cannot say that it is common.

27,578. Can you tell us the classes by which the practice is followed?—By the lower classes of sweepers and Mahomedans.

27,579. Do you believe that the people would be willing to bear any extra taxation?—I do not think that the people would be willing to bear any extra taxation, if prohibition or further restriction were to be decided on, resulting in the loss of revenue to Government. There is no scope for further taxation.

27,580. Are you a Bengali?—Yes.

27,581. Have you been settled for some years in the Hoshangabad district?—Yes, for the past 22 years I have been connected with the Hoshangabad district.

27,582. (Mr. Haridas Veharidas.) You say that the use of madak is more resorted to by the lower classes of society, and this is the reason why opium smoking is now and then found to be condemned; you also say that opium smoking is more injurious than opium eating. Would you not modify your statement and say that the opium habit is condemned, not merely because it is used by the lower classes, but also because it is a bad habit?—No madak smoker has ever been excommunicated or condemned in society.

27,583. Do you consider that the use of opium in moderate doses for a young man in good health is a good thing?—Never in my experience have I known it to be a bad thing.

27,584. Do you take opium?—I do not take it, but I would not hesitate if I were advised.

27,585. Advised by the doctors?—Yes.

27,586. Then if advised by the doctors it is a good thing, and if not it is a bad thing; is that what you mean?—No, I do not mean that. I would not consider it at all necessary to take the opinion of a doctor before taking opium. In my own case I might do so, but I do not think it is absolutely necessary to take the opinion of a doctor before beginning to take a moderate dose of opium.

27,587. Then is it one rule for other people and another rule for yourself?—No. It entirely depends upon the person to take it or not to take it. It is not necessary that he should always go to a doctor for advice.

27,588. (Mr. Mowbray.) The closing of the smoking shops in the Central Provinces was carried out some time ago?—In 1890.

27,589. Do you know whether that has practically put a stop to smoking shops, or do they still exist under

another name?—The practice has decreased to a considerable extent as is shown by statistics. There were 151 shops, and the last report shows that there are now only 130.

27,590. What figures are you quoting from?—From the Government reports. They show that there has been a perceptible decrease in the number of madak shops in the Central Provinces by reason of the circular No. 4 of 1890.

27,591. What I asked was, whether smoking on premises where madak is sold has been put a stop to, or whether it still takes place in clubs under another name?—Not that I know of. In the headquarters of the district I find that it has decreased to a great extent.

27,592. (Mr. Pease.) What is your opinion with regard to the Sikhs?—It is only hearsay, but with regard to Marwaris I have personal knowledge.

27,593. Would you be surprised to hear that more than one colonel of a Sikh regiment told us that there are only eight or nine men in their regiment who take opium? (No answer.)

27,594. If conscientious Hindus and Mahomedans were unable to obtain opium they could not resort to alcohol?—Orthodoxy has been very much slackened now-a-days. Necessity might drive them to take cheap alcohol.

The witness withdrew.

RAI BAHADUR RAGHOB MAHADIK called in and examined (through an interpreter).

27,595. (Mr. Fanshawe.) You are an honorary magistrate of the Raipur district, I understand?—Yes.

27,596. Will you kindly tell us what your position is; are you a landowner?—I am a zemindar in the Raipur district.

27,597. Will you tell us your experience as regards the habit of consuming opium?—I have often had special opportunities to deal with the people and localities in general whereby I have become acquainted with the use and effects of opium. In my opinion of those who habitually use opium, the habits of the opium eaters are not bad, but the smokers, and specially those who cannot afford to have nutritious food, generally take to bad habits. Opium does no physical harm to the eaters, but it does so to the smokers. As far as my experience goes, the effects of eating and smoking opium are quite different. People generally eat opium when they grow old with a view to keep up their health and comfort, and they are really benefited by it. Opium eating does away to some extent with several diseases, which usually accompany old age, and keeps up physical strength in its original state. It has been generally seen that people who do not take opium on attaining old age, and who complain of certain diseases, are advised by opium eaters as well as by those who do not use it to eat a little opium every day, and that opium in such cases does produce some good. Had opium not been beneficial in its effects, small children of our country would not have been given opium to eat which they are daily given till they grow two or three years old. People fall into the habit of smoking opium in the very prime of their youth, and oftentimes even before that, on account of bad company or immoral pursuits, and it has been generally seen that those who are greatly addicted to opium smoking, and specially those who cannot provide for nourishing diet, &c., are deprived of their physical strength which declines more and more as their age advances. Often the people do not remain even strong enough to follow the pursuits for which they commenced to smoke opium. Opium smoking makes a man contemptible in the eyes of his fellow brethren, his face becomes blackish, his very appearance indicates that he is a "opium smoker." Several persons addicted to this habit commit petty thefts, when they fall in want of money for purchasing opium. Well-to-do persons, however, are not driven to this extreme, because opium smokers like sweatmeats and nourishing diet, and these to some extent avoid the bad consequences of opium smoking which usually fall to the lot of the poor. Still those who are very much addicted to this habit become physically and morally weak and incapable of attaining their object with which they commenced smoking opium. Their name is also stained. The public opinion is that madak should be stopped altogether, because of its bad effects, which I have already described, but that opium eating should not be prohibited. In my opinion

smuggling of opium is quite possible, but the measures nowadays taken for minimising the growth and sale of opium should be kept as hitherto done. Vend and use of madak should be entirely prohibited in order to save the people from its bad consequences, which I have already mentioned in my reply. It is worth while to note here that it will be almost impossible to stop the manufacture of madak altogether when the production and sale of opium are not prohibited, for madak will then be manufactured secretly at home. But when the Government will try to put a stop to it, people will get but few opportunities to do so when its sale will be prohibited. The police should be required to keep a strict watch on the opium smokers. Proper punishment should be awarded, and the informers rewarded when a case of opium smoking be clearly proved by evidence. In this way, it is hoped, use of madak, specially by those who have not yet commenced it, will gradually disappear altogether. I am not well acquainted with the present system in these provinces regulating the sale and manufacture of opium. In my opinion sale and manufacture of opium should not be prohibited. I do not therefore think it advisable for me to touch on the question of modifying the existence, or of introducing new rules on the subject. For the sake of a very small proportion of the population who use opium, I do not think it justifiable to compel the people in general, the greater portion of whom do not use opium at all, to bear any extra taxation which will be necessary to compensate the loss resulting from its prohibition. I do not think that people will be willing to bear such taxation. In my opinion madak should at first be totally prohibited and then for a year or two the excise income from sale and manufacture of opium should be compared with that of previous year's. If there be any significant loss by the prohibition of madak, the duties on the manufacture and sale of opium should be proportionately raised so as to compensate the loss. In this way, i.e., by selling opium dearer, only those persons who use it will have to bear the additional charge, while those who do not use it will have no ground to complain of.

27,598. Do you know if there are many people who smoke opium in the Raipur district?—The number is less than those who eat dry opium.

27,599. Can you tell us among what classes the practice of madak smoking is most common?—All classes.

27,600. (Mr. Pease.) What per-centage of the adult males in your district take opium in any form?—After the age of 50 most people take opium, because they think that opium benefits them.

27,601. What do you mean when you speak of the very small proportion of the population who use opium?—Yes, a small proportion of the population take opium.

27,602. But you have just told us that nearly everybody takes it after 50 years of age?—Not all; only a small proportion. Some do not take it.

The witness withdrew.

Mr. Kalidas Chandri.

19 Feb. 1894.

Rai Bahadur Raghoba Mahadik.

Lala Nand
Kishore.

19 Feb. 1894.

LALA NAND KISHORE called in and examined.

27,603. (*Mr. Fanshawe.*) Will you kindly tell us what your position is in Saugor?—I am a banker, zemindar, merchant, honorary secretary of the municipal committee, and honorary magistrate.

27,604. Is the honorary secretary to the municipal committee of Saugor elected or nominated by Government?—Elective.

27,605. Have you had many opportunities of acquainting yourself with the people of the Saugor district who use opium?—Yes.

27,606. What opinion have you been able to form regarding the effects of opium on the moral and physical condition of the people?—Moderate eating of opium is morally and physically beneficial. Smoking and excessive eating of opium are most undesirable, both morally and physically. Opium can be eaten without anybody's knowledge and without forming a society, while smokers of opium have to devote much of their time in using the drug, which does not prove of sufficient relish without society, and such society necessarily cannot be of good classes of people.

27,607. What is the general opinion, so far as you are aware, as regards opium smoking?—Smoking is generally looked down among people of the middle and richer classes. The opinion of the public is very much against the smoking of the drug only, the excessive use of which has ruined the constitution of all consumers, who generally belong to the poor class of people and who cannot afford to get sufficient and rich nourishment as is required.

27,608. Is madak smoking at all common in the Saugor district?—Yes.

27,609. Fairly common?—Yes.

27,610. Would the prohibition of the use of opium except for medical purposes be practicable?—I consider entire prohibition of sale, except for medical purposes, impracticable. Consumption of opium for purposes of eating should not be checked. Smoking should be put a stop to totally. The prohibition of smoking will not in my opinion affect the present revenue, as smokers will as an alternative take to eating.

27,611. Do you consider that the policy of prohibition would be regarded with discontent by the people of Saugor?—Only smoking; not eating.

27,612. Do you think the prohibition of eating would be regarded with discontent?—Yes.

27,613. Have you personally come across many cases of opium eating or smoking in excess?—Yes.

27,614. Many cases?—Yes.

27,615. Among what class of people would these excessive cases be?—The smoking would be among the lower classes.

27,616. As regards eating, have you come across many cases of excessive eating?—Both among the poorer classes and the richer classes.

27,617. Have you personally known many such cases?—I know a few.

27,618. A few such cases?—Yes.

27,619. (*Mr. Haridas Veharidas.*) You say that the moderate eating of opium is morally and physically beneficial; may I ask you in which way the moderate eating of opium is morally beneficial?—I mean by moral that the opium eaters do not do any harm; they are not injurious to anybody.

27,620. (*Mr. Mowbray.*) Have you got many shops in the Saugor district where you can buy madak?—There is only one shop where madak can be sold.

27,621. Is that a shop where you can buy both opium and madak?—Yes.

27,622. Where do people smoke madak in Saugor?—In Saugor the general order is that they must smoke in the big shop. There is only one suddar shop, and the people are only allowed to smoke there.

27,623. Do they smoke in the suddar shop?—The order is to that effect; and those who smoke in their private houses are arrested, because in private houses it is strictly prohibited to prepare and smoke madak. They can buy ready made madak.

27,624. Do you mean that they smoke at the suddar shop where they buy it?—Yes, most of them smoke there.

27,625. (*Mr. Pease.*) If smoking was prohibited you say that the smokers would take to eating; do not you think it would be a good thing for them to take to eating?—Better than smoking.

27,626. You spoke as though you think it would be rather a good thing for the revenue that they should take to eating; would you not prefer that they should give up opium altogether?—It seems to me the people could not do that.

27,627. They could not do it?—No.

27,628. (*Mr. Fanshawe.*) With regard to the statement you made about smoking on the licensed premises, are you aware that smoking madak is not allowed in licensed shops. The sale of madak is allowed, but the smoking of madak is not allowed in licensed shops?—I am aware of that; but they cannot smoke anywhere except in the suddar shop where it is sold.

27,629. But smoking is prohibited. The order of the Government is that madak may be sold, but smoking on the premises is prohibited; are you aware of that?—Yes, I am aware. It is only sold in one shop.

27,630. Yes, sold; but not smoked?—Yes, but few smoke there.

27,631. Have you seen that yourself?—Yes.

27,632. Lately?—Yes.

27,633. In the licensed shop?—Yes.

27,634. Actually in the licensed shop you have seen some few people smoking?—Yes.

27,635. And that is what you are referring to?—Yes.

27,636. You are an honorary magistrate, did you take any action to bring this breach of the law to the notice of the authorities?—A few people were arrested lately.

27,637. Owing to your action?—No, not on my action, but the action of the police.

27,638. Are you quite sure you are telling us what you really saw, people smoking in a licensed shop just lately?—Yes.

27,639. And the people were arrested by the police, and you saw it?—Yes.

27,640. You are speaking of what you saw when these people were arrested?—Yes.

27,641. (*Sir James Lyall.*) Do you know what the madak is made of in the Central Provinces?—Babul leaves, and some people make it of betel leaves and opium.

27,642. Liquid opium, I suppose, mixed up with the leaves and fried?—The leaves are fried first, and the opium is melted, and they are then mixed together.

27,643. When the custom of smoking hookas prevailed a good number of people used to smoke opium with tobacco in hookas, did not they?—No.

27,644. Never?—No.

The witness withdrew.

Dr. C. S. DURAND called in and examined.

Dr.
C. S. Durand.

27,645. (*Chairman.*) Will you kindly make any statement you wish to make to us?—I am a medical missionary, a graduate in medicine, having practised two years in America before coming to India. I have been in India four years and three months, most of the time at Harda in the Central Provinces. I began medical work among the natives immediately upon my arrival in the country. I am well known in Harda, having attended a medical dispensary all the time I have lived here and visited the sick in

their homes in every part of the town, making many visits almost daily. The people not only know me but have sufficient confidence in me to speak without fear or reserve in reference to the use of opium, as they might not do to a stranger. I know personally at least 15 confirmed opium users in Harda and adjacent villages. I speak with them frequently and freely in reference to the habit. Everyone I have spoken to on the subject gives testimony to the effect that the use of the drug is injurious but the habit

cannot be stopped. I visited an opium smoking resort at 8 p.m., January 22nd. I found 12 men who said they were smoking madak. I asked them if opium and the common preparations of it were beneficial or harmful. They all replied promptly that they were very harmful. "Why do you use them if they are so harmful?" I asked. "We cannot give up the habit" they answered. "But why did you begin to use the drug in the beginning?" "Because of the force of example. It was offered to us by others and we began to use it out of curiosity, but now the habit has such a hold upon us that we cannot give it up." "Does the use of opium make you stronger so that you can do more work?" "No it makes us weaker. We cannot do as much work as those who do not use it." "Would it be a good thing or a bad thing for the Government to close all the shops and stop the sale of opium?" All promptly and unanimously said "It would be a very good thing." "What would be the benefit?" "Our children would not be ruined. Several boys 10 or 12 years of age in Harda are confirmed opium users!" "How would it affect those who are confirmed in the habit to have the supply stopped?" "They would be troubled more or less with diarrhoea and prostration for a time, but the most of them would recover from that." It is a common practice in this place for parents and nurses to give infants opium to make them sleep. I knew one case of a child being given opium until, at the age of about two-and-a-half years, there was apparently scarcely a tissue left in its body but skin and bones, and it died of marasmus caused in all probability solely by the opium. I recall two more similar cases. The appearance of each child was the same as that of the first. I lost sight of these two cases but I am positive that they could not have lived long after I saw them. The symptoms of chronic opium poisoning are very peculiar and unmistakable. The skin hangs loose on the body, as if the flesh was taken out; and the face looks old and wrinkled and dried up. It is not to be mistaken by one who has had an opportunity of observing it. I was called on January 22nd to see an infant six weeks old, which was suffering from constipation and retention of urine brought on by an overdose of opium. This infant has had opium almost daily since its birth. It is very small, appears not to have grown at all since its birth, and its skin is loose and wrinkled like that of an extremely old person. It has since died. I have seen another case since, which is in a fair way to die also. The child is six months old and has had opium daily. I told the parents it would not live another six months. It is of the same community as the other case I mentioned. I have had some experience with opium users as labourers. A year ago I employed a man to carry two small loads a short distance. After carrying one load he said he could do no more without opium although the whole job would not have occupied more than an hour. As I refused to pay him before the work was finished and he had no money he borrowed two pice and invested it in opium. I saw no more of him that day, but the following day he brought the man from whom he had borrowed the two pice and asked me to pay the pice to him. On January 27th I sent a small load from the bazaar to my house by an opium smoker. My servants know the man well. They say he was once a well-to-do man, son of a jeweller, but since forming the habit of using opium he has spent all his money for it—has sold all his property and all his clothes except a few dirty rags. He now hangs around the bazaar earning a pice or two now and then, which he immediately spends for opium, while for his food he either goes to his parents or begs it. I see the man every time I go to the bazaar.

27,646. (*Maharajah of Darbhanga.*) You refer here more to opium smoking than eating, I suppose?—I am not certain in all cases which they do, whether they eat or smoke it. In the case of the twelve I saw at the smoking dens, they were all smoking; but in the case of the two coolies I have mentioned, I am not certain whether they smoked or ate.

27,647. (*Sir William Roberts.*) Where were you a graduate of, Dr. Durand?—St. Louis, Missouri, U.S. America.

27,648. Did you receive a full medical training?—Yes.

27,649. Is the practice of giving opium to infants very common in the neighbourhood of Harda?—It is. The mother of the child I last spoke of told me, when I told her the child would not live unless she stopped giving it opium, "all our caste give opium."

27,650. We have heard before that 80 or 90 per cent. of the infants would have opium given to them?—Yes, I should think so.

27,651. There must have been something exceptional in these cases that fell under your notice?—Yes, it is only

those into whose houses I go that I see, unless my attention is called to them, I do not see them.

27,652. How do you account for the exceptional condition of these infants you mentioned?—In the case of the use of every drug, opium as well, it has a different and more pronounced effect on some persons than on others.

27,653. Then you think it was an individual idiosyncrasy?—I think you might express it in that way, and that idiosyncrasy might be expressed as a peculiar susceptibility to the opium poison. It is hard to tell what proportion of people have that to such an extent that they would be poisoned by the opium. Some have it and some have not.

27,654. Would you think that there was greater injury done by opium amongst these infants than the occasional opium poisoning that takes place in England and America?—It is more general.

27,655. What makes you think so?—Because more infants get it. It is given to a greater per-centage, 80 or 90 per cent. of the whole number are given opium, whereas in England or America a rather small per cent. get opium.

27,656. That is not quite a conclusive reason. I presume there is a greater tolerance of opium amongst the infants of India than amongst the infants of England or America?—That idea has never struck me.

27,657. If in India 80 or 90 per cent. of the children get opium and yet live to be young men or young women there must be something very exceptional in these cases of opium marasmus?—Yes.

27,658. Did you ascertain whether they had any disease?—It was mentioned they had not.

27,659. Did you make an examination?—Yes.

27,660. You could not detect anything?—I could not detect anything else.

27,661. Did you not find that when you detected a case and told the mother she was giving the child too much opium the child recovered?—Cases that have gone so far, that get the peculiar symptoms of chronic opium poisoning, I have never seen recover.

27,662. Is not that rather a sign that there was some other disease?—I do not think so, because the pure effects of opium on the healthy body are just those.

27,663. It does not produce any deleterious effect apparently: except in these singular exceptions, it does not hurt the infants at all?—It does not, apparently, hurt them so much. I think it does hurt them. I think it injures them physically, at least, if not mentally and morally to some extent; but not to so great an extent as the cases noticed.

27,664. (*Mr. Mowbray.*) Your experience is all Central Provinces experience?—Yes.

27,665. What sort of a place is Harda; is it a district or town?—A town.

27,666. What size town?—A town of between 13,000 and 14,000.

27,667. I see you say you know at least 15 confirmed opium users in Harda and adjacent villages; I suppose you mean 15 people who consume it in excess?—Yes, in excess; people who are fit for nothing, who barely work long enough to get a pice or two for opium, and then go and take a smoke; and who then go and get another pice to buy opium to smoke again.

27,668. Thirteen or fourteen out of 15,000 is not a very large number?—These are very excessive users.

27,669. Smokers or eaters?—I am not certain.

27,670. Was the smoking resort you went to in Harda?—Yes.

27,671. Have you given any attention to the law about these smoking places?—Somewhat.

27,672. Was it a licensed shop where you found these people smoking?—It was not in a shop. It was under a tree on the other side of a narrow street.

27,673. On one side of the street there was a shop; had the shop a license board up?—I do not recollect a board; I am sure it is a licensed shop.

27,674. Licensed for the sale, I suppose, both of madak and opium?—They have both there at least.

27,675. And you found these people smoking on the other side?—Under a tree.

27,676. Not in a house at all?—No. There is one little shed made of bamboo matting in which they smoke; and there is a tree under which they congregate and smoke.

Dr.
C. S. Durand.
19 Feb. 1894.

Dr.
C. S. Durand.
19 Feb. 1894.

27,677. Then you would not suggest there was anything illegal in that?—I do not see how you could make an illegal point of it.

27,678. (Mr. Haridas Vekaridas.) Have you a dispensary as well as a hospital?—I have no hospital. I am building one now. I have a dispensary.

27,679. You have no place to keep patients in?—Not yet.

27,680. Do you think that those people who told you opium smoking was a bad thing, and if they were able to give it up it would be a good thing, were serious?—I have no reason to doubt what they said. I did not extort anything from them at all. They were very glad to speak about it. They said, "We will come to the dispensary to get some medicine to leave off the habit."

27,681. Perhaps, knowing you did not like the habit, they said that to please you?—They would have denied even smoking it if they had any such idea in their minds.

27,682. Do you try to induce them to go to your place and remain under treatment to get rid of the habit?—I told them all, as I told a man yesterday, that if they would stop opium, and any disease, diarrhoea, or anything occurred, then they could come to me, and I would give them what assistance I could.

27,683. Did they avail themselves of your offer?—Four of them offered to come without my saying anything about it; but they did not come.

27,684. And so far they were not serious?—They did not carry out their intentions.

27,685. (Mr. Fanshawe.) To what missionary society do you belong?—The Foreign Christian Missionary Society.

27,686. Is that an American society?—Yes.

The witness withdrew.

Mr. J. P.
Marzban.

Mr. J. P. MARZBAN called in and examined.

27,695. (Chairman.) You are editor of the *Jame-Jamshed*, and proprietor of the *Advocate of India*?—I am.

27,696. Will you give us your opinion as regards the consumption of opium in the different districts with which you are acquainted?—The population of Bombay may be practically divided into three classes, the aristocracy, the middle class, and the labouring class. To the best of my belief the first do not use opium at all. Of the middle classes a very small per-centage consume opium. The third class are the largest consumers. From inquiries I have been able to ascertain that of the licensed opium shops, the Musalmans are the largest buyers, the Hindus come next, and the rest of the population, consisting of various castes and nationalities, form a very small per-centage of the opium-consuming class. I have seen opium eaters dozing in a helpless state for about an hour after they have swallowed their accustomed quantity; but I have also seen Kathiawari Kharvas or Lascars, and other labouring classes all the better for their dose. The former, as a rule, eat opium. The Nowganis, or the bandar coolies, who are remarkable for their strength, generally use opium, but I cannot say I have seen them any the worse for it. Of course I cannot say that opium is a blessing. Far from it. If its consumption could be stopped without involving very serious consequences, I should be the first to advocate such a step. But to my mind such a preventive step should be taken first, if at all, in case of spirit drinking, as I know that excessive use of strong drinks has ruined more men and families in a twelvemonth than opium could possibly be expected to do within half a century. I have never in my experience come across a case in which a family was rendered destitute owing to the master of the house or the principal wage-earning man having been an opium eater. But I am in a position to say that I have come across a number of families who have been utterly ruined by the drinking propensity of the master of the house. I have voluntarily undertaken the work of visiting the poor districts with a view to relieve distress amongst the Parsis. Within the last three years I have visited nearly 700 houses. Amongst these I met with but one instance of a woman using opium. Her statement was that because she took opium she was capable of bearing hunger and fatigue, but I have seen dozens of cases in which the wife and the children were reduced to abject poverty, bordering on starvation, through the vice of drink. As a Parsi I can safely say that the vice of opium eating is almost unknown amongst them. During a recent visit

27,687. With reference to this visit to what you call an opium smoking resort on January 22nd, was that the only occasion on which you discussed the matter with opium smokers?—No. I have discussed it with them before and since; but not at their place.

27,688. Not while they were actually smoking?—Not at the place of their smoking while they were actually smoking.

27,689. During your four years' experience, has it come within your knowledge that opium is used in Harda as what may be called a household remedy by the people?—Yes, it is used a great deal, and especially given to children. I saw a case before I had been there a week.

27,690. I am referring more to its use for rheumatic pains, colds, and so on?—I do not think it is used much. It may be.

27,691-92. Has it come within your experience that opium is taken as a restorative rather commonly among older men after the age of 35 or 40?—The 12 men I saw were all men under that age, and most of them had been smoking for a number of years. Their ages would not average over 30, and they had been smoking on an average of about 10 years.

27,693. Has it come within your experience that the habit of eating is common among older men as a restorative?—I cannot say as to that, because most of the opium users I know, with the exception of about four, are men in middle life, and they have been using it for a long time already.

27,694. With regard to the instances of the two labourers, I understand that they were men who came in to do odd jobs, and happened to be men who had been excessive opium consumers?—They live in the town, and simply hang round to do odd jobs that they can do in a few minutes to earn a pice or two.

I paid to an opium den I ascertained by careful inquiry that of the 800 chandul smokers there was only one who was a Parsi, and he was an irregular visitor. During this visit I examined about a dozen people as to the effects of opium on their health, and in every case their answer was that opium was essential to their health and comfort, and if by any mischance the sale of opium was stopped, they would have to resort to large quantities of spirituous liquors to supply the want. In almost every case I found the smoker cheerful, contented, and apparently healthy. In up-country towns I always made a point to frequent licensed liquor shops, and I was shocked to find that the inferior class of artisans, such as shoemakers, tailors, carpenters, builders, and labourers, spent at an average three annas per head per diem in liquor, at the close of the day. Their average wage I found to be about eight annas. In most cases after the liquor was consumed they tottered to their homes in a semi-drunken state and slept off the effects of drink without any food. On the other hand, my frequent visits to the opium shops showed me that the opium eaters spent about, at an average, one anna per head, and were plump and unmistakably well-fed. Amongst the Musalmans spirit drinking is a prohibition, and those addicted to vice declared that if they were to be forced to give up opium they would be driven to drink. I think that the sale of opium under strict police regulations is conducive to peace in the town. I have been assured by experienced police officers that in case of serious crimes they have to look for the suspected criminals in the liquor shops rather than in the recognised opium dens. Numerous cases have been brought before the law courts where high misdemeanors have been traced to drunkards, but there have been very few cases indeed where murders or fatal assaults have been traced as direct results of opium eating. In Kathiawar, I found that men of influence and position, as a rule, take opium, and the prevalent belief there is that the use of the drug is a sure preventive of malarious fevers and other diseases.

27,697. What is your experience as regards the effect of such consumption on the moral and physical condition of the people?—I think I have already stated my views that the opium smoker is generally a peace-loving subject. He does not care for violence or fuss—all he wants is that he should be allowed to pass his time undisturbed. In case of a drunkard the case is otherwise. He generally creates a disturbance and is a nuisance to the neighbourhood. A person who takes small quantities of opium does not show

any physical falling off as in the case of a drunkard, who is invariably emaciated.

27,698. What is your opinion as to the disposition of the people of India in regard to the use of opium for non-medical purposes?—Opium is considered as a luxury by some and a necessity by others. Absolute prevention of sale of the drug will be considered a great hardship as it does harm to nobody except perhaps the smoker himself. The per-centage of opium smokers in Bombay is so very small that it is hardly worth while to keep up expensive departments to check the sale. The compulsory prevention of opium eating and smoking must necessarily lead to drinking and the inevitable result will be disorganisation and strife. The general opinion of the natives appear to be that this movement of the anti-opiumists is purely sentimental. That instead of coming to this country to disturb a peaceful state of things which does nobody harm, they ought, first, to strive and do away with the drinking hells of England which ruin a number of people. That if any reformation were needed it should begin nearer home where the vice of drinking does greater mischief than opium in India.

27,699. Do you think the people would be willing to bear in whole or in part the cost of prohibitive measures?—The people of India will never consent to bear in whole or in part the cost of prohibitive measures. They are groaning under the heavy load of taxation, and any addition to the existing burden in shape of taxation to make up the deficiency created by loss of opium revenue will be the signal for general discontent. I have serious doubts as to the efficacy of measures proposed by the anti-opiumists. To think that if India would cease to supply China with opium the Chinese would stop smoking the drug is absurd and farfetched. The vice, if so we call it, is so ingrained in their system that they will find the drug from other markets over which the British would have no control, and the net result would be that India would lose a good slice of her revenue which is crippled as it is. To reduce the statement to a narrow circle I might say that a very little imaginary good can be effected at a tremendously ruinous cost and at great risk of public peace and safety of the administration.

The witness withdrew.

Dr. F. B. SEERVAI called in and examined.

27,711. (Chairman.) I believe you have a statement to make with reference to what is known as the Bombay petition?—Yes. In connexion with the anti-opium petition to Parliament I will note here the way in which the signature was attempted to be obtained from me. While I was engaged with some patients, about two years or more ago, a man was announced as wishing to speak to me. I saw him, and he handed me one sheet of paper from a number of similar ones with a few names on each and asked me to sign it. On asking what it meant, he imploringly told me that it was for a very laudable object, a petition to the Parliament against the evils of opium habit in India. I asked him to show me the petition, which he said he would send me afterwards, but I refused to sign without seeing it, and the man never returned.

(Chairman.) The Commission will take note of this statement.

27,712. (Mr. Fanshawe.) Had you any reason to know that the person who brought the petition had been sent on behalf of the Anti-Opium Society?—He said so.

27,713. Was he a peon, or messenger?—That I cannot exactly say. The matter was at that time so very unimportant. I never thought it would require so much attention, and I hurriedly went back to my patient.

27,714. (Mr. Haridas Veharidas.) Was that a Parsi?—I cannot exactly say, it is such a long time. These are the impressions left upon me.

27,715. You do not know whether it was a Mussalman, Parsi, or Hindu?—I only recollect he was trying to get my signature on a blank sheet of paper, with some names on it. That is the only thing I recollect. It happened so long ago, and I attached at the time so little importance to the matter that I never thought of it again.

27,716. Was he a respectable man—a gentleman?—That I cannot say.

27,717. Had you known he was a respectable man from his appearance, would you have called him in and given him a seat?—Not at all.

27,700. It may be concluded from what you have already stated that in your opinion the sale of opium in British India should not be prohibited?—That is my opinion.

27,701. (Mr. Pease.) You say, "If its consumption could be stopped without involving very serious consequences I should be the first to advocate such a step"; would you personally be in favour of prohibiting the use of opium if you were not afraid that such a step would be in advance of public opinion?—Quite so.

27,702. (Mr. Haridas Veharidas.) You say the habit of drinking spirits is very injurious, would you not thank people who came here to suppress it?—Yes, I would.

27,703. We have been told that if the use of opium were prohibited there would be an extended use of alcohol; is that your opinion?—Yes, that is my opinion.

27,704. (Sir James Lyall.) What do you mean by saying that you would be the first to advocate such a step as the stopping the consumption of opium?—I would be amongst those who were foremost in advocating such a step.

27,705. Do you mean that you are opposed to all kinds of stimulants and narcotics?—Used in any excessive degree.

27,706. To prohibit the use of opium would involve making it a sort of crime, punishable by law, would not it?—Yes, if you come to that.

27,707. Do you think that would be found satisfactory?—It would be carrying the matter too far.

27,708. Where was this opium den to which you paid a visit and where you found 800 chandul smokers?—Bhendi Bazaar, Bombay.

27,709. We have been told by some missionary gentlemen who visited these so-called opium dens that the habitués of these dens always cry out that they are slaves to the opium habit, that they are being ruined by the opium, and that they hope Government will do away with the shops; in your visits have you ever seen anything of that kind?—Never, I have heard quite the contrary.

27,710. How many men were there in the chandul shop when you went there?—I went to about six or seven. The number varied between 50 or 60—80 sometimes.

Mr. J. P.
Marzban.

19 Feb. 1894.

Dr
F. B. Seervai.

27,718. (Mr. Pease.) Is that (showing document) the paper which was handed to you?—No.

27,719. Was there any printing on the paper handed to you?—No, a few names only.

27,720. (Sir William Roberts.) I believe you are a medical practitioner in Bombay?—Yes.

27,721. And a graduate of the Grant Medical College?—Yes.

27,722. What opportunities have you had of studying the habit of using opium in Bombay?—My observations as regards the consumption of opium extend to a period of 33 years of medical practice in the city of Bombay, among almost all classes and races of the population. Also my observations extend to parts of Gujarat, Kathiawar, and the Deccan. I have no statistics of the consumption of opium, but it is used apparently by larger numbers of the Gujaratis and Kathiawaris than of the Deccanis. In Bombay city it is more commonly used among Hindus and native Musalmans than among other communities, and I am convinced that a moderate habitual use of opium becomes a necessity to a large class of the opium eating population to mitigate the pain and suffering from chronic or incurable diseases, to lessen the effect of fatigue, of mental worry, and to a certain extent that of privation. It is largely used as a household drug in almost every case in which it may be expected to relieve pain; and to put restriction upon or to prohibit the use of this the most useful and pain relieving drug would be in my opinion both inhuman and impolitic.

27,723. (Mr. Haridas Veharidas.) Have you had anything to do with an opium trading firm?—Yes.

27,724. How many years ago?—I used to purchase opium for merchants who shipped it to China, and I tested it in the Chinese way. I had some Chinamen under me to do the work, because it was very laborious and tedious. Before commencing the work they used to smoke chandu. Then they began work and assayed about two to three hundredweight of samples. They had to boil, to

Dr.
F. B. Seervai.
19 Feb. 1894.

filter, and to concentrate the extracts, and put them into different capsules, and weigh them, and find out the percentage. All that was done during the night by two Chinamen. At the same time they had to manage about a dozen and a half of vials. The smoking did not seem to make them any worse, but more fit for laborious work.

27,725. While smoking opium so excessively were they efficient in the performance of their duty?—If they had not smoked I do not think they could have worked as efficiently as they did.

27,726. Were they smoking often?—No, they only smoked once before beginning their work. They did not

The witness withdrew.

Mr. Abdulla
M. Dharamsi.

Mr. ABDULLA M. DHARAMSI called in and examined.

27,729. (*Sir James Lyall.*) You are a solicitor, are you not, in Bombay?—Yes.

27,730. What is your experience as to the consumption of opium?—The use of opium is not confined to any particular race of people but is found more or less in almost all classes and communities of the native population in the districts with which I am acquainted. Generally speaking its use is moderate and its abuse an exception. It is chiefly used by persons who have to undergo great physical exertion and by persons over 45 years of age, and is taken as a dietetic stimulant. The districts with which I am acquainted are Bombay and parts of Gujarat, Kathiawar, and Cutch.

27,731. What do you think are the effects of consumption?—Having known several persons who consume opium, I am of opinion that its moderate consumption does not produce any evil effects on the moral and physical condition of the people. I have known opium eaters varying in age from 45 to 80 years, and in the great majority of cases found them to be healthy both in body and in mind. No case has come under my notice in which the moral condition of the opium eaters has suffered from the moderate use of the drug.

27,732. What do you think the people of India think generally in regard to the prohibition of the use of opium for non-medical purposes?—In my opinion the people of India are well disposed towards the moderate use of opium for non-medical purposes, and I think there are various reasons for such disposition. Some of them are as follows:—Opium does not intoxicate, and the quantity taken does not generally increase with the habit. It does not lead to violence or crime. It does not undermine the constitution and bring on the sorrows and sufferings resulting from the excessive use of alcohol. To several classes of the community spirituous drinks being forbidden by religion, opium is the only stimulant to which they can resort.

27,733. What is their disposition towards bearing, in whole or in part, the cost of prohibitive measures?—I am of opinion that the people of India are not willing to bear any part of the cost of prohibitive measures. As matters now stand the country is already heavily taxed, and is not able to bear further taxation. The loss of revenue which would result from suppressing the cultivation of opium would be felt heavily by the country, and it would be very difficult to make it up.

27,734. I gather from your opinion that the sale of opium, except for medical purposes, should not be prohibited?—In my opinion it would not be advisable to prohibit the sale of opium for non-medical purposes. Such prohibition will cause great discontent and lead to the substitution of alcohol for opium, a result much to be deplored.

27,735. Do you think if prohibition was enforced in British India it could be extended to Native States?—I think it would be difficult to extend such prohibition to Native States.

27,736. You have been to China, have you not?—Yes, recently.

The witness withdrew.

Captain HAROLD SEWALLIS BLACKBURNE called in and examined.

Capt. H. S.
Blackburne.

27,753. (*Chairman.*) Will you make your statement to us, please?—I am commander of the P. & O. s.s. "Gwalior." I began sea life a little more than 24 years ago, and have been trading generally to the East between England, India, and China during that time. About a

smoke during the night; and at six o'clock next morning they were again on duty, and weighed the extract and found out the per-centage by their own method.

27,727. Was it correct according to your test?—Correct within one or two per cent. I did not try all the samples, but took some at random, and verified them, and they were within one or two per cent. That does not make any difference in assaying for smokable opium extract.

27,728. (*Mr. Pease.*) Do you think they could have done their work if they had not smoked?—I never tried that; but they did their work well within their smoking.

27,737. Where did you stop in China?—For the most part I stopped in Hong Kong. I was for a short time at Canton and Makow.

27,738. Can you tell us anything you observed in reference to the opium smoking habit at those places?—I observed that people generally smoked opium, and I made some inquiries of people with whom I came in contact, chiefly merchants dealing in silks. I asked them if the export of opium from India was stopped whether the Chinese would give up the habit of smoking, and they said that they would never give up the habit, and if they did not get opium from India they would get it from other places. I saw opium being smoked in two or three Chinese houses. There was a gathering or party there, and I saw people from about 40 to 70 years of age who smoked opium. I asked them and they said they had had the habit for a long time. Some of them indulged in it once or twice a week, and some daily. I found them healthy and robust people. They were well-to-do people, merchants, respectable members of society dealing with foreign merchants.

27,739. Are there many merchants or other people of the Mahomedan faith in Hong Kong?—Yes, there are Mahomedan merchants at Hong Kong.

27,740. Did you see many?—There are not many.

27,741. You saw some?—I saw some.

27,742. Do you know whether the habit of smoking opium prevails at all among them, or whether they avoid it altogether?—No, not amongst them. When I said I saw people smoking opium I meant the Chinese.

27,743. Does it prevail amongst the Mahomedans?—So far as I know it does not prevail amongst them.

27,744. I believe you are of the Khoja caste, are you not?—Yes.

27,745. Is the habit of giving what they call bala golis to children common among your community?—Yes, it is.

27,746. Is it generally supposed to be beneficial?—That is the belief. It is given to the children as a tonic, and also to keep them quiet.

27,747. The Khojas are a wealthy community, are they not, in Bombay?—Yes, fairly wealthy.

27,748. What sort of professions do they follow?—Generally merchants.

27,749. And some like yourself have taken to other professions?—Very few have taken to professions yet.

27,750. (*Mr. Pease.*) Did you see anything of the effect of opium smoking in China among the poorer classes?—No, not amongst the poorer classes.

27,751. Do you yourself believe in the practice of giving children bala golis?—It is commonly given amongst the middle class people that I know. In our community it is largely used.

27,752. I thought by the way you answered the question you had not much faith in it yourself?—I have not tried it on my children so I do not know.

year ago I visited some of the opium dens and shops in Bombay, in company with a missionary friend, and the majority of those whom we spoke to seemed to realise what a terrible curse the opium was to them, and several of them asked us why the Government did not close these

places up; and on being asked if they wished it, said Yes. To the best of my recollection they were under the impression that the Queen had issued an order for these places to be shut up. I feel very strongly about the opium question, and as a lover of my country I feel sad about it, as in my opinion our treatment of China in regard to it is the most disgraceful blot in our history; and believing as I do that God deals with nations as with individuals I see looming in the future some terrible retribution to our country. I am not sure that it has not already begun, as I have often heard of terrible cases in our own country of gentlemen and ladies of good birth even, and sometimes doctors themselves, who have got so under the power of morphia taking that they have lost all power of will. Although I have not lived much on shore during my years of sea service, I have come a good deal in contact with the natives of India and China, as members of my crew, and also as passengers while at sea, and as labourers when in port. Until I read about the state of things in India, and began to investigate for myself, I had no idea that the natives of India were in any way addicted to opium smoking. Up to a year ago, as far as my own personal observation is concerned, I do not recollect ever seeing a native of India smoking opium on board ship. In China, however, I fear that the habit of opium smoking has a far greater hold on the people, and many of my friends in China have told me that it is greatly on the increase. Many a time have I seen some terrible specimens of humanity among our passengers, men who hardly ever move from one lying position on the deck, and seem to smoke nearly all day long, looking not unlike the photograph specimens displayed in some of the anti-opium papers. In China I think that opium smoking is universally looked on as a vice, and Europeans certainly do not, as a rule, care to have a servant who is an opium smoker. Chinamen, as a rule, do not like to own to being opium smokers, but out of a number of deck passengers I have always found a good percentage of opium smokers who cannot restrain themselves, and are yet unable to smoke in secret. Knowing as I do intimately some of the oldest missionaries in China, men and women who have lived among the Chinese in their homes, I have not been taken in by the evidence of the numerous witnesses who have been telling us lately of the general beneficial effects of opium on the people of India. It seems strange that the same drug should affect the people of China so differently. Many a rich Chinaman has been brought by opium to a miserable beggar and thief as I have been informed by those who have known them personally in both stages of existence; and suicide by opium, especially among women, is of common occurrence. We have done China a gross and irreparable wrong by forcing the opium trade upon her, and I should like to see all opium prohibited except for medical purposes. It is not in my province to suggest how we are to make up for the loss of revenue, but of this I am fully convinced that God's blessing will not rest upon us if we continue this wrong for the sake of any gain. Since writing out this evidence I have felt so exercised about my own responsibility in the matter that I have felt led to resign the P. & O. service, as the P. & O. are and have been for many years the principal carrier of the drug to China from Bombay.

27,754. (*Sir James Lyall*.) You say you have often seen terrible specimens of humanity among your passengers, men who hardly ever moved from one lying position on the deck, and seemed to smoke nearly all day long, looking not unlike the photograph specimens displayed in some of the anti-opium papers. The evidence we have got from China points to the fact that there is a belief in China that people suffering from consumption and diseases of the lungs get advantage from opium smoking; did you ever inquire from those people whether they suffered from diseases of that kind?—No, I did not.

27,755. You presumed then that what you saw—the emaciated appearance—was entirely due to opium?—Yes, because they were smoking continually.

27,756. Is it not possible that if you had gone into the case like some doctors would have done you would have found that these emaciated people were also suffering from illness, and that, in fact, they were smoking because of the state of their constitution?—It is possible, but I do not think it is very probable.

27,757. You say we have done China a gross and irreparable wrong by forcing the opium upon her; it is not the fact that the opium imported into China has always been taken off the ship by the Chinese themselves—that is, our ships have taken it to the Chinese coasts, but it is the Chinese themselves who have always smuggled the opium on shore?—That may be; but it is against the wish of the

Government. At one time, as you know, thousands of chests were destroyed.

27,758. When you say “we have done China,” you mean the Chinese Government?—I mean the Chinese nation, because the Government of the country made every effort to keep it out of their country 50 or 60 years ago, and there was hardly any opium in the country. They do not want any more opium wars.

27,759. I mean to say, the Chinese people are equally responsible with our sea captains and merchants who export the opium to the Chinese coast, are they not?—I do not think so, because they are the weaker nation.

27,760. You are talking of the Government; I am talking of the Chinese nation as distinct from the Government?—Our responsibility is greater, because we are a Christian nation, and these are heathens; that is where I feel our responsibility.

27,761. Do you think we ought to have made a law prohibiting our ships from carrying anything that the Chinese made contraband to the coast of China?—I think we should have helped the Chinese Government to keep it out of the country when it was against their wish.

27,762. Do we do that with regard to the trade of any other country?—I do not know what we would have thought of the nation putting such a scourge upon us, especially if they were professing to be above us altogether in moral qualities.

27,763. You mean that our ships of war ought to have overhauled these opium clippers and taken the opium out of them?—I daresay you know more about the history of the matter than I do. I do not profess to have gone very thoroughly into the matter. I rely more upon the authority of learned men, and men that have lived in the country.

27,764. Do not you think that without having studied very carefully the history of things that happened nearly 50 years ago it is rather rash to say “we have done China a gross and irreparable wrong”?—I do not think it rather rash; other people may think so.

27,765. I mean without studying the history carefully? I do not think it is rash, because I have it on the authority of those who have given their lives for higher purposes, and I know they are truthful.

27,766. You cannot tell whether they are writing from full information or not, or whether they are writing from the emotional point of view, can you?—I know they would be truthful.

27,767. You mean the missionaries?—Yes, missionaries and others. Principally missionaries, my friends in China.

27,768. (*Mr. Fanshawe*.) You are aware that the form in which opium is consumed in India is chiefly eating and drinking, whereas it is generally smoked in China?—I am not very much acquainted with how it is done in India. I went into some of the opium dens about a year ago, and saw some people smoking and some eating.

27,769. Then your actual experience of opium consumption in India is simply such as you have seen in the dens?—I have had very little experience in India.

27,770. But you ventured to compare the two, and you have also stated that you have not been taken in by the evidence which has been given before this Commission, which seems to suggest that you are of opinion that the evidence cannot be accepted as true?—I do think it is not all true.

27,771. At the same time you say your experience of the opium habit in India is very limited indeed?—Until a year ago. I have seen more of it since. I do not think that the natives of India smoke or use opium to anything like the same extent they do in China. I have had ample opportunities of studying the Chinese. There are perhaps 300 or 400 on deck, and we go the rounds amongst them, and they cannot get out of sight. I take it, as a rule, when a man gets in that state he is in some back shop where the public do not see him. You do not find those sort of men working in the streets or shops. They are out of sight.

27,772. Do you think you were justified in suggesting that the evidence given from all parts of India was not true, when your own experience of the practice of the opium habit was so infinitesimal?—I do not say they are not true; but they are so conflicting, and so very different to the effects I have seen and heard of opium on the Chinese, that I cannot help doubting the statements of a good many of the people,

Capt. H. S. Blackburne.

19 Feb. 1894.

Capt. H. S.
Blackburne.

19 Feb. 1894.

27,773. (Mr. Pease.) What has been your position with the P. & O. Company?—From fourth officer to commander.

27,774. In conscientiously giving up your appointment with the P. & O. Company is it a personal loss to yourself?—I have nothing at all at present from a worldly point of view—nothing.

27,775. (Sir William Roberts.) You say you fear that some terrible retribution is coming to our country in consequence of its doings with regard to opium in China, and you go on to state that you are not sure that the retribution has not already come on account of the terrible cases in our own country of gentlemen and ladies of good birth seeming to have got into the habit of taking morphia; have you any evidence that the morphia habit is more common in England than elsewhere?—No; but it is very much on the increase I am told by doctors. I believe that opium taking will be very much on the increase soon after all that has been said about the beneficial effects.

27,776. That is a prophecy, and they say you should not prophesy unless you know; it may comfort you to know, according to the statements that I have seen, that England is rather behind hand in the morphia habit, and that other nations in Europe are rather more afflicted with that habit than England?—Yes.

27,777. Is the Chinese nation degenerating?—I think so.

27,778. What reason have you to think so?—The evidence of most of my friends in China, who have lived among them for many years.

27,779. Is there any evidence that you know of showing that the Chinese as a nation are losing their vigour?—Yes,

The witness withdrew.

Mr. JOHN FRITCHLEY called in and examined.

Mr.
J. Fritchley.

27,785. (Chairman.) You were formerly jailor of the Midnapore, Patna, and Bancoora Jails, and also served in the Decca and Bengal Police, that is so, is it not?—Yes.

27,786. And you are now supported by your sons?—Yes.

27,787. I believe you have had 50 years' experience among the Chinese, Mahomedans, and Hindus, and certain low classes of India; and you have had experience in jails and in the police, and as ship chandler and merchant in China?—Yes.

27,788. With these experiences what have you to say to us about the opium question?—The opium habit is very prevalent among the lower classes in China and all over Indian. When in China I saw the Chinese in a most deplorable state from opium eating. I also saw the Chinese lying about, with cadaverous faces, smoking their opium pipes. Several of them died within two or three months of my having observed them. That was my experience among the Mandarins and poorer classes. I saw a great many of them die. I also visited the opium dens with the Rev. Mr. Morrison.

27,789. Was that in the year 1844?—Yes; I visited the dens with Mr. Morrison, the missionary. I believe he was the first missionary that went to Hong Kong. He took me to several of these dens, and showed me how the people smoked. They make a small ball, which they put in their pipe, and light it until the ball bursts. Then the man takes a good pull at the opium and draws in the smoke, and then lies down on his pillow. He does not get up for six or seven hours afterwards. Mr. Morrison personally showed me these things to convince me what the opium effects were like in China. While I came out to India I had a great dislike for opium; and when I was in the police I had experience of lots of people being killed through opium. Opium is used as a suicidal drug. A pill of opium with a little oil over it kills them in about two or three hours. Many children were brought to the police drugged with opium which had been given them by their parents to keep them quiet. They had been given an overdose and died. Some women were also brought in dead, their husbands having dosed them with opium in the opium dens.

27,790. You observed these incidents when you were in the police?—Yes.

27,791. What action did you take?—We took their names down, and sent them to the doctor, or to the magistrate. Those that had been purposely drugged were

morally I believe they are, and physically too. They are waking a great deal to western notions, and they have been going in for trade much more largely than they used to—doing their own trade in the way of steamers, railways, and so on. They are getting more ascendancy in that way if that is what you mean.

27,780. That is rather a sign of progress, is not it?—Well, I do not know whether it is so much progress.

27,781. Is it possible you can have national success without moral soundness?—For a time.

27,782. Have you not drawn a distinction between habits as they affect individuals and as they affect nations?—Individuals compose the nation, and there is a very large per-centage of Chinese who are utterly ruined by opium.

27,783. Is it not possible that a habit, like our own habit of taking alcohol, although injurious, as we know, to a large number of individuals, yet may be beneficial to a still larger number, and that upon the balance you may get a habit injurious to individuals, but beneficial to the community?—I recognise that both opium and liquor do a vast amount more harm than good. It is a very questionable thing whether either of them do any good. Opium is no doubt sometimes a very useful medicine, and it is quite possible liquors and wines may be, but that is a question doctors have not thrashed out yet.

27,784. You would not even entertain it as a speculation that any estimate of the good and evil of the opium habit or of the alcohol habit was valueless until you balanced the good and evil?—I do not think they can be balanced at all.

sent to the magistrate, and those who had committed suicide were reported, and the doctor made a post-mortem examination, when he found the opium and the oil mixed in their stomach had caused their death.

27,792. When did you retire from the police?—I was transferred from the police to the jail in 1864.

27,793. Have you any more recent experiences?—I was in the Patna jail too.

27,794. What did you see there?—The prisoners that came into jail. Patna, I believe, is the greatest place for opium growing and opium eating.

27,795. The prisoners in the Patna jail are not allowed to take opium, are they?—Not allowed to bring it into jails; but these people came in craving for opium, and I insisted that they should not get any until they were cured. I saw in the evidence of Dr. Mouat, who was Inspector-General of jails when I was jailor, that he said opium eaters or smokers were the healthiest people. When I saw this I wrote to the *Guardian* and told them to read my letter, and refer to the Inspector-General's Jail Circular prohibiting opium in every jail. If opium was such a nice thing as to make people robust and healthy and strong I do not see why such a restriction should be imposed.

27,796. It might have been prohibited because it was a luxury and an indulgence which ought to be denied to prisoners from punitive motives?—Then there was a man brought into prison sentenced for one month. This man had a craving for opium and would not eat his food.

27,797. When did this occur?—About 1865.

27,798. You are sure of your facts, I suppose—it was a long time ago?—Yes. This man was brought into jail for a month. He weighed about 32 Bengal seers. He escaped from the jail for want of opium. The magistrate sentenced him again for six months. When he came into prison he craved so for opium that the doctor said he would die if he did not get it. But I prevented him getting opium. I told him to go on eating his food and he would soon get over it. In five days he had no craving for opium. When he was released, seven months afterwards, I weighed him again, and he weighed 1 maund 39 seers. He looked as robust, healthy, and hearty as ever. This was particularly reported by Mr. Cunliffe, the magistrate, to the Inspector-General of jails, and the latter sent a circular round to all the jails prohibiting as much as possible any opium entering the jails. This man got over the opium smoking in five days, and became a very robust man; and this circular was sent round to all the prisons prohibiting the prisoners from using opium in any form whatever.

27,799. Was not there any order before prohibiting the use of opium in the jail?—Yes, there were orders in 1857 by the Inspector-General of jails.

27,800. Have you any other evidence to give?—No, nothing particular.

27,801. When did you leave the jail service?—In 1871.

27,802. How long were you a merchant in China?—Three years.

27,803. What kind of merchant were you?—Ship's chandler; bartering and selling tea and other goods.

27,804. Were you born in India?—I was born at sea, near the Isle of Wight. My father belonged to the 89th Regiment.

27,805. Did you go to China from England?—From Madras. I was in Bombay in 1839.

27,806. And you were brought up in India?—Yes.

27,807. And went from India to China?—Yes.

27,808. I think you said you went to China in 1844?—About the end of 1843.

27,809. When did you enter the police?—In 1859.

27,810. What did you do between ceasing to be a merchant in China and entering the police?—I was book-keeper to Wise and Glass, the great indigo planters of Dacca.

27,811. Where have you been living since you left the service in 1871?—I have been about taking contracts in

different places. I got into the Public Works Department at Jubbulpore. I have been taking contracts here and there on the railways.

27,812. Were you an overseer in the Public Works Department?—Overseer.

27,813. That was after you left the jail service?—Yes.

27,814. (*Mr. Pease.*) I suppose it was when you were in the Public Works Department that you were engaged in railway construction?—No. I was engaged in the Public Works Department getting the barracks built at Jubbulpore.

27,815. When were you engaged in railway construction?—Here in Bombay in 1882.

27,816. In what capacity?—Making bricks and tiles and culverts and bridges.

27,817. As a contractor?—No; petty piece-work.

27,818. Under a contractor?—Yes; and I used to get pay from the concern as a manager.

27,819. At that time you had the engaging of persons, both men and women, had not you?—Yes.

27,820. How many had you in your employ at any one time?—On the Portuguese railway I had 500 employed.

27,821. When you were engaging them you never engaged anyone that you knew ate or smoked opium?—No.

The witness withdrew.

The Rev. H. F. LAFLAMME called in and examined.

27,822. (*Chairman.*) You live, I believe, at Yellamallili, Vizagapatam?—Yes.

27,823. To what mission do you belong?—I represent the conference of the two Canadian Baptist Telugu Missions, with a membership of 43 missionaries, who occupy 14 mission stations, extending from the Kistna River on the south to the extreme northern limit of the Telugu country halfway through the Ganjam district on the north, and inland from the sea from 30 to 50 miles, but not including the hill tracts or agencies in either the Kistna, Godavari, Vizagapatam, or Ganjam districts. The native Christian community of these missions numbers about 3,055 adult church members, and perhaps twice as many children and dependents.

27,824. What classes of natives have you had experience amongst?—The members of the body here represented have had experience amongst all classes of the Telugu people, and amongst all castes. Converts from the highest castes have enabled them to learn particulars of their private practices, and the low and outcastes they have no trouble in studying at first hand. The work of the men in preaching takes them so constantly into the villages that they spend the greater part of their time amongst the people. Whereas the school and medical work and house-to-house visitations of the lady missionaries bring them into the family life of the high as well as the low castes. The oldest missionaries' experience dates back 20 years, others 16, a third 11, and the majority about five years. The missionaries superintend all of their own building work, thus dispensing with contractors, and come into daily and intimate contact with a host of masons, carpenters, coolies, and cartmen, and in this way observe not only the effect of opium on users as compared with non-users, but on users at later stages as compared with earlier stages in their history. They understand the language of the common people thoroughly, and in conversation with them from time to time learn the evil effects of opium from the users themselves. The single ladies in their medical work, caste girls' schools and house-to-house visitations come into the homes of the high caste as well as the low, and meeting the women of the household have exceptional opportunities of learning that particular phase of the opium habit which is hidden from ordinary observers. As no person addicted to the habitual use of opium is either admitted into church membership, or allowed to remain, if discovered, special inquiry is made regarding all such cases with a view to reform them if possible, and thus a knowledge of the habit is acquired. As the work of the missionary is to all classes, castes, and conditions of people, he visits not only the streets of the wealthy and the respectable, but moves amongst the shepherds, the pariahs, the fishermen, the toddy-drawers, and the fruit-sellers and scavengers, at all seasons of the year and all hours of the day. Generally being accom-

panied by his native preachers, he can immediately learn from them the particulars of any practice or the meaning of any phrase which is new and strange and might otherwise escape him. With one exception all of our missionaries are itinerating missionaries, and spend the greater part of their time in the streets and squares, and sometimes the houses of the people in city, town, and village.

27,825. How far is opium eating or drinking prevalent amongst these classes?—Opium drinking is not practised to our knowledge. As to opium eating there is a great difference of opinion. At the annual meeting of one section of our Christians, who, in and about Cocanada, number some 700, of the 40 delegates from the 12 different native congregations, some 17 were in a position to express an opinion with some confidence. Of these, 12 declared that 75 per cent. of the adult population use it. Other five declared that only half used it. A regimental doctor of wide experience declared to one of our missionaries on one occasion that one-third of the people used it in these districts. In Cocanada and the Godavari others were of the opinion that about 25 per cent. of the people used it. Some of the more educated and most intelligent declared that all men over 40 years of age use it. This is confirmed by a very large number of thoughtful and observant persons from different parts of the territory mentioned in my former reply. At the very lowest estimate which I should personally dare to make, I would say that 10 per cent. of the total population—men, women, and children—are habitual users of opium. This, I am positive, is not an over-estimate, and is based on my own personal knowledge. Should I follow the testimony of others who, by a lifelong experience amongst the people are in a position to speak much more positively, I should be inclined to place the percentage much higher, and possibly nearer the truth by saying that 25 per cent. of the entire population in these parts use it habitually. Medicinally it is used occasionally by almost all of the people. Of the habitual consumers the majority are men, possibly in the proportion of two men to one woman. I cannot speak of definite percentages amongst children, but the universal testimony from all parts of the sea-coast talukas of the Godavari, Vizagapatam, and Ganjam districts in the Telugu country is that from the age of 40 days up to two or three years opium is constantly administered by mothers to the children; many of them give small doses daily to the babies to quiet them, and relieve colic, &c. The dose is usually the size of a mustard seed. Generally amongst habitual users the dose is one-half anna's weight a day.

27,826. Is opium smoking prevalent?—Opium smoking is confined entirely to men. It is considered a great shame for a woman to be seen smoking opium, and of all the dens I have seen I have not yet seen a woman smoking. Though in Cocanada a woman is said to run an illicit

Mr.
J. Fritchley.

F. Laflamme.

The Rev. H. F. Laflamme.

19 Feb. 1894.

smoking shebang. In these parts only the principal towns of 5,000 population and over, situated on the main roads, have opium smoking dens. Out of the total population I am quite sure that at least five in 1,000 resort to the opium dens. But there is a great deal of private smoking which cannot be easily detected. I am sure the smokers are much more numerous. In Cocanada there is one licensed smoking den. I was shown three or four other places where smoking is indulged in privately. Some of them were in private houses, so not accessible, and in others, though there was every indication of the practice being carried on there, we failed to catch the habitués in the act, nor could we induce any of them to make a confession. In town populations perhaps two in 100 smoke.

27,827. At what age is the habit generally acquired?—Between the ages of 25 and 40. The taste is doubtless acquired in many instances in early childhood, from the vicious practice of mothers indiscriminately treating all infantile complaints of a certain character with opium.

27,828. What motives induce people to form the habit?—There is no doubt but that the habit is generally acquired through using the drug as a medicine; and as such for coughs, diarrhoea, dysentery, cholera, fever with chills, and rheumatism. Amongst women, many resort to opium as a relief to pains caused by womb troubles. Occasionally children, who have been sickly, never relinquish the habit, and grow up from childhood confirmed opium eaters. Lecherous persons take opium, believing that by so doing they can indulge more freely and more frequently. It seems to act as a stimulant to the passions. Many learn it by associating with users, much as boys learn to smoke at home.

27,829. Is the habit easily relinquished?—In only very exceptional cases is the habit ever relinquished, and then with the greatest difficulty; leaving it off at once and for ever is the only effective cure. That such is possible, despite the protests to the contrary of the users, is abundantly evidenced by experience with prisoners addicted to the habit. The native hospital assistant at this place* relates the incident of a prisoner who begged for opium so pitiably, that the jail authorities called him, fearing serious results if the man's desire were denied. Instead of administering opium, the hospital assistant gave him a substitute saying there was much opium in it. The man seemed quite content, though really there was not a drop of opium used in the mixture administered. He confirmed this by many other incidents of like character. There was a notable case* in this place: that of a merchant who was an habitual excessive consumer, who fell into jail for some crime. For four months he was deprived of opium. When released, so marked was his physical improvement, that his friends were scarcely able to recognise him. He relapsed into the habit, and with that into leanness of body and soul. An old man who was blind used to find his way to the opium shop in his native village for the usual daily dose. His son moved to another place taking his father with him. He did not know the way to the opium shop in that village, and could get no one to show it him, as they were all opposed to his using so much money uselessly, so he lay all day long for days upon his cot, racked with fearful pain, and crying out that he would die for lack of opium; but he did not die. He got better and lived for years after, a stronger and a healthier man for not using it. One of the native preachers, a very useful man, fell into the opium habit. As he could not continue it and remain a member of the church he determined to leave it off. One of the missionaries took him in hand, and administered very strong coffee whenever the craving for opium recurred. He has never taken opium since, but dares not leave off the coffee. As no opium user is allowed to become a member of our communion, there are occasional cases of even old people leaving off the habit in order to join the church.

27,830. Is there a marked difference between moderate and excessive consumers; if so, what is the percentage of excessive consumers?—The effects are so decidedly different with different persons that the line between moderation and excess is exceedingly crooked. During an attack of dysentery, a native hospital assistant administered from one to three doses of laudanum to me daily, containing between 30 and 40 drops each, followed in an hour by a bolus of ipecacuanha powder. Doubtless, the nausea and vomiting neutralized the effect of the opium. The result was a comfortably dreamy condition. Whereas Mrs. Laflamme, when suffering from a similar attack, on taking only ten drops, came nearly dying of the effects. The action on natives is not nearly so powerful as on Europeans. The dose to which a user

quickly habituates himself, if it had been taken early in the acquisition of the habit, would have been fatal. In our mission work and in receiving candidates for baptism we consider all habitual consumers as excessive consumers. We take the ground that opium, taken in any other way than as a medicine to cure a certain sickness, is an unjustifiable excess. So that any man who uses it for sickness must give it up when the sickness is cured, or should opium fail to help him, must leave it off and try some other drug. Looked at from this point of view, the percentages mentioned above represent the excessive consumers, and the difference between them and those who use the drug legitimately for medicinal purposes only is marked indeed.

27,831. What proportion of their income do habitual consumers spend on opium?—The incomes of the different classes differ so much, and even the day wages of the coolie classes vary to such an extent in the different districts that definiteness in answering this question is quite impossible. Wealthy zamindars and landholders use it. The amount spent on opium by them would be meagre as compared with their income. Though men are able to discover how much is purchased by some of the zamindars for use in their households, the total might not be so small. Old Paikarow, of the Vizagapatam district, was a famous opium user, and latterly so constantly under its influence that a servant sat by him at meals to indicate the different dishes by placing the old man's hands on them as he directed. He has some present day successors scattered through the district who would vie with him in excesses. Our coolie classes, who represent a large part of the population of these districts, and who are most quickly and seriously affected by the opium draft upon their slender incomes, secure day wages at the following rates in the different sections:—

	Men.	Women.
Kistna and Godavari delta.	3 to 4 annas.	2 to 3 annas.
Vizagapatam	- 2 annas.	1 anna, 2 pies.
Ganjam	- 1 anna, 6 pies.	1 anna.

The price of opium varies. In the Bhimavaram taluk of the Kistna it sells for 3 tolas a rupee. In Sarvasiddhi taluk, Vizagapatam, it sells at 2½ tolas to a rupee, whereas in Cocanada, where day wages are quite frequently eight annas, especially amongst the longshoremen, who are notorious opium eaters, the increased demand for opium is so great that the license for the 20 and odd retail shops in that taluk sells for 12 or 15 thousand rupees. There one rupee will buy only 2½ tolas of opium. It is a well-known fact all the world over that where day wages increase the consumption of intoxicating drinks and drugs increases, and where they diminish, the intoxicants are not so extensively used. Speaking generally, not definitely, and of the coolie classes and day labourers, such as masons, carpenters, fishermen, and such, from one-sixth to one-fourth of their income goes for opium. This is a very serious inroad on an income which, if all of it were used on nourishing food and necessary shelter and clothing, would not then save the people from the ragged and painful edge of poverty. The average income per head in Madras is only Rs. 25½. One rich man in the Godavari lost his property through the stupor and mental weakness induced by the opium habit, and when dying and unable to swallow had it rubbed on his lips, and died with the smell of it in his nostrils. One coolie in Turrie never came home till he had spent his entire day's wage of 3 annas on opium. He lived on his wife's and children's earnings and on charity. A sweeper in Yellamanchili spent all his monthly wage of 3 rupees on opium, and begged his clothes and food from door to door. A preacher named Jagayya spent one-half of his monthly wage of 6 rupees on opium, and compelled his wife and old father to support him out of their hard-earned daily wage.

27,832. Is there a general tendency to increase the dose?—The striking peculiarity of opium is that a large majority of those who use it, presumably as a medicine at first, become so enslaved to it that the most violent pains in the arms and legs, and sometimes the whole body, occur immediately on their being deprived of it. The will, which has in the meantime weakened under the influence of the drug, is unable to withstand the temptation to relieve the sufferings when the old remedy is so easily procurable. And though they know that they are being weakened in body, mind, and morals, they yield and continue the habit. The dose may not be increased till some serious sickness occurs which does not yield to the former dose. Then the dose is doubled, and as even this increased dose is found ineffectual in allaying the old pains, it is slowly enlarged. The amount which some can take in a day and live is astonishing. A fisherman in the South Godavari took

* i.e., Yellaman, Chilli.

$\frac{1}{2}$ a tola a day. He died of cholera. I have known cases in which the shopkeeper gave small pills to young men, purporting that they would cure sickness. When the habit had become so strong in their victims that they felt they could not live without it, then the shopkeeper stopped giving and made them buy. One such said he spent all the money he could get on opium, and begged his meals. He could live without food, or with very little; he felt that he could not do without opium. His bleared eyes, shrunk chest, wasted limbs, and shuffling hesitating movements indicated that he would not live long, even with opium. Although he had been using it only one year, he takes $\frac{1}{2}$ of a tola a day.

27,833. What are the results of the habit physically, mentally, and morally?—A noted religious mendicant says that “alcoholic drinks deprive a man of self-control. “Ganja (hemp) deprives him of his sense. But opium “takes his life-blood.” I have heard that opium and alcohol taken together make a man very ugly indeed. This testimony is confirmed at the mouths of thousands of witnesses. Men commonly give up tobacco and alcoholic drinks, but the reformations amongst opium eaters are so rare that it is said, “The man who takes opium habitually takes it to his death.” (a.) Physically.—The vicious practice followed by mothers of giving it to soothe restless babes has resulted in the death of many of the little ones. Opium in very minute doses will prove fatal to children, so sensitive are they to it. To tabulate the numbers is difficult. But on asking a mixed company of some 200 people in the Kistna, where the habit is not extensive, how many children they had known to die from over-doses, they mentioned seven cases. In my own experience I have known native nurses to administer opium to four different European children in their charge with almost fatal results. The parents in two of these cases, never suspecting the cause, were completely puzzled as to how the children should be treated. In two of the cases the symptoms of opium poisoning were so decided that instant measures were taken for their relief and the children barely escaped. An overseer in the Public Works Department, a man of a great deal of intelligence, in a public meeting convened to secure evidence on the opium question, rose and told how he hated opium because a dear little lad of his had come near being killed by an accidental dose of the poison, and of another child which had been killed by its own mother giving it opium to lull it to sleep. He said a great many deaths occur in this way amongst children, because the poison is so easily secured and the mothers are so ignorant as to its proper use. For these reasons he would strongly urge the necessity of placing opium in the hands of medical men to be sold by them only as a medicine. They would then ask the people why the opium was needed, and could properly advise them as to its uses, or suggest and prescribe a substitute. (b.) The mortality from opium amongst adults is sufficiently alarming to demand a more careful provision for the sale of the drug under medical supervision, so that those who use it medicinally may be properly advised as to the size and frequency of the dose. In Cocanada during a sudden cholera scare, opium was taken as a preventive medicine by several in such large quantities as to result in their death. Habitual users take such large quantities that what seems a small quantity to them when taken by a non-user is sufficient to kill them; so that the advice of opium eaters is practically worthless. Out of a group of ten men five said they had known of ten fatal cases. (c.) Many cases of suicide, especially amongst women, are the result of opium. So well known are the dangerous and powerfully poisonous properties of opium mixed with gingly oil that a common threat amongst the women when angry is that they will take the mixture and thus end their miserable lives. An old wholesale opium vendor, who has been an habitual consumer of the drug for some 20 years, until now his abnormal appetite demands one quarter of a tola a day to satisfy its imperious cravings, thus describes the results:—“The people waste away and “become lean in their flesh. Their property vanishes. “When this is all gone, they beg and even steal to secure “the wherewithal to satisfy the demon gnawing at their “vitals. It is very bad, very bad. They lose all will “power, and when the weakened will struggles to escape “the thralldom, the fearful pains in the body which immediately follow any attempt to leave it off overcome all “better desires, and the man falls back a confirmed, a “hopeless, and a helpless slave.” A young man who had been cook to a noted opium eater in Binnipatam describes him as follows:—“My master was stout. He ate well. “He was weak. He ate sweet things, but could not take “much solid food. He took opium six years in large “quantities. I weighed it out for him. If there was a “delay of an hour he could not endure it. He would

“become violently angry and beat me. He died from the “effects of it.” The lad himself was an opium sot, and he looked it. From my own personal knowledge, and I have heard many a poor fellow’s confession, the effects seem as follows:—The appetite goes, there is a bitter taste in the mouth, in three months the will is so weakened that the eater becomes a slave, perhaps an unwilling one, to the habit. His strength slowly ebbs away, he loses flesh, fearful pains rack his limbs and body if he leave it off for only a few hours. His eyes become bleared, his conscience (never very active) gets blunt, and when his property wastes away because the habit has destroyed his ability to retain it, he will beg and steal to get opium. He will even threaten his wife and children with murder if they do not provide him with the money which he has become unable to earn to purchase the black pill. If he is a peon or a household servant in a family he sleeps over his work and becomes so dull, stupid, and weak that even the most indulgent of masters loses all patience with him. Amongst my masons, and I employed 20 of them for over one year, several were opium users. They were good for nothing that required intelligence and strength. They were adepts at putting in small stones and much mortar. But were a constant trial to my patience, and I bore with them only because masons were scarce, and poor as they were, no one better could be secured. The opium users amongst the coolies could be easily recognised by the characteristics common to the class, and were retained in many cases only because dismissal meant untold hardship to their suffering wives and little ones. In many cases the day’s wage was paid the wife instead of the opium eating husband to ensure its being used for food. Two of my household servants were opium eaters. Stupidity, utter lack of conscience, incapacity, and shameless negligence rendered them so utterly useless that we were compelled to dismiss them. Men addicted to drink were good servants compared with them. Opium consumers have such a pernicious influence morally that none are knowingly admitted to church membership in our missions, and if discovered are excluded. I believe this is almost the universal practice in connexion with missions working in China. They do not admit opium users to their church membership.

27,834. In what proportion of cases is the habit injurious?—Any drug used as a medicine, which when taken so enslaves the user as to make it impossible for him to give it up even after the sickness for which it was taken has passed away, must be injurious. Better the original sickness than the opium habit. In all the cases which I have known well the habit has been injurious.

27,835. Is opium generally believed to be protective against fever?—There is a great diversity of opinion amongst the natives. It is generally believed to be good for a fever with chill. Men not addicted to opium laugh at those who use it as a protective against fever, and declare that those who do so have more fever than others, and say they take it for fever to give an excuse for an otherwise unjustifiably bad habit.

27,836. Is it especially useful in malarious districts, or believed to be so?—It is believed to be so.

27,837. Is it necessary, or believed to be necessary, to enable working people to get through their daily toil?—By the stupidity it induces men are not sensible of fatigue. But it does not and cannot strengthen men. And the use of it destroys the appetite for wholesome food. Men who do not use it are more hardy and stronger than those who do. In selecting coolies or bearers I should invariably take men who do not use opium.

27,838. Is the habit of taking opium looked upon as disgraceful?—Yes, by all classes of the people. There is a proverb used by all classes on occasions when anyone has been inexcusably stupid, which is to the effect “that the “man acts like an opium eater.” The man at whom the proverb is pointed invariably resents it with anger. This sentiment is so widespread amongst the people as to promise easy enforcement of a good-strict prohibitory law.

27,839. Does the existing system of granting licenses for the sale of opium tend to the spread of the habit or its restriction?—A licensed vendor secures his license at the highest up-bid prices. In order to remunerate himself he uses his utmost endeavour to extend consumption and sale. Every retail vendor and every proprietor of an opium smoking den is loud mouthed in commending the numerous medicinal uses of the drug and in urging the people to try it. They give away a good deal to young men not addicted to the habit to induce them to adopt it, and when they are once enslaved make them pay for it.

27,840. Has the closing of shops for consumption on the premises been carried out in your district?—Opium

The Rev. H. F. Laflamme.

19 Feb. 1894.

The Rev. H. F. Laflamme.

9 Feb. 1894.

smoking shops are still in existence in Cocanada, Yellamanchili and, as far as I could learn, in all other places in these parts where they have hitherto existed. The authorities are cognizant of their existence.

27,841. Have the results of this measure been beneficial?—They should be so. The closing of the shops would scatter and weaken the opium smoking fellowship. Union is strength to the extent that the congregating in opium smoking dens is broken and the curse weakened.

27,842. Are any further measures required to give effect to the policy of discountenancing opium smoking?—By driving the opium smoker to indulge in private he is thrown under the powerful restraint of the abuse of the women and non-smokers of his household, who seeing the bad effects in him oppose the habit vigorously.

27,843. Is it desirable to prohibit the sale of opium except for medical purposes?—Yes, by all means yes. The medical purposes for which the drug may be used are too well known to be denied. But those purposes can be safely accomplished only by the advice of a qualified medical practitioner. In this way, and this way only, can the drug be restricted to its legitimate uses and be prevented from ministering to the lusts of, and creating vice amongst, the people.

27,844. Would public opinion favour the adoption of the measure?—The sentiment of all classes of the people and of even a large number of opium victims would be altogether in favour of such a restriction. I have in my hand four petitions to this effect, one from the 43 missionaries of our two Canadian Baptist Missions, labouring amongst some 3,000,000 of the people, two others from the native Christian community connected with one of our missions and numbering about 3,000 adult communicant church members, and a third from a public meeting of some 30 men who represent the highest intelligence and best social element of my own town of Yellamanchili. They are Hindus, men of education and of high position. They regret the havoc wrought by the opium habit amongst their fellows, and in the simple and brief resolution passed by them represent the attitude of all thinking people amongst their fellow countrymen. Good Hindus, good Mahomedans and good Christians all over these districts would unite in desiring Government to restrict the sale to that for medical purposes only.

27,845. What class of persons do you think could be entrusted with the medical use?—Medical men, hospital assistants, &c.

27,846. (*Sir James Lyall.*) It is in Vizagapatam and Ganjam that the opium habit is most common, is it not?—In Godavari as well.

27,847. It is exceedingly common in the whole country, is it not?—I do not know; we are only on the sea coast.

27,848. It is a very old practice in that part of the world, is it not?—I am informed so.

27,849. Is it not a curious fact that the Madras Government seem to have been ignorant of the extent to which opium is used in those districts up to the year 1880?—I do not know. I did not come to India myself until 1887, so I am not familiar with it.

27,850. I suppose your views in respect to the prohibition of alcohol would be the same as they are in respect to the prohibition of opium?—I should like to say a word or two on that. I have been rather surprised at the evidence given in favour of opium, and in that connexion I should just like to say this: the only way I can account for the remarkable evidence given by many witnesses to the effect that opium is largely harmless and to many very helpful is that they recognise that a report by this Commission which may result in the prohibition of the opium traffic in India will make the liquor traffic in England utterly indefensible. The opium and the liquor traffics are in the same box. Those who are enemies to the one are enemies to the other. Anyone in a position to compare the evils wrought by alcohol in England with those wrought by opium in India would not for a moment hesitate to affirm that the former is a much more serious vice; so that it becomes apparent that the Parliament which undertakes to grapple with and overcome the lesser evil in a distant land must not, and cannot, long delay an attack on the greater evil at its very doors.

27,851. But when we come to the point of trying to stop the use of alcohol or the use of opium we find that the only way of stopping it is to make it a crime punishable with fine or imprisonment?—That is the way we do in America and Canada.

27,852. You think that is really a good thing?—I think it is an essential thing.

27,853. Is it not very doubtful whether you have succeeded in Canada in repressing drinking by that system?—We have not as yet had a fair trial. We have had local option in Canada, the Scott Act, but we found that these Local Option Acts were really not effective, and the people became so disgusted with the failure of the Acts to meet the case that they have reversed their decision at the polls, and thrown the Local Option Acts out of provinces entirely. Recently a commission was appointed by the Dominion Parliament to examine into the question of the alcohol traffic in all parts of the Dominion. They visited the Eastern and Western States, and have been at work for some time. In the meantime a plebescite has been declared in some of the provinces, Manitoba, Ontario, Prince Edward's Island, in which this one single issue was put to the vote of the people, and the people have declared in favour of the prohibition of the liquor traffic, by an overwhelming majority.

27,854. In these three?—Manitoba, Ontario, and Prince Edward's Island.

27,855. I think I heard last year, when I was in Toronto, that in Ontario it was going quite the other way?—That is what they thought, I think. Professor Goldwin Smith and Professor Clarke were very much surprised at the results. It was voted on the 1st January last. In Nova Scotia and New Brunswick they are practically prohibitionists. New Brunswick passed Prohibition Acts as early as 1867. Their legislators were rather in advance of the sentiment of the people, and they found it was impracticable, but now the people are in favour of it, and we have had prohibition in the north-west territories for a long time until recently. British Columbia and Quebec are the only provinces that are not strictly prohibitory.

27,856. Do not you think that stronger things can be done safely in a democratic, self-governing country in that way than in a country like India, where Government is carried on by a small group of foreigners?—I was before the Hemp Drugs Commission, and they were asking the same question in connexion with the prohibition of hemp drugs, and I told them there that such a law was utterly useless, unless it was backed up by a strong public sentiment. But in this country, if the Government of the country were determined to suppress these traffics, the officials under them, the deputy collector, the tassildars, and such like, who are very anxious indeed to curry favour, would heartily second their efforts. In the districts, as a rule, the people are very obsequious and timid, and I think any determined effort on the part of the Government to suppress the traffic would be successful. I am sure that in our districts it would not raise any trouble whatever. When I first came to Yellamanchili there was a proclamation against the growth of hemp drugs. The hemp plants were torn up all over the place; nobody grew them at all.

27,857. They stopped the cultivation of the hemp drugs?—It is not illegal, I think. They learned that afterwards, and they have taken to growing it again. They simply got that impression from the action taken by the police.

27,858. You were asked what was your own opinion about the effect of opium as a prophylactic against fever, and you gave an answer; but is it not a fact that among the people in the districts of Vizagapatam and Ganjam the general idea is that the opium habit is a very strong resistant to fever?—In Vizagapatam and Godavari I think people believe in it. They take it largely for that reason; but in the Kistna district they do not take it, except for fever with chills. The medical man there, the hospital assistant at Yellamanchili, says that quinine is very much more effective, and he thinks that the measures taken by Government to place quinine in all the post offices and police stations for sale at a mere nominal sum will do away with the necessity of opium.

27,859. (*Mr. Fanshawe.*) I understand that you do not think that opium stands on any different ground to other stimulants?—No; I do not think so. I think it is a much more difficult habit to detect, and I think it is a much more difficult habit to give up.

27,860. I mean that with regard to prohibition you do not think it stands on any different ground to other stimulants?—We take the same stand against alcohol as against opium.

27,861. Have you any statistics as to the number of suicides to show that opium is largely used as a means of suicide in the part of the country to which you refer?—No, not amongst the women. I may mention here that if a woman has a quarrel with her husband she threatens to

take opium mixed with oil, and says that that will be the last meal she will cook for him.

27,862. You are probably aware that in other parts of India people commit suicide in wells, or hang themselves with their clothes, and so on?—They do in our part too.

27,863. (Mr. Haridas Vekaridas.) Do you consider the effects of alcohol are more injurious than those of opium?—I think they are both very bad.

27,864. No doubt, but opium would stupify a person while alcohol would make him violent?—I have said in connexion with that, in comparing the drugs, that ganja takes away a man's sense, alcohol deprives him of his self-control, and opium takes his life blood.

27,865. But perhaps you will admit that opium will not make a man so mischievous to society as alcohol will?—I think that alcohol in America and England is a much more serious evil than opium in India. In our district, I think, alcohol is a more serious evil than opium.

27,866. If that is the case, would you not rather see alcohol suppressed before opium?—We tackle them both together.

27,867. (Mr. Mowbray.) Are your districts in Madras districts where the coolies go across to Burma from?—Yes, a number go from there.

27,868. Do they go to and fro to see the same people again?—Yes.

27,869. We have had a good deal of evidence about their opium eating and their hard work while in Burma?—A great many of our coolies learn their bad practice in Burma; they contract the habit there. I know of some cases where a man has contracted the habit of eating ganja there.

27,870. (Mr. Pease.) Are you quite sure about ganja in Burma?—I have known cases where they have taken ganja in Rangoon, men who contracted the habit there. All the coolies do not use opium by any means. I have employed a large number of coolies, and all of them did not; they could not afford it. Those who did use it were very much less capable than the others as day labourers.

27,871. (Mr. Mowbray.) Your experience is about six and a half or seven years?—Yes.

27,872. (Sir William Roberts.) Does the description you give of the effects of opium, where you say, "The appetite goes, there is a bitter taste in the mouth," and so on, apply to moderate or excessive consumption?—It applies to all. The first part of the description represents the moderate users, and then the immoderate user, while the latter part represents the sot.

27,873. (Mr. Mowbray.) You gave us some figures about the amount of income in Madras, and I think you put the average income at 25½ rupees a year?—Yes.

27,874. Where did you get those figures; it is rather a small amount, is not it?—Yes, it is small. I noticed the figures given in "National Righteousness."

27,875. It is Rs. 2 a month?—Yes, for man, woman, and child. This description seemed to tally exactly with my own experience amongst the people that I adopted it as true. I think the figures are Sir David Barbour's figures—the average income for each province according to Sir David Barbour, taking in all sorts of income. It is a comparative table for different Presidencies.

27,876. (Chairman.) Dividing the total income by the number of people, all sexes and ages?—Yes. In connexion with the financial view, I think that our mission would be opposed to the principle of compensation. Sweeping

changes in the fiscal policy of a country necessitated by the exigencies of party government have frequently resulted in the closing of useful branches of industry and manufacture. Yet such a government never dreams of compensating the ruined manufacturer. By compensating the opium grower and manufacturer in India we would be guilty of the grave inconsistency of treating the progenitors of a means of national vice with more leniency than fair and honourable tradesmen. Where the Government of India is under necessity of narrowing production they never compensate the farmers thus thrown out of opium production. I do not think compensation would be fair.

27,877. (Mr. Fanshawe.) What about compensation to cultivators in the Native States?—I do not see why they should receive it if the other cultivators do not. Then in connexion with the Madras Act—I have it here.—I have made a study of it during the last few months. I have been surprised at a great deal of the evidence given in favour of opium, speaking of it as a very beneficial thing, a very good thing; whereas in the wording of the Act right throughout it is treated as a very dangerous drug indeed. In connexion with the prohibition of the traffic we were only asking that the opium traffic may be so prohibited that opium will be used for medicinal purposes only. Some have said that if this occurred there would be a great deal of trouble among the people, that the people would not endure it; but we find that previous to this Act—one of 1878—opium sold at eight tolas to the rupee. When this Act was introduced and the new regulations came in force the price of opium rose to 2½ tolas a rupee, and there was no disturbance. So that I think if a still further prohibitory enactment is made according to the 6th Rule of the Madras Opium Act, all that we asked for would be accomplished, and I do not think any trouble would result. The 6th Regulation of the Madras Act says: "The collector may grant to any person residing within his district a license as a medical practitioner in such form as may from time to time be prescribed by the board with the previous sanction of the Governor of Fort St. George in council, for the possession and retail of opium, intoxicating drugs, and poppy heads for medical purposes only; provided that such medical practitioner shall not have in his possession at one time more than one seer of opium, one seer of intoxicating drugs, and ten seers of poppy heads, or such larger quantities as the board may in special cases authorise." We ask for that restriction to medical purposes only. Then in connexion with this Act I find on page 182, paragraph 10, in the grant of the license to the vendor of opium, that he shall "close his shop if situated on or adjacent to the line of march whilst a regiment or detachment of European or native soldiers is passing or encamped in the vicinity, should the collector so direct." I think the tendency to crime is evidenced in the regulations by the Madras Governor. He says in the fifth clause of the license for the vend of opium under Rule 31, "He shall not receive any wearing apparel or other goods in barter for opium; that he shall not open his shop or make sales therein before sunrise; that he shall not keep it open or make sales therein after 8 p.m.; that he shall not harbour any suspicious person therein; and that he shall not at any time allow the smoking or consumption of opium or its preparations in any form on the premises of such shop,"—"that he shall not permit persons of notoriously bad character to resort to his shop; that he shall prevent gaming and disorderly conduct therein; and that he shall give information to the nearest magistrate or police officer of any suspicious person who may resort to his shop." So that the various tendencies of the use of the drug are evidenced by the wording of the regulations themselves.

The witness withdrew.

Mr. R. M. RAMACHENDRAM called in and examined.

27,878. (Chairman.) You are secretary, I believe, of the Mahajana Sabha, Conjeevaram?—Yes.

27,879. Will you give us your views on the opium question?—From the statistics gathered from the shops licensed for the sale of opium it would appear that the quantity consumed in this town is comparatively very little. Men of high social status do not appear to take to opium eating. A few poor people and some pensioned sepoys are the only customers of the shops, who take it that they may not feel hunger. It is more used here for medicinal purposes than for consumption, as it is. Nations supposed to be affected by our trade in it appear to manufacture the same more or less in their own countries, and

they may themselves be left to look after them. Our trade in it is a chief source of income to this country. The populace of this town, therefore, are of opinion that its distribution in this country may be confined to medicinal purposes alone, the manufacture of the same here and its export to other countries being left unmolested. The following resolutions were passed by my society:—"The amount of opium consumed during the official year of 1891 to 1892 is about 1,500 tolas. The amount consumed from 1892 to 1893 comes to about 1,957 tolas. From April 1893 to March 1894 it will come to nearly 1,200 tolas. Yearly about 300 tolas are used for medicinal purposes, and 200 tolas for the manufacture of

Ramachendram.

19 Feb. 1894.

"nadat. Deducting those from the whole, about 1,000 tolas per year is consumed in the genuine state. The maximum amount allowed for each buyer is only three tolas. Even if it should be presumed that $1\frac{1}{2}$ tola is consumed by each man, we have only about 60 opium eaters, against a population of about 40,000. Of these 60 opium eaters 40 are habitual eaters. Most of these are pensioned sepoys of low condition in life. They say that opium satisfies hunger. It is a sort of febrifuge to them. Opium is used in the manufacture of certain medicines called poonady, madanakameswary legyam, and so forth. These are things that increase the lust of a man, as their very names express. Opium does not do any harm to a man of good nourishment. Excess in opium eating only causes unconsciousness to the eater, and does not prove deadly as is the case with alcoholic liquors. An opium eater does not do any harm to society. He does not rave or throw stones at others as a drunkard. But men of high social status do not at all have any recourse to any of these intoxicants. By the manufacture of opium, the Indian Government and the Indian agriculturists are profited much. To deprive the Government of this legitimate source of income is not desirable. If it is the intention of the British Parliament to suppress the traffic in opium, in

"the interest of its Indian subjects, the Government may be directed to prohibit the sale of opium in India for other than medical purposes. We are not for a thorough prohibition of the manufacture of opium. India should be free to export her opium to any country. It is not the duty of this Government to prohibit the importation of opium into countries like China, &c.; for those Governments will themselves take care of their subjects where necessary. By prohibiting the manufacture of opium India alone may be made to lose an immense income, and the supposed evil will continue to remain the same in those places, for it is clearly known that opium is manufactured even in those countries, in the interest of whose people the suppression of the manufacture is being considered."

27,880. (Chairman.) They are resolutions passed at a meeting, are they not?—Yes.

27,881. (Mr. Fanshawe.) I understand that this was a meeting of the Mahajana Sabha, is that so?—Yes.

27,882. How many persons belong to that association?—About 60.

27,883. How many were present at the meeting when these resolutions were passed?—Nearly 45.

The witness withdrew.

Rao Sanib
Rambilas.

RAO SAHIB RAMBILAS called in and examined (through an interpreter).

27,884. (Chairman.) You are, I believe, a banker, of Amraoti, Hyderabad?—Yes.

27,885. What have you to say with regard to opium?—Opium eating is neither morally nor physically in any way harmful. It is actually beneficial to those that are given to it. He who is an habitual user of opium cannot do without it. If he does not get opium in time his strength fails, and he is quite knocked down; nay, he becomes insensible. Those addicted to this habit are industrious and diligent. I am not aware of any moral evils resulting from opium eating. As to opium smoking it is much looked down upon. There would scarcely be any person (excepting those that are addicted to opium smoking) who would say anything in favour of opium smoking. It has a deleterious effect upon the nervous system, and it results in decay of the faculties. But in Berar, amongst users of opium, there could be found only 10 per cent. who smoke opium, and again opium smokers could be found, for the most part, among the lower classes (i.e., Kunbi, Dheds, &c.). From a medical point of view opium is absolutely necessary to the people of Berar, and the effect of consumption of opium (excepting smoking) is undoubtedly beneficial. Opium is administered in many medicines that relieve people from diseases. There are very few persons in Berar who use opium as a luxury. My conclusion is that the use of opium is not deleterious to the population, and, therefore, my opinion is that its supply should not be curtailed either wholly or partially, nor could it be so curtailed, as such curtailment would tend to tell upon the Government revenue and the health of people devoted to the use of opium. If it be assumed that Government could possibly curtail the supply of opium, my belief is that an entire curtailment would never be received by classes given to opium, though a partial one might be received with great difficulty and reluctance; and the result of such an entire curtailment will be that many an opium user shall have to fall a victim at the altar of this curtailment. I having made inquiries, and referred

to popular opinion, am of opinion that opium cannot with advantage be replaced by any other drug.

27,886. (Sir James Lyall.) When you talk about opium smoking in Berar, do you mean chandu smoking or madak smoking?—Madak; there is no chandu in Berar.

27,887. Is it an ancient custom?—I have seen it going on for 50 years, and it existed before that.

27,888. Are you sure that about 10 per cent. of the total users of opium are smokers?—Yes. People of lower castes smoke madak, but the better class people do not.

27,889. When you say that madak smoking results in the decay of the faculties is that a general statement, or have you noticed it?—The liver is destroyed by madak smoking.

27,890. Have you seen instances?—I have been told that it produces these effects internally, but I have not seen it myself.

27,891. You say there are very few persons in Berar who use opium as a luxury. Do not you consider madak smoking a luxury?—Yes, it is a luxury.

27,892. (Mr. Fanshawe.) What is your position at Amraoti?—I am a banker there. My firm has been established there for over 100 years.

27,893. (Mr. Haridas Veharidas.) Do you take opium yourself?—No.

27,894. Do you say it is actually beneficial to those who use it; if you took it would it benefit you?—I think I would be benefited by it.

27,895. Even without any necessity for taking it?—If there should be any failure in my strength, and I should feel the necessity for opium, I should take it.

27,896. Then people should take it only for the sake of health?—Yes.

The witness withdrew.

Adjourned till to-morrow at 11 o'clock.

At the Town Hall, Bombay.

SEVENTY-SIXTH DAY.

Tuesday, 20th February, 1894.

PRESENT:

RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

Sir JAMES B. LYALL, G.C.I.E., K.C.S.I.
 Sir WILLIAM ROBERTS, M.D., F.R.S.
 Mr. R. G. C. MOWBRAY, M.P.

Mr. A. U. FANSHAWE.
 Mr. ARTHUR PEASE.
 Mr. HARIDAS VECHARIDAS.

Mr. J. PRESCOTT-HEWETT, C.I.E., *Secretary*.

Mr. A. J. DUNLOP recalled and further examined.

27,897. (*Chairman.*) I believe you are the senior member of the Board of Revenue of the Hyderabad State?—Yes.

27,898. You have put in a valuable memorandum on the question that has been referred to this Commission so far as it relates to Hyderabad?—Yes. I have also filed a letter* written by the Prime Minister of Hyderabad to Mr. Plowden, the Resident, which he is anxious should be before the Commission, as showing the views of His Highness the Nizam's Government. Since my memorandum was written I have also obtained further evidence which I should like to put in.

(*Chairman.*) Your memorandum† will receive the most careful attention of the Commission; and we shall be happy to receive anything you wish to put in.

27,899. (*Sir James Lyall.*) How long have you been in service in the Hyderabad State?—I have been ten years in Hyderabad. Altogether my service amounts to nearly 25 years. I held the appointment of Deputy Commissioner in Berar; and in foreign service I am senior member of the Board of Revenue in Hyderabad.

27,900. You say in your memorandum, "Opium imported, either from beyond the frontier or from the districts, into the city of Hyderabad, and also opium exported beyond the frontiers, were subjected to a uniform customs duty of Re. 1 per seer"; apart from the city of Hyderabad, opium passing to and fro in the district of Hyderabad did not pay any duty I suppose?—Up to 1880 it paid no duty, except the Re. 1 import duty whether imported into the city or into the district.

27,901. I suppose opium was very cheap at that time in the Hyderabad districts?—Yes; it was very much cheaper than it is now. Sometimes the price is made the cause of complaint by certain people. One still hears of people complaining of the high price of opium. The policy of the Government has been to raise the price.

27,902. I suppose the Nizam's Government agreed to the proposals of the Government of India because they were convinced, after examination, that they would get a much larger revenue from opium in that way than they had before?—I do not think so. I happened to know something of that question at the time, because while some of these negotiations were going on I was second Assistant Resident in Hyderabad, and acting at that time, and I do not think His Highness the Nizam's Government realised that they would receive such an increase in revenue as they have actually got. They simply did it because they were induced to do so by the Government of India to save their revenue. They did not anticipate any loss, but I do not think they anticipated such an increase as they have obtained. I also think that it was not anticipated that there would be such an increase in Berar as there has been. We are very much in the same position in Hyderabad as the Government of the assigned districts are.

27,903. I see it is provided in the agreement that either of the parties shall be at liberty to withdraw after giving to the other party 12 months' notice. As it was so profitable a measure there is no chance of the Hyderabad Government wishing to withdraw; but if the Government

of India went in for prohibition in British India the Haidarabad Government would withdraw and change its policy?—I am instructed to say that if this agreement is cancelled, and if opium is prohibited, His Highness the Nizam's Government will claim the right of allowing opium to be cultivated again, which will be a very inconvenient arrangement for the neighbouring provinces of the British Government. Under this agreement they have the right to do so; and the Prime Minister himself has said so in his own letter.

27,904. You say "muddutkhanas and chandul shops known in Hyderabad as bambookhanas, because the chandul is smoked through a bamboo pipe, are prohibited by law, and the police have instructions to prevent the opening of any such places." When was that law introduced?—I cannot give the actual year. It has been in force some time. I am sorry to say it is not always observed. There are a large number of muddutkhanas still in the Hyderabad city. One reason of that is because in the city itself there are so many jurisdictions of independent jagirdars, and the police have not succeeded in closing all the shops. The rule, however, is that they should be closed.

27,905. Do you know what the reasons were which induced the Hyderabad Government to pass the order?—The order was passed in the time of the first Sir Salar Jung. I have not seen the order myself, and I do not know what reason was given for it; but it is not supposed to be respectable to have muddutkhanas. I suppose the Mahomedan Government wish to see them closed.

27,906. Is there any prohibition against liquor shops?—None whatever, except that they must be licensed; and the number, of course, is kept within certain bounds.

27,907. I see you say, "These figures" (referring to revenue) "give an average of nearly Rs. 18 per seer, or Rs. 7-13 per seer less than the amount realised in Berar"; is it the sale of the Government farms in Berar which fetches a higher figure, or what is the reason?—Certainly the sale of Government farms realises more in Berar than it does with us. I fancy also that there is more smuggling in the Hyderabad State than there is in Berar, which, of course, affects the sale of farms.

27,908. In giving your opinion upon the effects of opium, comparing them with those of liquor, you say, "For my own part I can only say that, while I see much drunkenness among the lower classes of the native population caused by excessive indulgence in country spirits, and while the consumption of European liquor is seriously increasing, I cannot recall a single instance in which I have seen a person the worse for opium smoking or eating"; is liquor very cheap in Hyderabad?—Native liquor is not so very cheap. Compared with Bombay prices it is a little cheaper perhaps, but not very much. The serious question is the enormous consumption of European liquor which is on the increase. The people of Hyderabad, especially the rising generations, are taking to drinking European liquor to a very serious extent. Those of us who meet the people cannot help observing it. The use of European liquor is a very growing evil in Hyderabad, not on account of its cheapness, but, I suppose, because the people prefer it. By the people I mean the rather better class. This is really one of the serious questions in Hyderabad.

Mr.
A. J. Dunlop.

20 Feb. 1894.

* See Appendix XXV. to this Volume.

† See Appendix XXVI. to this Volume.

Mr.
A. J. Dunlop.
20 Feb. 1894.

27,909. You know that the Government of India levies a customs duty on European liquors, calculated to be equal to the excise duty upon native liquors?—Yes.

27,910. Does the liquor which reaches Bombay bound for Hyderabad pay customs duty, or is it sent through in bond?—It pays customs duty in Bombay, and it pays customs duty in Hyderabad; so that it is considerably more expensive than liquor in Bombay.

27,911. There is no arrangement by which the Nizam can claim to get it through without paying customs duty?—That is raising rather a difficult question. There is an old treaty by which the old port of Masulapatam is supposed to be a free port to the Nizam. But the question is an old one, and I am not justified in saying that. As a matter of fact all the liquor goes to Bombay, and is all assessed. The ordinary customs duty is assessed in Bombay, and it again pays duty in Hyderabad.

27,912. You say "Sikhs, of whom there are 4,600 according to the last census, are also regular consumers of opium." I suppose those 4,600 Sikhs are mostly Deccani Sikhs?—Yes.

27,913. What professions do the Deccani Sikhs generally follow?—They are in the regular troops; some of them are now employed in the police. They form a portion of the Nizam's regular troops and Jagirdar's troops.

27,914. Are they men of different castes; do you know what their caste is, being a Sikh of course it is a matter of religion?—I do not think so. I think they are just the same as the Sikhs as originally came from up-country. They have become Deccanis now. Some of them have not married. I always make a distinction between pure Sikhs and Deccani Sikhs. I do not think they are people who have changed their religion.

27,915. Further on you say, "There are no druggists' shops or medical practitioners in the Hyderabad districts to whom the duty of selling opium could be entrusted"; I suppose there are what are called Attar shops?—We have Yunani doctors in parts of the districts, but not everywhere. There is a great scarcity of them. In our districts it would be practically impossible to say that opium should only be sold through medical practitioners because they do not exist except in the larger towns.

27,916. I gather from your memorandum that you think that not only the ministers of His Highness the Nizam, but the people of Hyderabad generally, would regard with great presentiment any attempt to force a policy of prohibition upon them?—Most certainly. The feeling is very strong indeed; in fact it is so strong that in a city like Hyderabad, which has a population, including the suburbs, of something like 400,000 it would be practically impossible to do it. On this point, if I may be permitted, I should like to give some evidence which has come into my hands since I wrote my memorandum a few weeks ago. The supply of opium was stopped in a town containing about 20,000 inhabitants for two or three days owing to a dispute between the contractors; and with your permission I will read what the Talukdar, who is in the position of the collector of a district, or deputy commissioner of a district, reported to me as a member of the Board of Revenue, showing what happened when the opium supply was stopped. This is a translation of Rubkar No. 517, dated 27 Isfandar 1303 Fasli, from the First Talukdar, Warangal district, to the Subadar.

Eastern division. "In forwarding copy of a petition from Nomal Ramchandram, opium contractor of this district, I have the honour to state that the opium contractor had sent for about eight thousand rupees worth of opium for the Warangal district, but the opium has been detained at Hyderabad in the excise office. At the request of the contractor the matter was reported to the excise office, the Abkari Commissioner, and the Revenue Board, with a request that permission may be granted to the contractor to bring in his opium, as the people have become clamorous owing to opium not being procurable in Warangal. A telegram also was sent yesterday, but up to this time no reply has been received from anywhere. In consequence of opium not being available the lives of the opium eaters are at stake. On my way to office I saw a crowd near the hospital in a curious state. Some men were gasping as if they were going to die, and the contractor was surrounded by all of them. With great difficulty I rescued the contractor from their hands and pacified them by telling them that I was endeavouring to get them opium which I hoped would arrive in a short space of time. Another crowd came to my office and stated that about 50 men were in a very sad plight, and in fact the wretched state in which I found the men forming

"part of this crowd cannot be described. This then is the state of affairs. If permission is granted the opium chests in Warangal which are under attachment since two years will be made over to the contractor on his furnishing a reliable security, and afterwards when the contractor's opium is received two boxes of the same quantity and weight will be replaced in lieu thereof. It is also possible to recover the price of the opium from the contractor. I have made this suggestion owing to the extreme urgency of the case, as in the event of any delay taking place, I am afraid to conjecture what will happen to the opium eaters this night. Irrespective of the present request I beg that a representation may be made to higher authorities with a view to prompt orders being issued regarding the contractor's opium."

"(Signed) SHOUKATH HUSAIN,
"Officiating First Talukdar."

This is the translation of an Urdu letter. It came to me in my official capacity; and I was obliged to telegraph down to release certain opium from attachment, which under ordinary circumstances would not have been released. If this happened in a small town like Warangal with 20,000 inhabitants it can be imagined what would happen in Haidarabad.

27,917. I gather from the rules attached to your memorandum that all the opium imported into the Hyderabad State has to come through the authorities and certain depôts?—All of it is carefully weighed. The rules are exactly the same as the opium rules for Berar. A pass is issued; it goes to the Godown and it is weighed and dispatched.

27,918. From these depôts it is sent to the licensed vendors?—Yes.

27,919. So that the State authorities have complete control, and can issue the opium at whatever price they think fit to the licensed vendors?—We have nothing to do with the price.

27,920. You might?—No, we sell the farms at auction; the opium farm for each district is sold.

27,921. I am not talking about the price to the public; I am talking about the price to the vendor?—We have nothing to do with that. The vendor buys the opium himself at Indore and Malwa and he brings it in. He makes his own arrangements for buying it. He has to come to the Nizam's Government to ask for a pass, and through the Resident the pass is given. He makes his own arrangement. He brings it into Hyderabad; he puts it into the Godown, where it is checked, weighed, and issued. We have nothing to do with the price. We take our Rs. 10 duty, and the amount of the farm revenue, which raises the price.

27,922. The Government has complete control, and might easily raise the price if it liked?—We sell by auction; we have no minimum price. As I have shown our price is still too cheap. We are anxious to make it dearer. We suffer from the great drawback that Jagirdars have independent jurisdiction (there are very large Jagirdars in Hyderabad having independent States), and then there is competition between Government and the Talukhas, which also lowers the price.

27,923. If you got over the difficulty of the Jagirdars' jurisdiction it would be very easy for the Nizam's Government to tax the opium to any extent it liked over and above the Rs. 10 per seer import duty, as it must come, as it were, into their hands at the Godown?—We could not put more on at the Godown; we could with the sanction of the Government of India, but we could not put on any kind of customs duty without the sanction of the Government of India.

27,924. Under this agreement?—Yes, under this agreement; and also under an old treaty regarding all our customs duties. We do not impose any customs duty without the sanction of the Government of India, and the Rs. 10 duty sanctioned by the Government of India is the maximum arranged for. Of course it could be arranged with the Government of India, and in that way we could raise the price to anything we liked.

27,925. (Mr. Haridas Veharidas.) You state that the Nizam's Government would claim the right to grow poppy?—We reserve the right of claiming it.

27,926. The Minister's letter says that you maintain the right to claim; you are not claiming now?—We maintain our right to claim. It was a right which we enjoyed before this arrangement was made.

27,927. If one party withdrew from the agreement the other party would withdraw?—Certainly.

27,928. (*Mr. Mowbray.*) I think you have told us that when this arrangement was made with His Highness' Government, His Highness' Government did not anticipate any loss, and that, as a matter of fact, there has been a considerable gain?—Yes, a very great gain.

27,929. And, therefore, in this case no question of compensation arose so far as the State revenue was concerned?—No.

27,930. I should like to ask you whether any question of compensation arose with regard to the cultivators who had been in the habit of growing poppy, and who were prohibited under this agreement from continuing to grow it?—They have made considerable claims, especially the Jagirdars—the large proprietors; but so far their claims have not been settled.

27,931. Is the land revenue in Hyderabad settled in the same way as it is in British India?—The land revenue in Hyderabad, so far as the district is concerned, is settled in exactly the same way as the land revenue in the Bombay Presidency. I have been Settlement Commissioner in the Nizam's Government for some years, and I can say that we have lost heavily from that point of view—from opium ceasing to be grown. Opium land used to pay Rs. 30 per bigha, and now we are assessing the same land at about Rs. 5; but we have gained on the other side.

27,932. Looking at it from the other side, the cultivator who has been prohibited from growing poppy has in fact received compensation by the reduction of the land revenue which he has to pay?—He has now since the settlement was introduced. For some years the cultivators did not receive it and there were great complaints, so much so that land was thrown out of cultivation. The cultivators, however, would still be very glad to go back to opium. It was a very favourite crop with them.

27,933. They would prefer to grow opium with a higher rate of land revenue than grow other crops with a lower rate of land revenue?—They would.

27,934. With regard to the shops for the sale of madak and chandu, I understand that there are no shops in which smoking is allowed. Are there any shops in Hyderabad, or in the Nizam's dominions, in which madak and chandu can be bought in its prepared state?—Yes, there are many shops where it can be bought; but they do not allow smoking in the shops.

27,935. There is no rule against smoking 'itself'?—No, none whatever.

27,936. You say that there is more smuggling in Hyderabad than there is in Berar; what form does the smuggling take?—I say so because I have had a great deal of experience of smuggling in Berar, having been the magistrate at the emporium where opium is received. We used to detect many cases in Hyderabad, and though now we detect very few cases I am quite convinced myself that there is a good deal of smuggling. I think it is brought in by the passengers who arrive by the mail trains. One has only to look at the crowds of natives travelling, each one with a large bundle. It would be almost practically impossible to check smuggling. We have had cases in which they have actually put opium into the spokes of the wheels. They have hollowed out the spokes of the wheels and packed opium inside. I have no hesitation in saying that our system for checking smuggling is at the present time in a very unsatisfactory state.

27,937. I suppose it would be very difficult to make it satisfactory?—It would be extremely difficult. We are doing all we can, but it is very difficult.

27,937a. I suppose the opium which is brought in in this way is all Malwa opium?—I fancy so.

27,938. It would hardly pay to smuggle Bengal opium, would it?—Bengal opium, I believe, is the cheaper of the two, but Malwa being nearer I should think the probability is that the smuggled opium is all Malwa opium. Any opium which saves our Rs. 10 duty would give a sufficient profit to a man to induce him to smuggle.

27,939. Even if he got opium which paid the pass duty?—Yes; the pass duty is Rs. 10 a seer, that is what I was thinking of.

27,940. I was thinking of the Rs. 600 a chest?—Rs. 700 a chest is what we take, which is Rs. 10 a seer. Rs. 600 is the minimum.

27,941. I do not quite understand the letter you have read to us, how long had the opium been detained?—The letter was not written with the object of its being placed before the Commission in any way; it was merely a report made to the Subadar of the Eastern Division, and it was sent to me. The contractor had imported some six chests

of opium which he was not allowed to take possession of, owing to a dispute with another contractor. It is unnecessary to enter upon the details here, but for certain reasons this opium was attached and the supply of opium fell short in this town of 20,000 inhabitants. My only object in putting this letter forward is to show what happened for two or three days when there was no opium. I was obliged to telegraph down to give them some opium there.

27,942. The want of opium made itself felt in three days?—Yes.

27,943. (*Mr. Pease.*) You have stated that certain claims of the ryots are still unsettled; is that under the agreement of October 1883?—The claims arise out of the change of system introduced by the agreement of 1883. The system was introduced in 1880, and the agreement was executed formally in 1883.

27,944. The cultivation of the poppy ceased in 1880?—Yes, the formal agreement with the Government of India being executed in 1883.

27,945. How can claims remain unsettled in 1894 that arose in 1880?—I do not suppose that the claims will ever be admitted. The claims have been made but they have not been satisfied.

27,946. In plain English, the Government have declined to recognise the claims?—Practically that is so. The ryots felt that they had a grievance, but whether they have formulated a claim or not I do not know; but the Jagirdars did so.

27,947. The fact remains that they were prohibited from growing poppy and there was no revision of the rates for some years after?—The revision of the rates was made as soon as the settlement operations came into these districts. There was no revision of the rates pending the regular settlement operations.

27,948. What is the date of the letter you have read?—January the 30th, 1894.

27,949. (*Chairman.*) In the interesting statement you have put in there is one point which seems to me to call for particular notice. Referring to the general question of the prohibition of the use of opium except for medical purposes you tell us very clearly that your view is "that such an extreme course could only be justifiable if it were proved beyond all doubt that the use of opium is carried to such an extent, and so abused, that it is undermining the health, strength, and moral character of the population, or any large class of the population." What is your view of the exact state of facts from that point of view?—I cannot recall in all my service ever having seen any case in which a man was the worse for opium consumption. I have seen many drunkards but I have seen no evidence in my daily life in Hyderabad of anybody being the worse for opium. On the other hand, since we have been especially inquiring into the subject I have heard an immense amount of evidence on the other side. If I had known when I wrote my memorandum all that I know now I would have stated the case much more emphatically than I have done. The view which I have expressed here I still maintain most fully, that there is not a tittle of evidence to show from anything found in the Hyderabad State that the use of opium is abused or is injuring people in any degree whatsoever. It is practically impossible to stop the use of the drug; and I should be very sorry to be at Hyderabad if any measure were introduced to stop it because it would lead to most serious consequences in the city. Hyderabad is a town we cannot trifle with; it is full of armed men.

27,949a. With regard to compensation to His Highness' Government and to the Jagirdars, what do you consider the total sum would be which might be demanded?—I have said in my memorandum that if opium were to be stopped we should claim 5 or 5½ lakhs a year, which is what we now receive. His Highness' Government sees no reason why opium should be stopped, and therefore it is not disposed to sacrifice any revenue. If the measure were forced upon His Highness' Government the sum I have mentioned would be claimed. But this is what the Prime Minister has said: "I feel so strongly the practical impossibility of prohibiting the consumption of opium as proposed, that it seems almost unnecessary to refer to the question of compensation." We throw that quite into the background because it is such an impracticable question.

27,950. Do you desire to say that even if this large sum which you have named as the annual amount to be paid by us as compensation were paid, there would still be dissatisfaction and discontent?—I say most earnestly that if you were to give us 20 lakhs a year we would rather continue

Mr. A. J. Dunlop.

20 Feb. 1894.

Mr. A. J.
Dunlop.
20 Feb. 1894.

opium. It would be impossible to carry on the Nizam's Government if opium were entirely prohibited. It is not used to any great extent as I have shown. The consumption in the city and the suburbs is one-third of a grain per head per day, which is not high, by any means. Still, it is used in moderation by so many people that to stop it would lead to such a state of things that His Highness'

Government would rather forfeit any revenue than have it stopped.

27,951. I suppose the amount used is not in excess of what you would call medical use?—These is no evidence to show that the amount used is excessive in any way; it may be in some cases, but we have no evidence of it.

The witness withdrew.

Col. K. J. L.
Mackenzie.

Colonel K. J. L. MACKENZIE, C.I.E., called in and examined.

27,952. (Chairman.) I believe you are commissioner having charge of the Hyderabad assigned districts?—Yes.

27,953. I believe you wish to put in a memorandum* on opium and its use in the Hyderabad assigned districts, commonly called Berar?—Yes.

27,954. As I understand previous to the 31st of March 1878 the control and check upon the consumption of opium was extremely lax?—Yes.

27,955. And there are no records previous to that date upon which you are prepared to place reliance?—None whatever. Up to 1877 the cultivation was entirely free. Import was also free.

27,956. What was the date when the existing rules were founded?—The existing rules came into force on the 1st of April 1879. Our revenue year goes from the 1st of April to the 31st of March.

27,957. Tell us shortly what has been the effect of the rules of 1880 with regard to the vendors of opium?—It has enabled us to watch the movements of opium inside the province, and it has enabled us to control and check it as far as we could.

27,958. Under the rules of 1880 the vendors of opium, wholesale or retail, are obliged to keep up regular accounts showing the date of sale, the name of the purchaser, the quantity of opium purchased, the total quantity sold to consumers, and the quantity of opium used in preparing madak?—Yes.

27,959. You have a perfect means of checking the amount of consumption?—I should be sorry to say that. Some opium may be smuggled, though I do not think it would be so very much.

27,960. But so far as it comes within the ken of the authorities you have a good check now?—Yes.

27,961. What is the duty?—Rs. 10 a seer.

27,962. Or Rs. 700 per chest of 140 lbs. ?—Yes.

27,963. That is a very heavy duty is it not?—It has brought opium up from about Rs. 8 a seer to Rs. 40 or Rs. 50 a seer.

27,964. So far as the action of Government is concerned it has put a very serious check upon the consumption of opium?—Yes. The immediate effect was to check cultivation, it fell considerably.

27,965. The consumption per head is exceedingly small, is it not?—Yes. The highest it has ever gone to is 3 of a seer.

27,966. What is the lowest amount?—5.

27,967. Keeping in view the medicinal use, you think it cannot be asserted that in Berar the use of opium except in a few rare cases is hurtful?—No, certainly not.

27,968. What was the price of opium before this taxation was imposed, and what is the present price?—It varied from Rs. 6 to Rs. 8 a seer when cultivation was free, and before any of these rules were brought in. As I have shown in my memorandum the licensee sells to the taluk farmers, who purchase the right to vend at Rs. 20 per seer. These in turn sell opium to their sub-contractors at a fixed price of Rs. 22 per seer. These sub-contractors or the retail vendors in their turn realise quite Rs. 40 a seer for opium sold for consumption, and Rs. 40 to Rs. 50 a seer for opium used for madak.

27,969. Have you anything to say as to the use of opium by the different races?—No reliable information is to be obtained as to the exact numbers of the different sections of the population mainly addicted to the use of opium. Its use is very general and fairly evenly distributed between all castes and peoples except Europeans and Parsis. Hindus (high and low caste) and Mahomedans, males, females, and children (between birth and up to three and four years of age) all consume opium. Amongst smokers of opium Mahomedans mainly predominate.

* See Appendix XXVIII. to this Volume.

27,970. It is considerably given to children, is it not?—I believe so.

27,971. Is it believed by the people generally that such use does no harm?—So I am told.

27,972. Looking at the native races amongst whom you have lived, would you say that the finest specimens are to be found among the people who use opium?—Certainly.

27,973. What is your own view as to the policy of prohibition?—I think it is impossible.

27,974. Do you think it is undesirable?—I think it is most undesirable.

27,975. (Mr. Fanshawe.) You say, "If the information obtained from the vendors is to be trusted, it would appear that in Berar most of the opium which is sold is bought for use medicinally." Do I understand you to mean by that that it is used on medical advice or used by the people themselves as a household medicine?—As a household medicine. We have very few native practitioners indeed. The people use it for all sorts of pains and ills, and they go and buy it for that purpose.

27,976. Then the class of information to which you refer would be statements by the sellers, who told you that opium was bought by native purchasers for pains and complaints, and so on?—That is what I mean.

27,977. (Mr. Mowbray.) So far as the revenue of the assigned districts has gone, the prohibition of the growth of poppy, taken with the new arrangements, has resulted in an increase of revenue to the Government?—Yes, that is shown.

27,978. Have there been any complaints on the part of the cultivators who formerly cultivated poppy?—The only complaint recorded by Mr. Jones, who was then the commissioner of the day, was that he found that they were obliged to sell their opium to the farmers. They did not complain of the stoppage of the cultivation.

27,979. When the cultivation was allowed the cultivators were compelled to sell to the licensed vendors?—Yes.

27,980. And that they complained of?—Yes, they wanted to sell it to anybody they liked.

27,981. But when the cultivation was prohibited altogether, did they make any complaint or claim for compensation for having been deprived of a profitable crop?—No.

27,982. When were the land rates in Berar settled?—We commenced about 30 years ago in the western portion of Berar; we took taluk by taluk.

27,983. Are you now commencing to revise the rates?—Yes.

27,984. Do you know in the revision which is now beginning whether any calculation is made in consequence of opium being prohibited?—It does not come into our calculation at all. Opium was only grown on what they called garden cultivation. At the time when it was stopped the area of cultivation fell to about 2,462 acres. That was the year the order came out stopping it. But it was falling before that; because the price of cotton was rising so high, and garden cultivation did not pay. Since then garden cultivation has fallen out in Berar very much. The wells are useless. The people rely very much upon cotton and oil seeds, linseed, and so on.

27,985. So that practically at the time when the cultivation of poppy was prohibited in Berar it was a dying industry?—It was. I do not mean to say that it would have died out for it was always a valuable crop. Even a little helped if everything else failed.

27,986. But it was not a matter of serious importance to the agriculturalists?—No.

27,987. You say "the licensee sells to the taluk farmers, who purchase the right to vend, at Rs. 20 per seer." The licensee is the man who holds the wholesale vend license, is he not?—Yes, he pays Rs. 16, and he gets the right to bring the opium in from Indore.

27,988. The Rs. 20, I suppose, is fixed between the licensee and the taluk farmer?—Yes.

27,989. Then you say that these taluk farmers in turn sell opium to their sub-contractors at a fixed price of Rs 22 per seer; is that fixed by Government?—No, it is arranged by themselves.

27,990. You only mean that it is fixed in the sense that it is always the same?—Yes.

27,991. And not fixed by law?—No.

27,992. With regard to the number of shops, see that in the last year for which you have given us figures, 1892-93, there has been a very large reduction induced in the number of shops as compared with 1891-92?—Yes, in 1891-92 the number was 585, and in 1892-93 it was 478.

27,993. Is there any special reason for that?—There were complaints that they overlapped, and there were parts of the country that did not require them. It was to prevent ruinous competition that we reduced the number.

27,994. These are the number of shops and not licenses?—The number of shops.

27,995. The number of shops to be opened for each license is settled I suppose?—Yes.

27,996. Who by?—By the deputy commissioner, sanctioned by the commissioner.

27,997. The number of shops is settled before the license is put up to auction?—Yes.

27,998. The revenue shown in column No. 4 of your first table is not for opium alone but includes also revenue obtained from other drugs?—Yes, we have separated them this year.

27,999. But the main portion you say comes from opium?—Yes.

28,000. Have you separate shops for the sale of chandu and madak?—Chandu is unknown in Berar. I believe madak is the only thing they prepare.

28,001. Have you shops for the sale of madak?—Not separately.

28,002. Is every opium shop able to sell madak, or is a separate license required?—No, they have not a separate license, they can prepare and sell it.

28,003. So that every opium shop may also be a madak shop, if it is wished?—Yes.

28,004. I suppose the resolution of the Government of India against smoking on licensed premises applies to Berar?—Yes.

28,005. Have you done your best to carry it into effect there?—Yes, we have.

The witness withdrew.

RAO SAHEB DEORAO VINAYAK called in and examined,

28,014. (*Sir James Lyall*.) Are you a Government officer?—I am a pleader.

28,015. Are you a native of Bombay Presidency?—I am a native of Bombay Presidency, but I have spent 40 years of my life in Berar.

28,016. Will you kindly give us your opinion with regard to the habit of opium eating and opium smoking?—I make distinction between opium eating and opium smoking. In opium eating again I make two divisions, (1) using opium medicinally, and (2) using the same non-medicinally. In medical use I include opium prescribed by medical men and also opium given to children and opium taken by old and infirm persons in old age only. Non-medical use: In Berar and among Beraris, Rajputs, and a few other Hindus and a few Mahomedans take it for its own sake. Marwaris born in Berar or elsewhere are more or less used to opium. But with a few exceptions these people are well fed, and opium does not do any harm to them. Morally, they are in no way inferior to non-eaters, and physically they do not fare badly. Opium requires solid nourishment, and this they can afford to have. Opium smoking is bad and produces very undesirable results. In Berar opium smoking prevails generally among lower classes, and they are, as a rule, poor. Smokers are physically weak and morally low. My belief is based on personal inquiries and personal observations. Rajputs, Sikhs, and Rathors are extensively opium eaters, and yet are fine, stout, and healthy. Morally, they are not inferior to non-eaters similarly situated. Marwaris are notoriously opium eaters, and I have not been able to find more business-like, more frugal,

28,006. Have you found much difficulty in doing it?—No. I think the people are very law abiding. I do not know that they would always obey the law unless someone was present to look after them.

28,007. As far as your experience goes, has the closing of licensed shops for smoking led to the opening of unlicensed places?—I am afraid it has, from what respectable native gentlemen tell me. Personally, I cannot give you any evidence of value upon that point, but they tell me it has done harm in that way.

28,008. Do the people who complain to you think that it is better or worse that smoking should go on in unlicensed shops?—They think it would be better to have the smoking in licensed shops where everything is open.

28,009. Do you care to express an opinion upon it yourself?—I should say, let it be done openly. It is looked upon as a matter of disgrace and you would probably check opium smoking. The tendency at present is either to drive the people to smoke opium in secret or to take to something else, so I am told by respectable natives. I would have licensed shops, where the people would have to go in public to smoke. The disgrace of the thing would prevent a number of people from taking to it.

28,009a. (*Mr Pease*.) Do you not think that in the statistics you have given with regard to Amraoti you have placed under medical use opium that is taken as a stimulant and can hardly be considered as medical use?—Probably so. This is only a return from the man himself, to give a rough idea of how he sold it. The people generally tell him that it is for medicinal use and he puts it down in his book.

28,010. After deducting what is for medical use and what is for smoking, about half a pound is left out of seventeen pounds and a half, and as we know that opium in various forms is used for outward application, it seems to me very little for non-medical use?—I should not attach very great importance to these figures myself. I only gave them from what the man told me; it is only to give a kind of idea to what happens.

28,011. (*Sir James Lyall*.) Did you happen to be working in an opium growing district when the cultivation of the poppy was stopped?—I was in Ellichpur.

28,012. You heard no complaints by the cultivators at all?—No, I heard no complaints.

28,013. You said that one reason for that was because cotton cultivation was taking its place; another reason, I fancy, was because the wholesale vendors so bullied the cultivators by forcing down the price that the cultivation was not a popular one?—It was not a popular one certainly, because of the complaints that were made to the commissioner at the time. The cultivation of opium fell because of that reason.

and more accurate sort of people than they. Smokers, however, I have seen hundreds of the description I have mentioned, viz., physically weak and morally low.

28,017. Can you give us any figures?—I have no figures to cite, but can assert that in 90 out of 100 cases my remarks will hold good. Medically, opium can never be deleterious; nor is it so non-medicinally if used in moderate quantity. It is looked upon as a relief in certain cases; opium eating ought not therefore to be stopped.

28,018. What is your opinion about opium smoking?—Opium smoking is no doubt desirable to stop, but more desirable will it be to stop the use of alcohol which has been doing immense mischief to the country. Opium in its worst form would allow a person at least to stand on his legs and behave as an ordinary human being, whereas a drunkard is sometimes a beast, and is found lying his full length. If at all philanthropists insist on Government to remove vices from the population, I think the ways adopted must be directed towards the stoppage of vices in the order of the mischief they create. The first efforts, therefore, ought to be directed to the stoppage of alcohol drinks, and then, and then only, the question I think would arise as to whether opium smoking should also be stopped or not, and not till then.

28,019. With reference to what you say about intoxication from alcohol, people often talk of intoxication from opium, do you think that is a proper word to use with regard to opium?—No.

28,020. Have you ever seen a man who was at all out of his senses from the use of opium?—No.

Col. K. J. L.
Mackenzie.

20 Feb. 1894.

Rao Sahab
Deorao
Vinayak.

Rao Sahab
Deorao
Vinayak.

20 Feb. 1894.

28,021. Have you ever seen a man in a state of insensibility or stupor from the use of opium?—No. I have seen many people using a moderate quantity of opium, and they were the best men of business.

28,022. Among what classes does the opium smoking habit prevail?—Opium smoking is a vice, but in Berar generally it is confined to the lower classes. Alcohol, on the other hand, covers higher as well as lower classes, including the classes more or less influenced by some strange liquor ideas—such as concentration of mind in philosophical studies, buoyancy of animal spirit, &c., &c. These, no doubt, are not the ideas of higher classes, but are such as could be cited as an excuse by some of our newly educated violent people to hide their weakness. Whatever may be the truth in these excuses, liquor to my mind is a curse, and immense times greater curse than opium smoking in its worst form.

28,023. Can you suggest any means for stopping opium smoking?—I cannot at present suggest any practical means to stop opium smoking. Stoppage means three things—(1) lingering death, (2) going to liquor or any other worse thing such as bhang or ganja, (3) smuggling. Smuggling means a remedy worse than the disease itself. Between the two other things, the smoker, I am inclined to believe, will naturally prefer vice to death.

28,024. Is it desirable to raise the price?—It is not desirable to raise the price.

28,025. What is the public opinion in the matter of the use of opium?—Public opinion is not against opium eating but it is against opium smoking. But short supply of the article will not be received by the general population as an unmixed blessing since it has the tendency of turning the smoker to worse things.

28,026. What is the popular belief about the effects of opium eating?—Popular belief is that opium eating is beneficial to health when taken in moderate quantity. It is bad if extravagantly taken, but not one-tenth so bad as the liquor is. Popular belief in giving opium to children is that it keeps them quiet and gives them sound sleep. It is also believed that it is a preventive in several ailments to which children are liable. Popular belief regarding the use of opium by old and infirm persons is that it keeps them in spirit and enables them to attend to their daily occupations. Old persons are many times obliged under certain circumstances to live on one meal, and opium has the capacity to avoid pangs of hunger.

28,027. Do you agree yourself in that view as regards the use of opium by old and infirm persons—do you think it is a right view?—There is a popular belief about it. I am personally inclined to think that old people take opium simply to keep them in comfort. The poorer classes use opium in old age because they have to work in the hot sun and at night, and opium keeps them in spirits.

28,028. What is your opinion on the whole about stopping the use of opium?—I consider, on the whole, that

The witness withdrew.

Nawab
Muhammad
Salam-Ullah
Khan.

NAWAB MUHAMMAD SALAM-ULLAH KHAN called in and examined.

28,043. (Sir James Lyall.) You are a Jagirdar and Special Magistrate in the Buldana district?—Yes.

28,044. In what part of Berar is the Buldana district?—There are six districts in Berar, and Buldana is one of them. It is on the boundary of the Nizam's State and the commencement of Berar.

28,045. What family do you belong to?—I belong to the Bhutan family. My grandfather was in office, a Talukdar, at the time of the battle of Assaye in 1803. He rendered service to the British Government in that war, and therefore he got a Jagir, and we have settled there from that time.

28,046. What is your view with regard to the effects of the consumption of opium upon the people?—My belief is that the effect of the consumption of opium on the people of Berar is not bad or injurious at all, and the result of the consumption is not in any way injurious either to the consumers or to the public in general. The effect of the consumption of opium does not necessarily affect the morals of the consumer. Physically the effect of eating of opium does not result in bad consequences, if opium is eaten in moderation.

28,047. Among what classes of people is the habit prevalent?—There is no particular class of people who could be said to be abnormally affected by opium, and as a whole the consumption of opium is equal in all classes and

it would be impolitic to stop the use of opium in India indiscriminately.

28,029. What do you mean by "indiscriminately"?—I have said that it is desirable to stop opium smoking, but because it is not practicable I say it need not be stopped; therefore I used the word "indiscriminately."

28,030. Your general conclusion is that nothing can be done at the present time?—To my idea nothing can be done at present.

28,031. Have you interested yourself in any way in social or political matters?—I am the vice-chairman of the Akola Municipality, and also vice-chairman of the Berar Sarvajanik Sabha.

28,032. Is that association a political association?—Yes.

28,033. Has it any alliance with the Congress?—The Congress is for the whole country. The Berar Sabha looks after the interests of the Berar province only.

28,034. You are also interested in the Congress, are you not?—Yes.

28,035. Have you attended as a deputy?—Yes, I have been to the Congress every year since 1888. I am a delegate from Berar.

28,036. (Mr. Haridas Veharidas.) Do you consider the habit of taking opium by a young man in good health a good habit?—Opium is generally taken for some remedy or to relieve pain; it is not taken as a mere luxury.

28,037. Would you consider it a good habit when it is not taken on account of health?—My opinion is that it is not so much opium that is to be condemned as objectionable; it is only on account of want of nourishment that people suffer when they suffer at all from opium.

28,038. Do you think that if a man who was in the habit of taking opium did not take it at the regular time he would suffer?—Yes.

28,039. Would you consider it advisable to take it as a habit and not for the benefit of the health?—In Berar the people, even when they are young, take opium for some reason, but there are people, for instance the Marwaris and others, who take opium for its own sake—for pleasure.

28,040. You would not consider it advisable to take opium under those circumstances?—No, but it has become a habit with them, and I do not think they can give it up.

28,041. Would you advise your son who is young and in good health to take opium as a habit?—No, I would not, but if he required it on account of his health I would not object.

28,042. (Sir James Lyall.) Would you advise your son if he is young and in good health to take tobacco?—Parents will not advise their children to take tobacco or opium, but if they do take it they will not object.

sections of the people. If there should be called a section of people who are habitual eaters of opium, but not abnormally affected by eating opium, I should take these sections to be old women and infants. As to view the opium eaters medicinally and non-medicinally, I think, it would not be wrong to view that all the opium taken is taken medicinally, because opium has not a pleasant taste or any pleasant effect, and those who take it take it for the benefit derived from its effect. Some people take opium as a cure for some disease, some take it for relief from pain, some for exhaustion, or as a stimulant to the general system of the body in old age and under similar circumstances.

28,048. Is opium used as a domestic medicine?—Yes. The opium is the cheapest and the best available medicine within the reach of the poor people, and a better one they cannot obtain.

28,049. What effect does the habit have upon the morals?—I have seen people enjoying very high position in the native society addicted to the habit of eating opium, and I have found that it had not any bad effect on their morals, as they were found to be men of very good morals all round. I am not of opinion that the use of opium is deleterious, and, as I have said before, the use of opium is wholly medicinal, and in my opinion it is not advisable to curtail its supply wholly or partially.

28,050. Opium is much dearer than it used to be, is it not?—Yes, it is much dearer. Every attempt has been made to make it as dear as possible.

28,051. Do you think that the making of it so much dearer has materially reduced the consumption?—Yes, because the people cannot take so much. They have reduced their doses. A poor man cannot afford to take too much. If he took two mashes before he would only be able to take one masha now.

28,051a. Do you think the present system is good, or would you propose any alteration?—I do not think any system can be better than the present one. The present system of the Government is, in my humble opinion, a quite sufficient curtailment of the supply of opium, and any steps beyond the present system would be dangerous. Any curtailment of the supply of opium would be received in a most serious light by the people, and would be very dangerous, as many soldiers in the army of the Government, and many of the fighting races, such as Sikhs and Rajputs, are addicted to the habit of eating opium, and it would be most dangerous if a discontent is created amongst them.

28,052. Have you any experience of the cultivation of opium?—Not much.

28,053. Do you think it is a profitable one?—Yes, it is a very profitable one. I have not cultivated it myself, but I am a landholder, and they used to cultivate it in my own villages.

28,054. When the cultivation was stopped by order was there any complaint made about it?—My people suffered very much.

28,055. Do you know whether they complained to the authorities?—No, they did not make any complaint. They thought it would be useless to complain. It is very profitable. The only two good crops are sugar cane and poppy. The cultivation of sugar cane involves a great deal of expense. First of all there is the seed. The seed

of sugar cane will cost 50 or 60 rupees. The cultivation of poppy takes only three months, whereas sugar cane takes 12 months. Sugar cane has to be watered the whole year, and at the time of making molasses it costs a great deal because about 25 persons are engaged and they have to be paid. Opium grows in three months, and 20 labourers only can do the work in three days. They are paid 1 anna in the morning. They have only to work two hours, and I have known the average produce of a bigha to be about 7 seers of opium.

28,056. One witness told us that about the time when opium was prohibited in Berar the price of cotton was going up very much, and therefore the cultivators took to cotton instead of opium, and did not mind very much?—I cannot speak about that because it is a very long time ago. I was not old enough to judge as to that. It was prohibited nearly 20 years ago and I did not take any interest in it. I was learning at school at that time.

28,057. Where did you go to college?—I was at Akola High School, and I was a short time at Bombay.

28,058. (Mr. Haridas Veharidas.) Did your father or grandfather get the title of Nawab from the British Government?—I got it.

28,059. You say that "some people take opium as a cure for some disease, some take it for relief from pain, some for exhaustion, or as a stimulant to the general system of the body in old age." In the case of old age of course it is used as a stimulant?—Yes.

28,060. Is it good for a young man in good health?—It would be folly to take it in that case. If a young man suffers from sickness of course he would take it.

28,061. You mean he would take it for the benefit of his health?—Yes. If I am in good health I do not want it and why should I take it. If I am sick or have some complaint I should take it.

The witness withdrew.

Mr. G. S. KHAPARDE called in and examined.

28,062. (Chairman.) What is your position?—I am a High Court pleader of Bombay, and also a High Court pleader of my province. I was for four years a first-class magistrate, and after resigning my place I have been practising. I am vice-chairman of the Municipality of Amraoti.

28,063. Are you the elected chairman?—Yes, the elected vice-chairman of the Municipality, and the elected chairman of the District Board, and I am a member of the District Congress Committee and also a member of the International Congress.

28,064. We shall be glad to hear anything you have to tell us with regard to the question before this Commission?—Opium is given to nearly all the children in Amraoti up to three or four years of age. It is not given after that unless they have some ailment or the doctor prescribes it. My own idea is that it produces no injurious effects. It has produced no bad effects on me, on my father, or on my children. We give our children opium until they reach the age of three years. During my experience as a magistrate I did not come across a very bad character, a person who had committed crime, through taking opium. I have known people quarrel because of taking liquor, but I have not known any quarrel through taking opium. I condemn opium smoking, and I say it is very injurious. I have seen people who were very well fed and very well looked after, but yet when they took to opium smoking they ruined their health. They get sunken cheeks and protruding eyes, and all sorts of ailments. So far as I can see it produces no special effect upon the morals of a person. If anything, an opium-eater is what we call an easy going person. He takes everything more or less easy. The greatest fault I can attribute to opium is that a man who takes opium is not disposed to mind anything which is going on about him. He does not take to bad habits, and he is not necessarily a liar or a person addicted to any other kind of evil-doing.

28,065. That tendency to let things pass is exhibited, I suppose, in the case of those who take opium in what may be called excess?—I think even in small quantities it has that effect on a man. It makes him more or less disposed to let things alone. That is one of the reasons why it is given to children. The ladies in the house and the people want to work, and the child gives too much trouble when it is wide-awake. They give it a small dose of opium and it keeps the child quiet. Otherwise it does not do harm to

children. My three sons have been brought up on opium, and none of them are in bad health, and they can compare favourably with any boys of their age.

28,066. Do you desire to recommend any modifications in the present regulations, either as regards licensing or the rules affecting the sale or cultivation of opium?—I am familiar only with the regulations in my province.

28,067. What do you say about them?—I think they are quite sufficient so far as they go.

28,068. What is your opinion as to the general feeling of the people with reference to any changes that have been proposed to this Commission?—The people more or less desire the present arrangement to remain *statu quo*. The cultivators naturally wish for permission to cultivate poppy and so get more money by it, but otherwise there is no desire to change the law.

28,069. As regards the general body of opium consumers, do you say they would not wish that the sale should be restricted to medical use upon a doctor's certificate?—Consumers naturally want to get it as cheap as they can; they would like to have it made cheaper if possible, but otherwise the general body of the public are quite satisfied with the regulations as they now stand.

28,070. Would they object to any change?—Change in the direction of making it harder to get would be objected to, I think, either in the way of making it harder to get or by raising the price.

28,071. What would you say would be the feeling of the people as to increased taxation to make up for the loss of revenue?—They would object very strongly to increased taxation.

28,072. (Sir William Roberts.) Is the practice of giving opium to infants very common in your district?—Yes.

28,073. Is it given to them every day?—Yes, generally every day, in the evening.

28,074. Only once a day?—Yes.

28,075. It is ordinarily given once a day in the evening?—Yes.

28,076. But if it is given to keep the children quiet, as you say, while the mothers are at work, I suppose it must be given in the morning?—No, because one dose keeps them quiet for 24 hours.

Nawab
Muhammad
Salam-Ullah
Khan.

20 Feb. 1994.

Mr. G. S.
Khaparde.

Mr. G. S.
Khaparde.

29 Feb. 1894.

28,077. (Sir James Lyall.) You say you have seen some people extremely thin or emaciated from opium smoking?—Yes.

28,078. May not a man be very emaciated and more or less weak, and yet able to do his work?—These people whom I have come across, these opium smokers, turn out very worthless men. They could not do any work. They spend most of their time in sleeping and lying idle.

28,079. Are you speaking of Amraoti?—No, of Ellichpur.

28,080. That was from madak smoking, I suppose?—Yes, I have seen it. I noticed in my province that the people do not generally stop at madak smoking. When they commence madak smoking they generally take to other kinds of intoxicants along with it, such as bhang or ganja. The madak smoker is really an objectionable character.

28,081. He is almost always a man of low position, is he not?—No; I met one man of a very good family who has taken to it, but he is looked down upon; nobody associates with him if they can help it.

28,082. As a rule, I suppose, it is confined to the towns, is it not?—Usually, but occasionally I come across an opium smoker in a village—very occasionally.

28,083. As it is so much looked down upon and thought so vicious, naturally only rather shameless people take to it, I suppose—people who have no reputation to lose—as a rule?—As a rule people of exactly the class you state take to it, but in some cases I have even found rich men and men of position take to it. I met four or five of them once.

28,084. I suppose they were vicious young men, were they not?—More or less almost all of them were of the same character. Only one of them has risen to a position since.

28,085. If you stopped madak smoking would not these same rather shameless vicious sort of people take to liquor?—I think they would.

28,086. (Mr. Fanshawe.) You have spoken of the use of opium among children; is it your experience in the districts in which you have been employed that opium is taken by older men as a restorative?—Yes, some old men take it as a restorative.

28,087. Is opium used, as far as you know, as a household remedy among the people of the districts against rheumatism, colds, and complaints of that kind?—Yes, they often make a paste out of it, and if they have a pain in the stomach they put some of the paste on the stomach and occasionally they put it on the forehead, and so on.

The witness withdrew.

Mr.
R. M. Dane.

Mr. R. M. DANE called in and examined.

28,101. (Chairman.) I believe you have a statement to make to us?

(Witness.) I would request that the abstracts of evidence of the following witnesses from the Hyderabad State, who were prepared to appear before the Commission at Hyderabad, but who have been unable to attend at Bombay, may be printed in the Appendices to the Report:—Surgeon-Lieutenant-Colonel Edward Lawrie, Residency Surgeon, Hyderabad; Mr. Dorabji, Commissioner of Customs of H. H. the Nizam's Government; Nawab Imad Nawaz Jung Bahadur, Abkari Commissioner; Sheo Lall Moti Lall, banker; and Seth Bhagwandas, banker. The abstracts of their evidence have been submitted.

(Chairman.) The abstracts shall be inserted in the Appendices* as you request.

(Witness.) As regards the Central Provinces, I very much regret to say that the memorandum on the excise administration of opium in the Central Provinces, which was intended to supplement the information contained in the note regarding those provinces which was put in by Mr. Finlay on opium produced and consumed in India, has not been prepared in time.

28,102. It will be put before us for the preparation of the Commissioners' Report?—Certainly. I have received a note in manuscript this morning; it is possible that some alterations in it may be necessary, and there has been no time to have it printed. The note is by Mr. Drake Brockman, the Officiating Commissioner of Excise. He is here

28,088. That would be external application, but I am speaking of taking it in the shape of pills for rheumatism and colds in the head—nusia, as it is called—and so on?—That has not come within my experience.

28,089. (Mr. Haridas Veharidas.) Do you consider the habit of taking alcohol is more injurious than opium?—Yes.

28,090. Would you like to see some steps taken to restrict the sale or use of alcohol?—Yes. I do not wish to say that opium is a blessing and should be recommended to everybody, but I say it is the lesser evil of the two.

28,091. Would you like to see the use of alcohol restricted or suppressed first?—Yes.

28,092. (Mr. Moubray.) Are you a member of the National Congress?—Yes.

28,093. Were you at Lahore a short time ago?—I was.

28,094. There was no session at all with regard to the opium question at the Congress?—There was no discussion brought up specially. There was a private conversation among the members, and the feeling appeared to be that, as there was a Royal Commission sitting and evidence being recorded, it would not be proper for a non-official body like the Congress to pronounce an opinion upon it.

28,095. (Mr. Pease.) Do you think that some young men who are respectable begin to smoke and through the association of smoking become disreputable characters?—I have not come across a person who started well in life—I mean one who went to school or to college—who afterwards took to smoking opium. I have not seen a young man of that kind yet.

28,096. Still there are many respectable young men in a very humble position in life; do these respectable young men sometimes commence the habit of opium smoking?—In my experience I only know of one instance of that kind.

28,097. You think they become bad characters before they begin to smoke?—Yes.

28,098. (Sir William Roberts.) Have you noticed many fatal accidents from this practice of giving opium to children, or have you heard of any?—I know of none.

28,099. The people are so skilled in the use of opium?—The mothers generally understand the dose. They give so little of it. It is a very small pill.

28,100. Fatal cases do not even happen accidentally?—So far as my experience goes I have not heard of anything of that kind.

if the Commissioners desire to examine him. If not, the note will be printed and put in.

28,103. I have no doubt he will make a full and careful statement of all the matters he wishes to bring under our notice in his paper, and it will be before us as evidence in that form for the preparation of the Report?—Certainly. Mr. Drake Brockman is prepared to answer any questions that may be asked. If I may be allowed to make a suggestion I would suggest that the Commissioners should ask him questions on any points on which they feel doubt as to the excise system, and the note* may be put in subsequently in a complete form containing full information on all points. I should like to point out that paragraph 43 of Mr. Finlay's note on opium produced and consumed in India appears to me to contain sufficient information upon the matter which I understood was in doubt yesterday, viz., whether consumption of opium in any form is allowed on the premises. I should like to state further that three witnesses from the Central Provinces, the Rev. Israel Jacob, Rai Bahadur C. Narainswami, and Rao Sahib Balwant-Rao Bhuskatey have been prevented from attending before the Commission by ill-health, as I have been informed by telegram from the Revenue Secretary to the Chief Commissioner at Nagpur. I would ask that their abstracts† of evidence may also be printed in the Appendices.

(Chairman.) They can be put in.

* See Appendix XXVII. to this Volume.

* See Appendix XXXIX. to this Volume.
† See Appendix XXX. to this Volume.

The witness withdrew.

The Honourable GANGADHAR RAO CHITNAVIS called in and examined.

28,104. (*Chairman.*) You are a malguzar and honorary magistrate of Nagpur?—I am.

28,105. Have you any observations to make to us with reference to the consumption of opium?—I have not had many opportunities of informing myself on the subject of the use and effects of opium. The few opportunities I had were only at Nagpur, in the persons of some who had suffered from opium or madak smoking, and had then gone a begging, and some who came before me as criminals in my court. In these districts persons who are generally addicted to opium smoking belong to the Mahomedan class. Very few Hindus take to it. But the number of opium eating Hindus is, I believe, much larger than opium eating Mahomedans. I may here say that in these districts opium is not smoked by itself, but is smoked in the shape of madak.

28,106. You have spoken of opium smoking; may I take it from you that this opium or madak smoking is much more injurious to health than opium eating?—Yes, I think so.

28,107. With regard to opium eating, would you say it does not conduce to any very bad effects?—My experience has been limited to well-to-do classes of persons who have taken to opium eating, generally persons who have taken to it with a motive, to do them good or to prevent them from having malarial fever.

28,108. For medicinal purposes?—Yes.

28,109. With regard to madak smoking, is that a habit which is looked down upon by the people?—Yes, people do look down upon it.

28,110. Persons who eat opium are not regarded in that light?—No.

28,111. You say some of them are very respectable members of society?—There are only a few in my part of the country. The people do not take opium there much, because the climate is not malarial in most parts of the province.

28,112. Do you consider it possible to entirely prohibit the use of opium?—I do not think so.

28,113. Do you think that if such a prohibition of the use of opium were attempted it would lead to a great increase of smuggling?—Yes, to increase of smuggling and dissatisfaction as well, as opium is mostly taken for medicinal purposes.

The witness withdrew.

RAO BAHADUR RAO YADO RAO PANDE called in and examined (through an interpreter).

28,122. (*Chairman.*) What is your position as a landholder?—I am a malguzar of 35 villages, and also a jagirdar and mahajan (money-lender).

28,123. In what district do you reside?—Bhandara.

28,124. What have you to tell us with regard to the question before this Commission?—I have had numerous opportunities in the course of my daily avocations of observing the habits of persons who use opium. Opium eaters do not join together and eat opium. They take it in their respective houses at appointed hours. Even respectable and well-to-do men use opium. The Marwaris who have settled down here from two or three generations, and are generally in good circumstances, are addicted to this habit. Some of my acquaintances use opium while others do not. I have no personal experience either of eating or smoking opium. The use of opium is not injurious. As a rule natives administer it as medicine in small doses to young children till they are nearly three or four years old, the reason being that it acts as a preventive of cold and other minor complaints. It keeps up the strength of old persons if taken by them. But it is decidedly injurious in the case of young persons. Still, if the use of opium is accompanied by that of milk, ghee, and sugar it does not cause any injury. There may be 10 or 15 per cent. of persons who use opium. The effect of opium smoking in the case of aged persons is physically very injurious. It makes a man weak and dries his blood. The liver and brain are both affected. In my opinion smoking should be put a stop to. I have got a number of acquaintances among natives who eat opium. They are in favour of its use. It is my opinion, as well as the opinion of other people, that it may be used for purposes other than medical. The growth of poppy and the production and sale of opium should not be stopped. There should be no prohibition against its use for those who only

28,114. What do you believe to be the opinions of the people with reference to the contingency of having to bear any further taxation?—I can gather from the opinions of the people that they would be most unwilling to bear any further taxation imposed upon them to cover loss of revenue from opium. They would object to any such change. It would be most inadvisable to tax the whole population, many of whom may be living very moderate lives, to correct the vices of a few persons. I would never advocate any such change when, in addition to the reason above mentioned, people themselves do not find that opium eating with good nourishment is as injurious as it has been represented to be, and that in some cases it is really a blessing.

28,115. (*Mr. Fanshawe.*) You have spoken of the use of opium for medicinal purposes. I gather that you have also had experience of its use in the case of people going on journeys, and when special exhaustion has to be undergone?—Yes, in malarial climates when people go on long journeys, or have to undergo exhaustion.

28,116. When you say that it is really a blessing in some cases, you refer to cases of the medicinal use of opium and to the other cases you have described?—Yes, and to the case of infants too.

28,117. Has it come within your experience that opium is used by older men as a restorative after the age of 35 or 40?—Yes, those who take opium after that age, and who have good nourishment, generally live long—that is my experience.

28,118. How do you regard the taking of opium in moderation as a whole?—I think it conduces to good health.

28,119. The excessive cases you think ought to be reprobated, but, taken as a whole, the moderate use of opium is not open to objection?—No.

28,120. (*Mr. Haridas Veharidas.*) Would you consider it a good thing for a young man in good health to take opium as a habit?—If he takes it for medicinal purposes I would not look down upon the habit, but if he takes it, as in the case of madak smoking, for immoral purposes I would look down upon it.

28,121. You would say the same with regard to opium eating, I suppose?—Yes.

eat it. But some punishment should be prescribed for those who buy under the pretext of eating but use it for smoking purposes. There is no prohibition for the sale of opium, but there is a prohibition for its manufacture. The consumption of opium will diminish in case its sale for purposes other than medical is stopped. The system in this province is that licenses are issued for the sale of opium. The system is good. As far as my opinion goes, I see no harm in making opium pay for the loss which may be sustained by stopping the use of madak. Most probably the people will not be willing to bear the extra taxation. I believe that they will greatly dislike it.

28,125. (*Mr. Pease.*) Do you think that young persons can smoke opium without injury to their health?—No, they cannot, it causes great injury whether they are young or old.

28,126. (*Sir James Lyall.*) Is Bhandara one of the districts in which they used to cultivate poppy?—No.

28,127. When used the Bhandara opium to come from?—I do not know.

28,128. Was opium 20 years ago much cheaper than it is now, or has there been any change?—It is much dearer now.

28,129. Do you know why?—One reason of the increased cost is that opium is now taxed, and another reason is that people have begun to smoke more madak than before, and as madak is made out of opium the price of opium has, therefore, been increased. Formerly people did not smoke madak so much; they used to eat opium in the solid form.

28,130. Do you really think there has been a great increase in madak smoking?—Yes, the number of madak smokers has increased, and the people smoke more than they did before.

The Hon.
Gangadhar
Rao
Chitnavis.

20 Feb. 1894.

Rao Bahadur
Rao Yado Rao
Pande.

Rao Bahadur
Rao Yado Rao
Pande.

20 Feb. 1894.

28,131. (*Mr. Pease.*) Do you advise that madak smoking should be prohibited, and the price of opium for eating increased?—I am in favour of the prohibition of madak smoking, and I see no particular objection to increasing

the price of opium, because the number of opium eaters is not large, and those who eat it generally eat it as a restorative in old age or for some disease.

The witness withdrew.

Rao Sahib
Bihari Lal.

RAO SAHIB BIHARI LAL called in and examined (through an interpreter).

28,132. (*Chairman.*) What is your position?—I am a malguzar of 35 villages. I have the title of Rao Sahib, and I am also a banker.

28,133. Where do you reside?—In the district of Jubbulpore. I am also Government Treasurer of the Seoni district.

28,134. What have you to tell us with regard to the question before this Commission?—I frequently come across those in Jubbulpore who take opium in my dealings with them, which has made me acquainted with the use and effects of opium. In my opinion the opium eaters are frequently steady workers and keep good health. Madak smokers who are poor are generally lean in body and suffer from poverty of blood. Madak costs them much more than those who take opium, as the latter can satisfy themselves by taking opium of one or two pice, while opium smokers must spend two annas or so to intoxicate them to their satisfaction. The natives of India consider that opium has several medicinal properties and is frequently useful, and it is taken on account of its beneficial effect in some diseases. Opium taking has never been observed to be the cause of any crime as alcohol. A drunkard may become senseless, which is not the case with an opium eater. In my opinion it is not advisable, with reference to

the possibility of smuggling, to put a stop to the cultivation of poppy and the production and sale of opium. I am acquainted with the present arrangement for the sale of opium, and I cannot suggest any reform, but about madak, which is injurious to health, it would be beneficial if greater restrictions be imposed upon madak smokers with a view to discourage the habit. They can take opium instead. If the use of opium be prohibited, the Government will be obliged to recoup the loss of revenue by fresh taxation, to the great discontent of the people in general, who are unable to bear extra taxation with the present income tax, salt tax, and other taxes which are already too heavy for them to bear.

28,135. (*Mr. Pease.*) What further restrictions would you place upon madak smokers?—I consider that the existing arrangement as regards opium is satisfactory, that the price is dear, and that there is no necessity for further restriction. As regards madak smokers, the number is not large, but still it is an injurious habit, and I think some restriction should be imposed which would prevent people who do not smoke from commencing the habit.

28,136. What restrictions do you recommend?—I am in favour of some further restriction, but I am not prepared to state what the restriction should be.

The witness withdrew.

Surg.-Maj.
C. Henderson.

Surgeon-Major C. HENDERSON called in and examined.

28,137. (*Chairman.*) You are civil surgeon at Hoshangabad?—I am.

28,138. How long have you been in India?—Since 1880.

28,139. In what districts have you served?—In Madras, Burma, Port Blair, and the Central Provinces.

28,140. (*Sir William Roberts.*) In what capacities have you served?—In connexion with my professional duties, and also with reference to the prisoners of the Hoshangabad Jail during the past nine years, and the police force of the Hoshangabad district during the same period, I have had considerable opportunity of informing myself with respect to the use and effects of opium.

28,141. What opinion have you come to as to the effect of the habit on the users?—My opinion as to the effects of opium on the people who habitually use it is that only in the case of a comparatively small number who eat it in large quantities, and in the case of those who smoke it habitually, does it do any harm. In these, according to my experience, not very frequent cases, it does undoubtedly do harm by causing more or less permanent muscular inactivity and waste, reducing the individual in course of time to a state of helpless inactivity and bad health. In the very large number of those, however, who eat the drug habitually in moderate quantities—five to 30 grains a day—I am quite convinced that it is an inestimable boon, having no appreciable effect other than beneficial. It has the effect of checking chronic painful affections, of bracing up the system before undergoing heavy or unusual fatigue. Its action in checking and preventing such chronic affections as chronic bronchitis, asthma, rheumatism, and dysentery I think is undisputed, and in my opinion there is a strong probability of its possessing the property commonly attributed to it, viz., of acting as a prophylactic in certain diseases such as malaria. The effect physically on moderate eaters is nil; they are just as well nourished, strong, and healthy as other people. I cannot recall a single case in which I have had to invalid a man when his incapacity for further service was attributed to the opium habit. I believe the use of opium has no moral effect whatever upon those who consume it. No bad moral effects from the consumption of the drug have ever come to my notice among the general population, nor have I noticed any connexion between the crimes committed by the prisoners in the jail and their opium consuming habits; and such a thing must be rare, otherwise instances would have come before me during the many years in which I have been in charge of the jail. The large majority of opium consumers are quiet, well-conducted, orderly people.

28,142. What is your experience as to opium smoking?—Smoking opium in the forms of chandu and madak is much less resorted to than eating, and chiefly among the poorer classes. It is in my opinion far more injurious than eating, probably from its gaining access to the system through the lungs instead of through the stomach. Its effects are much more quickly realized and somewhat more intense than those following eating. Whether it is necessary to increase the amount of opium entirely depends upon the reason for which it is taken. In the case of those who are the victims of chronic complaints the amount of opium they take depends upon the amount of relief obtained, and has often to be increased; on the other hand, those who take it in moderate doses for pleasure need only to increase the amount slightly during a period of years.

28,143. What have you to tell us with regard to the practice of giving opium to infants?—As regards the practice of giving children opium to keep them quiet, I am of opinion that it is harmful and injurious and ought to be stopped, although I am aware that many hold an entirely different opinion.

28,144. May I ask you on what ground you have come to the conclusion that it is injurious?—Because I think that as a rule it is not given for medicinal purposes, but simply to keep children quiet when they cry.

28,145. Have you any cases which have come within your actual personal experience of evil effects connected with this habit?—No, I cannot say that any cases have.

28,146. Your objections are based merely on theoretical grounds?—Yes.

28,147. What is the public opinion with regard to the habit of using opium?—Native public opinion is not adverse to the habit of eating, especially in the case of those who are driven to it from chronic intractable complaints, but opium smoking is regarded by many as a disgrace, there being a pretty unanimous and strong public opinion that it should be put a stop to.

28,148. Is it possible, in your opinion, to prohibit the sale and production of opium except for medical purposes?—In my opinion it would be impossible to prohibit the sale and production of opium except for medical purposes, because (1) of the ease with which smuggling could and would be carried on; (2) medical purposes are often closely and intimately connected with others; (3) anyone requiring opium could always say that they wanted it for medical purposes; (4) if the medical agents through whom the drug could only be procured were to consist of the

civil surgeon and hospital assistants the number of these would be so infinitesimally small as compared with the large number requiring the drug that it would amount to a great and public scandal that the people could only procure the drug through such agency; (5) if such a system were resorted to the existing medical authorities (putting aside native hakims as being altogether unreliable and out of the question) would have to be enormously augmented, or the system would prove impracticable.

28,149. Would you approve of any modification of the existing Government system to check the use of opium?—As to consumption being checked by modification of the existing Government system, in my opinion no such step should be taken. I would advocate, on the contrary, that every village, with the exception perhaps of the very small ones, should be provided with a supply of opium, so that the people may be able to procure the drug when ill much easier than they can at present. Under the existing system it can only be procured in a few villages, and people living in the large number of remaining ones have to send long distances or go without it. I have upon several occasions, while on tour in the district, seen examples of this hardship, and no doubt it very frequently occurs. As regards chandu and madak, however, I am of opinion that the use of these forms of opium should be abolished as far as possible. In making this suggestion I do not of course suppose that it would be possible for Government to stop the custom of smoking opium completely so long as the drug can be purchased, but I think that Government would do wisely to discourage the habit of opium smoking as far as possible. There is no necessity for its continuance. The practice is looked upon by many as a disgrace; native opinion generally is against it, and it is injurious to the system. Moreover, if stopped, there will be no resulting hardship to the people who use it, as they will simply resort to the harmless habit of eating opium instead of smoking it.

28,150. Have you had much experience of madak smoking or madak smokers?—I have been brought into contact with them during my service in this country.

28,151. There has been some little confusion as to why madak smoking is looked upon with disapproval. We are not quite sure whether it is a form of the opium habit that is resorted to by persons of abandoned character, and that it is disreputable on that account, and not because it is more injurious than the eating of opium, what is your view?—As far as my experience goes I am inclined to think that madak smoking is much more injurious than opium eating on account of its being inhaled into the lungs; the fumes of madak are not simply taken into the mouth.

28,152. May I take it that your opinion of the more injurious character of madak smoking is based upon that theoretical supposition?—Partly upon theory, and partly upon what I have seen of those who actually smoke madak.

28,153. (*Mr. Pease.*) Do you think the effect of burning opium in the process of smoking alters its character and effect upon the human system?—It might be so.

28,154. (*Mr. Mowbray.*) You referred to madak shops. Are there many places where people can buy madak now?—I believe there are comparatively few places now. There are something like 57 shops where you can buy opium for eating, but there are not so many where you can buy madak.

The witness withdrew.

The Rev. W. E. ROBBINS, M.A., called in and examined.

28,167. (*Chairman.*) I believe you have been a missionary of the Methodist Episcopal Church in India since 1872, and that you were one of the bearers of an anti-opium memorial from 17,000 Christians in India and Great Britain to the Chinese Government four years ago?—Yes.

28,168. We shall be glad to hear anything you have to tell us with regard to the question before this Commission?—I have from time to time visited numbers of places in India, as well as in other countries, which were reeking with the fumes of the opium smoked therein, there being often as many as a hundred in, and some instances several hundreds of men, women, and children in each at a time, in all stages of exhilaration and intoxication. Of the numbers of frequenters of these places questioned—in Marathi, Hindustani, and English—with reference to the good or bad effects of the habit of eating or smoking the drug, there has been a remarkable consensus of opinion in

28,155. You said, "I think that Government would do wisely to discourage the habit of opium smoking as far as possible"; how do you think Government can discourage it?—By prohibiting the public sale of it.

28,156. You cannot say exactly how many places sell it at present? You think it is sold now at a small number of places, and you wish the sale to be prohibited altogether?—Yes.

28,157. I suppose there would not be much difficulty then in people buying opium and converting it into madak?—No, they could do so.

28,158. (*Mr. Fanshawe.*) As regards your proposal to make opium more easily procurable, is it not the case that in many villages opium would be found in some few houses as being kept there in small quantities as a household remedy?—Among the well-to-do people perhaps that would be so, but I do not think it is the case among the poor people.

28,159. Not among the cultivating classes?—No. That is my experience.

28,160. You say, "Native public opinion is not adverse to the habit of eating, especially in the case of those who are driven to it from chronic intractable complaints"; do you not think also that native public opinion is not adverse to the habit when opium is used as a restorative in old age? You have only spoken of chronic and intractable complaints?—I did not mean it in that sense, I meant generally speaking, but especially in the case of those who are driven to it from chronic intractable complaints. I do not think they are adverse to the habit of eating opium either in the case of old age or in the case of the young.

28,161. I understand you to mean that they are not adverse to the habit of eating opium whether by old or young people, and that there is a less feeling against it when people are driven to it by some complaint?—That is what I mean.

28,162. (*Sir James Lyall.*) Are you aware that certain Chinese witnesses have said that in China opium smoking is believed to be a very effective remedy for consumption and pulmonary affections, or at any rate a habit which stops the progress of these affections?—I have heard it stated.

28,163. Do you think it is possible?—I think it is possible in moderation. It is the excessive smoking which is injurious.

28,164. You said that your idea of the results of madak smoking is not obtained from mere theory, but that you have noticed its effects in cases; do you mean by that that you have noticed the appearance of madak smokers, or do you mean that you have medically attended many madak smokers?—I mean both. I have attended them as prisoners in jail, and I have also noticed the emaciated appearance of madak smokers.

28,165. These people are generally supposed to be debauched characters. Is it not very difficult, therefore, to say whether their physical condition is due merely to the madak smoking habit, or whether it may not be due to debauchery of other kinds?—In many cases I think it is very difficult to say whether their emaciation is due to disease or whether it is due to the smoking habit.

28,166. A witness who gave evidence to-day said that in many cases these madak smokers also took bang and other drugs; would not that add to the difficulty of the diagnosis?—It would complicate things very much.

*Surg.-Maj.

*The Rev. W. E.
Robbins, M.A.*

condemnation of it as evil and only evil; and certainly the looks of the speakers did not belie their words. Indeed I may say that this condemnation of the practice has been unanimous—the only exception that I recall being a vendor at one of the stalls. Only recently a man, unsolicited, told me in good English that it was doing him harm and he was quite ready to give it up, but could not, and that has been the sad wail of multitudes in this land and others. My observation is to the effect that not only do the habitués of opium loathe the practice and themselves for having become enslaved by it, but that they are held in disrepute among the people generally who do not use it. Wherever I have gone amongst Christian missions and churches of all denominations I have found that those addicted to the use of opium are rigidly excluded from membership until they have abandoned it; and in order to treat them for it, medical missionaries have their patients locked up in rooms

The Rev. W. E.
Robbins, M.A.

20 Feb. 1894.

where they can have no access to the drug for a number of days, and even after they seemed cured they are very liable to relapse. As fascinating as the habit may be to the Chinese, I am of opinion that if it be not prohibited except as a medicine it may prove just as fascinating and seductive to the people of India, who certainly have not more robust constitutions for resisting its evil effects. I have met at least one Hindu merchant who had been reduced from wealth and respectability to penury to gratify his craving for the drug. But he was only an example of the many of all classes and creeds.

28,169. I notice that you speak of having seen on certain occasions several hundreds of men, women, and children at one time smoking opium—where and when did you see these large gatherings?—About five years ago I had my attention first directed to this subject in the city of Bombay. I visited several different places where there were very nearly a hundred persons smoking. I think, perhaps, I have not seen more than a hundred at one place in Bombay. In China, at Shanghai, I saw as many as a thousand in one place at a time.

28,170. When you spoke of these large numbers you referred to your experiences in China?—Yes.

28,171. Do you know that under recent regulations licenses are no longer granted in this country for opium smoking?—I believe that is so, but I see them at the stalls in great numbers, three men at one stall, serving out opium as fast as they can to passers by of all ages, sexes, and creeds.

28,172. You have not stated specifically what is your recommendation as a remedy for the evils of which you have spoken about—what do you recommend to be done?—The best recommendation I can make is to prohibit the growth of opium in India, the export of it from India, and the import of it into India except for medical purposes. That seems to me to be the only effectual remedy.

28,173. Being in favour of a prohibitory policy in relation to opium, would you desire to include in the same restrictions the sale of alcohol?—I would be quite ready to advocate that as well. I think one of the strongest points that has been made with reference to the evil effects of opium is that you cannot find anything better to compare it with than alcohol.

28,174. In this country, which do you consider is the greater cause of evil—alcohol or opium?—It would be difficult to tell, perhaps, without a greater knowledge of the whole country. It was a long time before I would agree that opium was really worse in its effects than alcohol, knowing, as I do, the evil effects of alcohol; but there are two or three reasons why it seems to me that it is really worse. One reason is that it is more seductive, fascinating, and insidious, and people get into the habit before they are aware of it, even more so than in the case of alcohol. Another reason is that it seems to be more difficult to break off even than alcohol. I have been told by our medical missionaries in the opium refuges where they have a great many of these smokers that they had a large number whom they sent out as cured, and the universal testimony of these medical missionaries was that a very large proportion of these men went back again to the habit. One medical missionary said that as many as 90 per cent. went back to the habit, and another missionary told me that the per-centage was even more than that.

28,175. (Mr. Fanshawe.) I understand that your experience of the opium-eating habit in India is limited? You speak more particularly as regards opium smoking?—Yes.

28,176. With regard to the views you have expressed as to habits of opium loathing the practise and themselves for having become enslaved by it, and being held in disrepute among the people generally, do you wish those remarks to apply more particularly to the smoking habit?—Yes, to the opium smoking habit more particularly. I think they would apply to the opium eating habit as well, but these places which I have visited were places where opium was smoked principally.

28,177. I understand that the time when you visited these opium smoking places was five years ago?—It would be about five years ago when I first visited them.

28,178. As regards your experience of opium smoking on licensed premises in Bombay, did you see any children smoking opium on any occasion at those places?—I have seen young people. I could not say how old they were. They were not small children.

28,179. You say that you have seen hundreds of men, women, and children smoking opium. I wish to know whether you have seen children smoking opium in Bombay?

—I do not say that I have seen so many children smoking opium in Bombay as in China.

28,180. Did you see any? In your recollection, have you seen any children in licensed shops in Bombay actually smoking opium?—I would not say that I saw any under 12 or 15 years of age.

28,181. Did you see many children over that age smoking opium?—Not very many, the proportion was small.

28,182. Did you see any large number of women smoking opium in these licensed shops in Bombay?—I do not recall just now whether I saw any women at the time I visited these places in Bombay. I certainly saw a great number in China.

28,183. (Mr. Haridas Voharidas.) Do you consider at the present time that the alcohol habit is increasing or decreasing?—I think it is increasing.

28,184. Do you think the opium habit is increasing or decreasing?—I think they both go together. From my observations in Singapore I saw that there were opium shops about every 10 yards with liquor shops between them.

28,185. I am speaking of India?—I have not seen so many opium shops in India.

28,186. How would you compare the opium habit of 20 years ago with the opium habit of to-day, do you think it is increasing?—I think the opium habit has increased during the last 20 years.

28,187. Do you think the opium habit is more injurious than the alcohol habit?—I think it is more injurious in the respects that I have mentioned.

28,188. In other respects do you think alcohol is the more injurious?—It is six of one and half-a-dozen of the other. I do not know which to condemn the more.

28,189. If opium is stopped do you think the people would take to alcohol?—I believe, from the characteristics and temperament of the people of India, that they are more liable to take to opium, and that it is likely to do more harm than alcohol to which they have not been generally addicted.

28,190. If opium is stopped in the way you propose, would they not take to alcohol?—I am not prepared to say. To some extent they would, no doubt.

28,191. Would it not be more injurious in point of religion and precept? Perhaps you know that alcohol causes a person to be violent?—The very effect of its causing them to be violent prevents many from taking it who otherwise would. The opium is so seductive and insidious that they are under its influence before they are aware of it.

28,192. Would not you like to see alcohol dealt with first?—I would like to see either habit done away with. If you do away with alcohol to-day and opium to-morrow it would be all right.

28,193. (Mr. Mowbray.) In what parts of India has your work been?—I have been about nine years in Bombay city.

28,194. Is that recently?—I was here for my first five years, and I have been here for four years from 1888 to 1892.

28,195. Have you been in any other part?—This merchant that I speak of was at Dongargarh, in the Central Provinces.

28,196. You have been 22 years in India, and you have accounted for nine years; where have you spent the rest of the time?—I was six years at Poona, two years in Igatpuri, one year in Lucknow, and two years on furlough.

28,197. Did you see much of the opium dens at Lucknow?—I did not. My attention was not called to it at the time I was there, which was nine or 10 years ago.

28,198. How long were you in China when you went with this petition?—I was in China about four or five months altogether.

28,199. How long were you in the Straits Settlements?—I spent 15 or 16 days in the Straits Settlements, Singapore, and Penang. I was at Hong Kong one week, Canton one week, Shanghai about six or seven weeks, Tientsin a week or more, and three weeks at Peking.

28,200. Are you working at Bombay now?—I am working at Igatpuri, about 85 miles on the north-east on the G.I.P. Railway.

28,201. (Mr. Pease.) When you were at Tientsin did you have an interview with Li Hung Chang, the Chinese Minister?—Yes; I had an interview with the Prime Minister, the Metropolitan Viceroy.

28,202. Did he receive your memorials and promise to forward them to the Imperial authorities?—Yes, he received them and promised to forward them to the Central Government with his recommendation.

28,203. Is this a correct representation of what took place:—“He spoke in strong and emphatic terms of the moral and material evils of opium smoking. He said the Central Government were most sincere in their antagonism to the opium traffic, and if the foreign import were prohibited they would at once turn their efforts to effectually put down the home growth. But, he asked, would not the demand for a prohibition treaty with Great Britain bring on a third opium war?”—Those are the words he used.

28,204. Have you anything further you would like to add with regard to that interview?—When asked that the Chinese Government should demand a prohibition treaty from Great Britain (which was the purport of the memorials), he nearly repeated the words uttered by the Marquis Tseng a few days before he died, viz., “China is not free; she cannot take the first step.” He said China would be most glad, and would take measures if there were a prohibition treaty between Great Britain and China; they would take measures which they thought would be successful in putting it down, like the home growth.

28,205. (*Sir James Lyall*.) Who was the Chinese Minister you had this interview with?—*Li Hung Chang*. We also had an interview with Prince Ching, the father of the reigning Emperor—a communication from his physician.

28,206. What was *Li Hung Chang*’s position?—He is Grand Secretary to the Chinese Government, corresponding to the Prime Minister, and he is also the Viceroy of the Metropolitan Province of Chihli.

28,207. Did he give you a reply?—Not a written reply.

28,208. Who interpreted?—A Chinese gentleman named *Lo Fung Lo*.

28,209. You said just now that you had known one rich man who was ruined by the opium habit. I suppose you have known a good many who were ruined by liquor, have you not?—Yes; I have nothing good to say of the liquor habit.

28,210. Are you prepared to say in what way you would prohibit the use of opium except as a medicine?—The only effectual way is legal prohibition.

28,211. To make it a criminal offence?—Yes.

28,212. What do you mean by medical use, do you mean medical prescription?—I would say precisely as it is done in England.

28,213. Are you aware that the English system does not prevent its use for other than medical purposes?—I am not aware of that. I would say under a doctor’s prescription.

28,214. The English system does not prevent its sale except so far that the word “Poison” must be put on the bottle—would you be satisfied if the words “Poison Shop” were put up above an opium shop?—That would help some perhaps, but I am not sure that the people do not know already that it is poison—a great many of them.

The witness withdrew.

Mr. DRAKE-BROCKMAN called in and examined.

28,227. (*Sir James Lyall*.) What is the title of your office?—I am officiating Commissioner of Excise in the Central Provinces.

28,228. How many years’ service have you had?—A little over seven years.

28,229. Your experience has been entirely in the Central Provinces?—Entirely.

28,230. How long have you acted as officiating Excise Commissioner?—Nearly two years. I hold several other offices besides, Inspector General of Registration, Superintendent of Stamps, and Commissioner of Miscellaneous Revenue.

28,231. I believe you have prepared, on behalf of the Central Provinces,* a note on the administration of the excise revenue from opium?—Yes, the note shown to me is based on one of mine, the original has been modified.

28,232. Who modified it?—The Revenue Secretariat.

28,233. Do you put in this note now?—I did not put it in. It was sent by post from the Secretariat.

* The memorandum on the administration of the excise revenue from opium in the Central Provinces will be found in its complete form in Appendix XXIX. to this Volume.

28,215. You do not mean that it should only be procurable on a medical order?—Yes, that is what I meant to say. I was not quite aware how it was done in England.

28,216. I think you have had experience of places like the Central Provinces? In Bombay there are a great number of reliable doctors of all kinds, but in the Central Provinces you may go a great many miles without finding a doctor, except perhaps a village Vaid, is not that the case?—That is true, certainly, in many places. I think it would be easy enough to regulate that. I have not thought just how it should be done in cases of that sort, but I have no doubt it could be done. Some officer could be authorised to do it.

28,217. You would have some medical officer appointed for the purpose all over the country?—I would not have them specially appointed for the purpose. I think there would be little difficulty in that. We cannot go very far, excepting away out on the frontiers, without finding a medical officer of some kind.

28,218. But in the Central Provinces you will admit that you may go a great number of miles, 50 or 60 or 70 miles without finding a medical officer?—Yes, that is so, but I do not think they would suffer very much if they did not get it.

28,219. Some witnesses have told us in reference to what you say that opium is the great and almost the only medicine which is used as a domestic medicine in India, and which everybody knows how to apply?—That is not my experience, it is something quite new to me. I have not heard of its being used as a general remedy at all until the last few weeks.

28,220. You spoke of having seen the opium shops crowded with customers, is it not a fact that if you only allow one shop in an area of 50 to 100 square miles for an article which is in considerable demand that shop is likely to be more crowded than most shops?—Yes, that would be so in a large place.

28,221. Do you say that opium eating is more seductive and fascinating than alcohol drinking?—Yes, it comes on so insidiously.

28,222. Is it not the fact that a great part of the seductiveness of alcohol consists in the pleasure of its taste and the pleasure of drinking in company?—It may be so, I do not know why people drink it at all.

28,223. Is it not general knowledge that in all countries people like the taste of liquor, and the pleasure of drinking it in company, and that that is one of the seductions of the habit?—I have heard that.

28,224. Do you think there is the same seductiveness in swallowing a bitter pill?—They soon get a very powerful craving for it.

28,225. (*Mr. Mowbray*.) With regard to the China petition you have mentioned, I suppose the proceedings were reported at the time?—Yes, it was published in several papers in England.

28,226. Can you give me the date?—21st April 1892.

28,234. You were told it was part of your duty to put it in?—Not exactly so. I was told to forward a memorandum to the Secretariat. It was there modified, and sent on by post.

28,235. I understand that up to 1873-74 throughout the whole Central Provinces, except Sambalpoore, the cultivation of the poppy was allowed, and the licensed vendors drew their supply of opium from those cultivators?—They got it from where they pleased. They either imported it from outside the province or obtained it from the local growers.

28,236. Were they allowed to import it from the Native States?—They could make their own arrangements.

28,237. Was the import from Native States allowed?—Yes, I think so, certainly.

28,238. Import was allowed freely from Native States?—Yes, certainly.

28,239. Without any pass?—There was a small duty I believe. I have the rules here, if I may be allowed to refer to them. The rule was as follows: Opium, the growth of

The Rev. W.E. Robbins, M.A.

20 Feb. 1894.

Mr. Drake-Brockman.

Mr.
Drake-
Brockman.

20 Feb. 1894.

"foreign territory, may be imported for sale in the districts of the Central Provinces, or for transit elsewhere, except as described in the preceding rule, covered by a pass form No. 5, which shall be granted by the officer in charge of the district or by the Tehseeldar of the sub-division into which it is proposed to import, on a written application showing the weight, number of packages, and destination of the consignment. Such pass must be countersigned by the officer in charge of the district or sub-division of each district through which the consignment may pass, as in Rule 10."

28,240. Is this the present system?—No, under the present rules import is not allowed except on account of Government. The rule just quoted was issued in 1866, and remained in force till October 1872, when others to much the same effect were issued.

28,241. I understand that in 1873-74 the Bengal system, which had prevailed in Sumbalpoore, began to be extended to the other districts?—Yes, that is so.

28,242. You quoted some figures, and you say in consequence of this change the revenue rose from 38,979 to 107,273?—Yes; but the latter figure represents gross revenue, and to make the comparison just the net revenue, Rs. 78,216, should be taken.

28,243. Are you talking of the revenue of the whole Central Provinces or of those three districts?—The revenue from the Chattisgarh division.

28,244. I suppose that great increase was due to the substitution of licit for illicit opium?—Yes, I should say so certainly, and particularly to the fact that the price of the opium came to Government.

28,245. You say that the result of the introduction of the Bengal system has been to raise the price of opium to the purchasers from 4 to 6 tolas to the rupee, the old village price, to 2 or 2½ tolas to the rupee?—That is so.

28,246. The old village price was from 4 to 6 tolas the rupee, and it has been raised to 2 or 2½ tolas the rupee?—Yes.

28,247. That is, the price has been doubled to the consumer?—Yes.

28,248. You say, "The policy of the administration has been only to license shops where an actual and steady demand existed, or where facilities for illicit traffic were great." Do you mean by the last words that in such places, even when the demand is small, you sometimes allow shops?—Yes; where there are special facilities for illicit introduction of the drug, shops are licensed more freely than they otherwise would be.

28,249. The new system was completely introduced from 1879-80?—Cultivation was stopped towards the end of 1878, and all districts were under the new system from the 1st April 1879.

28,250. Since then there has been no reduction in the number of shops, but a small increase?—The figures have varied from time to time.

28,251. The consumption of opium would remain about the same?—It has slightly increased. Looking to a long series of years, the average annual consumption has been 625 maunds, and in no year have the total issues varied greatly from that amount.

28,252. I see it is stated that the number of madak shops has been reduced from 285 in 1890-91 to 128 in 1893-94?—That is so; including temporary shops the reduction has been from 298 to 131.

28,253. What has been the cause of that large reduction?—The main reason has been that the practice of madak smoking is generally recognised by the native community to be very harmful, and in 1890 proposals were submitted to the Chief Commissioner to make its manufacture illegal; but it was not thought desirable to go so far at that time, and the orders issued were simply to the effect that licenses should be granted only at large centres of population where there is a considerable and permanent demand for the preparation.

28,254. You say that poppy cultivation was absolutely closed in all districts by 1878?—That is so.

28,255. I believe you were not there at the time, but have you any information as to whether it led to great complaint or not?—No. So far as my perusal of official records goes I should say it did not; but I have no information worth imparting on the subject.

28,256. You say that "smuggling had been stopped from the Madras side and from the Bengal side?"

there could hardly have been smuggling from the Madras side?—Before the Opium Act came into force there was some smuggling of what is called "biscuit" opium. It came through from Rajmundri into the Chattisgarh division.

28,257. You say that smuggling is still going on in those districts which adjoin Native States, and that the measures to stop it met with very slight success in spite of special supervisors and paid detectives, &c.?—That is so.

28,258. Are the powers of the feudatory States under the Central Provinces distinctly defined?—They have sunnuds, which will be found in Aitchison's Treaties. With regard to opium, they are under special restrictions, which are described in the note on opium arrangements in the Central Provinces.

28,259. You do not know how those restrictions are imposed?—I understand they are in their sunnuds; executive orders embodying them issued, in the first instance, from the Local Secretariat.

28,260. (Mr. Pease.) Does the number of shops, of which we have a record, give us the complete number, or are there, as there used to be in the Central Provinces, special licenses given for shops on bazaar days?—There are temporary shops in the Central Provinces.

28,261. Those are not recorded in the list of shops which are given to us?—Under the standing orders they should for the most part be classed as permanent shops. In some districts I have reason to believe that these orders have not been observed, and I am now engaged in bringing them to the notice of the Deputy Commissioners.

28,262. Some years ago it appears that they were in the habit also of granting occasional licenses for bazaar days; I was asking whether these shops licensed specially on bazaar days are included in the total number of shops now returned?—The figures on page 10 of the Government of India's "Note on opium produced and consumed in India" were checked by my office, and I believe they are correct.

28,263. Then with regard to the permanent shops?—All the shops,* including the temporary shops, are included in the Government of India's return, so far as their existence is known to me.

28,264. Those shops are not opened all the year round?—In many cases a shop which is intended to be permanent is not worked whether it is called temporary or not.

28,265. I want to know whether that is the number of shops that are licensed for the year, and whether there are additional shops occasionally licensed for special occasions?—The number returned by the Government of India* includes all the temporary shops, so far as their existence is known to my office.

28,266. Smoking on licensed premises was forbidden many years ago I believe?—The prohibition came into force on the 1st April 1891.

28,267. Do you think that there is smoking upon licensed premises now?—Occasionally. I have had complaints. Only the other day the Deputy Commissioner of Seoni caught a number of persons smoking on the shop premises. The licensee was punished. If cases do occur, and are brought to the notice of the authorities, the men to blame are punished.

28,268. What effect do you think the closing of the licensed premises for the purpose of smoking since 1891 had had upon the practice of opium smoking?—My personal opinion, already expressed in an official report to Government, is that it is likely to do good, as indicating the opinion that Government has of the practice. It is a deleterious practice, and one that should be discouraged. I may also add, however, that many officers do not agree with me in thinking that the measure can have any effect on consumption of madak.

28,269. I suppose you would be of the opinion that a person who is an opium smoker would be sure to smoke on private premises if he could not smoke on public premises?—I think so; but there would be fewer recruits for the practice.

28,270. Is it not your opinion that the fact that there is no licensed shop would, to use your own term, tend to lessen the number of recruits for smoking opium?—I am inclined to think so. That is my personal opinion.

* The witness subsequently corrected this: see page 374. The figures in the Government of India return do not include temporary shops.

Mr. J. PRESCOTT-HEWETT, Secretary to the Commission, called in.

(Chairman.) I believe you have a statement to make to us?

(Witness.) I received yesterday a petition from certain opium smokers in Bombay to the following effect:—

“To the President and Members of the Royal Commission on Opium. Honoured Sirs,—We, the undersigned opium consumers of Bombay, beg to inform you that opium has done us no harm. If the use of it is prohibited, it will be a great hardship on us. As the Commission is appointed for us, we must be heard and not the Padris. We request you to go round our private clubs and get us examined by doctors. If you do not do this, and your report is unfavourable to us, we shall protest against it.—We remain, Sirs, your obedient servants.”

The petition is signed by a number of opium smokers. They were induced to leave the room under the solicitations of Mr. Haridas. I have next to read a letter addressed to your lordship by Mr. Prautch, which is as follows:—

“Bombay, 16th February 1894. Lord Brassey, Chairman, Royal Opium Commission. My Lord,—I think it right to inform your lordship that it has come to my knowledge that recently a Resolution was issued by the Bombay Government to restrict the giving of information and evidence by Government servants on the opium question. I venture to think that your lordship ought to call for a copy of this Resolution. I wish to further mention that a few weeks ago W. Almon, Esq., Assistant Commissioner of Customs, wrote a letter from Bombay Customs House Office to a legal gentleman in Poona, asking him to arrange an interview for himself with an important anti-opium witness. This attempt having failed, Mr. Almon himself called on the witness who declined to see him. This affords another illustration of the action of the authorities in this opium inquiry. If my statement is denied, I can produce the original letter.—I have the honour to remain, faithfully, A. W. PRAUTCH.”

Your lordship has asked for the communications from the Bombay Government, referred to by Mr. Prautch in his letter of the 16th instant. They are as follows:—

Revenue Department,
Bombay Castle, 25th November 1893.

Letter from the Commissioner of Customs, salt, opium, and abkari, No. 5834, dated 8th November 1893:—

“I have the honour to submit, for the information of Government, a circular which, I understand, has been sent to various executive officers under this Government by Mr. Ernest Hart on the question of the use and abuse of opium. It was submitted to me by Mr. Lamb, acting collector of Kolaba, with a request that I should instruct him as to the reply he should send. I forward also copy of my reply to Mr. Lamb and of the circular which I addressed to all collectors. It seems probable that Mr. Hart's circular has been sent to others than collectors, and possibly Government might wish to issue instructions regarding it in the general and political departments.”

Circular letter from the Commissioner of Customs, salt, opium, and abkari to all collectors in the Presidency (except the collector of Kolaba), and the collectors and deputy-commissioners in Sind, No. 5642, dated 27th October 1893:—

“A collector has forwarded to this office for instructions a circular from Mr. Ernest Hart, Chairman of the British Medical Association, asking for certain information about the use and abuse of opium amongst the natives of India. To reply to such applications might prove embarrassing, and as the Opium Commission, which has been appointed by Parliament, is shortly about to visit India, all the information which Mr. Hart desires to obtain will be elicited by the properly constituted authorities. I have therefore to inform you that if you have received a similar letter it is desirable, for the reasons given above, that you should not reply to it.”

Resolution.—Government approve of the circular issued by the commissioner of customs, salt, opium, and abkari to the collectors and deputy commissioners, copies of which should be forwarded to all other heads of offices for information.

W. L. HARVEY,
Under Secretary to Government.

The witness withdrew.

Adjourned to Thursday next.

At the Council Hall, Secretariat, Bombay.

SEVENTY-SEVENTH DAY.

Thursday, 22nd February 1894.

PRESENT:

RIGHT HON. LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

Sir JAMES LYALL, G.C.I.E., K.C.S.I.
The Hon. Sir LACHHMESWAR SING, Bahadur,
Maharaja of Darbhanga, K.C.I.E.
Sir WILLIAM ROBERTS, M.D., F.R.S.

Mr. R. G. C. MOWBRAY, M.P.
Mr. A. U. FANSHAWE,
Mr. ARTHUR PEASE.
Mr. HARIDAS VECHARIDAS.

Mr. J. PRESCOTT-HEWETT, C.I.E., Secretary.

Mr. J. PRESCOTT-HEWETT called in.

(Chairman.) I believe you have some communications to make to us?

(Witness.) I have received the following letter from Mr. Dane, “On behalf of the Government of Bombay I request that a note may be made in the proceedings to the effect that Mr. Lee Warner, C.S.I., Secretary to the Government of Bombay in the Political Department, and Mr. Fazalbai Vishram, who are now members of His Excellency the Viceroy's Legislative Council, were not examined owing to their absence in Calcutta, and that

“the abstracts* of their evidence may be printed in the “Appendices.”

(Chairman.) Very well.

(Witness.) I have also received the following letter from Mr. Drake-Brockman, dated 21st February:—“I was mistaken yesterday in informing Mr. Pease that the “number of shops for retail vend of opium as given on

Mr.
J. P. Hewett.
20 Feb. 1894.

Mr.
J. P. Hewett,
22 Feb. 1894.

* See Appendix XXIII. to this Volume.

Mr.
J. P. Hewett.
22 Feb. 1894.

"page 10 of the Government of India's Note included 'temporary' shops. Statistics of these shops will now be added to the Central Province Note, so that there may be no further mistake on the point. A temporary shop is always sold with the nearest permanent one, and a single license covers sale of both; the Government of India figures correctly represent the number of licenses issued. I shall be glad if the error can be corrected before the shorthand notes are sent to press." Mr. Drake-Brockman wishes his answer to be corrected, the question is whether it is to be done by correcting the answer on the minutes, or affixing a note.

(Chairman.) I think the answer* may be corrected.

(Witness.) I have also received the following letter from Mr. Campbell:—

"To the Secretary, The Royal Opium Commission,
Bombay.

SIR, 21st February, 1894.

"IN connexion with the letter published in to-day's paper, which, at the last meeting of the Royal Opium Commission the Rev. Mr. Prautch laid before the Chairman, I have the honour to request that the following statement may be placed on record.

"Mr. Prautch writes that Mr. Almon, the assistant commissioner and collector, wrote from the Customs House to a legal gentleman in Poona asking him to arrange an interview with an important anti-opiumist witness in Poona. The letter to which Mr. Prautch presumably refers was addressed by Mr. Almon to a friend who is a pleader in Poona, and is also a leading member of the Methodist Episcopal Church in that city. The letter is in the following terms:—My Dear —, In a paper called the 'Woman's Anti-Opium Prayer Sheet for August 1892,' published in England, there is a report of an address by Miss Soonderbai Powar on the opium question. Some of the statements said to have been made by Miss Powar are strange to those having a knowledge of these things here. Are you acquainted with Miss Powar? If you are, and can do so, could you arrange with Miss Powar that I could see her with a view of asking her about these particular statements in the way of explanation. If Miss Powar will see me, I would like yourself and some other non-official gentleman to be present at the interview.

"With regard to Mr. Prautch's statement that the suggestion of an interview had reference to an important anti-opiumist witness, it is to be noted that when Mr. Almon's letter was written we were not aware that Miss Soonderbai Powar was intended to be called as a witness. The circumstances under which that letter was written are briefly as follows:—In January last my attention was drawn to a paper published in England in August 1892 under the title 'Soonderbai Powar's Message,' which I had

not before seen and which contained, among others, the following statements:—That thousands of high caste women die of starvation in their dark zenana rooms because their husbands ruin themselves by smoking in licensed opium dens; that young men are led to smoke opium through the wiles of the opium farmer who sets his servants at the street corners furnished with opium pipes to tempt the youths to smoke; that they (apparently either the opium officials or the opium farmer) quietly mix opium with our tea in refreshment rooms and in hotels, so that a craving for opium arises and before we know what we are doing we shall become slaves of opium. As the alleged writer, Miss Soonderbai Powar, was born in or near Poona, and has spent almost her whole life in Poona or in Bombay, it follows that these statements referred either to Poona or to Bombay. As each of these statements involved serious charges against the management of the opium revenue in Bombay my duty required me to examine into their truth. Inquiries made through the commissioner of police and the health officer of the municipality failed to reveal any foundation for them, except that, in respect to the third statement, it appeared that there had been a rumour, some two years ago, that certain Irani, that is, Persian Parsi, tea-house keepers, put poppy heads in their tea to darken its colour. As Mr. Almon, the assistant collector of abkari, could procure me independent information, and also as he is responsible for hotel and refreshment room licenses, and under the Abkari Act has power to deal with infringements of the Opium Act, I asked him to make inquiry into the truth of the rumour that poppy heads were sometimes put in tea. The result of these inquiries was that Mr. Almon failed to find that the rumour had any foundation in fact. Mr. Almon suggested to me that, as is usual in such cases, he might obtain from Miss Soonderbai in Poona the individual who made the statement, information regarding the practice which he had failed to obtain in Bombay. The letter given above was written with that object and with my knowledge. In reply, Mr. Almon was informed that his friend could not arrange a visit, but that a reference might be made to the Rev. A. W. Prautch, of Thana, to whom his friend was forwarding Mr. Almon's letter, and who his friend wrote would probably know Miss Soonderbai and might arrange an interview. On hearing of Mr. Prautch's connexion with the matter I decided to make no further inquiry. Mr. Prautch's statement in the letter to the Chairman, that after the receipt of his friend's communication Mr. Almon called on the witness who declined to see him is, I am informed, without foundation.

I have the honour to be,
Sir,
Your most obedient servant,
J. M. CAMPBELL,
Collector of Opium.

The witness withdrew.

ADDENDUM.

NOTE.—The following evidence was taken at Delhi on the 23rd of January 1894, but the transcript of the notes having been mislaid, the depositions were not printed in their proper place, which is on page 251 of Vol. III., between Questions 18,863 and 18,864.

RAI BAHADUR RAGHUNATH SINGH called in and examined (through an interpreter):

(Chairman.) I believe you are a Jat and honorary magistrate of Najafgarh?—A. Yes.

Q. We shall be glad to hear anything you have to tell us with reference to the subject which has been referred to this Commission for inquiry?—A. Opium is generally used medicinally, old people in particular resorting to it as a preventive against catarrh, &c. People of advanced age use it also as a digestive and look upon it as a means of sustaining life. The people would not care to see restrictions placed on the use of opium, and they would pray Government not to do so as it is considered a medicine for certain diseases and is a means of enabling the old to digest their food. The natives of India have been accustomed to it for ages past. Opium is not produced in the Delhi district where I now live; but in the Bharatpur State where I resided before, the poppy is cultivated; and I know therefore that there is no other crop as valuable as that, seeing that it repays by hundreds of rupees on a single bigha. The people of this district are anxious to be permitted

to cultivate the poppy, and would hail such permission with delight. The people would, in my opinion, object to prohibitive measures being adopted as to the use of opium, and they would not like to be burdened with fresh taxation in lieu of that already imposed.

(Mr. Funshawe.) Will you kindly tell us whether you are honorary magistrate in Delhi itself or in Najafgarh?—A. Only in Najafgarh—a sub-division of the Delhi district.

(Mr. Wilson.) Will you tell me whether you consider that opium for men in perfect health is a good thing or a bad thing?—A. It is not good; it is bad for persons in health.

Q. Do you really mean to say that the profit on opium can be counted by hundreds of rupees on a single bigha?—A. I mean one bigha—one pakka bigha, which is three bighas kachha—that fetches more than hundreds of rupees.

(Sir William Roberts.) You have said that the habit of using opium in healthy persons is a bad habit;

* See note on page 372.

would you also say that the use of alcohol by healthy persons was an equally bad habit?—*A.* Worse than that.

(*Mr. Fanshawe.*) In saying that opium is a bad habit for persons in good health, do you apply that to the old people who you say use opium as a digestive?—*A.* I mean digestive only in those cases where old people become

degenerated or weak. It is bad for young men in good health.

Q. In speaking of the profits of opium you speak of the profits in the Bharatpur State?—*A.* Yes.

Q. Bharatpur being a Native State in Rajputana?—*A.* Yes.

The witness withdrew.

RAI BAHADUR RAMKISHAN DAS called in and examined (through an interpreter).

(*Mr. Fanshawe.*) I believe you are an honorary magistrate of Delhi?—*A.* Yes.

Q. Are you a regular resident of Delhi?—*A.* Yes.

Q. Will you tell us what you know about the use of opium by the people of this place?—*A.* Large numbers, especially those among the labouring classes, are in the habit of taking opium, which they consider to be more essential than either food or raiment. After having taken opium they can work more hard than they otherwise would do.

Q. For what reasons do these classes take opium?—*A.* To avoid catching cold, and in order to enable them to work hard.

Q. How is the habit of opium eating regarded by the people of Delhi?—*A.* The popular view in Delhi and its neighbourhood in regard to the consumption of opium is rather indifferent, viz., they look at it neither as a virtue nor as a vice. Persons addicted to other drugs are looked down upon, while opium consumers never attempt to conceal the habit, as they are considered a harmless lot of people.

Q. Are you referring to people who take opium in moderate quantities?—*A.* Yes, to persons who take it in moderate quantities.

Q. What would be the feeling in Delhi if the use of opium were prohibited except for medical purposes?—*A.* They would take it to be very hard if the Government attempted an interference.

Q. If the use of opium were prohibited except for medical purposes would the people be prepared to pay any fresh taxation that might be necessary?—*A.* No, by no means. The people would never be prepared to submit to any fresh taxation whatever to compensate for any loss in the opium revenue. They would not like it at all. At present the tax falls only on consumers; then it would become general and people will not like it. Fresh taxation would fall on the whole of the residents.

Q. As regards the present arrangements for the supply of opium on the part of the Government, have you any opinion to express?—*A.* I consider the present arrangements the best, as people can get opium very easily.

Q. I believe that you are a Marwari?—*A.* A Khatri.

(*Mr. Wilson.*) Is it your opinion that opium is more necessary to the labouring classes than either food or clothing?—*A.* Those who have become habituated to its use.

The witness withdrew.

VOL. IV.
APPENDIX I.

SUMMARY OF OPERATIONS ON OPIUM BY SURGEON LIEUTENANT-COLONEL HENDLEY, C.I.E.

(*Handed in by Surgeon Lieutenant-Colonel Hendley, C.I.E., see Question 20,262.*)

As I was interested in obtaining a correct knowledge of the conditions under which opium was taken in the Jeypore State, and was also desirous of ascertaining what native opinion, both professional and lay, was on the subject as regards the habitual use of the drug, I prepared in August 1892 a series of questions, which were based in part upon an inquiry conducted by Surgeon-Lieutenant-Colonel Crombie of Calcutta as well as on my own experience, and forwarded it to medical officers and hospital assistants, who were serving under me, and also to a large number of representative persons in Jeypore, with a request that they would be good enough to answer them from their personal knowledge. I received 55 replies.

Appended is a list of persons from whom I received replies, a summary of the replies received, and a letter received by me from the Rao Raja of Sikar on the subject.

I.—LIST OF PERSONS who have sent REPLIES TO
QUESTIONS.

1. Babu Jadunath De, M.B., Assistant Superintendent of Dispensaries at Jeypore, 21 years a practitioner, mostly at Jeypore.
2. Assistant Surgeon Jalaluddin, a Punjabi, formerly a Musalman, now a Roman Catholic Christian, L.M.S., Lahore. Since 1884 in Medical Department, Jeypore.
3. Second Class Hospital Assistant Myan Singh, a Sikh with 14 years' medical service, chiefly in the District Gaol, Jeypore, since he entered Jeypore service.
4. Third Class Hospital Assistant Ram Gopal, a Brahman with seven years' service, Sikar Dispensary.
5. Third Class Hospital Assistant Ram Sanchi, a Brahman, with one year's service, Chatsu Dispensary.
6. Third Class Hospital Assistant Mookund Ram, with two years' service, five years' previously in private practice, a Brahman, Sambhar Dispensary.
7. Third Class Hospital Assistant Hurdeo Prasad, Poorly qualified. Brahman, with 15 years' service, Cherama Dispensary.
8. Native Doctor Narsing Lall, Brahman, with 20 years' service, Mohwa Dispensary. Poorly qualified.
9. Second Class Hospital Assistant Broma Nuud, Brahman, with 16 years' service, Madhopur Dispensary.
10. Second Class Hospital Assistant Devi Lall, Brahman, Bandikui Dispensary.
11. Native Doctor Nund Kishore Singh, Rajput, of 21 years' service, Gaol Dispensary.
12. Hospital Assistant Gordhun Das, a Bania, over five years' service, Chomu Dispensary.
13. Local Class Native Doctor Prosono Kumar Das, a Bengali, 35 years' service, Khetri Dispensary.
14. Native Doctor Ganesh Lall, a Jain, with 24 years' service, Mayho Hospital, Jeypore.
15. Female Hospital Assistant Barji Bai, a Bania widow, three years' service, Mayo Hospital, Jeypore.
16. Female Hospital Assistant Janki Bai, a Khandelwal Brahman widow, three years' service, Mayo Hospital, Jeypore.
17. Native Doctor Kasim Ali, a Mohamedan, of 26 years' service, Sanganir Dispensary. Indifferent qualifications.
18. Native Doctor Azimulla, a Mohamedan of 25 years' service, Uniara Dispensary. Indifferent qualifications.
19. First Class Hospital Assistant Abdul Rahim, a Mohamedan of 22 years' service, Malpura Dispensary.
20. Third Class Hospital Assistant Abdulla Khan, a Mohamedan of six years' service, Jhunjhnoo Dispensary. Indifferent qualifications.

21. Third Class Hospital Assistant Mohamed Zahurul-Huk, a Mohamedan of five years' service, Hindown Dispensary.

22. First Class Hospital Assistant Syad Nur Khan, a Mohamedan of 25 years' service, Jeypore Central Gaol; has the order of merit for bravery.

23. Hospital Assistant Basat Ali, a Mohamedan of 15 years' service, Nim-Ka-Thana Dispensary.

24. First Class Hospital Assistant Mahbub Khan, a Mohamedan of 30 years' service, now pensioned, Sri Madhopur Dispensary.

25. Native Doctor Surfarajudin, a strict Mohamedan of 26 years' service, Sawai Madhopur Dispensary.

26. Hakim Mahomed Salim Khan, a Mohamedan and the Chief Yunani physician in Jeypore. Experienced.

27. Hakim Mahomed Azeezudin, a Mohamedan Yunani physician in Jeypore. Experienced.

28. Hakim Mohamed Yusaf Hussain Khan, a Mahomedan physician. Experienced.

NON-PROFESSIONAL STATEMENTS.

29. The Reverend G. Macalister, United Presbyterian Mission, Jeypore. About 20 years' experience here.

30. The Reverend J. Traill, United Presbyterian Mission, Jeypore. He has lived about 24 years in Jeypore.

31. Rao Bahadur Govind Singh Bahadur, Thakur of Chomu. He is the premier Rajput noble of Jeypore, and is a member of the Jeypore Council. He has received titles from both the British and Jeypore Governments, and is a leading member of the Walter Kirit Sabha, or Marriage Reform Association of Rajputana.

32. Thakur Fatteh Singh, Thakur of Naila, a Rahr-tore Rajput, formerly the Vice-President of the Council and Minister of Jeypore and a man of great experience.

33. Haji Mahomed Ali Khan, a Mohamedan and member of the Jeypore Council.

34. Thakur Hari Singh, a Rajput, and who takes great interest in all social questions relating to the Hindus.

35. Pundit Braj Balabh, a Brahman and head clerk, Jeypore Museum.

36. Lala Samander Karan, an Oswal or Saraogi, second clerk, Jeypore Museum.

37. Darogah Chimun Lall, a leader amongst the Jains and head of the Imarat or Public Works Department, Jeypore.

38. Durga Pershad, a Loda Rajput and first Meteorological Observer.

39. Nathu Narain, a Kayasth, a member of the Kayasth Congress, and second observer.

Inexperienced. 40. Shoo Pratap, a Kayasth, and third observer.

41. Luchmi Narain, a Kayasth and treasurer, Medical Department.

42. Babu Jogindra Nath Sen, many years president of the Jeypore municipality.

43. Hospital Assistant Shib Lall, reserve list, a Brahman.

44. Hospital Assistant Abdul Halim, a Mohamedan of four years' service. Purana-Basti Dispensary. Short service.

45. Rao Bahadur Kantee Chunder Mookerjee, C.I.E., Chief Member of Council, Jeypore, Brahman.

46. Mr. Williams, Superintendent of Goals, Jeypore, for more than 25 years.

47. Third Class Hospital Assistant Alimullah, a Mohamedan and a reserve hospital assistant. Intelligent but very short service.

48. Rajah of Khetri Bahadur. He holds a separate estate from the British Government.

49. Babu Mohendra Nath Sen, Member of Council, Jeypore.

50. Rao Rajah of Sikar, a very large landholder and great noble in Shekhawati.

51. Bhatt Sri Krishen Ram Vaid, a Hindu physician in Jeypore.

52. Vaid Anandi Lall, a Hindu physician in Jeypore.

53. Swami Ram Narain, a Dadu-Panthi Vaid.

54. Gokul Das Attar, a dealer in perfumes and apothecary.

55. Pandit Chimun Lall.

II.—SUMMARY OF REPLIES TO QUESTIONS.

[Quotations are given to indicate the line of native thought on the subject, and especially the position taken up by practitioners of the indigenous system of medicine.]

1. To what extent does the habitual use of opium prevail amongst the Hindus, Mahomedans, and Jains of Jeypore; and what do you think is the proportion of opium-eaters in each community in your district?

Almost all agree that the orthodox Hindus use most, then Mahomedans, and last of all Jains.

The last named take bhang instead. The estimates vary from that of Thakur Hari Singh, a very experienced resident of Shekhawati, viz., that 10 per cent. of the young take opium, and after 60 years only 10 per cent. do not use it; and the opinion of Assistant Surgeon Jalaluddin that in Jeypore 90 per cent. take it, down to 10 and even 5 per cent., according to Hospital Assistant Basat Ali and native doctor Ganesh Lall.

The majority give about 25 per cent.

In the Chomu district 75 per cent., according to Hospital Assistant Goverdhun Dass, use opium or poppy-heads. All agree that Marwaris use most.

In Sawai Madhopur, a fatally malarious district, almost everyone is said to use opium. Hakim Mohamed Azizuddin writes that 75 per cent. of the Jeypore people take opium, and 40 per cent. of the inhabitants of Delhi.

The Rev. G. Macalister, U. P. Missionary, a 20 years' resident of Jeypore, is informed that as a rule Hindus and Jains take a little opium when they are over 40 years of age. The premier noble of Jeypore states that all castes use it more or less. Chimun Lall, a leader amongst the Jains, believes that 35 per cent. of Jeypore people take it.

Nathu Narain, a member of the Kayasth Congress, gives the proportion at 25 per cent.

The Rao Rajah of Sikar gives one-tenth.

The Rajah of Khetri 8 per cent.

Babu Mohendra Nath Sen one-tenth.

Three Vaidas state that Rajputs use it most.

2. Does such use, in your opinion, lead to any evil results, as, for example, deterioration of health, neglect of business, poverty, gambling, domestic unhappiness, or sensuality?

Eight reply "yes," without giving any details; several others add, "only if the opium-eater is badly fed, and especially if milk cannot be obtained"; others, again, write, "only in young persons"; the most experienced observe that bad results only follow its use in excess.

The Rev. J. Macalister and Assistant Surgeon Jadu Nath De do not think it leads to any of the results mentioned.

The Rev. J. Traill says, "not the use, the abuse might." Haji Mohamed Ali Khan, Member of Council, considers the moderate use beneficial; Rao Bahadur Kantee Chunder Mookerjee, C.I.E., chief Member of Council, writes, "to deterioration of health when used in excess. In moderation sickly men generally improve in health, as I have experienced. Poverty cannot be the result of opium, as the drug costs very little in Jeypore; nor is there any connexion with gambling. Nor can domestic unhappiness result, as it does not make people troublesome as with intoxicants, nor is sensuality a result." Hospital Assistant Devi Lall thinks domestic unhappiness might ensue from want of opium. Hospital Assistant Syed Nur Khan says, "no, unless in the case of sensualists who in time may become impotent." Thakur Fateh Singh thinks it leads to waste of time, poverty, and

useless expenditure, but not to gambling, family quarrels, or sensuality. He also says medicines are of no use to the opium-eater. Thakur Hari Singh believes it leads to most of the results mentioned and to a little petty theft. Rao Bahadur Gobind Singh agrees with him, except that gambling and domestic unhappiness are not traceable to it. The Hakims think it may lead to idleness and poverty if the regular dose is not taken; and, according to the Chief Hakim Salim Khan, if milk and certain condiments are not used with it. He writes that "India is hot and the people phlegmatic, but opium is cool, hence it does not hurt them, as it would the inhabitants of cold countries. By itself it does not lead to ill results. Chandu and madak may do so, because taken in bad company in shops." Lala Samandar Karan says, "it leads to some neglect of business, but promotes perseverance in work. It causes obstinacy and readiness to be provoked." Mr. Williams, Superintendent of the Gaols, says, "Many parts of the plant are useful, it is valuable as a preventive of disease and against the effects of overwork." The Rajas of Khetri and Sikar think it is hurtful to some extent, but the former says "it does not lead to poverty or gambling." Babu Mohendra Nath Sen believes that only excessive use is injurious. The Vaidas generally think it valuable in disease.

3. Does the moderate use of opium lead in any considerable number of instances to excessive use? Is the tendency to increase greater or less than the same tendency in moderate spirit-drinkers?

Only two think the tendency is greater than in the case of wine, viz., Babu Jadu Nath De and native doctor Nursing Lall, but the latter adds, "wine drinkers become insane or violent." Two of the Hakims say, "wise men do not exceed," and also note that if the regular doses are not taken of opium, increase takes place.

The chief man says, "it does not increase, because opium is not a food, but the use of wine increases, because it is a food."

The Rev. G. Macalister can only recollect two instances of men so seriously addicted to opium as to be unfit for work. Thakur Fateh Singh thinks it a matter of personal character, and that only thoughtless persons exceed.

Haji Mohamed Ali Khan is much of the same opinion. Rao Bahadur Kantee Chunder Mookerjee thinks the craving for drink becomes irresistible, and is much more difficult to fight against than that of opium.

Others consider that all intoxicants lead to excess when taken in company. Native Doctor Kassim Ali says he once saw a sepoy who took an ounce of opium, but a man who takes two or three ounces of spirit may afterwards take two or three bottles.

4.—(a.) Do you think the prohibition of opium, except for purely medicinal purposes, would lead to an extended use of alcoholic drinks or of bhang or of other drugs or stimulants? (b.) Would you regard such substitution of alcohol for opium (apart from the religious aspect of the question) as against public or private morality or as a disaster to the community?

The reply of Babu Jadu Nath De perhaps best summarises the general opinion: "No; liquor cannot replace opium, because the latter is taken by all without prejudice. Bhang, charas, ganja, or stimulants or drugs would not serve the purposes of opium. The use of liquor is disastrous to the community and against public morality. In some classes, which have no religious prejudice against alcohol, opium might be superseded by it."

Female Hospital Assistant Barji Bai writes, "Spirit-drinking would be injurious, because it leads to poverty, irreligion (breach of worship), and disagreement amongst caste fellows." Others think bhang would be taken. One man says, "wine is better." Hospital Assistant Basat Ali says, "Wine would cost 4 annas, but opium costs only a pie, hence the man who eats the latter would suffer."

Some think arsenic or strychnine would be taken. The Hakims think bhang and spirit would be used. One is of opinion that moderate use of wine makes a man fatter and more ruddy, whereas the opium-eater becomes feeble and pallid. Some think nothing could take the place of opium. Thakur Hari Singh says, "Spirit would be taken, which, even apart from religion, would be a great disaster for Hindus." Darogah Chimun Lal writes, "One habituated to wine becomes insolent as the number of doses increases more than opium." Two or three men think it might be prohibited without danger, but add that alcohol is most harmful.

APP. I.
Jeypur.

Rao Bahadur Kantee Chunder Mookerjee says that most certainly other things would be used. Each class would take those which are not against their religion; thus Rajputs, Menas, Jats, Gujars, &c. would not take spirit.

The poor would drink country wine; the rich English spirit; Brahmins, Jains, and Musulmans would take bhang.

The former offer bhang to Mahadeva as prasad or consecrated food, which they eat, because Mahadeva or Shiva is very fond of it. It is offered daily or on special occasions. "Alcohol would be disastrous to all."

The Raja of Khetri says, "more harm and less profit from alcohol." The Rao Rajah of Sikar, "Of course other drugs would be used, and alcohol would be a disastrous exchange." The Vaidas all say wine would not be a substitute, and its use would be disgraceful. Pandit Chiman Lal, Jain, thinks it would not be hurtful to the Jains. Gokul Das, apothecary, thinks alcohol disgraceful, "because men would treat their mothers and sisters like their wives."

Mr. Williams believes prohibition would be a cruel hardship to the poor. Babu Mahendra Nath Sen would not like to see alcohol used instead.

5. Do you think the excessive use of opium is increasing or diminishing? If increasing would it be wise or useful for the State to interfere and stop the growth of the poppy and use of opium except for medical purposes.

On the whole, the opinion is that it is increasing. Rao Bahadur Kantee Chunder Mookerjee writes: "It would not under present circumstances be wise to interfere or to bring it down to the limit of medical uses. A check would only be necessary if it were used inordinately." Several think it should only be sold in licensed shops, others think only gradual interference would be right as other drugs would be used which are worse, and opium-eaters would suffer very much. Babu Jadu Nath De deprecates interference as no evil results follow moderate use. One writer would check sale of opium, but allow the poppy to be used. Another, in giving the same opinion, adds "without the poppy the poor are like the dead." All the Hakims think it is increasing, but should not be stopped without a substitute.

The chief one says "opium prevents bad air getting into the body and as many natives live in a small space. "Opium prevents the otherwise bad effects of bad air getting from the body of one man into that of another."

Thakur Hari Singh thinks everything should be stopped. One or two think the tax might be increased.

Mr. Williams is of opinion that it has "not diminished since the agitation began regarding opium."

The Raja of Khetri thinks gradual interference might be useful. The Rao Raja of Sikar believes it would be neither wise nor useful.

Babu Mohendra Nath Sen says, "it is not necessary." Bhatt Sri Krishun Vaid says "to stop it would be oppression."

Anandi Lal says that it would be disastrous. Pandit Chiman Lal that nothing could replace it. Swami Ram Narain that opium-eaters would suffer from many diseases, and Gokul Das "not for diseases, though useful for those who take it for other reasons."

6. Does excessive use of opium cause more or less degradation and depravity in your experience than immoderate drinking as regards (1) Deterioration of bodily health; (2) Mental or moral degradation; (3) Domestic misery; (4) Public decency; or (5) the frequency and kind of crime it leads to?

Babu Jadu Nath De says "excessive use leads to the above results as in the case of the moderate use of wine, but less crimes are committed." Assistant Surgeon Jalaluddin writes, "not more; opium-eaters are generally innocent and commit no crimes, but become poor, humble, and talkative."

Devi Lal thinks it leads to those results, except unhappiness when the usual dose cannot be had. One female Hospital Assistant thinks it worse than wine, the other that opium makes men obstinate if used in excess. A Musalman thinks liquor drinkers are not thought bad men, whereas opium-eaters are.

One says, "wine leads to breach of etiquette." Hakim Mahomed Salim Khan thinks it not so bad as wine, because the latter is taken in public shops and so is disgraceful; it is moreover expensive, even in moderation and leads to boldness, and so to crime. The other Hakims say "opium does not lead to crime." The Reverend G. Macalister, the Reverend J. Traill, and Thakur Gobind Singh, all think excessive use of

spirit much worse. Thakur Hari Singh says opium is taken to prevent the use of spirit rather than the contrary. Chiman Lal says, "the opium-eater never commits such crimes as dead drunk tipplers." Luchmi Narain says, "opium-eaters are looked down upon by those who do not use the drug, they remain strong if they take butter and milk." Hospital Assistant Abdul Halim says, "less in all ways, because spirit drinkers are more liable to brain and liver diseases and disorders of the digestive system, whereas opium-eaters only suffer from constipation." Rao Bahadur Kantee Chunder Mookerjee writes thus: "opium never produces the least degradation or depravity. It may make a man indolent or injure health, but not give rise to the sort of degradation experienced by immoderate drinkers, nor does it cause crime."

The general opinion is that excess is not as bad as immoderate drinking.

Mr. Williams says, "in moderation adds to health, causes reflection and caution, a quiet home life, and does not lead to crime."

Babu Mohendra Nath Sen writes, "the abuse is less harmful than the abuse of alcohol. It does no harm to the mental faculties."

Swami Ram Narain says, "those who find fault with opium are quite incorrect. It preserves the health and protects against insanity."

7. What effect in your opium (a) does the opium habit have in the children of an opium-eater? (b) It is well known that the children of spirit drinkers have congenital tendency to drink, is any similar tendency noted amongst the children of opium-eaters?

Replies almost uniformly in the negative to both questions. Several think a few children may be weakened, and three or four that it has some effect in making them like the drug. The Rev. G. Macalister says, "no desire for it in after years though very commonly given it when young."

Hakim Mahomed Salim Khan says, "opium does not nourish the body, hence the liking for it cannot be transmitted. Three Vaidas think that the children may have a congenital tendency if the parents take opium at the time of conception."

9. What is the quantity used in a month on an average?

This question was imperfectly understood.

Some replying for the quantities used in their district by the whole population, others for the individual.

Thakur Gobind Singh says 32 grains a day are taken by moderate eaters. Rao Bahadur Kantee Chunder Mookerjee writes, "they begin with a grain and may go to 8 grains, rarely to a tolah or 180 grains a day." He himself takes 1½ grains each morning and evening. He began it 15 years ago for chronic diarrhoea and has not increased the dose. He has lost the diarrhoea. He is now 59 and is equal to his duties. He has been so benefited that he would recommend it to his friends under similar circumstances. At 44 he was so disabled that if he had not used opium, he would not have been able to carry on his business, if life had not been cut short altogether. He is, he adds, "a living instance of the benefit of opium in moderation to a man who is not physically strong."

10. Does the quantity taken always or often increase? On the whole the answers are in favour of increase. A few do not know. The Rev. G. Macalister believes opium-eaters in India are very temperate in the use of it and excess is the exception. The Rev. J. Traill has known men useless until they gave it up altogether. Rao Bahadur Kantee Chunder Mookerjee says, "it increases if sufficient guard is not taken."

Several reply that it is increased in the cold season; and others, after a long period. Swami Ram Narain says, "wise men do not increase it."

11. At what age is the habit generally formed? Replies generally in favour of middle age, about 40 years. A few say ignorant persons begin in youth for pleasure. One says "it varies with temperament." The President of the Jeypore Municipality says, "young men begin it for society, not for bad purposes." Others say in old age; and one that some parents do not give it up when their children grow up. One or two say young men begin it for sexual purposes. Rao Bahadur Kantee Chunder Mookerjee says, "between 30 and 40 as health and strength are then at a standstill or are on the decline." Pandit Chiman Lal says, "the old are in great need of opium."

12. What are the reasons which usually induce people to begin to take opium?

For chronic diseases, for example :—

Diseases of the lungs.—Catarrh, bronchitis, asthma, phthisis. In cold and cough to dry up the secretions. Diseases of the digestive tract.—Dyspepsia, diarrhoea, dysentery, piles, colic, fistula in ano, flatulence.

Other affections.—Palpitation of heart; insomnia, paralysis.

Diseases of the eye, such as staphyloma, iritis, nyctalopia, and epiphora; earache; neuralgia, mental derangement, diabetes. In poverty to “induce labour,” weariness of old age. Villagers take it when tired and sick, chronic pain of all kinds, grief, cold, exhaustion, to prevent worry. Debility; rheumatism, phlegmatic diseases of all kinds. Stricture, gleet.

Spermatorrhoea and gonorrhoea. Young men take it for sexual purposes, and rich men to delay emission.

Hakim Mohamed Salim Khan says, “to prevent ‘emission and when the semen is thin.” This is the meaning attached to its use for sexual purposes.

It is taken for luxury, that is, because others do it at feasts, especially amongst the Rajputs; also as a stimulant as beer and wine are taken in Europe. Rao Bahadur Kantee Chunder Mookerjee writes, “when a ‘man feels decline of health. There are cases in ‘which it is taken, but very rare ones, merely as an ‘intoxicant. Taken especially for dyspepsia, diarrhoea, ‘disorders of the stomach and bowels, affections of the ‘lungs and neuralgia.”

Babu Mohendra, Nath Sen, in addition to the above, says, “it is used by the old to enable them to take rich ‘food.” Swami Ram Narain says, “also in some ‘cases of diarrhoea which cannot be cured without it.”

13. Do women use opium as much as men, or at all, for the same purposes?

Replies generally to the effect that much less is used and generally for diseases, old age, troubles, and sorrow. Thakur Fattah Singh says it is thought improper in the upper classes. One or two men think it is used by a few bad characters for sexual purposes.

14. Do Mohamedans, Hindus, and Jains consider it disgraceful to take opium habitually in moderate quantities? Is it contrary to their religion? If so, why?

Most of the Muslims and less experienced Hindus say it is prohibited for the former because an intoxicant. Only one or two consider that it is prohibited to Hindus and Jains, but some especially note that the prohibition is not so strict as in the case of wine. Moderation is enjoined. One man says it is less disgraceful than tobacco. Another that, though contrary to religion, “Precepts are not practice,” and opium can be eaten privately. The Rev. J. Traill says, “I think not; I have ‘met references such as this, ‘opium banishes care, so ‘the name of God ought to ease the soul in trouble.” The general idea is that, though prohibited to Muslims, and, to some degree, on this account, disgraceful, its use is tolerated, and in disease is allowable.

Rao Bahadur Kantee Chunder Mookerjee says, “nor ‘at all ashamed, nor disgraceful, nor contrary to ‘religion.”

The Rao Rajah of Sikar says that even Mahomedans in his district do not consider it disgraceful though contrary to their religion. The Vaidas say “it concerns ‘the Mahomedans.”

15. Do persons who take opium habitually live longer or shorter lives than others?

Thirteen say “shorter.” Thakur Fattah Singh says, “weakens, but does not shorten life.”

The Rev. G. Macalister has known old men habitually using opium. The Rev. J. Traill is informed that they “live to full age if well fed.”

Rao Bahadur Kantee Chunder Mookerjee says, “those who take it in moderation are likely to live ‘longer.”

Babu Jadunath De the same, Assistant Surgeon Jalaluddin the same, also Hospital Assistant Ganesh Lall, who quotes a case in the Mayo Hospital of a woman aged 100. Hospital Assistant Mahub Khan says, “No, because it does not lead to sexual appetite, which ‘shortens life.” Thakur Hari Singh says, “longer if ‘moderate in use.”

Rao Bahadur Thakur Gobind Singh says, no. Luchmi Narain writes, “live longer, my grandfather took ‘half an ounce a day and lived to 85. My father was ‘not in such good health, did not take opium, and ‘died at 69.”

The Raja of Khetri says the people in his estate think it the cause of long life, so does Babu Mohendra Nath Sen.

16. Are they as liable to diseases as others or more so?

A few say “more,” without comment. Babu Jadunath De says, “they keep better health and do not suffer ‘from diseases as others do.” Hospital Assistant Devi Lall observes “less liable, but do not recover from ‘disease as easily as others.” Hospital Assistant Syed Noor Khan and Rao Bahadur Thakuran Gobind Singh say the same. Also Thakur Hari Singh. Rao Bahadur Kantee Chunder Mookerjee writes, “in moderate ‘quantities protects less liable.” Hospital Assistant Abdul Halim observes, “less liable except to constipation,” and Hospital Assistant Shib Lall, “more liable, ‘because they are constipated,” and Bagbhat says, “no man can be attacked by any disease unless he has ‘constipation.”

Lala Samander Karan says, “less, but bear cold ‘with difficulty.” Hakim Mahomed Salim Khan writes, in our medical book “Quarabini-Kabir,” it is noted that “in modern times, when used in a ‘proper ‘way, opium protects from many diseases and saves ‘the health when failing.” Hospital Assistant Mahabab Khan, “less, because opium is hot and dry, ‘and diseases prevail from humidity.” Hospital Assistant Mya Singh says, “they escape malarial fevers ‘sometimes.”

17. Do you think the use of opium protects against any diseases or the effects of exposure to cold? If so, what diseases?

2. Do the men who use opium habitually suffer more or less than other people when they go from the plains to the hills in India or to Europe during the cold weather?

Only six think it does not protect from cold. Only one, a young man, from neither cold nor disease.

Question 12 has much the same meaning, hence most repeat their answers here.

In most cases it is said to protect against chest disorders, rheumatism, and diseases of the digestive tract.

The Hakims all agree in this; one says, “of course” it protects. “I saw a traveller quite senseless from cold, ‘I gave him opium, and he got right at once.” The Rev. G. Macalister says, “it protects against fever.” The Rev. J. Traill, “fever and cholera.” Thakurs Gobind Singh, Fattah Singh, and Hari Singh, Haji Mohamed Ali, Rao Bahadur Kantee Chunder Mookerjee all agree that it protects from cold, but some say the dose must be increased. The Vaidas say it protects against cold, diseases, and against corpulency. In short against disease of the phlegmonous humour.

18. Does the use of opium ever cause insanity?

Replies nearly all in the negative. Two or three say it may increase. The native doctor says, “the want of it ‘leads to foolishness.” Hakim Mahomed Salim Khan says, “no.” Sheikh Buali Sena (Avicenna) and Hakim Ali say that some kinds of mania are quite cured by opium. The Hakim Azizuddin says, “no,” but makes people strong. Hakim Yusuf Khan says, “no, protects ‘against it.” Darogah Chimun Lall writes, “never ‘become insane, though by excesses their morality is a ‘little muddled.”

19. Is opium frequently abused so as to cause death or shorten life?

Nine reply in the affirmative without any proof. Others say, “only when abused.”

Native doctor Surfaraj writes, “men addicted to it ‘never die.” Hakim Azizuddin writes, “it is the ‘antidote to death.” The Rev. G. Macalister, “very seldom.” The Rev. J. Traill “often does so as a poison, ‘but not so often as other things.”

Haji Mahomed Ali says, “it cannot shorten life.” Darogah Chimun Lall “produces a mortiferous effect, ‘causing an ultimate death if taken abruptly in excess.” Durga Prasad writes, “if abused, danger of death ‘when on the house top or beside a well.”

20. Do Hindus, Mohamedans, or Jains ever use opium in the belief that it increases sexual appetite, or for the sake of restoring it when it is failing? Do they use other drugs for that purpose?

Babu Jadunath De writes, “all classes believe it ‘invigorates it and steadies the power when failing. ‘They use other drugs and adopt many other practices ‘for this purpose. Assistant Surgeon Jalaluddin ‘writes to the same effect, but points out that it is not ‘to restore it; many other drugs are used for that ‘purpose. Several say ‘yes, but impotency ensues.’ ‘Those who know say, ‘to prolong or retard emission, ‘keep up the power, not used for appetite.” All

APP. I.
Jeypur.

the Hakims say this. Durga Prashad says, "it keeps "it moderate and even preserves it if milk and rich "food are taken." Pundit Brij Balabh says, "this is "the general belief."

Nearly all dwell upon the fact that other drugs are used for appetite. Rao Bahadur Kantee Chunder Mookerjee writes, "it is the general impression that "excess impairs the sexual power." It has never been "known to increase the appetite or restore the power "when failing. As it improves the health, it may act "indirectly in strengthening the power." The Vaidis think it is a matter for Mahomedans only.

21. Does the opium-eater become indecent?

Replies nearly all in the negative. Some say men may become filthy in their persons, or ridiculous as they nod in company. Chimun Lall says, "not beyond "humanity like a drunkard."

22. Would the habitual use of alcohol or ganja, instead of opium, be against public decency?

All agree that alcohol and ganja are worse. One says, "these would not be allowed before guardians or "superiors." Others note that, while all intoxicants lead to evil, the use of spirit is disgraceful, and a cause of public shame and indecency.

23. What per-centages of persons are locked up or brought before a magistrate on account of alcohol, ganja, and opium respectively.

Replies generally to the effect that very few, if any, are locked up for opium. A few commit petty thefts. Rao Bahadur Kantee Chunder Mookerji says, "hundreds "of cases for alcohol almost daily in large cities."

"Ganja makes men irritable, and so a man who takes it may be very quarrelsome, and offend his neighbours, and so come before the magistrate, but not so frequently as for alcohol. Instances are rarely known of such cases in which opium-eaters are brought before the magistrate on criminal grounds committed as caused by opium."

Mr. Williams, Superintendent of the Gaols, says, "none from opium." The Rajah of Khetri writes, "opium-eaters are not brought before the magistrates. "Ganja-smokers and spirit-drinkers are." The Raja of Khetri and the Rao Raja of Sikar say, "not opium, "but hundreds of spirit-drinkers." Mr. Williams has not met a case in 25 years. Babu Mohendra Nath Sen hardly remembers a case.

24. Is much crime traceable to the habitual use of opium? If so, what kind of crime? Crimes of violence? Of assault? Robbery? Theft? House Trespass, &c.?

Rao Bahadur Kantee Chunder Mookerjee writes, "no "crime is traceable to the habitual use of opium as "the effect of opium-eating. No opium-eater was ever "so charged. An opium-eater may rob as in the "ordinary world, but not because he takes opium."

Rao Bahadur Govind Singh and the Raja of Khetri say, "they do not commit crimes."

Nearly all say only a little petty theft or sell their clothes to get opium. Mr. Williams does not recollect a single case here in 25 years of gaol work.

Gokul Das, the apothecary, says, "opium-eaters can "do all sorts of crimes." No one else holds this opinion. He is clearly a pessimist all round.

25. Does the person who habitually uses opium become less useful in business, less powerful in body, less active, or more stupid than before?

Replies on the whole are that they do not if they use the drug moderately, and take the dose regularly. The Rev. G. Macalister knows many men "who use opium "regularly, and they are certainly hard-working men."

Rev. J. Traill says, "the abuse of opium, as of anything, may lead to them."

Lala Samander Karan says, "they are less powerful "and but get steadiness at work, not less stupid or useful "up to 60 years." Others say "no, if they get good food," others that they are a little weary, or "Pinak" after the effect is over. Durga Prasad also dwells on their perseverance. Hakim Mahomed Salim Khan writes, "improper use of bread is even dangerous. Opium-eaters are less active, &c. if they do not take milk."

The Rao Raja of Sikar says, "those who use opium before 30 years of age may become so."

Swami Ram Narain writes, "not all men are wise, "nor are all fools."

27. Are children given opium in your district, and, if so, for what purposes, and for how long?

Babu Jadu Nath De says, "by the rich to ward off "diseases, such as rheumatism, catarrh, fevers, diarrhoea; and by the poor, in addition, to keep the

"children asleep and quiet, and so relieve their mothers "Given in all Rajputana, cases of death from overdose "on record. Baneful custom, as it causes atrophy, "constipation, fever, &c. The principal cause of "infantile mortality here."

The opinions of all are much the same.

It is given from the third or fourth month to the second, third, or fourth year. Haji Mahomed Ali Khan says, "it is given to make them suck, as those who use opium like milk."

Darogah Chimun Lall says, "it saves them from the "effects of the atmosphere, and imparts a general "warmth; and a steady growth."

It is given for bowel complaints and teething. Hakim Mahomed Salim Khan says, "it keeps them from "the bad air of the world."

28. What are the practices and rules in your own caste or community as regards opium, ganja, alcohol, &c.?

Babu Jadunath De says, "opium is used for disease; "bhang as a luxury by the rich, alcohol, for 30 years "past, previously unknown, has committed havoc "equally amongst all classes and ranks."

Assistant-Surgeon Jalaluddin says, "it is not prohibited to Musulmans, whereas if alcohol falls on a "cloth the piece should be cut out and burned."

The Rajputs use it at festivals. Prosono Kumar says, "he who uses alcohol is outcasted, but they take opium "and ganja."

Opium, according to others, is not like spirit as it may be used publicly. The Rev. G. Macalister believes that opium-eaters are very temperate in India; excess is the exception. The Rajputs all say it is not prohibited. Darogah Chimun Lall says, "it is a matter of personal opinion." Babu Jogendra Nath says, "wine only is prohibited." Rao Bahadur Kantee Chunder Mookerji says, "opium is not prohibited in his caste. "Ganja is looked upon as sacred, as Shiva is in favour "of it."

Alcohol is prohibited except to worshippers of Sakti or Kali, who use it on certain occasions, but if this religious purpose leads to excess, as at times it may do, it becomes discreditable; almost all Brahmans before going to a feast sharpen their appetites by taking bhang in solution with almonds, pepper, and sugar. The Vaidis say alcohol is forbidden, but opium is used by all.

Pandit Chimun Lall says, "intoxicants are prohibited "amongst Jains."

III. Letter from RAO RAJA MADHO SINGH, Bahadur of Sikar, to the RESIDENCY SURGEON, Jeypure.

Dated Sikar, the 15th December 1893.

I was glad to receive your letter of the 7th August last, in addition to a number of question papers anent the advantages and disadvantages, &c. of the use of opium, with a request to let you know my personal experience thereon, as well as those of a certain number of prominent Seths and Sahukars residing within my territory.

In the first instance I must apologise for the long delay that has occurred, as I had to refer the questions from capable persons throughout my State, and I am sure you will agree with me, what a difficult task it is to deal with a prejudiced community, whose suspicion is susceptible to be easily roused on questions affecting their everyday life business, and how much more difficult it is then to elicit true and correct answers from its members separately and individually.

As regards my personal self, I have to say that I have never tasted opium in whatsoever shape during my life, and I feel it, therefore, to be a great disadvantage to speak with any weight on the use and abuse of opium consumption.

However, on the whole, I can say so far that the moderate use of opium is extended to a great extent in Rajputana, without deteriorating in the majority of cases either the physical or mental capacities of consumers. Among the Rajput community opium-eating (moderately) is not considered either a disgrace or reproach, but is rather enjoyed openly in festivals, and visitors are welcomed often with a request to partake therein. This custom is not so prevalent in Shekhawati, as it is in Western Rajputana and Bikanir.

A habitual moderate consumer is very seldom liable to the commission of a crime for the reason of his being addicted to opium, or, in other words, there must be

some other provocative causes for the man when he commits a wrongful act, to which his dose of opium may be attributed to have been a supplement, but the latter itself single-handed can rarely be seen to be the cause (*i.e.*, the primary cause) of such actions, as is often the case with alcohol or strong liquors. It is not the supply of opium that renders a consumer a danger to the public. Even his successive failure to obtain the article at the appointed hour, hardly leaves him sufficient vigour and energy to cause the breach of public peace, although such failures when prolonged have been observed to be deleterious to him physically.

It would consequently be a severe—nay, even unbearable—hardship to the great majority of consumers belonging to the present generation of limited means and incomes, either to prohibit the use wholesale among

them or render the commodity more difficult to their approach. As it is yet doubtful and not easy to say what wholesome and beneficial results will such outward interference bring to them, it is still harder to premise its effect on the world at large; now buried on the womb of futurity.

It is invidious to make a comparison, but, however, it can be said that opium-eating is less injurious than strong spirit in all its bearings, and an opium-eater will hardly choose any other intoxicant.

An immoderate use of almost all intoxicants has been generally found to be notoriously mischievous, and opium cannot be said with fairness to be an exception to the rule.

I have now the pleasure to enclose papers in answer to the list of questions sent to me.

APPENDIX III.

NOTE on the ADMINISTRATION of OPIUM to CHILDREN.

(Received from Surgeon-Lieut.-Colonel Hendley, C.I.E., subsequently to the date of his examination as a witness.)

In order to ascertain the number of children to whom opium is given by their parents, and the conditions under which it is used, I made a list of all the infants who were vaccinated in Jeypore, and inspected by me from March 20th to 31st, and asked certain questions regarding them, with the following results. After seeing 100 cases I stopped the inquiry. No cases are omitted in the list. There would be no difficulty in extending the number to several thousand cases. The custom is universal in the Jeypore State.

Seventy-eight per cent. were given opium. Twenty-two had not been given opium. In nearly every case where opium had not been given, the parents stated that there had as yet been no necessity for administering it, but if the children were suffering, or proved troublesome, or cried, so as to prevent the mother from working or both parents from sleeping, opium would be given. The above were the reasons alleged by all for giving the drug. In some

cases the opium had been first used because the child had become fretful after vaccination. A piece of crude opium, about the size of a Bajra seed (millet), one-sixteenth of a grain, was given usually twice a day. It was, however, carefully graduated to the needs of the particular case, sometimes only being administered once, at others three times.

The average age at which 78 children were first given opium was 44 days; the average age when seen 113 days.

The father only took opium in three cases. All the children were suckled by their own mothers, and all were perfectly healthy. Forty-five of the children were boys, and 55 were girls. All castes were represented. There were 75 Hindus, and 25 Mohamedans.

T. H. HENDLEY,
Surgeon Lieut.-Colonel.
Jeypore, April 10th, 1894.

LIST of CHILDREN examined between March 20th and 31st, 1894, in Jeypore, to ascertain whether Opium was given them or not.

[N.B.—All the Children were seen in consecutive order by Surgeon-Lieut.-Colonel T. H. Hendley, and none are omitted.]

Rajputana.

APPENDIX IV.

QUESTIONS issued by Lieut.-Colonel ABBOTT to the DURBARS of the NATIVE STATES in RAJPUTANA, with the connected correspondence.

[Presented by Mr. DANE on behalf of the Government of India.]

No. 3732-G. of 1893.

From the AGENT to the GOVERNOR-GENERAL, Rajputana,
to the SECRETARY to the GOVERNMENT of INDIA,
Foreign Department.

SIR, Dated Abu, the 22nd September 1893.

With reference to your letter, No. 3166-L., dated 9th instant, regarding the inquiry to be made in Rajputana by the Royal Commission appointed to report on certain matters connected with the production and sale of, and trade in, opium in India, I have the honour to enclose, for the information of the Government, copy of a demi-official circular addressed by me to the political officers within this agency.

2. I concur with the view expressed in your paragraph 5 that Ajmere would be a convenient centre at which to examine all witnesses from the Rajputana States. Should any members of the Commission desire to visit any of the States, I feel sure the Durbars would not raise any objection to their doing so, but I see little or no object at present in their making any such visit as I anticipate that all the information they will require can be laid before them at Ajmere.

3. With reference to the remarks in your 6th paragraph, I may state that I shall endeavour to meet the Commission and give evidence before them. For this purpose it would be convenient to me to be informed, as soon as possible, as to the probable date of the Commission's arrival at Ajmere, as I shall have to make arrangements for their reception at that place, and arrange my own tour so that I can meet them. It appears to me sufficient to nominate one officer to lay information before the Commission, and for this duty I should have selected Lieutenant-Colonel Abbott, Resident, Western Rajputana States, who was for many years Superintendent of the Jhalawar State, but he does not return from furlough till the beginning of

November. If your requisition for a brief outline of the evidence which the officer nominated can give admits of no modification it will be necessary for me to select another officer, and in that case I beg to nominate Lieutenant-Colonel Curzon Wylie. But as regards the outline of the evidence to be given, I may state at once that it will embrace information under the heads noted in paragraph 4 of my demi-official circular enclosed; and I may refer to the detailed information given in my long demi-official letter to the Foreign Secretary, dated 25th August 1891. I do not understand if any other outline is required to reach you before the 15th of October next. If the visit of the Opium Commission to Rajputana does not take place before the end of November I see no reason why Lieutenant-Colonel Abbott should not undertake the duty of laying before the Commission information already collected in this office, and that which I have now taken steps to collect through political officers. I do not suppose that a statement of the witnesses to be examined is required to reach Government before the 15th of October.

4. I would suggest that I may be favoured as soon as possible with further instructions regarding the officer to be appointed and the outline of evidence referred to in the preceding paragraph.

I have, &c.

G. H. TREVOR, Colonel,
Agent to the Governor-General.From the AGENT to the GOVERNOR-GENERAL, Rajputana,
to all POLITICAL OFFICERS in Rajputana.

Dated the 22nd September 1893.

You are aware that a Royal Commission has been appointed to report on certain matters connected with the production and sale of, and trade in, opium in India. The Commission will visit Rajputana on a date

Demi-
Official
Circular.

to be hereafter communicated, and will examine witnesses at Ajmere. The branches of the inquiry to be made by it which concern the native States are:—

- (1.) Whether, if the production and use of opium for non-medical purposes are prohibited throughout British India, such prohibition could be extended to the native States;
- (2.) The nature of the existing arrangements with the native States in respect of the transit of opium through British territory, and whether those arrangements could be, with justice, terminated; and
- (3.) To what compensation would the native States be fairly entitled in the event of measures of prohibition being adopted.

2. On these questions the Government of India are most anxious that the interests of the native States should not be overlooked, and that a full expression of their views should be placed before the Commission. They desire, therefore, that the Durbars may be invited to nominate witnesses regarding the matters mentioned in the preceding paragraph and any others to which the Durbars may wish to call attention in connexion with the opium question. Please explain all this personally* to the

* If more convenient the explanation may be given orally to a trustworthy Vakil or agent of the Durbar.

the Commission may lead them to recommend no interference which the Durbar(s) could object to. Our object is to enable the Commission to inform themselves fully on the whole subject, regarding which there is much misapprehension in some quarters.

3. If the Durbar(s) would like any members of the Commission to visit and make inquiries on the spot, please let me know. I am inclined to think that it would be sufficient to send witnesses to give evidence at Ajmere, but if the Commission should wish to visit I suppose the Durbar(s) would not object to invite them. In any case they can hardly have time to visit many States.

4. I should be glad if you could furnish me as soon as possible with full information up to the present date regarding:—

- (1.) The extent of poppy cultivation in
- (2.) The production of opium in
- (3.) The local consumption and export.
- (4.) Revenue derived by the Durbars from opium, either directly or otherwise.
- (5.) The nature of the agreement under which the drug is exported through British territory from
- (6.) Compensation to which the State(s) would, in your opinion, be entitled if the production of opium were stopped or its export prohibited.

A memorandum with statistics under these heads would be useful to the Commission.

No. 3462 I.

From the UNDER SECRETARY TO THE GOVERNMENT OF INDIA, Foreign Department, to the AGENT TO THE GOVERNOR-GENERAL in Rajputana.

SIR, Dated Simla, the 5th October 1893.

I AM directed to reply as follows to the several inquiries made in your letter, No. 3732-G., dated the 22nd September 1893, regarding the Royal Commission on opium:—

- (1.) The Commission is not likely to visit Rajputana before the end of November next, and the probable date of their arrival at Ajmere will be communicated to you when the Commission have definitely settled the course of their tour.
- (2.) Colonel Abbott may be nominated to give evidence before the Commission as you propose.
- (3.) The list of subjects enumerated in paragraph 4 of the circular, which forms an enclosure to your letter under reply, is approved.
2. I am to say that it will be convenient if a draft of the evidence to be given by Colonel Abbott can be prepared in advance and forwarded to the Government of India for their information.

I have, &c.

A. WILLIAMS,
Under Secretary to the Government
of India.

EXTRACT from a demi-official letter, dated 11th November 1893, from Colonel H. B. ABBOTT, Resident, Western Rajputana States, to Lieutenant S. F. BAYLEY, First Assistant to the Agent to the Governor-General, Rajputana.

I SUBMIT a list of queries to be sent to Durbars with a note explanatory of them which, I think, embraces all points.

When replies are received may I ask to be furnished with an epitome for all the States in the form Mr. Dhunjishah is now preparing. The note is intended in whole or part for the use of political officers to draw their attention, and through them the attention of Durbars, to the serious importance of the subject. If there be anything in the queries which looks like begging a question, I hope the phraseology will be altered, as it would be well to avoid even the appearance of endeavouring to influence the Durbars in their statement of the case, for we only wish to assist them in understanding the matter and putting it fairly before the Commission.

Colonel Trevor gave me to understand that my duty in connexion with the Commission would be only to place all the information received and produce the witnesses sent before the Commission, and he made no mention of my giving actual evidence myself, but if the Government of India in the Foreign Department think it desirable, I propose introducing myself to the Commission by making the following statement.

NOTE ON OPIUM.

We are called upon to consider—

- (i.) If the production and use of opium for other than medical purposes could be prohibited in Rajputana;
- (ii.) The nature of the existing arrangements with the Rajputana States in respect of the transit of opium through British India, and if these could with justice be terminated;
- (iii.) What compensation would the native States be fairly entitled to in the event of measures of prohibition being adopted.

2. Under the first head we have to ascertain what amount of opium is produced in Rajputana, which means what is the area under poppy growth? What is its yield? The above information has been received from some States, others have yet to supply it; and in the case of all it is necessary for the statistics to be uniform, i.e., to be for the same term of years, and all in British measures and weights (i.e., maunds and seers, acres, &c.) It should also be stated if the areas have been ascertained by survey or appraisement, and if they include alienated lands as well as Khalsa lands. Further, it is necessary that if there be any discrepancy, as compared with figures before furnished, it should be explained. The official or officials who supply this information should appear as witnesses on these points before the Commission. In the case of Jhallawar (and other States which possess such documents), a chart of crops might be produced before the Commission to show at a glance how large a portion of the irrigated area is devoted to the poppy. Next, there is the use of opium, in which must be included all preparations from it and the poppy plant. Cultivating witnesses should be examined as to the various uses the plant is put to, and they, together with members of the more important castes, and a representative to speak on behalf of the remaining population, should be called on to state—

- (a.) The uses they make of opium in its different forms, such as "amal" and "amal pani," "post," and so on;
- (b.) To what extent the above are taken by them;
- (c.) By whom (i.e., men, women, and children);
- (d.) On what occasions, and for what purposes;
- (e.) Their ideas of the effects; and
- (f.) If they could well manage without them.

These persons would afterwards appear as witnesses before the Commission. For Jhallawar I would suggest that some stalwart Soudhia, Mewati, and Rajput lumbers and patels should be among the witnesses selected.

It then remains, under the first head, for the Durbar to state if it be possible to prohibit the production and use of opium except for medical purposes, and, if so, by what means it could best be done.

APP. IV.

Rajputana.

3. There does not seem to be anything to inquire about from Durbars under the second head, which appears to refer to the arrangements by which all opium for export through British India has to pay duty at the scales. The justice of either prohibiting all export or attaining the same end by considerably raising the present duty is a matter for Government to consider. I know that for years past traders have petitioned to have the duty lowered.

4. The third head is a very important one for the Durbars. It will oblige them to most carefully think out the present value of the poppy, and of opium in all its forms, to them and their subjects, and the loss which will be incurred by them and their subjects if the poppy all but disappears as a crop, and opium and its preparations become practically non-existent articles of trade and consumption.

The value of the poppy plant in addition to the opium produced consists of its young leaves used as a vegetable, its seed and heads, and the preparations made from them. The value of opium extends to the preparations made from it.

Loss will be direct and indirect. Among indirect losses should be included those likely to occur from changes in the course of trade and in social habits consequent on deprivation of an article of commerce and general consumption. Pecuniary loss will be felt by (1) the Durbars, (2) jagirdars and all holders of alienated lands where poppy is grown, (3) by cultivators in both Khalsa and alienated lands, and (4) by traders.

For Durbars pecuniary loss will mean—

(a.) Diminution of land revenue, i.e., the difference in demand on lands assessed at poppy rates, and on such lands when poppy crops are replaced by other crops, irrigated or unirrigated.

The proportion, viz., 25 per cent., given by the Jhallawar Durbar as the difference above referred to is believed to be under-estimated, judging by the estimates for the Central India States and by the revenue rates given in the settlement report.

(b.) Loss in customs.

(c.) Loss in excise.

Note.—Where mixed excise contracts are given, care should be taken, in estimating what portion belongs to opium, to include all its preparations.

The estimate of 1,000 out of 7,100 given by Ulwar is believed to be too low, as in the Punjab it is considerably higher. Reference to former receipt books of contractors should aid in arriving at a fair estimate.

The losses touched on above are direct.

Indirectly there may be further loss in the revision of revenue rates and customs dues.

For holders of alienated lands losses may be suffered under any or all of the heads above mentioned.

The pecuniary loss to cultivators will be directly the difference in profit between the poppy crop and whatever

other crop is likely to replace it. By profit is meant the margin over expenses of cultivation.

Indirectly the cultivator will lose his credit; in other words, he will have to supply capital to make good that loss.

Traders.—Their direct loss will be in the traffic in opium and in the stocks which will remain unsaleable.

Indirectly they too will suffer in credit and by the disorganisation of their business. Connected with these traders there are the Manotidars of Jhallawar and the Bohras of other States, the recognised agricultural bankers or supporters of the cultivators, whose business will suffer considerably.

5. When all the losses pointed out above and any others that may occur to the Durbars have been carefully estimated, the Durbars might state what compensation they consider they and their subjects would be entitled to. Their estimates should embrace any expenditure to be incurred in prohibitive measures, in revisions of land revenue or customs, tariff, and such like. The political officers should record their opinion as to the reasonableness of the

Political officers to check Durbar estimates.

Durbar's estimates.

6. Medical testimony is wanted to show the effects of the consumption of opium and its preparations, and it

has been suggested that Surgeon Colonel Hendley should be invited to appear as a witness. The chief medical officer, I believe, has been asked by the Agent to the Governor-General to appear himself, and he might be consulted and asked to invite the evidence of such medical officers, both European and native, as he considers best qualified to give an experienced opinion on the subject.

7. This note goes over old ground in part, and is lengthy, but the great importance of the matter to Rajputana warrants it.

8. Prohibition can only be called for if it is understood that the consumption of opium in Rajputana is excessive, most harmful to the population, physically and morally, and can be put down with ease and at little expense. If, on the other hand, excess be rare, the habit be not

only harmless, but beneficial and if it be ascertained that prohibition would be most difficult and would involve heavy expenditure, it is urgently necessary, in the interest of the Durbars, that undeniable proof of this being the case should be ready to be laid before the Commission when they visit Rajputana. Their visit will most probably take place next January, and it is high time for the Durbars to realise that without careful and prompt preparation they may not be in the best possible position to prove their case by laying full information and sending capable witnesses to give evidence on all points before the Commission.

9. There need not be fresh witnesses for each branch of the subject, as the same witnesses may be conversant with more than one, but intelligent and experienced non-official witnesses are wanted as well as officials.

10. I propose that all witnesses be examined at headquarters by the Durbars with the aid of political officers, and that the written replies of the Durbars to the questions asked of them be based on the information which these witnesses supply. These same witnesses should, of course, be sent to appear before the Commission, and should reach Ajmere a week in advance of it in order that I may become acquainted with all, and see if each one understands on what points he is required to give evidence.

11. A list of all witnesses selected should be sent as soon as possible, giving their names, caste, profession, or office, their standing, whether they know English, and the points on which they are to give evidence.*

(Signed) H. B. ABBOTT,
Lieut.-Colonel.

Abu,

Dated 12th November 1893.

QUESTIONS TO WITNESS.

1. What is the area in acres under poppy in Khalsa and alienated lands taking the average for the past five years?

Revenue officials.

2. How have you arrived at those figures, by survey records or appraisement ("Nazari" or "Andazi")?

Revenue officials.

3. What is the out-turn of opium, in British maunds and seers, of the above area?

Revenue officials.

4. How is your calculation made.

Revenue officials.

Note.—If figures now given do not agree with those furnished before, the difference should be explained.

5. If the cultivation of the poppy in above areas were prohibited what crops would most likely take its place, irrigated or unirrigated?

Revenue officials, lumberdars, patels, one or two large jagirdars or their managers.

6. What would be the diminution in the revenue demand, consequent on the substitution of the above crops for the poppy? Give figures to show on what your calculation is based.

Revenue officials and one or two jagirdars or managers.

7. Would the stopping of poppy cultivation necessitate a revision of revenue rates or at least of irrigated rates?

Revenue officials and one or two jagirdars or managers.

8. In that case what loss in revenue would be entailed, and what expenditure incurred in completing the revision? Give figures.
Revenue officials and one or two jagirdars or managers.

9. If the production and export of opium be prohibited what will be the loss in customs to the Durbar, to jagirdars, and other holders of villages? Give figures to explain your calculation.
Customs officials and one or two great jagirdars.

10. Would the above prohibition require a revision of the customs tariff, and what would be the likely result of such revision, *i.e.*, would it result in recovery in part or in further loss of revenue? In either case how much would be lost or recovered? Give details to explain your reply.
Custom officials.

11. If the consumption of opium and its preparations be prohibited, what would be the loss in excise.
Customs officials.

Where necessary give your reasons for calculating that the specified loss would be incurred in respect of opium out of a mixed contract for all drugs.

12. What is the difference in profit on the cultivation of the poppy and the other crops which will replace it? Give figures to explain your reply.
Revenue officials, patels, and lumberdars.

13. Would there be a loss in credit if poppy cultivation was stopped? If so, in what way could credit be revived?
Revenue officials, patels, and lumberdars.

14. Fully detail what would be your loss as an opium merchant if the production and export of opium were stopped.
Traders.

15. Could you to any extent compensate yourself by other business? If so, how and to what extent?
Traders.

16. What would be your loss if your cultivators were forbidden to grow the poppy? Give details.
Manotidars and bohras.

17. What uses do you make the poppy plant from first to last?
Patels, lumberdars.

18. What employment do you and you family get out of the cultivation of the poppy?
Field labourers.

19. In what form do the members of your caste consume opium?

Consumers. 20. Do men, women, and children alike take it?

Consumers. 21. What proportion of the caste takes it.

22. What proportion, if any, of the persons whom you have mentioned above as taking opium, take it to excess?
Consumers.

23. How often is it taken a day, and how much at a time?
Consumers.

24. What are the special occasions and purposes for which it is taken, and is it considered absolutely necessary to take it at these times?
Consumers.

25. What are its usual effects on those who take it in moderation?
Consumers.

26. What would be the result on the habits and customs and physical condition of your caste if opium could not be procured except as medicine?
Consumers.

GENERAL NOTE.

In all cases present figures should be compared and reconciled with former ones.

QUESTIONS TO WITNESSES.

1. What is the area in acres under poppy in Khalsa and alienated lands, taking the average for the past five years?
Revenue officials.

2. How have you arrived at those figures, by survey, records, or appraisement ("Nazari" or "Andazi")?

3. What is the out-turn of opium, in British maunds and seers, of the above area?

4. How is your calculation made?

5. If the cultivation of the poppy in above areas were prohibited what crops would most likely take its place, irrigated or unirrigated?
Revenue officials, lambardars, patels, one or two large jagirdars or their managers.

6. What would be the diminution in the revenue demand, consequent on the substitution of the above crops for the poppy? Give figures to show on what your calculation is based.
Revenue officials and one or two jagirdars or managers.

7. Would the stopping of poppy cultivation necessitate a revision of revenue rates or at least of irrigated rates?

8. In that case what loss in revenue would be entailed, and what expenditure incurred in completing the revision? Give figures.

9. If the production and export of opium be prohibited what will be the loss in customs to the Durbar, to jagirdars, and other holders of villages? Give figures to explain your calculation.
Customs officials and one or two great jagirdars.

10. Would the above prohibition require a revision of the customs tariff, and what would be the likely result of such revision, *i.e.*, would it result in recovery in part or in further loss of revenue? In either case how much would be lost or recovered? Give details to explain your reply.
Customs officials.

11. If the consumption of opium and its preparations be prohibited what would be the loss in excise?

(Where necessary, give your reasons for calculating that the specified loss would be incurred in respect of opium out of a mixed contract for all drugs.)

12. What is the difference in profit on the cultivation of the poppy and the other crops which will replace it? Give figures to explain your reply.
Revenue officials, patels, and lambardars.

13. Would there be a loss in credit if poppy cultivation was stopped? If so, in what way could credit be revised?

14. Fully detail what would be your loss as an opium merchant if the production and export of opium were stopped.
Traders.

15. Could you to any extent compensate yourself by other business? If so, how and to what extent?
Traders.

16. What would be your loss if your cultivators were forbidden to grow the poppy? Give details.
Manotidars and bohras.

17. What uses do you make of the poppy plant from first to last?
Patels and lambardars.

18. What employment do you and your family get out of the cultivation of the poppy?
Field labourers.

19. In what form do the members of your caste consume opium?
Consumers.

20. Do men, women, and children alike take it?

21. What proportion of the caste take it?

22. What proportion, if any, of the persons whom you have mentioned above as taking opium, take it to excess?

23. How often is it taken a day, and how much at a time?
Consumers.

24. What are the special occasions and purposes for which it is taken, and is it considered absolutely necessary to take it at these times?

25. What are its usual effects on those who take it in moderation?

26. What would be the result on the habits and customs and physical condition of your caste if opium could not be procured except as medicine?

AGENT to the GOVERNOR-GENERAL'S CAMP, AJMERE,
29th November 1893.

From the FIRST ASSISTANT AGENT to the GOVERNOR-GENERAL, Rajputana, to all POLITICAL OFFICERS in Rajputana.

In continuation of the correspondence ending with my demi-official letter of 28th September 1893, I am

APP. IV.
Rajputana.

requested by the Officiating Agent to the Governor-General to send you copies of a note drawn up by Colonel Abbott, resident, Western Rajputana States, who has been selected to represent the Rajputana Agency before the Royal Commission on Opium for the guidance of Durbars and political officers in collecting the evidence to be given at the Rajputana sittings of the Commission. These sittings will probably take place at Ajmere and Jeypore in the last 10 days of January next, but the plans of the Commission may subsequently undergo alteration. As at present arranged, the Commission will be at Jeypore for part of the 24th January, and at Ajmere from 25th to 29th idem. It is possible that during this time sub-committees may visit Oodeypore and Jodhpore.

Mr. E. M. Dane, C.S., the officer selected by the Government of India to advise local administrations in the matter of preparing for the inquiry to be held by the Opium Commission, has had an opportunity of seeing the previous correspondence on that subject in this office, and has pointed out that the great importance of the inquiry to Rajputana, and the equally great importance of the evidence to be given by native States before the Commission, has apparently not been fully appreciated. He remarks that the present inquiry differs widely from any that have been previously instituted. On its results depend the future of the opium industry in native States as it has to report not only whether the production and sale of opium in British India should be prohibited, but whether such prohibition should be extended to native territory, and on what terms, if any, the existing arrangements with native States in regard to the transit of opium could with justice be terminated. Further, the Commission has to assess the compensation to which, in the event of prohibition being adopted, native States would be fairly entitled. This being the case, it is needless to say that Rajputana is vitally interested in the inquiry, and it is obviously of the first importance, not only to Rajputana but to India as a whole that the true facts regarding the production and consumption of opium in the Rajputana States should be clearly and effectively placed before the Commission. It must be remembered that facts which are notorious to political officers in Rajputana may be totally unknown to some members of the Commission, and no effort should be spared to enlighten such members. The evidence to be given by selected political and medical officers will have to be supplemented by that of natives of rank and influence, whose statements on the consumption-question is bound to carry more weight than that of Europeans. Such witnesses should, as far as possible, represent all interests concerned, and should be selected from the official, cultivating, trading, and consuming classes, and it is hoped that some of the leading nobles in the Rajputana States may be induced to come forward in person.

In order that the question of selecting witnesses may receive the attention it deserves, it is absolutely neces-

sary that Durbars should be fully informed (where this has not been done already) of the real scope of the inquiry which the Commission has been appointed to make, and should be invited to nominate witnesses without delay. Special care is needed in the case of Durbars in opium-producing States, such as Meywar, Kotah, and Jhallawar, in order that the witnesses sent to represent these States before the Commission may be able to adequately show what are the true facts regarding area under cultivation, number and caste of cultivators, out-turn of poppy and opium, local consumption, export, course of trade, extent of mercantile interests involved, connexion of the State (if any) with the opium trade, and the revenue of all kinds connected with opium which is enjoyed by the States and their feudatory jagirdars. The great feudatories and petty chiefs in some of the States need particular consideration in connexion with the inquiry, and there should be no lack of evidence both official and non-official, to prove before the Commission the full extent of their rights and interests in opium. Another point of special importance is that the Commission will require estimates of compensation, which would be due in case of prohibition, to have been drawn up not by political officers but by the Durbars themselves, with the political officers' opinion as to their correctness. Durbars should be induced, therefore, to lose no time in going thoroughly into the subject, and in preparing the estimates required with full details to show how the amounts of compensation estimated are arrived at.

Colonel Prideaux hopes that the foregoing remarks and the suggestions and observations made by Colonel Abbott in his note enclosed will suffice to indicate the urgent need of energetic and early action in preparing for the Opium Commission and the lines on which such action should be taken. He will be glad to hear at an early date what witnesses the Durbars have selected; whether arrangements can be made for their examination locally as suggested by Colonel Abbott, and whether it will be practicable to have them ready in Ajmere about a week in advance of the Commission's arrival there. He will also be glad to receive as soon as possible a record of the statements made by these witnesses at the local examination and the Durbar's own estimate of compensation which would be due to it in the event of prohibition, with your opinion as to its correctness.

I am to request that copies of all correspondence on the above-mentioned subject may be sent direct to Colonel Abbott, as it is important that that officer should receive early intimation of your proceedings, and of the action which the Durbar proposes to take.

I have, &c.

S. F. BAYLEY,
First Assistant Agent to the
Governor-General.

APPENDIX V.

APP. V.
Karauli.

COMMUNICATIONS addressed to the COMMISSION by (a) the MAHARAJA of KARAUULI and (b) the MAHA RAWAL of BANSWARA, RAJPUTANA. (See Questions 20,395, 20,398, and Question 21,544.)

[Handed in by Lieut.-Colonel ABBOTT, Resident in the Western States of Rajputana.]

(a.) KARAUULI.

From BHANWAR PAL, Maharaja of Karauli, to the PRESIDENT, Royal Commission on Opium, Ajmere.

Karauli, the 14th January 1894.

I HAVE much pleasure to inform you that I forward herewith some papers in which you will find all matters connected with the manufacture and traffic in opium in my State. You will also find therein figures showing the losses that would be incurred by this State if the cultivation of poppy and manufacture of opium were prohibited. These losses mainly fall under three heads, Land Revenue, Customs, and Cultivators. The first two are the direct loss to the State, and the third to the cultivators in general. The loss under land revenue would be Rs. 11,200, and the loss under customs Rs. 4,800. Thus the total loss to the State would be Rs. 16,000.

The loss to the cultivators will range from Rs. 28,350 to Rs. 37,800, since the margin of profit left to the cultivators, according to their allegation, is from Rs. 15

to Rs. 20 per bigha of land. The resources of this State being very small, these losses could hardly be recouped from any other sources.

Further, I have the pleasure to inform you that my friend, Colonel Abbott, will furnish you with informations other than those that have been put down in the papers regarding this State, as he has kindly consented to represent the Rajputana States.

Deposition of SHEIKH AMANAT HUSAIN, Revenue Officer, Karauli.

1. Taking the average of last five years, beginning from 1888-89 to 1892-93, the area of cultivation under poppy in Khalsa villages is 558 acres and 11½ biswas, and the area of land under the jaghirdars is 622 acres and 22½ biswas. The total area under cultivation is 1,181 acres and 4 biswas. This area covers the whole of land under poppy cultivation in the State of Karauli. These figures are taken from the annual returns submitted during the last five years.

2. The Khalsa area is taken from the jamabandi book of each village, and the area of land under the jaghirdars is taken from the annual returns submitted by the jaghirdars in each year.

3. The quantity of opium produced in the area, according to English maunds and seers, taking the average of production for the last five years, is the following:—

	Mds.	seers	chks.
Khalsa villages - - -	109	27	9
Jaghirdars villages - - -	100	27	10½
Total production - - -	210	15	3½

This calculation is arrived at from the papers and annual returns which have been submitted during the last five years. There is no difference in calculation in the returns of the present year and those of the past years.

4. Poppy is cultivated on irrigated lands, and there are here two methods followed in its cultivation. First, during the kharif crop the lands, which come under the plough only once a year, are left fallow, and specially set apart for poppy cultivation. Poppy is subsequently cultivated on such lands. If poppy cultivation were discontinued barley and wheat might be cultivated on such lands. But, regarding the collection of rent, owing to the difference in the cultivation of crops, and owing to difference in rates prevailing in different villages for lands under poppy cultivation, the average diminution in income would be Rs. 1-8 per bigha. This diminution in rate would rule so far as barley and wheat are concerned. Second method is this: Cotton and millet are cultivated on such lands which have the strength of producing two crops annually. This is what is called the early crop. The rent of this crop is collected during the kharif season. When it is reaped poppy is then cultivated, of which separate rent is collected from the cultivators. If poppy cultivation is discontinued then such lands would lie absolutely barren during the latter crop, since after the reaping of cotton and millet the season for the cultivation of barley and wheat would be far advanced. A great diminution in revenue would thus take place. The extent of such lands is not recorded in revenue papers, hence no accurate figures as to the extent of loss that would entail upon the State could be put down. But the estimated loss would be as much as the fall in revenue of nearly 800 acres of land, which is equivalent to 1,280 bighas (an acre is 1·6 bighas), and since the scale of rent collected in land under poppy cultivation is different in different villages, therefore an average of Rs. 8 per bigha being taken as an average rent per bigha, the total amount of loss would be Rs. 10,240 in land under cultivation twice a year, and Rs. 960 in land under cultivation once a year. The extent of the latter kind of land is 400 acres, equivalent to 640 bighas. So the total amount of loss that would arise in the revenue of this State is estimated at Rs. 11,200.

5. The settlement work of this State is still going on. The settlement work of some tehsils has been finished, and records-of-rights, such as terij, khatauni, &c. have also been prepared. Hence, if poppy cultivation were discontinued, the papers under settlement work which have already been prepared would surely require revision.

6. The extent of loss that would be incurred would be the expense of revising and again preparing the papers, and this loss would amount to nearly Rs. 5,000. If the papers that have been already prepared be immediately revised, the amount stated above would be the extent of loss. But if the settlement work is allowed to go on, and the papers that have been prepared be revised and prepared again after the lapse of some time, the extent of loss would increase, and would be double the present estimated loss.

7. The loss to the Durbār owing to the fall in customs from opium would be Rs. 4,070-11 annas, and by the poppy seeds, Rs. 489-5 annas, and from poppy shells the estimated loss would be Rs. 240. The total loss, Rs. 4,800. These figures are taken from the income under customs for the year 1892-93. Furthermore, the discontinuance of poppy cultivation would put a stop to the manufacture of oil from the poppy seeds. This would indirectly produce loss to the oilmen. Oil would then sell dearer than now, and thus the loss would be felt by all. The extent of this loss is impossible to calculate. The income under poppy shells is put down

as an estimated income, since in the Customs Office no separate tariff is kept for this article. On the other hand, this article is included in grocers' articles of sale. The jaghirdars would suffer no loss owing to the fall in customs duties, since they do not enjoy the privilege of levying customs duties.

8. The discontinuance of the cultivation of poppy and the manufacture of opium will cause no revision in the customs tariff, for the duties now levied upon different commodities have reached their highest limit. There is no margin left for further increase in other articles of trade, nor can the loss arising from opium be compensated from any other source.

9. In this State, excepting the customs duties which are levied upon opium, this article is not given on contract. Everybody has the privilege of selling and purchasing the article. Nor anything is prepared from opium here, such as madak or chandu. So there is no contract for the preparation of such things. Therefore no loss would occur in the excise revenue.

10. In reply to this question patels and lambardars depose thus:—The difference in their income from the cultivation of opium and that of wheat, subtracting therefrom the expense incurred in cultivating them, will be from Rs. 15 to Rs. 20 per bigha. Calculating the loss in this way, the whole loss on the entire area mentioned above, taking the average of last five years, will range from Rs. 28,350 to Rs. 37,800. This will be the direct loss of the cultivators.

11. The extent of loss to the jaghirdars has been described in detail in reply to question 6. Bohras (money lenders) would suffer the loss to the extent of interest of money laid out, for if the cultivation of poppy were discontinued, as a matter of course, a great disturbance would arise in the matter of money transaction between the cultivators and the bohras.

Deposition of Patels, Lambardars, and Cultivators.

GHISOLA, son of MOHAN LAL JATH, resident of Makanpur, Age 60 years. Illiterate.

CHUNNI, son of DAJJA, Brahmin. Mehta of Makanpur. Age 50 years. Illiterate.

GANGARAM, son of NANGA MAINA of Palita. Age 50 years. Illiterate.

The substance of the deposition of the three deponents is materially the same.

1. Opium is always cultivated on irrigated land. If the cultivation of poppy were discontinued, barley, wheat, and zira (cummin seed) might be cultivated in its place.

2. If the price of opium remains fixed, then the difference arising from the incomes of opium and wheat is Rs. 15 per bigha, e.g., the average production of opium on a bigha of land in English weight is 8 seers, the price of which is Rs. 30, and poppy seed is produced to the value of Rs. 8. Total value of a bigha is Rs. 38, whereas the production of wheat on the same bigha is 6½ maunds, the value of which is Rs. 18 only. The expense incurred in cultivating a bigha of poppy is Rs. 15. Thus still leaving a margin of Rs. 23, whereas in the case of wheat the expense is Rs. 8, thus leaving a margin of Rs. 10, which is less by Rs. 15 to the income of opium. If the value of opium arises, this margin is increased to Rs. 20.

3. Great difference would arise between the bohras (money lenders) and the cultivators. The bohras lend as much money as the cultivators like to borrow, in anticipation of the poppy crop. Bohras would not advance so much money in other crops. For the cultivators take the money on the hypothecation of the production of opium which is a very safe investment for the bohras. This difference cannot be made up by any other production.

4. The poppy leaves are used as vegetable, and the juice of poppy is used by the opium-eaters and for other medicinal purposes. Its seeds are used in making oil and are also used as medicine. The flowers of such plants from which opium has not been extracted are used as medicines. Opium-eaters use them for purposes of intoxication. The stems of these plants are used as fuels.

5. The wages earned by field labourers on one bigha of poppy under cultivation from the beginning to the harvest time is Rs. 7 or 8.

APP. V.
Karauli.

Deposition of Traders in Opium.

BIKHAM CHAND SETH (Mahesri Bania), son of JAISI RAM.
Age 64 years.

BEHARI LAL, son of MADARI RAM, Agarwala Bania.
Age 50 years.

1. The principal trade we carry on is in opium. We always deal in this article. Even our whole business and position in society lie in this trade. Bikhram Chand says that his annual income from this trade is 10 or 12 thousand rupees, and Behari Lal derives an annual income of one thousand or eleven hundred rupees. If the trade in opium or the cultivation of poppy were at once prohibited we should be put to the loss of the above amount.

2. Our loss could not be compensated from other trades, nor can we deal in other commodities. For opium is such an article of trade that, however long it might be stored up, it cannot be spoilt. On the other hand, its value rises by its becoming old. For this reason, we purchase it in favourable times, and dispose it when the price of opium rises in the market, or else keep it in reserve for more favourable times. Banking business, such as hundis, &c., have been received owing to the money order system. We have never traded in food grains or cotton, nor can these commodities be kept in store for a long time like opium. Their keeping in store is risky, and liable to much loss. Hence a trader in food grains, whether he likes it or not, whether the market is favourable or not, is obliged to dispose of his stock in trade. Owing to this such traders are put to severe loss. But traders in opium enjoy on the other hand the advantages which we have deposed above.

Deposition of another Consumer.

SETH BIKHAM CHAND, son of JAISI RAM, Caste Bania of the Mahesri Class, Resident of Karauli. Age 64 years. Literate. Knows Hindi.

1. My castemen, i.e., mahajans who take opium, take it in the form of globules.

2. Men generally take it. Women too, take it, but their number is comparatively small, and children also take it. After an infant is born, when it is 20 days or a month old, opium is then given to it in small doses. This is continued till it is 2½ or 3 years old. This is given to it, for it promotes health and vigour. Infants are rendered safe from the attacks of cough and cold.

3. Nearly 20 or 25 per cent. of my castemen take opium.

4. Nearly 5 or 6 per cent. of my castemen take it in excess, and they take it to the extent of 2 or 4 mashes per day.

5. Generally people take twice a day, morning and evening, sometimes three times a day, and sometimes even four times a day. But I take it three times a day. Each time I take 3 ratties, i.e., 9 ratties per day.

6. There is no common fixed time for people to take opium. Each consumer has a separate fixed time of his own, and at such times, owing to his settled habit, he is under necessity to take opium.

7. The effect of opium on the health of the moderate consumers is this:—They preserve their health, sense, the business habits, in short everything intact. People generally take opium in order to get relief from the sufferings of many diseases. Moderate consumers have been cured of many diseases. Opium is specially valuable in cases of cough and cold.

8. If people of my castemen who take opium and I, who take it, do not get it excepting as a medicine, then our habit and character would be changed for the worse. We would go mad. We shall lose all power of distinguishing good from bad. Our health would be entirely shattered. We shall be bereft of the power of all work. The social custom that prevails among us of receiving our friends with opium would not only be interfered with, but would be entirely abolished.

Deposition of KALYAN PAL, son of PRATAP PAL, Jadon Rajput. A resident of Khaoda Bapotidar. Age 65 years. Literate. Knows Hindi. A consumer of opium.

1. The people of my community generally take opium in the form of globules or small pieces, and sometimes take it mixed in water which is called amal panee.

2. Men generally take opium. The number of women who consume opium is comparatively small. Children too take opium. On the birth of a child, opium is given to it in very small doses when it is nearly a month or 20 days old. This is continued till it is five years old. We regard opium as a good tonic, producing good digestive powers in infants. It promotes health and vigour of the child. Infants are given opium generally to protect them from cold and other diseases.

3. The proportion of my castemen who take opium is nearly 75 per cent.

4. The proportion of men taking in excess is nearly 25 per cent. Such men generally take 8 or 9 mashes or even a tola per diem.

5. People generally take opium twice a day, morning and evening, and sometimes even three times a day. But I take twice a day, i.e., morning and evening. The quantity I take is 2 mashes in the morning and 2 mashes in the evening.

6. There is no common fixed time for people to take opium. Each consumer has a separate fixed time of his own, and at such a time owing to his settled habit he is under necessity to take opium. Among the Rajputs, specially during the time of betrothal or marriage, the relatives and friends of the parties concerned must needs take opium. That is a prevailing custom among them.

7. The effect of opium on the constitution of the moderate consumer is this:—They preserve their sense and health intact. The consumers generally take it in order to get a relief from many diseases. They are actually cured of those diseases. Opium is specially valuable in cases of cough and cold.

8. If our castemen who are consumers of opium and we who take it do not get opium except for medicinal purposes then we shall lose our character. We would go mad and would lose our sense. We shall fall a victim to bowel complaints. Our life would become a burden to us, even it would be impossible for us to live.

The social custom that obtains among us to welcome a friend with opium in time of friendly meetings would not only be interfered with but would be entirely abolished.

N.B.—The depositions of three consumers of opium, namely, Kalyan Pal, Ballao Sing, son of Lochan Sing of Harnagar, and Thakur Ganpat Sing Chohan of Karauli, are materially the same, excepting the quantity of opium consumed by each. Kalyan Pal takes 4 mashes per day, Ballao Sing 2 mashes every day, and Ganpat Sing 3 mashes every day.

(b.) BANSWARA.

Translation of statement, No. 329, dated 11th January 1894, on the opium question, from the office of the Banswara Durbar, forwarded with kharita, dated Pos Sudi 6 Sambat 1950, from the Maha Rawal of Banswara to the President, Royal Opium Commission.

1. By stopping the cultivation, trade, and use of opium, except as medicine, the State, jaghirdars, mahajans, traders, cultivators, labourers, and the poor will suffer great loss, because all of them are benefited by the income derived from opium. This country being chiefly jungles and hills, the use of opium keeps off the evil effects of the bad atmosphere. It is also given to children to protect them from cold. It gives strength to men and women in old age. Cultivators are enabled through the warmth which it gives to the body to work in the rainy as well as cold weather. Besides it is the custom in this country to take opium on occasions of marriage and other festivals. Hence its prohibition will be impossible.

2. It appears from inquiry that the State would suffer an annual loss of Rs. 1,69,088-8 if the cultivation of opium were prohibited. Even if this amount were paid to the State by Government as compensation, the people at large would not willingly accept it, for as the price of opium rises the profit amounts to 10 times more than it is at present.

3. An acre of land yields about 50 lbs. of opium, the price of which comes to 150 rupees Imperial. The price, moreover, depends upon the bazaar rates.

4. A man can eat opium from 6 masha to 1 tola (1 tola = 180 grains and 1 masha = 15 grains Troy weight) in a day. There is no one in this country who can take more than this on the average. If taken in moderation, it does no harm. But if stopped, it would ruin the health of habitual consumers.

5. Every part of the opium plant is made use of, i.e., when the plant is young, it is used as vegetable,

the poppy-heads are fried and eaten, and the stems of the plant are used as manure.

6. Nine hundred and fifty acres are cultivated with opium in this State. Only land cultivated under the Tehsil and Rāj Thamas was shown in former returns amounting to 816 bighas. 950 acres now shown include all land cultivated by jaghirdars, by holders of land in charity, and by chaukers, &c.

APP. V.
Banswara.

DETAIL OF ANNUAL LOSS.

	Rs.	a.	p.
Loss to the State, as shown below	9,510	0	0
Rent of 408 acres at Rs. 20 per acre, Rs. 8,160; if wheat were to be substituted the income derived will be Rs. 1,224 at Rs. 3 per acre; deducting this the net loss will come to	6,930	0	0
Custom duties on the export and import of opium and opium seeds	2,574	0	0
Total loss to the State	9,510	0	0
Loss to State cultivators, as shown below	53,448	0	0
One acre yields 25 seers of opium worth Rs. 150, therefore the price of opium for 408 acres at Rs. 150 per acre will be Rs. 61,200; if wheat substituted one acre will yield 12 maunds at Rs. 15 per 6 maunds, therefore the price for 408 acres will be Rs. 12,240; deducting this the net loss will be	48,960	0	0
408 acres will yield 816 maunds of opium seeds at 2 maunds per acre, the price therefore for 816 maunds at 4 Rs. per maund would be	3,264	0	0
The income from opium as a vegetable for 408 acres at Rs. 2 per acre would be	816	0	0
The income from the dry leaves for 408 acres at Re. 1 per acre comes to	408	0	0
Total loss to the State cultivators	53,448	0	0
Loss to jaghirdars, as shown below	10,214	0	0
Rent for 542 acres at Rs. 20 per acre comes to Rs. 10,840; if wheat substituted the income will be Rs. 1,626 at Rs. 3 per acre; deducting this the net loss would therefore be	9,214	0	0
Income from Khoont, Perkota, Chowkidari, &c. on opium and opium seeds	1,000	0	0
Total loss to jaghirdars	10,214	0	0
Loss to cultivators of jaghirdars, as shown below	71,002	0	0
Income from opium for 542 acres at Rs. 150 per acre comes to Rs. 81,300 an acre, yielding 25 seers. If wheat substituted the income will be at the rate of Rs. 30 per acre 16,260 deducting the above the net loss will come to	65,040	0	0
Income from opium seeds for 542 acres at 2 maunds per acre at Rs. 4 per maund comes to	4,336	0	0
Income from opium as a vegetable at Rs. 2 per acre	1,084	0	0
Income from the dry leaves at Re. 1 per acre	542	0	0
Total loss to the cultivators of jaghirdars	71,002	0	0
Loss to traders, as shown below	18,382	8	0
950 acres are under opium cultivation in the State. The out-turn, therefore, at 25 seers per acre, comes to 23,750 seers, the traders receive 2 chittacks per seer from cultivators for "koorsoolowari," i.e. (opium that sticks to the hands of the traders when weighing) the total quantity thus received by the traders comes to 29,683½ seers at 2 chittacks per seer, and the price at Rs. 6 per seer comes to	17,812	8	0
Cultivators have to spend an average of Rs. 5 per acre for labourers, seeds, bullocks, &c. The sahookars lend money to cultivators for 950 acres at Rs. 5 per acre which comes to Rs. 4,750 at one rupee per cent. as interest. The interest therefore comes to	570	0	0
Total loss to traders	18,382	8	0
The above is the apparent loss to traders, but besides this traders purchase opium in season and send it on to up-country. They would therefore lose also the profit on the sale of prepared opium.	6,532	0	0
Loss to labourers, as shown below	4,750	0	0
10 labourers are employed in ploughing, weeding, watering, sowing seeds, &c. per acre for nearly two months at Rs. 5 per head, the total labour, therefore, per acre comes to Rs. 50, and so for 950 acres the labour will come to	4,750	0	0
Besides the above, each labourer gets half a chittack of opium and hence for 950 acres (for 10 labourers getting half a chittack each) at 5 chittack per acre. The total quantity of opium comes to 297 seers, and at the rate of Rs. 6 per seer the total price would be	1,782	0	0
Total loss to labourers	6,532	0	0
Besides this the labourers would suffer additional loss in vegetable, poppy-heads, &c.			
Grand total annual loss	1,69,088	8	0

A. F. PINHEY, Captain,
Assistant Political Agent, Banswara and Pertabgarh.

APPENDIX VI.

STATISTICS regarding OPIUM in the NATIVE STATES of RAJPUTANA.

[Handed in by Lieut.-Colonel ABBOTT, Resident, Western Rajputana States. See Questions 20,393 and 20,397.]

MEYWAR STATISTICS.

THE total area under poppy cultivation, including alienated lands, is 50,000 acres, which yields 16,250 maunds of opium juice.

Of the above amount 9,475 maunds is exported to Bombay for foreign trade, while 40 maunds is taken to Marwar, making a total export of 9,515 maunds, which leaves 6,735 maunds in the State, 300 maunds of this is put down to local consumption, and there remains 3,735 maunds to cover wastage in manufacture and add to the stocks.

With the exception of its roots, every part of the poppy plant is brought into use by cultivators and others; the young leaves of the early weeding are eaten as vegetables; the older leaves are dried and sold for use in the manufacture of opium; the dried stalks are considered good fodder for cattle, partly supplying the place of salt. The raw heads are sold both for consumption and manure; the dried heads from which opium has been extracted are also used for manure, and from the seed oil is extracted which is used for lighting in the manufacture of opium and in preparing oil-cakes, which is nourishing food for cattle.

The value of the poppy crop to cultivators is estimated at Rs. 22,50,000.

Its value to the money-lending classes which support the cultivators, is calculated at Rs. 1,65,000.

The value of poppy cultivation to field labourers and village servants has not been estimated.

The value of opium to the State and holders of alienated lands together is put down at Rs. 6,98,735.

The value of opium to traders is reckoned at Rs. 1,10,000.

Opium is consumed in the following ways: mostly dry, a little with spices, a fair amount is taken mixed with water; smoking is not indulged in.

It is said that 30 per cent. of the Rajputs, 20 per cent. of the cultivating classes, and 10 per cent. of the remaining population, or some 12 per cent. of the whole are consumers. Children up to five years of age are believed to be given it generally, and are not included in the above calculation.

About 3 per cent. of the women are considered consumers.

Of the above consumers some 2 per cent. are looked upon as taking to excess.

As a rule it is taken twice a day, in doses ranging from 1 to 20 grains, or 2 to 20 grains per day; 15 grains is considered a moderate daily allowance for men, five for women, and one grain is usually given to children.

It is taken as a stimulant for the purpose of keeping the constitution robust.

It is considered necessary to consume opium on the following occasions, viz., births, betrothals, marriages, deaths, the Dewali and Holi Festivals, at greetings and reconciliations.

The habit is looked upon as very beneficial, and if it were stopped, the result, it is believed, would be loss of health and strength and consequent inability to withstand exposure, particularly in the case of the cultivating classes; while consumers would look upon prohibition as a cruel and tyrannical act, which would produce general discontent.

The minister considers prohibition possible but very difficult, while the political officer is of opinion that the State could not, unaided, carry out prohibition.

The compensation which it is considered would have to be paid is as follows:—

	Rs.
To the State and holders of alienated lands -	9,22,495
(Including the cost of revision of rates and prohibitive measures.)	
To cultivators -	16,48,002
(Loss of credit not estimated.)	
To the money-lending classes -	1,65,000
(Loss by bad debts and in credit not estimated.)	
To field labourers and village servants (not estimated.)	
To traders -	51,10,000
(Loss by disorganisation of business and in credit not estimated.)	
Total -	78,45,497

Of the above amount Rs. 28,05,497 is an annual loss.

The Resident, Lieut.-Colonel Wyllie, C.I.E., is of opinion that the figures for compensation as detailed above approximately correct and nearer the mark.

DUNGARPORE STATISTICS.

THE total area under poppy cultivation is returned as 2,285 acres, and the yield at 600 maunds of opium juice.

The area of alienated lands is 571 acres.

Of the 600 maunds, 289 maunds are exported to Malwa and Ahmedabad for foreign trade, while 200 maunds are taken to other parts of Rajputana, making a total export of 489 maunds, which leaves a balance of 111 maunds for local consumption, and to cover wastage in manufacture and add to the stocks.

The poppy plant is brought into use much in the same way as in other parts of Rajputana.

The value of the crop to cultivation is estimated as Rs. 40,857, that is to say, the net profit on 2,285 acres at Rs. 17-14 per acre.

Its value to the money-lending classes is calculated at Rs. 9,428 at a profit of Rs. 4-2 per acre.

The value of poppy cultivation to field labourers and village servants is estimated at Rs. 30,392.

The value of opium to the State is made up as follows:—

	Rs.
Land revenue -	20,568
Customs -	19,392
Other taxes -	2,715
Total -	42,675
Its value to the holders of alienated lands is -	6,860
Customs -	232
Total -	7,092

The value of opium to traders is put down at Rs. 78,240.

Opium is consumed mostly dry, a little with spices, a fair amount is taken mixed with water. Smoking is not indulged in except by poor classes. 15 per cent. of the whole population of the State are said to be addicted to the habit. The proportion of those who exceed is not given.

It is taken on the occasions of births, betrothals, marriages, deaths, the Dewali, Holi, Akhatij, and Dasheran festivals, and at greetings and reconciliations.

The Durbar is of opinion that an attempt to prohibit would produce general discontent.

Compensation is estimated as follows :—

To the State.

	Rs.
On account of land revenue - - -	14,729
„ customs - - -	19,392
„ special taxes - - -	2,715
Cost of prohibitive measures - - -	12,000
Total - - -	48,836

To the holders of alienated lands :—

Income from land - - -	4,907
Customs - - -	232
Total - - -	5,139

Compensation to cultivators :—

In Khalsa and alienated lands - - -	27,833
-------------------------------------	--------

Compensation for loss of credit to cultivators is not estimated. The compensation for money-lenders is estimated at Rs. 9,428.

Loss by bad debts and in credit not estimated.

The compensation to field labourers and workmen employed in the opium manufacture is made up as follows :—

	Rs.
Loss of wages to labourers - - -	24,797
To persons employed in the manufacture of opium - - -	1,607
Total - - -	26,404

The traders' compensation is estimated as under :—

	Rs.
Loss in annual profit - - -	24,180
Value of unsaleable stock - - -	3,80,165
Total - - -	4,04,345

Grand total - - -

Rs. 5,21,995

Out of the above sum, after deducting Rs. 3,80,165 on account of value of unsaleable stocks, there remains an annual loss of Rs. 1,41,820.

PARTABGARH STATISTICS.

The total area under poppy cultivation is returned as 8,383 acres, and the yield at 2,384 maunds of opium juice.

The area of alienated lands is not given separately.

No information has been supplied as to the amount exported or kept for local consumption.

The poppy is used much in the same way as in Meywar.

The value of the crop to cultivation is estimated as 1,67,660, that is to say, the net profit on 8,383 acres at 20 per acre.

Its value to the money-lending classes is calculated with that of the traders.

The value of poppy cultivation to field labourers and village servants is estimated as follows :—

	Rs.
Wages of field labourers working in Khalsa lands - - -	1,25,836
Value of produce given to village servants working in Khalsa lands - - -	52,393
Total - - -	1,78,229

(The wages of labourers in alienated lands is not included.)

The value of opium to the State is made up as follows :—

	Rs.
Land Revenue - - -	1,69,756
Customs - - -	30,000
Total - - -	1,99,756

	Rs.
Its value to the holders of alienated lands is - - -	67,555
Its value to the holders of customs - - -	1,500
Total - - -	69,055

The value of opium to traders and money-lenders is put down at Rs. 3,20,850 in a complicated account

I 82588.

The consumption of opium takes the same form as in Meywar, but the lower castes are said to smoke it as well.

The extent to which it is consumed is not clearly stated, but 50 per cent. of Rajputs and Charans are said to be addicted to the habit. The proportion of those who exceed is not given, but a witness says an ordinary daily allowance is eight grains. It is taken for the same purposes as in Meywar, and on similar occasions; the habit is regarded as most beneficial when taken in moderation, and its prohibition would have a very bad effect on consumers. The Durbar opinion is that an attempt to prohibit would cause endless trouble, annoyance, and expense. The political officer has not stated his opinion.

Compensation is estimated as follows :—

To the State.

	Rs.
On account of land revenue - - -	1,48,700
„ customs - - -	30,000
Expense of revising land revenue rates - - -	52,637

Cost of prohibitive measures (not estimated) - - -

Rs. 2,31,337

To the holders of alienated lands :—

Income from land - - -	88,118
Income from customs - - -	1,500
Expense of revising land revenue rates - - -	31,192

Total - - -

Rs. 1,20,810

Compensation to cultivators :—

In Khalsa lands - - -	1,32,908
In alienated lands - - -	78,760

Total - - -

Rs. 2,11,668

Within the above are included the wages of cultivators in Khalsa lands, the price of cattle no longer required, and the value of the plant as a vegetable.

Compensation for loss of credit to cultivators is not estimated.

The compensation for money-lenders is included in that for traders.

The compensation to field labourers and village servants is made up as below :—

	Rs.
Loss of wages to labourers in Kalsa lands - - -	79,449
Loss of wages in alienated lands - - -	47,080
Value of perquisites received by village servants from the poppy crops - - -	26,197
Total - - -	1,52,726

The traders' compensation, in which is included that of money-lenders, is :—

	Rs.
(1.) Loss in annual profit - - -	3,20,854
(2.) Value of unsaleable stocks - - -	6,00,000
Total - - -	9,20,854
Grand total - - -	16,37,395

Out of the above sum, after deducting 83,829 for revision of rates and 6,00,000 for stocks, there remains an annual loss of Rs. 9,53,566.

The Political Officer, Captain Pinhey, Assistant Resident, Meywar, is of opinion that the loss as estimated for wages of labourers is rather complicated, and does not seem to be clearly expressed.

TONK STATISTICS.

The total area under poppy cultivation, including alienated lands, is 14,010 acres, which yields 2,548 maunds of opium juice. The amount exported is 2,542 maunds, all of which, except a small quantity which goes to Marwar and Sirohi, is sent to Bombay. This leaves but six maunds for local consumption, which is estimated at 174 maunds. It is explained that the difference is made up by imports.

The poppy is used much in the same way as in Meywar. The value of the crop to cultivators has not been estimated.

APP. VI.
Rajputana.

Its value to the money-lending classes which support the cultivators is calculated at Rs. 39,000. The value of poppy cultivation to field labourers and village servants has not been estimated.

The value of opium to the State and holders of alienated lands together is put down at Rs. 3,78,916.

The value of opium to traders is reckoned at Rs. 94,600.

Opium is generally consumed in eating dry, smoking as chandu, and madak, and in drinking as golwa. It is also given to animals as medicine and applied as ointment. Poppy-heads steeped in water are used by poor people as narcotic.

About 16 per cent. of the population generally in the Tonk district is said to be addicted to the habit. About 40 per cent. of the Rajputs in the State and some 8 per cent. of the whole are consumers. The proportion of those who exceed is not given. It is taken for the same purposes as in Meywar, and on similar occasions, and is regarded as most conducive to health. The Durbar opinion is that the prohibition will entail serious loss to State and all classes, and great hardship to consumers. The Durbar further considers that the prohibition of cultivation ought not to be thought of. The British Government has always allowed free cultivation and trade in opium.

The Political Officer is of opinion that the prohibition looked upon as a direct intervention in internal administration, and would be viewed with distrust and as a breach of treaty stipulations.

The compensation which it is considered would have to be paid is as follows :—

To the State and holders of alienated lands—	Rs.	Rs.
Land revenue	1,32,900	
Customs	59,919	
Revision of rates	19,700	
		212,156
Cost of prohibitive measures to (not estimated).		
To Cultivators—		
(Loss of credit not estimated)	3,46,958	3,46,958
To the money-lending classes	1,04,030	1,04,030
(Loss by bad debts and in credit not estimated.)		
Loss of capital of bohras	3,000,000	3,000,000
To field labourers and village servants (not estimated).		
To traders	94,600	94,600
(Loss by disorganisation of business and in credit not estimated.)		
Grand total		3,758,104

Of the amount Rs. 7,38,404 is an annual loss.

The Political Officer, Lieutenant-Colonel Thornton, Political Agent, Haraoti and Tonk, is of opinion that the estimate of compensation is made with great care and is reasonable, and is as accurate as can at present be ascertained. The claims for losses to cultivators and traders are, however, stated to be exaggerated.

JHALLAWAR STATISTICS.

The total area under poppy cultivation, inclusive of alienated lands, is 28,625 acres, the yield from which amounts to 6,818 maunds of opium juice.

The exports all go to Bombay, and amount to 5,350 maunds. It is calculated that 1,224 maunds are consumed in the State, leaving 244 maunds for wastage and stocks.

The poppy is used in many ways.

The value of the poppy crop to cultivators is estimated at Rs. 3,87,252 (after paying the revenue payable to the State). Its value to the money-lending classes which support the cultivators is calculated at Rs. 1,46,553 on 4,441 maunds at the profit of Rs. 33 per maund. The value of poppy cultivation to field labourers and village servants has been estimated at Rs. 6,97,511.

The value of opium to the State and holders of alienated lands together is put down at Rs. 5,11,679. The value of opium to traders is reckoned at Rs. 2,59,200.

The consumption of opium takes the same form as in Meywar. The dose of opium dry varies from one grain to nine grains at a time. 80 per cent. of the population is said to be consumers to the extent of four grains per head per diem.

It is taken for the same purposes as in Meywar, and on many religious festivals and joyous occasions. The habit is regarded as doing no harm to the intellect or general health. The Durbar is of opinion that it is impossible to remain healthy in this part of the country without taking opium, and that if prohibition is carried out it would cause general discontent.

The Political Officer, G. R. Irwin Esq., considers that it would be difficult to over-estimate the injury to Jhallawar which would cause from the dislocation of trade, the agricultural destitution, and last but not least, the certainly enormous increase in the death-roll among an opium-consuming population, which would inevitably follow upon the heels of opium prohibition.

Compensation is estimated as follows :—

1. To the State and holders of alienated lands, including, the cost of revision of land revenue rates	Rs.	2,94,214
Cost of prohibitive measures not estimated.		
2. To Cultivators	Rs.	4,28,306
(Loss of credit not estimated.)		
3. To the money-lending classes	Rs.	1,46,553
(Loss by bad debts and in credit not estimated.)		
4. To field labourers and village servants	Rs.	6,39,911
5. Workmen employed in manufacture of opium	Rs.	57,600
		6,97,511
6. To traders	Rs.	2,59,200
(Loss by disorganisation of business and in credit not estimated.)		
Value of unserviceable stocks	Rs.	22,62,000
Extra expense of living on account of great rise in price of opium	Rs.	4,89,873
Grand total	Rs.	45,77,657

Of the above amount after deducting the following sums :—

(1.) Revision of rates	Rs.	20,000
(2.) Value of unsaleable stocks	Rs.	22,62,000
		22,82,000
Net annual loss	Rs.	22,95,657

KOTAH STATISTICS.

The area of all poppy lands in Kotah is 22,765 acres, which gives a yield of 6,260 maunds of opium juice.

The total export is put down at 3,493 maunds. As Kotah supplies opium to the States of Bikanir, Marwar, Jesalmir, and Sirohi, I have taken the exports of those, viz., 1,893 maunds as exported from Kotah, this leaves 1,600 maunds for foreign export.

No figures have been received to show what becomes of the 2,767 maunds left over after export. The poppy is used much in the same way as in Meywar. The value of the crop to cultivators is estimated at 12,50,000. Its value to field labourers and village servants is estimated at Rs. 3,75,000. The value of opium to the State and holders of alienated lands together is put down at Rs. 3,68,064. The value of opium to traders is reckoned at Rs. 1,79,600.

The consumption of opium takes the same form as in Meywar. It is said that 80 per cent. of the Rajputs, 70 per cent. of the Minas, 70 per cent. of the Kayestha, and 70 or 80 per cent. of the remaining population are consumers. It is taken for the same purposes in Meywar and on similar occasions. The habit is regarded as most beneficial when taken in moderation, and its prohibition would have a very bad effect on consumers.

The Durbar is of opinion that prohibition is impossible, and that nearly 75 per cent. of male population consumers will die or get infirm if prohibition is carried out, and the use of other intoxicants will increase.

Compensation is estimated as follows:—

To the State and alienated Landholders.

	Rs.	Rs.
On account of land revenue -	1,75,000	
Customs -	1,18,064	
The excise and special taxes -	18,000	
		3,11,064
Expense of revising land revenue and customs rates -	1,87,400	1,87,400
Cost of prohibitive measures (not estimated) -		Total 4,98,464
To cultivators -		12,50,000
(Loss of credit not estimated.)		
To the money-lending classes (no information given under this head).		
Loss by bad debts and in credit (not estimated).		
To field labourers, village servants, and others -	4,12,062	
To traders -	1,89,600	
(Loss by disorganisation of business and loss in credit not estimated.)		
Add—		
Value of unsaleable stocks -	22,50,000	
Grand total -	46,00,126	

. Out of the above sum after deducting Rs. 1,87,400 for revision of rates and Rs. 22,50,000 for stocks, there remains an annual loss of Rs. 21,62,726.

. The Political Officer, Captain Herbert, is of opinion that the immediate and non-recurring loss to States' subjects is perhaps an overgloomy estimate.

BUNDI STATISTICS.

The information from Bundi does not show the Khalsa (fiscal) and alienated areas separately, but the total area in which the poppy is grown is 1,87½ acres, the yield from which amounts to 37½ maunds of opium juice. The export for the foreign trade is 167 maunds, the balance it is presumed is for local consumption.

The poppy is used much in the same way as in Meywar. The value of the crop to cultivators is estimated as Rs. 95,421, that is to say, the net profit on 1,87½ acres is Rs. 51 per acre.

Its value to the money-lending classes is calculated at Rs. 20,926; their yearly profits. The value of poppy cultivation to field labourers is estimated as Rs. 36,847.

The value of opium to the State is made up as follows:—

	Rs.
Land Revenue -	44,224
Customs -	36,404
Total -	80,628

Its value to the holders of alienated lands is not shown separately. The value of opium to traders is put down at Rs. 1,00,000. The amount of trade in opium in the State is estimated at 2,000 maunds, and the traders' profit is calculated at Rs. 50 per maund.

The consumption of opium takes the same form as in Meywar. The extent to which it is consumed is not stated, but 60 per cent. of the Mahajans are said to be addicted to the habit; the proportion of those who exceed is said to be about two in a thousand.

It is taken for the same purposes as in Meywar and on similar occasions. Its prohibition would have a very bad effect on consumers.

The Durbar opinion is that an attempt to prohibit would cause serious loss both to the State and the subjects, and would imperil the present peaceful condition of the country.

Compensation is estimated as follows:—

To the State.

	Rs.	Rs.
On account of land revenue -	34,396	
Customs -	36,404	
Expense of revising land revenue rates -	1,00,000	
Cost of prohibitive measures -	50,000	
		2,20,800
To the holders of alienated lands (not estimated).		
Compensation to cultivators in Khalsa lands -	1,04,176	1,04,176
Do. In alienated lands (not estimated).		
Loss of credit to cultivators (not estimated).		
Compensation to money-lenders (Loss by bad debts and loss of credit not estimated.)	20,926	20,926
Compensation to field labourers and village servants (not estimated).		
The traders' compensation is -	75,000	75,000
The value of unsaleable stocks, loss of disorganisation of business, or loss of credit are not estimated.		
Grand total -		4,20,902

Out of the above sum, after deducting Rs. 1,00,000 for revision of rates, there remains an annual loss Rs. 3,20,902.

The Political Officer, Lieutenant-Colonel Thornton, Political Agent, Harauti and Tonk, considers the Durbar's estimate of the loss direct and indirect, both to itself and its subjects, as accurate as it is possible to make them under existing circumstances.

SHAHPURA STATISTICS.

The total area under poppy cultivation is returned at 636 acres, but only 570 acres are used for producing opium. The yield of poppy juice is 129 maunds, the whole of which is exported to Bombay, local consumption being provided for by imports, for foreign trade.

The poppy is used much in the same way as in Marwar. The value of the crop to cultivators is estimated as Rs. 12,116, that is to say:—

	Rs.
(1.) 570 acres yielding opium at a net profit of Rs. 19-3-4 per acre -	10,948
(2.) 66 acres yielding poppy-heads at Rs. 17-11-4 per acre -	1,168
Total -	12,116

Its value to the money-lending classes which support the cultivators is calculated at Rs. 9,250. It is estimated that a capital of Rs. 50,000 is advanced by the bohras to cultivators. The interest drawn by them generally varies from Rs. 12 to 25 per cent. per annum. Taking an average of the two, interest at 18½ per cent. on 50,000 amounts to Rs. 9,250.

The value of poppy cultivation to field labourers is reckoned at Rs. 26,076, being Rs. 41 per acre.

The value of opium to the chiefship and the holders of alienated lands within it is made up as follows:—

	Rs.
(1.) Land revenue on 636 acres now under poppy cultivation at an assessment of Rs. 10-6-8 per acre -	6,625
(2.) Patwari cess at annas 6-0 per acre -	238
(3.) Customs revenue -	4,713
Total -	11,576

The value of opium to the traders is reckoned at Rs. 13,500. Their capital invested in this trade is said to be about Rs. 75,000 which yields interest amounting to Rs. 9,000 at 12 per cent. per annum, and there are other profits—amounting to Rs. 4,500.

The consumption of opium takes the same form as in Meywar. The extent to which it is consumed is not stated, but 65 per cent. of Rajputs and 30 per cent. of

APP. VI.
Rajputana.

Brahmins, are said to be addicted to the habit. The proportion of those who exceed is given at 5 per cent. An ordinary daily allowance is said to be 12 grains. It is taken for the same purposes as in Meywar and on similar occasions. The habit is regarded as most beneficial when taken in moderation, and its prohibition it is considered would have a very bad effect on consumers. The Raja-Dhiraj is of opinion that an attempt to prohibit would cause general discontent in every class of the people, and that it would be impossible to enforce any such prohibition or restriction by any reasonable means within the power of the chiefship.

The Political Officer considers that any direct intervention by the Supreme Government would be viewed with apprehension and distrust, both by the chief and his subject.

The compensation which it is considered would have to be paid is as follows:—

(a.) *To the Chiefship and the Holders of Alienated Lands.*

ON ACCOUNT OF LAND REVENUE.

	Rs.	Rs.
(1.) Diminution in land revenue when poppy is re-placed by wheat and barley -	3,584	
(2.) Loss of revenue owing to decrease in cultivated area for want of capital and credit -	12,500	
(3.) Loss on account of frequent damages to wheat and barley crops at Rs. 2 per acre -	636	
(4.) Loss of revenue owing to retardation of cultivation of waste lands -	4,344	
(5.) Loss of revenue on account of falling of price of food grain on which revenue is taken in kind -	12,000	
(6.) Loss of interest on Rs. 16,000 yearly invested for improvements of land revenue -	1,920	
Total -		34,984
Customs -	Rs. 4,709	Rs.
Loss on account of remission on other articles -	5,000	
Cost of revision of customs tariff -	1,000	
		10,709
Expense of revising land revenue rates (not estimated).		
Cost of prohibitive measures -	3,240	
Total -		48,933

(b.) *To the Cultivators and Field Labourers.*

	Rs.	Rs.	Rs.
On account of loss of profit from poppy cultivation.			
(1.) Diminution of the value of produce when poppy is substituted by wheat and barley -	11,292		
(2.) Loss on account of falling of value of food grains -	24,000		
(3.) Difference in personal earnings between poppy and the substitutes -	22,418	57,710	
Loss of credit -		33,000	
Total -			90,710

(Note.—Within the above are included the wages of cultivators.)

(c.) *To the Field Labourers and Village Servants.*

(Not shown separately, but included in the loss of cultivators.)

(d.) *Money-lending Classes.*

	Rs.	Rs.
On account of loss of yearly business -	9,250	
Loss by bad debts -	25,000	
Loss of credit -	5,000	
Total -		39,250

(e.) *To Traders.*

	Rs.	Rs.
On account of loss of trade -	13,500	
Value of unsaleable stocks -	60,000	
Loss by disorganisation of business -	20,000	
Total -		93,500
Loss of credit of traders not estimated.		
Total compensation -		2,72,393

Out of the above sum, after deducting Rs. 1,000 for revision of customs tariff, Rs. 25,000 for loss by bad debts, Rs. 60,000 value of unsaleable stocks, and Rs. 20,000 for traders, and loss by disorganisation of business, there remains an annual loss of Rs. 1,66,393.

The claim for compensation under the various heads put in by the Chiefship has been examined by the Political Officer, Lieutenant-Colonel Thornton, Political Agent, Harauti and Tonk, and he considers that so far as it refers to direct losses is in accordance with the best information at present available.

KISHIENGARH STATISTICS.

The area of poppy cultivation is:—

	Acres.
Khalsa (fiscal) -	103
In alienated lands -	70
Total -	173

The yield of the total area is 195 maunds of opium juice; five maunds are exported, and 190 maunds are kept for local consumption.

The poppy is used much in the same way as in Meywar.

The value of the crop to cultivators is estimated as Rs. 36,005, that is to say, the net profit on 173 acres at Rs. 208-2.

Its value to the money-lending classes is not calculated. The value of poppy cultivation to field labourers alone is estimated at Rs. 19-8 per acre, or a total of Rs. 3,373.

The value of opium to the State is made up as follows:—

	Rs.
Land revenue at the rent rate of Rs. 16-8 per acre for 103 acres -	1,699
Customs duties -	14,206
	15,905

Its value to the holders of the alienated lands is:—

	Rs.
Land revenue at the rent rate of Rs. 16-8 per acre for 70 acres -	1,155

The value of traders is put down at Rs. 1,31,200.

The consumption of opium takes the same form as in Meywar. The proportion of consumers to total population is estimated at 20 per cent. The proportion of those who exceed is said to be rare, amounting to 6 per cent. of the consumers, but are said by a witness to exceed 16 per cent. among Rajputs. It is taken for the same purposes as in Meywar, and on similar occasions. It is also made use of at the harvest time. It is given to animals when making forced marches. The habit is regarded as most beneficial when taken in moderation. The Durbar opinion is that an attempt to prohibit would entail great hardship on infants and consumers, and lead to the use of liquor, or poisons like arsenic. The Durbar considers prohibition possible, but very difficult to carry out, and would give rise to great discontent.

The compensation which it is considered would have to be paid is as follows:—

To the State.

	Rs.	Rs.
On account of land revenue -	671	
„ customs -	8,626	
„ excise -	1,800	
„ other taxes -	3,780	
		14,877
Expense of revising land revenue and customs rates -	1,000	
Cost of prohibitive measures -	3,600	
		4,600
Total -		19,477

	Rs.	Rs.
To the holders of alienated lands—		
Income from land - - -	455	455
Compensation to cultivators in Khalsa and in alienated lands -	35,208	35,208
Loss of credit to cultivators (not estimated).		
The compensation to money- lenders is included in that for traders.		
Loss by bad debts is not estimated.		

The compensation to field labourers and others is made up as follows:—

	Rs.	Rs.
Loss of wages to field labourers in Khalsa and alienated lands -	3,163	
Loss to oil pressers - - -	6,000	
		9,163

The traders' compensation, in which is included that of money-lenders, is loss in annual profit.

	Rs.	Rs.
(1.) To internal traders - - -	31,200	
(2.) To export traders - - -	1,00,000	
Value of unsaleable stocks - - -	80,000	
		2,11,200

Add:		
For consumers—extra expenses of living on account of great rise in price of opium - - -	75,600	75,600

Grand total - - - 3,51,103

Out of the above sum, after deducting the following items:—

	Rs.	Rs.
(1.) Cost of revision on rates - - -	1,000	
(2.) Value of unsaleable stocks - - -	80,000	

There remains an annual loss of Rs. 2,70,103.

JEYPORE STATISTICS.

The poppy cultivated is 7,622 acres, including alienated lands, but only 3,000 acres are used for producing opium; poppy-heads only are taken from the rest. The yield of poppy juice is 1,687 maunds, some 14 maunds are exported. It is not stated what becomes of the remainder, but it may be put down to local consumption.

The poppy is used much in the same way as in Meywar, except that the leaves of the plant are not used for vegetables.

The value of the poppy crop to cultivators is estimated at Rs. 3,83,124. Its value to the money-lending classes is calculated at Rs. 40,911.

The value of poppy cultivation to field labourer and village servants has not been estimated.

The value of opium to the State and holders of alienated lands together is estimated at Rs. 1,47,800. The value of opium to traders is not reckoned.

The consumption of opium takes the same form as in the other States already mentioned.

Opium-smoking exists, but is rare. The extent to which it is consumed among the population as a whole is not stated, but 25 per cent. of Rajputs, 5 per cent. of Mahomedans, and 15 per cent. of the remaining population are said to be addicted to the habit. The proportion of those who exceed is said to be 4 per cent. of the consumers. It is taken for the same purposes as elsewhere, and on similar occasions, and at a Akhatij festival. The habit is regarded as most beneficial when taken in moderation. The Jeypore Durbar is of opinion that the result of prohibition will be bitterly complained of by most of the people, and likely to cause general discontent of a very serious nature, and many habitual consumers will consider their lives shortened.

The Political Officer, Colonel Peacock, has not stated his opinion.

Compensation is estimated as follows:—

APP. VI.
Rajputana.

To the State.		Rs.	Rs.
On account of land revenue -		25,866	
" " customs - - -		35,135	
			61,001
Expense of revising land revenue rates - - -		20,000	20,000
Cost of prohibitive measures (not estimated).			
Total - - -			81,001

To the Holders of Alienated Lands.

	Rs.	Rs.
Income from land - - -	24,000	
Revision of land revenue rates (Shekhawati) - - -	40,000	
Customs - - -	15,000	
		79,000
Compensation to cultivators on Khalsa land - - -	1,27,725	
In alienated lands - - -	1,89,750	
		3,17,475

The information for money-lenders is not given.

The compensation to field labourers and village servants is not estimated.

Traders.

Loss in annual profit not estimated.		
	Rs.	
Value of unsaleable stocks - - -	25,00,000	25,00,000
Grand total - - -		29,77,476

Of the above amount the sum of Rs. 4,17,476 is an annual loss.

KARAULI STATISTICS.

The average area under poppy cultivation for the past five years shown by the annual records is—

	Acres.
Khalsa (fiscal) - - -	558
In alienated lands - - -	622
Total - - -	1,180

The same papers give the average annual produce as—

	Maunds.
From Khalsa lands - - -	110
From alienated lands - - -	100
Total - - -	210

No mention is made as to the disposal of this produce.

The poppy is used much in the same way as in other parts of Rajputana. The flowers of such plants from which opium has not been extracted are used as medicine.

The value of the crop to cultivators is estimated at Rs. 43,660; that is to say, the net profit on 1,180 acres at 37 per acre.

Its value to the money-lending classes is not calculated. The value of poppy cultivation to field labourers is estimated at Rs. 14,160, at Rs. 12 per acre.

The value of opium to the State is made up as follows:—

	Rs.
Land revenue - - -	11,312
Customs - - -	4,800
Total - - -	16,112

Its value to the holders of alienated lands is not calculated. The value of opium to traders is reckoned at Rs. 13,100.

The consumption of opium takes the same form as in other States. The extent to which it is consumed among the population as a whole is not stated, but 75 per cent. of Rajputs and 25 per cent. of Mahajans are said to be addicted to the habit. The proportion of those who exceed is not given. It is taken for the same purposes as in other States and on similar occasions. The habit is regarded as most beneficial when taken in moderation. Neither the Durbar nor

APP. VI.
Rajputana.

the Political Officer, Lieutenant-Colonel Martelli, have offered any opinion as to the possibility of prohibition. Compensation is estimated as follows:—

<i>To the State.</i>		Rs.	Rs.
On account of land revenue	-	11,200	
Customs	-	4,800	
For expenses connected with revision of land revenue rates	-	5,000	
			21,000
Cost of prohibitive measures (not estimated).			
To the holders of alienated lands (not estimated).			
Compensation to cultivators	-	33,040	33,040
In Khalsa lands and in alienated lands (not estimated).			
The information for money-lenders is not given.			
		Rs.	
The compensation to field labourers	14,160	14,160	
The traders' loss in annual profit is estimated at -	13,100	13,100	
Loss of credit and value of unsaleable stocks are not calculated.			
Grand total	-	-	81,300

Out of the above sum, after deducting Rs. 5,000 for revision of rates, there remains an annual loss of Rs. 76,300.

Note.—The compensation to cultivators is calculated on the mean difference in profit resulting from the cultivation of the poppy and the crop to be substituted for it, viz., Rs. 28 an acre on 1,180 acres.

Note.—The figures for compensation as stated above do not altogether tally with those in the Kharita of his Highness the Maharaja, but are worked out in detail from the written statements furnished by the State.

DHOLPUR STATISTICS.

The total area of poppy cultivation only is given, and is 268 acres, the produce from which is 72 maunds of opium juice.

All the opium grown in the State is generally bought up by Kerowlee traders, and exported to Malwar for foreign trade. The average consumption in the State is said to be eight maunds.

No information is supplied as to the uses made of the plant. Its value to cultivators, money-lenders, and to field labourers and village servants is not stated. Its value to the State is made up as follows:—

	Rs.
Land revenue from Khalsa and alienated lands, 268 acres at Rs. 18 per acre	- 4,828
Customs and excise revenue (Khalsa and alienated)	- 2,474
Total	- 7,302

Opium is eaten or drunk as a rule, and rarely smoked. It is said that 20 per cent. of Rajputs and some 10 per cent. of adult males of the whole population are consumers. It is taken so as to act as a general stimulant to the brain and the muscles. It is also used on the occasions of birth, betrothals, marriages, deaths, festivals, greetings, &c.

Its use is said to have done no harm whatever to the population of the State, and its prohibition would cause general discontent.

The Durbar is of opinion that an attempt to prohibit would cause endless trouble. The Political Officer, Lieutenant-Colonel Martelli, has not stated his opinion.

Compensation is estimated as follows:—

<i>To the State and Landholders.</i>		Rs.
1. On account of land revenue	-	4,828
2. Customs	-	1,294
3. Excise	-	1,180
Total	-	7,302

The cost of prohibitive measures and the expense of revising land revenue rates have not been calculated.

The information for cultivators and money-lenders is not given.

The compensation to field labourers and village servants is not estimated.

The traders' loss is not calculated, as there is no trade in opium in the State.

ULWAR STATISTICS.

This State grows the poppy for the sake of its heads, and not to produce opium.

Opium is consumed mostly dry, and a little mixed with water, smoking is not indulged in.

The extent to which it is consumed among the population generally is not distinctly stated, but 33 per cent. of the cultivating class, 10 per cent. of the Rajputs, and 2 per cent. of Kaisths are said to be consumers. The proportion of those who exceed is put down at 8 per cent. among cultivating, and 1 or 2 per cent. among Rajput consumers. It is taken for the same purposes as elsewhere, and on similar occasions. It is said to be beneficial for cold and cough, and if taken in moderation it serves as a preventive for several diseases. By its prohibition the consumers would be put to great inconvenience. The Durbar opinion is that the consumers who would be deprived of the use of opium would feel this prohibition keenly, and it is quite possible that they might prefer certain claims for the loss which would thereby be occasioned to them.

Consumption is estimated as follows:—

	Rs.
Loss of land revenue	- 5,000
Loss in excise—	
(1.) To the State	- 9,250
(2.) To the contractors	- 1,952
Loss in Octroi duty	- 375
Total	- 16,577

BIKANIR STATISTICS.

Opium is not produce in this State.

The revenue derived by the State from it consists of customs duties, and is calculated on the average imports of the past nine years, and the present rate of duty at 77,490. The holders of alienated lands do not obtain any income from the drug.

The annual profit of traders is estimated at 20,000.

By the more well-to-do classes opium is mostly consumed dry, ordinarily twice a day, and to the daily amount of 12 grains, the poorer classes take it more mixed in water, in the forms known as "amal-pani" or "post."

Twenty-five per cent. of the whole population, it is considered, are consumers, of whom 1 or 2 per cent. take it to excess. Among the castes Rajput consumers are reckoned at 30 per cent., the numerous caste of Jat cultivators at 20 per cent., and the mercantile and Brahmin castes at 12 per cent.

It is taken for the same purposes and generally on the same occasions as elsewhere; it is also given to horses, cattle, and camels, when extra work is expected from them.

The moderate habit is looked upon as of great advantage, and by its means drink can be given up.

The result of prohibition would be to kill half the consumers, and drive the other half to taking arsenic and other poisons or liquor.

The Durbar and Political Officer, C. S. Bayley, Esq., have offered no opinions as to the possibility of prohibition and its consequences.

The compensation is estimated as follows:—

<i>For the State.</i>		Rs.
For prospective loss in customs revenue	-	1,50,000
(Cost of prohibitive measures is not estimated.)		

The alienated landowners deriving no income there is no compensation required under this head, and the cost of prohibitive measures to them is not estimated.

FOR TRADERS.

In Local Trade.

	Rs.
Loss in annual profits	- 20,000
Value of unsaleable stocks	- 1,00,000

In Foreign Trade.

At other centres where they carry on business and retain stocks - - -	Rs. 20,00,000
	<u>21,20,000</u>

(Compensation for disorganisation of business or loss in credit is not estimated.)

The total compensation claimed amounts to Rs. 22,70,000 of which Rs. 1,70,000 is for annual loss.

The Political Officer considers the compensation claimed for the State and on account of internal trade as fair, but that for the foreign trade decidedly under the mark; that the loss altogether would be a very serious one, and unless full compensation was given both the State and its inhabitants would suffer very severely.

JAISALMIR STATISTICS.

The poppy is not grown and therefore opium is not produced.

Opium is taken in five different ways:—

- (1.) Crude, called "Mawa." (Proportion 60 per cent.)
- (2.) Solved and strained through cotton, called "Bhian" - - - (20 per cent.)
- (3.) Solved and strained through cloth, called "Galwan" - - - (10 per cent.)
- (4.) Plain Pills - - - (7 per cent.)
- (5.) Spiced - - - (3 per cent.)

It is said that 65 per cent. of Rajputs and Charans.

It is said that 65 per cent. of Rajputs and Charans, 55 per cent. of Mussulmans, 40 per cent. of lower castes, 25 per cent. of Mahajans, and 20 per cent. of the remaining castes or some 50 per cent. of the male and 10 per cent. of the women are consumers.

Children up to three years of age are believed to be given it generally.

Of the above consumers 15 per cent. of Mussulmans, 10 per cent. of Rajputs and Charans, 5 per cent. of Mahajans, and 2 per cent. of the remaining population are looked upon as taking to excess.

Of the consumers some 5 per cent. take it only once a day, and some 2 per cent. only once a week in small doses.

It is considered necessary to consume opium on the occasions of births, betrothals, marriages, deaths, the Akhatij, and other festivals, the first shaving of a male child's head among Rajputs and Charans, shaving the parting of a beard by Rajputs and Charans, and at greetings and reconciliations. It is said that the moderate use of opium improves the appetite, invigorates the body, gives courage, removes fatigue, and keeps off cold.

If the supply of opium were stopped, the result, it is believed, would be loss of health, and the death of nearly all consumers over 50 years of age.

The Durbar is of opinion that it is quite impossible to prohibit the consumption of opium in the Jaisalmir State. He also anticipates political difficulties to the State in the event of prohibition being decided upon.

The average import of opium for the past 10 years has been about 162 maunds yearly, yielding an income of about R. 32,175, and this would be the real loss of customs to the Durbar.

The loss to traders is estimated at Rs. 16,850 per annum, and of Rs. 53,000, once for all on account of unsaleable stock and unrecoverable debts.

The total annual loss, for which compensation is asked for is estimated at Rs. 49,025 as above.

The Political Officer, Lieutenant-Colonel Abbott, considers the estimate for compensation to be reasonable.

MARWAR (JODHPUR) STATISTICS.

Opium is not produced in this State.

The revenue derived by the State from it consists of customs duties, and is calculated on the average imports of the past five years and the present rate of duty at Rs. 2,31,800. Besides this, transit duty on opium for Jaisalmir brings to the Durbar an average annual income of about Rs. 500. The holders of alienated lands obtain an income of Rs. 5,000 from the drug.

It is mostly consumed in the dry crude form called "Kara Amal," but a few take opium pills, dissolved opium and tijara (*i.e.*, poppy-head) infusion.

It is ordinarily taken twice a day, to the daily amount of 8 to 12 grains,

Six per cent. of the whole population, it is considered are consumers, of whom 20 per cent. take it to excess, that is to say, from 12 to 18 grains daily. Men are said to be more generally habitual opium-eaters. Only 2 per cent. of females use it as a habit.

It is mostly used by Rajputs, Charans, Bhats, and criminal and forest tribes. The next greatest consumers are Sindhis and Kaem Khanis, then come Jats and Kulbees.

It is taken for the same purposes and generally on the same occasions as elsewhere.

The use of the drug is held socially respectable, and is the symbol of courtesy and hospitality to all.

The moderate habit is regarded as of great advantage. It helps the consumers to bear the fatigues of their calls and to prolong their existence.

Prohibition will create discontent.

The Durbar is in favour of moderate consumption, and desirous of protecting its revenue.

The compensation is estimated as follows:—

	Rs.
For the State.	
For loss in customs revenue -	2,00,500
(Cost of prohibitive measures is not estimated.)	
For alienated landholders -	5,000
For Traders.	
Loss in annual profit -	42,548
(Value of unsaleable stock, compensation for disorganisation of business or loss in credit not estimated.)	
Total annual compensation -	<u>2,48,048</u>

The Political Officer, Lieutenant-Colonel Abbott, is of opinion that the loss in revenue shown by the Durbar is not only reasonable but is, if anything, estimated below what it might actually lose under the circumstances contemplated.

SIROHI STATISTICS.

The poppy is not grown and therefore opium is not produced.

The consumption of opium takes the same form as in the rest of Rajputana. The extent to which it is consumed is not clearly stated, but 6 per cent. of Rajputs, 8 per cent. of Charans, and 6 per cent. of Mahajans, as also Grassias and Rebaris are said to be addicted to the habit. The proportion of those who exceed is given as 12 per cent. of Rajputs, 16 per cent. of Charans, and 25 per cent. of Grassia and Ribery consumers. An ordinary daily allowance is about 9 grains, but those who take it in excess take up to one-fourth of a tola at a time, that is half a tola or 80 grains per day. It is taken for the same purposes as in other parts, and on similar occasions. The general belief is that moderate consumers keep healthy, and that no treat or feast can be considered complete without opium.

The Durbar expresses the opinion that the prohibition of the production, export, and sale of opium, except as a medicine, will be very unfavourably received by all classes in the State (who value it as a stimulant and attach much importance to its use on many occasions), and will be a hardship in particular to the Grassias and other hill tribes, who use it as a safeguard against the malarious climate of those regions. The Durbar considers its use as beneficial.

Though the average import of opium for the past five years has been about 175 maunds, yearly yielding an income of about Rs. 30,625 at the present rate of duty of Rs. 175 per maund, the Durbar reckons 200 maunds in the usual amount of consumption; and, judging by the great increase of duty in the past, it considers duty can be raised up to Rs. 400 a maund without diminishing the import. It thus reckons its prospective loss of customs revenue, should opium cease to be imported, at 200 maunds by 400 per maund Rs. 80,000 a year, the small dues taken by jagidars being included in the above.

The traders' loss is estimated at Rs. 10,000 a year.

Value of traders' stocks not estimated.

The total annual loss for which compensation is asked for, is estimated at Rs. 90,000 as above.

The Political Officer, Lieutenant-Colonel Abbott, is of opinion that the Durbar has estimated its loss at quite an outside figure.

APP. VI.
Rajputana.

APPENDIX VII.

STATISTICS regarding the comparative COST and PROFIT of CULTIVATING POPPY and certain other Crops in the MEYWAR STATE, RAJPUTANA.

[Handed in by MEHTA BHOPAL SINGH. See Question 20,461.]

APPENDIX VIII.

APP. VIII.
Ajmere.

MEMORANDUM on the OPIUM EXCISE in Ajmere-Merwara.

[Handed in by Captain P. J. MELVILL, *see*
Question 21,749.]

MEMORANDUM.

Since 1818, when the districts of Ajmere-Merwara passed into the hands of the British Government, till the present time, the cultivation, possession, and sale of opium have been unrestricted except within the Cantonment limits of Nusseerabad and the municipal limits of Ajmere, Beawar, and Kekri.

In 1835 an attempt to introduce the farming system was made by Mr. Cavendish, Superintendent of Ajmere, but the peculiar position of Ajmere-Merwara compelled him to abandon the scheme altogether.*

When Act XXXI. of 1856 became law, the Government of the North-western Provinces did not see fit to extend its operation to Ajmere-Merwara beyond the limits of the Cantonment of Nusseerabad.* The reason for extending the provisions of the Act to Nusseerabad only was that if extended to the whole of these districts, it would be unworkable, in view of the position of Ajmere-Merwara, which are surrounded by native States, where the possession and sale of opium are practically unrestricted.

The Opium Act, No. XXIII. of 1876, was not brought into force in Ajmere-Merwara, in consequence of the representations contained in letter, No. 322, dated the 17th May 1877, from the Chief Commissioner of Ajmere-Merwara to the Government of India.

Subsequently, Act XXIII. of 1876 was amended by Act I. of 1878, which was brought into force in Ajmere-Merwara on the 2nd August 1879;† but under the rules framed under the Act, and approved by the Government of India,‡ the Chief Commissioner of Ajmere-Merwara was empowered to define the areas within which the possession of opium should be restricted, and the areas defined were the municipal limits of Ajmere, Kekri, and Beawar, and the Cantonment limits of Nusseerabad.§ The Act was extended to those areas only, which include all the towns of any size in the districts, in consequence of the representations made by the Chief Commissioner in his letter, No. 96, dated the 31st January 1879, to the Government of India.

In 1887 the rules mentioned above were amended|| for the reasons that (i.) the cultivation of poppy and manufacture of opium without a license were not prohibited within the restricted areas, and (ii.) wholesale dealers were entitled to sell opium wholesale to consumers, with the consequence that all well-to-do consumers bought in the open market from wholesale dealers, and the Government revenue suffered, in that under the circumstances the farm of opium did not bring in the amounts it should have.

The rules as amended by the Chief Commissioner's notification of the 12th August 1887 have remained in force up to the present time.

In 1891 the Government of India resolved that the consumption of opium on the premises in any form should be prohibited,¶ and the chandu shops in Ajmere-Merwara were accordingly closed.

The amount of land under poppy in the district of Cultivation of Poppy in Ajmere is insignificant, and, Ajmere-Merwara, except to an exceedingly limited extent, poppy grown for the sake of the seed and the poppy-heads only, no opium is extracted. The seed not required by the cultivators is sold by them, and from the poppy-heads an infusion named post is made which is very generally used by Rajputs of the poorer classes and by others. The average amount

of land under poppy in the Ajmeré district is given below :—*

	Acrea.
Khalsa and Jaghir	23
Istimirari estates	125
Total	148

The cultivation of opium in the Ajmere district is, then, almost entirely confined to Istimirari estates, and prohibition or the imposition of special restrictions there would have to be considered in connexion with the question of tenure, all these estates having been granted on fixed quitrents in perpetuity. As it is, special rents, varying from Rs. 4 to Rs. 12 per acre, are paid by cultivators to the Istimirardars for land under poppy, and the cultivation may be said to be restricted by these special rates.

In Merwara there is a much larger area under poppy, the average being 2,205 acres. In that district there are two tehsils—Beawar and Todgarh. In the Beawar tehsil the greater part of the land on which poppy is cultivated is either (1) land which, from its situation, is too moist for maize and other Kharif grain crops, and on which cotton is grown; or (2) land on which cotton is grown at the choice of the cultivator. When cotton is grown no second crop, other than poppy, can be raised, as cotton is not picked till after the time when the Rabi grain crops are sown.

In the Todgarh tehsil poppy is cultivated, partly for the same reasons as in the Beawar tehsil, and partly because the country is very hilly, and the cultivable area comparatively small, and the holdings are for the most part very limited in extent. It is therefore a matter of great importance to the cultivators to raise the most profitable crop possible, and that crop is poppy. Another great advantage of the crop to the cultivator is that he can always obtain advances on it without difficulty, and can sell the opium for cash.

The average out-turn of opium per acre under poppy is 12½ seers on land on which a Kharif crop has not been raised, and 7½ seers on land which is double-cropped.

The expenses per acre of cultivation of poppy and other crops, the gross value of out-turn, and the net profit to the cultivator are given below :—

The average net profits of (a), (b), and (c) together are Rs. 45-12, while those of (d), (e), and (f) are Rs. 13-7. If then, the cultivation of poppy were prohibited and cereals took its place, the net loss per acre would amount to a little over Rs. 32; and as the average acreage under poppy in Merwara is 2,205 acres, the annual loss to the cultivators would be over Rs. 70,000, or more than half the total land revenue and water revenue payable to Government (Rs. 1,33,302).

The average gross and net values of the opium produced in Merwara are approximately Rs. 81,585 and Rs. 48,510, respectively.

The cost of manure has been given in each case, but as a matter of fact the cultivator seldom pays for it, his cattle providing him with sufficient. The cost of labour has been shown in no case, as poppy is usually cultivated on small patches of land, the owners of which are sufficiently numerous to provide the labour themselves.

If the cultivation of poppy were prohibited, it is clear that the payment of the Government dues would be made with greater difficulty than is at present the case; and prohibition would beyond all doubt create the very greatest discontent among the cultivators of Merwara.

The native States bordering Ajmere-Merwara are

Restrictive measures. Meywar, Marwar, Kishengarh, and Jeypore. In Meywar it appears that no restriction is placed on the cultivation of the poppy, nor on the possession of opium, though a small village transit duty is levied.

APP. VIII.
Ajmere.

In Marwar poppy is not cultivated, and there is no restriction on the possession and sale of opium, but an import duty of Rs. 150 per maund is levied. In Jeypore the rate charged on land under poppy varies from Rs. 4 to Rs. 5-10 per bigha, and an import duty of Rs. 25 to Rs. 35 per maund is levied on manufactured opium. In Kishengarh no special tax or restriction is imposed on the cultivation of the poppy or the possession or sale of opium, while imports are very lightly taxed.

If it were proposed to restrict the cultivation, possession, and sale of opium in Ajmere-Merwara by imposing taxes, these would necessarily have to be not higher than those imposed in the bordering native States, as otherwise smuggling would commence, and, seeing that no village in these districts is more than a day's march from the frontier, preventive measures would necessarily be futile.

In 1893 the Assistant Commissioner of Merwara made an inquiry as to the quantity of opium produced there and locally consumed, and the quantity exported. He estimated that no more than one-fourth of the amount is consumed locally; that one-fourth is exported direct into Merwar; and that the remaining one-

half is sent to Beawar for export.* It is believed that most of the opium sent to Beawar is exported to Marwar and Meywar, but no statistics are available.

The opium which is brought to the Ajmere scales is produced in Malwa and Kherowlee. Practically the whole of it is exported to the Punjab.

Opium is used habitually by the majority of Rajputs and by many others in Ajmere-Merwara, but so far

Prohibition.
as my experience goes, excessive consumption is not common. Owing to the position of these districts, it would be impossible to check the possession of opium, unless its cultivation, possession, and sale were prohibited in the adjoining native States. In my opinion, prohibition would be attended by considerable danger, and would, beyond all doubt, create very great dissatisfaction.

* Letter, No. 1281, dated the 12th April 1893, from the Commissioner to the Chief Commissioner of Ajmere-Merwara.

APPENDIX X.

QUESTIONS regarding OPIUM issued by Lieut.-Colonel D. ROBERTSON to the DURBARS of the NATIVE STATES in CENTRAL INDIA.

[Handed in by Lieut.-Colonel ROBERTSON, Superintendent of the Rewa State, see Question 21,868.]

Production.

1. What terms are employed to describe measurements of opium land? If bigas are used, state what the size of one biga is, i.e., 150 feet square, or what?

2. What is the area under opium cultivation, in what manner is this information derived by survey (Nazari or Paimashi), or how?

3. Does the cultivated area under opium vary from year to year, if so, to what extent? How do you account for these variations, taking for this purpose a period of 10 years?

4. What is ordinarily grown in land thrown out of opium cultivation if not allowed to remain fallow?

5. Could any other crop be profitably cultivated in the place of opium, such as Indigo-sugarcane, &c? Give reasons for your answer.

6. In the cultivation of opium what method is employed in sowing, manuring, weeding, watering, and collecting the juice? Describe the process throughout, noticing also the manure used. How many waterings are given—whether well-water is better than tank-water; whether “kyaris” are made or not, and whether in the weeding or thinning anything is derived which supplies the cultivator with food.

7. Who are the people (castes) who cultivate opium, and in what proportion do they stand to the total population of the State? Is any special skill required in its production?

8. In what month is opium sown, when does it ripen, and by what climatic conditions is it affected at the various stages of its growth?

9. What is the average produce of poppy milk per biga in the various classes of land which please specify?

10. How is the land revenue assessed, i.e., for a term of years or at each harvest? If in the former manner are the ordinary rules for assessment observed? In the latter case what portion of the yield does the State take? and is the demand taken in cash or kind?

11. In the case of a regular settlement for a term of years what are the average rates per biga for the various classes of opium land?

12. Are there any privileged classes, for instance, Brahmins, who obtain concessions in assessment? if so, what do these concessions amount to?

13. Is the cultivation of opium extending or contracting? Do the Durbar officials seek to extend it?

14. Is the cultivation popular amongst the people as compared with other crops? Explain your answer, giving, if possible, an estimate of the profit to the cultivator of opium.

15. Is most opium land do-fasli, if so, what crop ordinarily precedes opium? and does it as a rule provide sufficient food for the cultivator, his family, and cattle during the year? Please explain and give some illustrations of your answer.

16. What ordinarily becomes of the poppy milk or chik? Does the cultivator keep it or is it placed as security for the revenue demand anywhere in deposit?

16a. Is the jallap system in force, if so, to what extent? Please describe it.

Manufacture.

17. Describe the process of manufacture, also Rubba, Tikia, Hath-parakh, and hukhlin.

18. Is opium filtered to test its fitness for China, and is any but the best opium sent there? Is adulteration resorted to to any extent? If so, what method is adopted?

19. Where is opium manufactured, and in what months?

20. How many men, and of what castes, are engaged in this manufacture? for how many months are they employed, and what remuneration do they receive? Do they do any other work?

21. What is the cost per chest of opium to the merchant after he has paid the State dues on chik?

Poppy Seed—Dust and Heads.

22. Is the poppy seed disposed of separately by the cultivator; if so, at what rate? Mention if the price fluctuates much, and by what it is regulated.

23. What is the average produce of seed per acre, and is much of it used locally?

24. Where is the seed, which is not used locally, sent to, and in what quantities?

25. Is the dust collected, and sold separately? if so, at what rate?

26. Are the poppy-heads disposed of separately? What price per biga do they fetch?

Consumption.

27. What are the arrangements for vend of opium by retail sale, and what revenue is derived either from farming the monopoly of vend of license fees?

28. What is the retail price of opium now?

29. Can cultivators sell in any quantities, great or small, to whomsoever they please, and can they keep what they want for private consumption?

30. In what form is opium consumed, i.e., eaten, drunk, or smoked?

31. What is the population of the State? how many shops are there? are they situated in towns or in the country? under what rules or restrictions, if any, do they work, and has the farmer the right to open shops where he pleases?

32. Are there any special or general restrictions regarding, or penalties attached to, smoking opium in public or private? Are there any as regards eating?

33. Do any chandoo shops exist in your State?

34. Can any estimate be given of the number of people per 100 of the population who consume opium? distinguishing if possible between those who smoke, and those who merely eat it in moderation?

35. Do agriculturists and others who follow trades involving exposure ordinarily eat opium? If so, can you give any estimate of their daily consumption, distinguishing the use from the abuse of the drug?

36. In the case of those who consume opium, is not its use often attributed to old age, infirmity of some sort, or liability to great exertions? Please give your answer at length.

37. Is the kusumbha practice prevalent, if so, on what occasions, domestic or otherwise? How is the preparation made, and what amount of opium is ordinarily used?

38. Is opium ordinarily given to infants? If so, up to what age and in what doses? Is the drug known to produce any deleterious effects in these cases?

39. Is a child weaned easily from the use of opium, and in what manner does the change affect its health?

40. Is any decoction made from poppy-heads? What is it called? Is its use at all general? What are the

APP. X.
Central India.

APP. X.
Central India.

effects? If used medicinally, for what ailments is the decoction considered beneficial?

41. Is opium given to horses, camels, or bullocks? If so, to what extent and with what object?

42. Does opium allay or stave off the pangs of hunger?

43. Does the moderate opium-eater take more or less food than a non-consumer? Is the former ordinarily thinner? Does he die sooner? Is he more or less susceptible to disease, such as "Fasli" fever? Does he suffer more or less from thirst in the hot weather? Is opium taken more freely at any particular time of the year, such as the hot weather or rains?

44. Is the use of opium ordinarily confined to any particular caste or castes? Do men take it more freely than women?

45. Can you undertake to produce five or six aged or middle aged, habitual, moderate eaters of opium for the inspection of the Royal Commission?

Revenue.

46. Give as nearly as possible the amount of land revenue derived from the cultivation of opium?

47. As regards the taxation of chik or crude opium:—

(1.) At what rate is this tax levied?

(2.) What does it produce yearly in the aggregate?

(3.) When and in what manner is it taken?

(4.) Is it taken from the cultivator as well as the middleman?

(5.) Is it taken on entering manufacturing towns? If so, name these, and state whether the rate varies?

(6.) What rate or rates are taken in the towns in the form of dharwai, tolawatti, &c.? Has the seller as well as the purchaser to pay dharwai, &c.? Are these rates taken at every fresh sale?

48. Is the export of crude opium prohibited (if not), what tax is levied on crude opium exported to another State?

49. What taxes are levied on the manufacture of opium, and what do they produce?

50. What duties are levied on opium moving about, whether in the State or going to another State? What is realised by these taxes?

51. Are any taxes on opium taken extra to those already alluded to? If so, specify and describe them, noting what they bring in to the State Treasury?

52. What revenue does the State realise by way of a tax on speculative bargains in opium?

53. What temples, Panjra Poles, and other charitable institutions are dependent upon offerings made by opium merchants at a certain rate per chest?

Trade Internal.

54. What is the approximate amount of "Rubba" sent to the Punjab? Is this trade a State monopoly? What rates are levied wholesale and retail on this "Rubba?"

55. Is biscuit and inferior opium (hath parakh) not up to China standard exported? If so, where is it sent to? What rates are levied, and how much do they bring in?

China Trade.

56. What profit does a merchant make now per chest of opium in the following cases?—

(a.) The merchant who manufactures and (1) sells locally for export or (2) exports.

(b.) The dealer who buys manufactured opium and exports.

57. What is the amount of opium now in stock, distinguishing between old and new opium? Where are the stocks mostly stored?

58. Is the opium trade a losing one now? If so, explain how it is that merchants adhere to the business, and apparently are able to gain a living therefrom?

59. Is there any trade in poppy khatti (oil cake)?

60. Can you say anything of interest or importance in connexion with Central India, in regard to the opium trade in the city of Bombay?

61. Can you give any figures regarding the trade in poppy leaf-dust, poppy seed, poppy oil, poppy oil-cake and heads?

62. Supposing the productions of opium were to cease or be stopped, on whom would the loss fall, the Durbar, the cultivators, or the traders? If the loss would be shared by the three, in what proportion would it fall upon each of those named?

APPENDIX XI.

APP. XI.
Central India.

STATISTICS REGARDING OPIUM IN THE NATIVE STATES OF CENTRAL INDIA WITH PREFATORY NOTE by
Lieutenant-Colonel D. ROBERTSON.

[Handed in by Lieutenant-Colonel D. ROBERTSON, *see* Questions 21,867, 22,965.]

NOTE by Colonel D. ROBERTSON.

It is necessary in order to render what follows intelligible that I should explain the circumstances under which I have proceeded in preparing the information submitted to the Royal Commission at Indore.

The statements (Groups A., B., C.) were prepared from information supplied by the States, and in many cases I adopted the figures supplied without alteration;

in some cases, however, there were obvious exaggerations which I was compelled to curtail. These instances are all referred to in this note.

Again, when the States prepared their evidence, in some cases the particulars previously supplied to me were departed from, and higher amounts of production, revenue, &c. were given. These instances are noted for reference. Finally, a few clerical errors arose, which are also pointed out.

GROUP A.

Bhopal.

H. H., the Begum's Yaddasht (memorandum) gives about 12 lakhs as the amount required for compensation. The figures in statement, Group A. are, however, (excluding the totals), those which I recorded myself after personal inquiry from the local officials at Bhopal, and so far as they go (they do not include traders' losses, as these could not, I was told, be estimated) are probably more correct than Her Highness's general estimate. The Minister's (Imtiaz Ali) evidence was prepared after the Begum's Yaddasht, and was probably an attempt to work up to her figures, the accuracy of which I had questioned.

Jaora.

I am afraid the figures are unreliable. In the evidence of the Nawab, regarding loss to cultivators, there is a clerical error, viz., Rs. 4,02,000 for Rs. 4,20,000; the former sum is said to be correct. The total amount of compensation, Rs. 12,38,000, having been supplied at the last moment by the Nawab, the intermediate items, such as area under cultivation, production and revenue, which I had previously recorded, require to be amended; this could only be done by a further reference, which there is now no time to make.

Dhar.

The yearly produce of opium was given by the State officials to me, and, subsequently, by one witness in evidence, as 1,312 chests; but in striking the average for 10 years, the balance in hand at the commencement of that period has been mistakenly included by the State officials in the total. I have corrected this mistake by excluding the opening balance. The yearly total should be 1,075 chests.

Narsingarh.

The loss to cultivators is estimated by Nasir Ali, the State representative, to be Rs. 1,50,000, and to traders Rs. 65,000. I have given in my statement, Group A., the figures which were recorded by the political agent, Bhopal, after personal inquiry from officials of the State.

Rajgarh.

The total opium revenue given by me in Group A. is Rs. 1,22,680, and that now furnished in evidence is Rs. 1,24,248. This may be due to the fact that the amount of the wazn kashi (weight tax) was not given in the statement furnished to me. The loss to the State and cultivators estimated by Rajgarh officials was reduced by me in preparing the statement to the extent of about 25 per cent., as the political agent, Bhopal, thought the figures given by the officials unreliable; they were moreover palpably exaggerated.

Sitamau.

The amount of land revenue derived from opium is given (in Group A.) from information furnished to me as Rs. 91,316; in evidence the amount is said to be Rs. 95,696. No reason has been furnished for the increase.

I should also add that in preparing the statement I reduced the probable loss to the State from Rs. 83,400 to Rs. 74,300, as in all these small States the loss of revenue would be about 75 per cent. of the total revenue derived from opium. No information was supplied to me about loss to cultivators; it has been assumed at a round sum of Rs. 60,000.

Sailana.

The produce estimated by the State is at the rate of about 15 sers (30 lbs.) per bigha; this is considerably above the average in Malwa, and has therefore been reduced by me from 1,203 chests to 401. The land revenue derived from opium has been reduced from Rs. 1,60,475 to Rs. 60,000, as the total revenue of the State is only Rs. 1,50,000. Similarly, I have reduced the losses by about 25 per cent. of Rs. 70,000, which is the total opium revenue given in Group A., together with an allowance of about Rs. 2,000 for taxes realised in kind. The loss to cultivators was given by the State officials as Rs. 1,28,380; this amount I reduced to Rs. 40,000.

Khilchipur.

The statement made by the witness, that the total opium revenue is Rs. 51,000 must be a mistake; the correct figure is Rs. 31,000. The losses to the State, cultivators, and traders were reduced by me from Rs. 39,000 to Rs. 23,000, Rs. 1,05,000 to Rs. 29,000, and Rs. 36,000 to Rs. 16,000 respectively.

Piploda.

The land revenue was stated by the witness to be Rs. 70,000, viz., from the produce of 2,800 bighas of opium cultivation. This was clearly excessive, and I reduced by 25 per cent., viz., to Rs. 53,000. Similarly, the loss to the State was reduced from Rs. 70,000 to Rs. 39,500.

GROUP B.

Jhabua.

Loss to the State estimated at Rs. 43,329; as the total revenue under all headings is only Rs. 17,809, I reduced the estimate to Rs. 14,494.

Multhan.

Losses to cultivators and traders were not given by the State. They were assumed by me.

Bagli.

In Group B. the area under opium before the evidence was prepared was reported to be 1,600 bighas. I therefore reduced the amount of loss estimated to fall upon the State from Rs. 31,232, as given in evidence, to Rs. 26,932.

Pathari.

The loss to the State, as estimated by the officials, was reduced by me from Rs. 4,250 to Rs. 2,319.

Barwani.

The loss to the State was reduced by me from Rs. 5,200 to Rs. 4,065.

GROUP C.

Datia.

Loss to State reduced from Rs. 5,578 to Rs. 5,000. The latter amount was fixed by the political agent in Bundelkhand after personal inquiry from the officials of the State.

In many cases where the interests were small, and especially in those States where revenue was taken in kind which it was impossible to estimate accurately, I allowed the figures as given to stand.

D. ROBERTSON.

February 1894.

APP. XI.

Central India.

GROUP C.—These States are unimportant in the sense that their Produce is very rarely brought to the Scales, and may be considered either equal to or less than their Local Consumption.

Name of State.	Area, Square Miles.	Revenue.	Population in 1881.	Population in 1891.	Production of Opium.		Number of Retail Shops, Eating or Smoking in Chests (if any).	Annual Revenue derived from Opium.						Probable Loss to State and others interested in Production of Opium if Cultivation were prohibited and other Crops substituted.
					Area under Cultivation in Acres.	Yearly Produce in Chests of 140½ lbs.		Land Revenue derived from Opium Cultivation.	Duty on Chick or Raw Opium.	Local Export Duty taken by the State.	Any other Rate levied, such as Wazan Kashi or Town Duty.	Amount realised from Retail Sale of Opium Shops.	Total Revenue under all Headlines in the five preceding Columns.	
1. Datia -	Miles. 837	Rs. 10,00,000	182,598	186,440	105	16	75	4,573	Rs. 1,278	As. 4 per seer	Rs. 640	Rs. 575	Rs. 7,066	Rs. State - 5,000 Cultivators - 3,000 Traders - 4,000 12,000

15. Bijawar -	974	2,25,000	1,13,285	1,23,414	—	—	—	—	—	—	—	—	—	—
Total -	22,683	71,37,500	26,02,403	28,96,468	443	47½ + 5 seers	198	7,545	1,311	19	671	25,150	34,696	Rs. State - 28,300 Cultivators - 5,100 Traders - 5,000 88,103

NOTE.—There are 80 other States, mostly Thakurates, on the border of Malwa, or small Chiefships in Bundelkhand and Baghelkhand, which are given in alphabetical order as an Appendix to Group C. Those either produce no opium at all or are unable to supply any information. If they derive any revenue from the retail sale of opium it is probably inconsiderable.

APPENDIX XIII.

ABSTRACTS of EVIDENCE of WITNESSES tendered for EXAMINATION from the NATIVE STATES in CENTRAL INDIA, but not examined by the Royal Commission.

APP. XIII.
Central India.

[See Questions 22,379 and 23,306.]

1.

ABSTRACT of the EVIDENCE of DURGA SHANKAR JOSHI, of Ujjain in the Gwalior State.

Moderate use of opium does not produce bad effects —nay, many people find it necessary to use opium. It gives them strength of body, especially in old age. People in other countries can use and indulge in liquors, but we Brahmins and Mahajans and others are prohibited to the use of liquor. If anyone drinks liquors he is out-casted. If Government will prohibit opium, people will think that Government wishes us to take to liquors. Liquor produces many evil effects on body and mind; dropsy and gout, liver and other diseases are produced by it, and those who drink usually fight, and sometimes commit murders, as we have seen. Opium produces no such evil effects, but produces good, and is not prohibited by our religion. Such being the case, if Government does not prohibit the use of liquor, but prohibits the use of opium, it will be a great injustice. The consequences of such a measure will, I think, be dangerous. I have seen some of the pamphlets with pictures published by the missionaries in connexion with opium. I think they are invented to deceive the Government. For we have rarely seen any opium consumer in the condition described in the pamphlets. If permitted, we can produce pictures of liquor consumers in a condition thousand times more

deplorable; how these people become wholly slaves to others, and senseless with froth issuing from their mouths and wallowing in the gutters like beasts; or, if they fall out before becoming senseless, how they smash each others heads and even commit murders. We sincerely hope that as the Queen-Empress has sent this Commission with commendable intention, to inquire into the opium question in India, you will kindly inform Her Majesty in our behalf that the prohibition of opium will do us great physical and moral harm, and will ruin us in many other ways.

2.

ABSTRACT of the EVIDENCE of THAKUR, DAULAT SINGH, of Barda, Barnagar, in the Gwalior State.

Opium cultivation and consumption cannot in any way be stopped, and if prohibited the State and its subjects will suffer heavily.

Opium is given to children and is used by old men in this province. Now, if it will not be given to both of them, in that case many diseases will be prevalent amongst them, and babies will die and old men will suffer bodily.

As Kashmir produces saffron, Malwa produces opium. If the cultivation of opium be stopped, even one-tenth of the profits of opium will not be derived from the production of any other thing.

APP. XIII.
Central India.

I eat opium daily about 4 annas in weight. It has proved beneficial. Other men have similarly been benefited by its use. Any prohibitive measure will incapacitate the people and many lives will be lost.

Every man is ready to endure many hardships for the nourishment of his children, and if opium had not been beneficial parents would never have given it to their children.

Opium is a sure remedy against many diseases, i.e., purging, cough, asthma, cold, dysentery, rheumatism, &c.

Any prohibitive measure will cause loss, both of life and property, and therefore will be greatly disliked by the people.

There are 80 per cent. opium consumers among Rajputs, and so multitudes will suffer from its prohibition.

3.

ABSTRACT of the EVIDENCE of AMBARAM, Numbardar of Bhitaree Ujjain, Ujjain, in the Gwalior State.

I eat opium twice a day about 2 annas in weight. I have been eating opium these 22 years. I am exposed to the open air and cold weather, and hence I began to eat it. I have been eating opium 2 annas in weight these 13 years. I myself cultivate opium, and other cultivators of my village also do it. First-class land yields 2 dharis, second-class 1 dhari, and third-class land yields $3\frac{1}{2}$ seers. The rate of adan land is Rs. 15 per bigha. In certain places it is less. Cultivators get much profit. In addition to it makki is also produced. We have to pay about Rs. 7 or 8 to other labourers, and our own labour is worth about Rs. 7 or 8. Sahukar lends us money on opium only. Wheat cannot be produced, for if rain falls the wheat in irrigated land will suffer and the seed will be small. The soil of Malwa is damp. Sugar cane cultivation costs Rs. 100 per digha, and we cannot get sufficient water for the cultivation of sugar-cane. People do not consider me to be disreputable on account of my eating opium. Children are given doses of opium so long as they are nourished with milk only, i.e., till they come to the age of $2\frac{1}{2}$ or 3 years. It is given either from the day of their birth or from the 8th or 15th day, in order to enable them to digest milk. I shall die if I do not get opium. If it is prohibited to day I shall feel pain in my belly. My limbs will be benumbed. I shall be attacked by fever. I shall not be able to sit or stand. Drops of water will fall from my eyes and nose. Malwa will be desolate. If opium be prohibited, the progeny will not live long.

4.

ABSTRACT of the EVIDENCE of BHAVA VALAD BHAGWANT PATEL, aged 110 years, of mauza Jalwa, Ujjain, in the Gwalior State.

I eat opium since 15 or 20 years. I had been attacked by disease in my leg, and could not get sleep, and hence I took about 1 ratti of opium. Now I eat $1\frac{1}{2}$ masha. It has cured my disease and enabled me to get up and move about. Now if I do not take it I shall not be able to move even a step and I shall be attacked by one or other disease. Opium is cultivated in our villages from the time of our forefathers. I myself have been cultivating it all my life.

5.

ABSTRACT of the EVIDENCE of GUNPATRAO WASUDEO, Subha of Mandsaur, in the Gwalior State.

I was Subha of Ujjain for eight years, and am Subha of Mandsaur for the last 10 years. My father, Daji Anunt, was a great farmer of revenue in former times; and I also lived with him at Mandsaur. I have experience of this province from about 40 years.

About 12 annas ($\frac{3}{4}$) of the revenue of this zila, which produces opium most, is derived from opium. No other crop can yield so much revenue.

There are about 30 Istamrardars in this zila. They are Rajputs. The cultivators are also Rajputs. Any measure prohibiting opium will produce dissatisfaction.

Fifty per cent. of the people of all castes consume opium. If these thousands of people will not get opium, diverse diseases will overtake them and will cost them their lives. Among Rajputs kasumbha is necessarily drunk on auspicious occasions, and even abstainers are required to take it a little. They consider opium auspicious and productive of welfare. If these Rajputs were interfered with in their social customs, how far they will be discontented may be imagined.

The use of opium is not baneful; but, on the contrary, conducive to health. I have never seen opium produce any evil effects, and they generally consume opium moderately.

Mandsaur has a very large trade in opium, and sanukars have been established here from generations. If opium export will be prohibited, they will suffer and close their firms. The city will be deserted and labourers and other servants will starve. No investment in any other crop trade yields so large profits. Again, corn is damaged by being stored in the cold and open air, and cannot be stored underground owing to dampness of the soil. In any case, grain cannot be long stored without being damaged.

In short, if opium is stopped, the State and traders will suffer, as also cultivators and labourers, while those who consume opium will be physically ruined.

6.

ABSTRACT of the EVIDENCE of BADRIDAS, Munim of Subkarn Pralhaddas, Ujjain, in the Gwalior State.

This firm in Malwa dates from Samvat 1887 (i.e. 1830 A.D.), and deals in opium. I am manager of the firm since about 24 years.

Opium trade is the most important in Malwa, and is carried on from centuries. Our long experience has acquainted us with all the secrets of the trade and the ways of making the greatest profit. In various centres of trade our agencies have been permanently established. If opium be stopped, the loss of the traders and merchants in our Maharaja Sahib's Malwa will be about 10 lakhs of rupees.

There are about thirty (30) opium-trading firms in Ujjain; and many managers and clerks derive their livelihood. Hundreds of labourers are engaged in the manufacture of opium. All these will be thrown out of employment and will have to go abegging. We cannot easily employ ourselves in any other trade, nor can so much capital be invested. Wheat, cotton, &c. require to be disposed of in a short time. If kept long, their value is reduced by being damaged in various ways, and the capital invested is itself in danger.

British Government has always given encouragement to trade. From all countries merchandise of every kind is imported into India, and from here opium, cotton, wheat, and linseed are exported; and among these opium is a principal item. If opium trade is prohibited, the loss to Malwa and India will be very great. Malwa merchants will lose about 30 lakhs per year, while Bombay merchants will lose their commission charges to the amount of about 5 lakhs. The British Government and the States will suffer. The loss of cultivators and labourers will be very great.

7.

ABSTRACT of the EVIDENCE of UMRAOSINGH, Munim of a Banker at Ujjain, in the Gwalior State.

I was suffering from dysentery. So in 1830 I began taking opium. I found relief, and also general benefit to my health. I took 2 rattis for 15 years and since five years take 3 rattis.

I am manager of Kibe's firm since 1928, and have always done my duty from 10 a.m. to 8 p.m. I can walk 10 miles without feeling warm or feverish. Those who take other intoxicants become incapable of mental work and lose in position, but not so with opium.

My father took opium, and was a strong man. By the favour of God my mother is alive, and is 60 years old, and takes opium with benefit and goes to temples on foot.

By the production and trade of opium thousands of people, rich and poor, gain their livelihood. And crores of rupees are invested in its trade. There is no other equally large and profitable trade.

8.

ABSTRACT of the EVIDENCE of GANESHARAM, Munim of a Banker at Mandsaur, in the Gwalior State.

The firm of Tarachand Ghanasham Das is of nearly 70 years' standing. I have been in the firm since eight years. The firm trades in opium only. The loss we will suffer from the prohibition of opium is as follows:—The profit from adat or agency is very considerable. No other trade yields so much profit. The bulk of the thing being very small and its value being very great, it can be stored safely and easily. We can keep no other article of trade for a long time, and if we keep it, we have the fear of its being damaged and the

price being lowered. Those who manufacture and sell opium earn a profit amounting from Rs. 25 to 100 per chest. In addition to this they earn interest. Those who invest their own capital in this trade get Rs. 100 of profit and Rs. 25 of adat and interest per chest, *i.e.*, a capital of Rs. 500 brings Rs. 125 a year, *i.e.*, Rs. 2 a month per chest. Sometimes he earns a lesser amount. Any other article as sugar, wheat, &c. is eaten by rats and may be easily misappropriated by men. Not so opium, except in very small doses.

9.

ABSTRACT of the EVIDENCE of SEVARAM PARAKHA, a Banker at Mandsaur, in the Gwalior State.

My firm is of about 100 years' standing at Mandsaur. I trade only in opium. Opium was at first exported to Daman *via* Jawad. Opium is now exported to Bombay since Samvat 1888-89 (*i.e.*, 1832 A.D.) Opium trade is still much more profitable than other trades. Since the day the juice is brought to our firms, it yields us interest, adat, &c., and it increases in value in proportion to the period it is kept stored. It can be kept from five to 10 years. So large a capital cannot be invested in any other trade.

10.

ABSTRACT of the EVIDENCE of RAGHUNATH VALAD OMKAR PATEL, of Agar, in the Gwalior State.

I have been eating opium these nearly seven years. I use above 2 rattis in weight and twice a day. From the beginning and till now I eat 2 rattis. I cultivate my own 4 bighas of opium land. One bigha of opium land yields 6½ seers of opium, worth Rs. 31-4 and 4 maunds of opium seed, worth Rs. 6, *i.e.*, Rs. 37-4. Out of this, Rs. 10 are incurred for labour and cattle-grazing expenses and Rs. 10 are paid to the State, *i.e.*, Rs. 20 are expended and the remaining Rs. 17-4 is our net profit. Besides this, we produce with opium garlic, onion, makki, &c. sufficient for our own use. We do not get so much profit from the cultivation of any other thing. We can hardly realise sufficient to cover our expenses and labour.

11.

ABSTRACT of the EVIDENCE of RAJAJEE VYAS, Brahmin, of Ujjain, in the Gwalior State.

I am a native physician, and according to our Medical Science opium is useful in many diseases, such as cough, asthma, diabetes, white leprosy, consumption, spleen, worms, and malarial fevers. Greyish opium assists digestion, white-yellow opium counteracts the effects of old age; opium is consumed with benefit by children and by most old men. It is prescribed with good effects in above diseases.

Opium is allowed by our Shastras, but not liquors, the evil effects of which are manifold.

12.

ABSTRACT of the EVIDENCE of NARAYENRAO VITHAL, Brahmin, of Agar, in the Gwalior State.

I daily take opium one-fourth of a tola in two doses. I was suffering from fever and purging. It has cured my disease. If I do not get opium I shall not be able even to move.

Opium is not prohibited to us by our religion, but liquors are. I think the prohibition of opium will be a great injustice.

13.

ABSTRACT of the EVIDENCE of THAKUR PRALHADSINGH, of Runija, Barnagar, in the Gwalior State.

Many benefits are derived from the use of opium. I myself sometimes use it. It produces no bad effects on the body; on the contrary, it cures many diseases.

Opium consumption is not considered disreputable in our caste. In marriage, betrothal, and other ceremonies and at hospitable tables it is freely served. Nay, the betrothal ceremony is not considered completed unless kasumba is drunk.

If the use of opium will be stopped children cannot be nourished, and thousands of men will die without it.

How much sinful it is to let thousands die of the want of a thing:

The loss we will have to suffer from the prohibition of opium in revenue and the loss of the subjects in general is as follows: In opium cultivation the land pays per bigha Rs. 15 to 20; and if any other thing is produced in it, then it hardly pays Re. 1-10. Again, in opium land no other thing can be produced by irrigation. In adan land, the wheat produce yields very small seed, and it is attacked by red blight. There is not sufficient water for the cultivation of sugar-cane. Cotton and other crops produce less when watered. In our villages there are nearly 300 wells, and if opium cultivation is stopped about 20 or 25 wells will remain in use and the others being unused will fall down; in that case the value of 275 wells, at the rate of Rs. 300 a well, *i.e.*, about Rs. 82,500, is lost capital. The subjects in general will also suffer heavily, as in opium cultivation the cultivator realises about Rs. 15 per bigha; and the labourers also will suffer.

14.

ABSTRACT of the EVIDENCE of THAKUR FATTESING, Jagirdar Tajkhedi, Bhaugarh, Mandsaur, in the Gwalior State.

I am the Istamrardar of Tajkhedi. I daily eat opium about one-half of a rupee in weight. I took to it because I had pain in my limbs. I have been consuming it these 12 years. It has cured my disease. It will go very hard with me if I will not get opium. In marriage and other ceremonies it is freely served. The ceremony is not considered to be completed without it. We Sisodia Rajputs do not drink liquor. It is prohibited among us. We will feel very hard if opium consumption is prohibited. A prohibitive measure will be disliked amongst us.

15.

ABSTRACT of the EVIDENCE of PARASHRAM, of mauza Nandavada, Mandsaur, in the Gwalior State.

We have been cultivating opium from generations. Our loss will be very great if opium cultivation and trade be prohibited. The land in this district does not yield any other produce with good profit except opium. The land yields about Rs. 50 worth of opium and Rs. 12 worth of opium seed. Out of this about Rs. 35 are paid in revenue and for costs, and the remainder is our profit. No other cultivation brings so much profit.

16.

ABSTRACT of the EVIDENCE of LACHMAN PRASAD, Kamdar of Tanoday, Agar, in the Gwalior State.

I take opium for the last 10 years. I was weak before. I am now strong. I can work like a young man. If we do not eat opium we shall be fit for nothing. Opium cultivation is very profitable. If it be stopped cultivators will suffer a great loss.

17.

ABSTRACT of the EVIDENCE of RAI BAHADUR NANAK CHAND, of the Indore State.

My name is Nanak Chand. I am jagirdar of two villages in Depalpur district. I have been Deputy Minister since three years. I was Treasury Officer for four years. My age at present is about 34½ years. My service in the State is of seven years and a half. I have got the title of "Mashiruddaula Rai Bahadur."

2. Out of nearly 170,000 irrigated bighas of land, 122,550 bighas are under opium cultivation.

3. In 122,550 bighas of opium there are 110,550 bighas of State land and 12,000 bighas of jagir land.

4. The whole production of crude opium in this State is estimated to be 1,22,550 dharis (or 15,320 maunds).

5. From an average of nine years the export of opium chests from Indore City and other towns in the State is 11,800 a year.

6. Opium revenue realised by the State from all sources is Rs. 20,12,000.

APP. XIII.
Central India.

7. If opium is prohibited pecuniary loss—

	Rs.
(1.) To the Darbar (including Rs. 2,00,000, the estimated cost of prohibitive measures) would be nearly	20,29,000
(2.) To the cultivators	19,48,000
(3.) To the traders	5,50,000
(4.) To the jagirdars	1,46,000
Total	46,73,000

8. No money compensation would be sufficient to meet State loss.

9. It would be impossible to apportion compensation amongst individual agriculturists and traders.

10. Prohibition of opium would cause grave discontent amongst all classes of people.

11. If the Government will determine to prohibit opium and pay compensation, I think the inquiry about accurate amount of loss will result in the increase of figures given above as loss to the Durbar, cultivators, traders, and jagirdars.

(Signed) NANAK CHAND.

24th December 1893.

(True copy.)
G. J. SPARKES MADGE,
Superintendent, Central India Agency.

18.

ABSTRACT of the EVIDENCE of NAGO BHIKAJI DAUBE,
of the Indore State.

I am Naib-Dewan Khasgi and one of the special officers appointed by the Durbar for obtaining information for the purpose of the Royal Commission on Opium.

I was assistant collector and collector for several years in different districts, and I have had many opportunities to discuss this subject with rude as well as intelligent people engaged in the cultivation and trade of opium, and I am of opinion that any interference with the rights and privileges of the subjects of native States with regard to the growth of opium will result in great complications and serious danger.

I have given replies to all the 62 questions proposed by the Central India Agency, which I append.

Opium production should not be prohibited.

	Rs.
The State would suffer a pecuniary loss of	21,00,000
„ jagirdars of	1,63,000
„ merchants of	8,50,000
„ agriculturists of	18,56,000
Total	49,69,000

(Signed) NAGO BHIKAJI DAUBE,
Special Officer, Opium Commission, Indore.
Dated 23rd December 1893.

(True copy.)

G. J. SPARKES MADGE,
Superintendent, Central India Agency Office.

19.

ABSTRACT of the EVIDENCE of KESHAV GOPAL KAMB,
L. M. and S., Principal Medical Officer, Holkar's Army.

I, Keshav Gopal Kamb, am the principal medical officer in H.H. Maharaja Holkar's Army. I am a servant of 10 years. My experience about the consumption of opium is as follows:—

It is eaten, drunk as well as smoked. Here in the army more than half of the strength will be found addicted to opium-eating. Kasumbha-drinkers and chandu smokers don't exist in the army. From the experience which I have about opium-eating, I can assert that its moderate use is in no way injurious to health. Those that eat opium in the army perform their duties properly. Opium is eaten by men of all

castes. Opium-eaters live to good old age. Opium-eaters, immediately after its consumption, generally drink milk or eat some sort of sweatmeat. Opium does stave off the pangs of hunger. When one becomes habituated to the use of opium one does not suffer from great thirst. Men indulge in the use of opium more freely than women.

The prohibition of opium will certainly cause great discontent in the army.

20.

ABSTRACT of the EVIDENCE of KESARI CHAND, of the
State of Indore.

I am Munim of the firm of Padamsee Nainsee and President of the Akra Panch or Chamber of Commerce at Indore.

My master's transactions amount to half crore of rupees or more.

I have been in the opium trade for 16 years.

The banker and trader of Indore will suffer a loss of over 12 lakhs of rupees every year.

There will be grave discontent if opium is prohibited, as, besides the annual profits which the merchants will lose, they will also lose their outstandings of more than three crores. I eat opium daily. I was suffering from an affection of the lungs, which was cured by taking opium. Opium is beneficial. I could not work without opium.

(Signed) KESARI CHAND.

21.

ABSTRACT of the EVIDENCE of BALMUKUND GAYADEEN,
General Commanding of the State Army, Indore.

My name is Balmukund Gayadeen. I am a native of Cawnpore. I have served the State for 28 years. I was successively Mankari, Squadron Leader, Adjutant of Cavalry, Superintendent of City Police. Commanding of two cavalries and batteries of Mulki Fouj, Adjutant General of the Regular Army, Major General, and at present full General Commanding of his Highness the Maharaja Holkar's Army including Artillery, Cavalry, and Infantry Brigades. I am also a member of the State Council. My experience in the military line enables me to state as follows:—

Opium is eaten as well as drunk in the army. The per-centage of consumers is in my opinion 50. A moderate use of opium is known not to tell against the physique of soldiers. Opium-eaters are sober, quiet, obedient, enterprising, and attentive to their duties. They can stand hard marches under the influence of the drug, and do not present a worse appearance than non-consumers. If the use of opium is accompanied by the use of milk, sweetmeat, or any substantial food as is usually the case, it is not only harmless but positively beneficial. It staves off hunger, and keeps the user from the effects of exposure to cold or heat. The habit of opium-eating is very difficult to break off and consequently if prohibited would cause serious privation. The stoppage of opium would disable the users for active duty and is sure to cause great discontent in the army under my command, which consists of Sikhs, Rajputs, and other warlike tribes. Opium is also useful to animals and makes them capable of undergoing hard work and long journeys.

The financial aspect of the prohibition of opium is equally fraught with bad results. It is estimated from the State accounts that the loss to the State resulting from prohibition would be more than 20 lakhs annually, and would render unproductive the vast investments made by the State in the extension of irrigation. It would also entail losses upon the cultivators, Jagagirdars, traders, and other classes who depend for their livelihood upon opium in one way or another, amounting to some 35 lakhs annually, and will mean ruin to most of them.

The State's loss will be impossible to be met by reduction in expenditure or extra taxation. The expenditure in regard to the army admits of no reduction; on the contrary, the expenditure has lately increased by the formation of Imperial Service Cavalry.

22.

ABSTRACT of the EVIDENCE of DHANRAJ BRIJLAL, aged 45, caste Oswal Mahajan, occupation, Agent on the firm of Rai Bahadur Gokuldas Valabdas, inhabitant of Indore at present.

I eat opium since last five years. I was ill for two years and became very weak, when a native physician advised me to use opium, by which, he said, I would restore my health. I did so, and I am happy to say that I have recruited my health by it. I have continued its practice till now. It enables me to work with double vigour and keeps the intellect clear. It is also preventive against several attacks of minor distempers. I can say from my own experience that opium does not allay hunger, but, on the contrary, it excites. It is a fact that rich sustenance and milk are greatly beneficial to an opium consumer.

23.

ABSTRACT of the EVIDENCE of HARKISAN RAMLAL MODI, aged 38, occupation, Ijaradar and cultivation, caste Mali, inhabitant of Oomaria Bujruk pargana Mhow, in the Indore State.

I am a leaseholder of villages as well as a cultivator from three generations. I cultivate both irrigated and dry lands every year. In the irrigated land I grow articles by turns, in consequence of which I have an experience of the produce of each kind in a bigha. From my personal experience I can confidently state that, among all the articles produced by cultivation which fetch any money to a cultivator, opium is the first that gives him good profits. It is produced in less time, less labour, and moderate expenditure. An article which has a demand in foreign markets fetches large money. Cotton at present stands on an equal footing with opium, but they cannot exchange their places; that is, no opium can be produced in cotton soil or vice versa. It will be observed from the above that there is no substitute for opium in opium land, and that no article can be equal to it in enriching its producer. Prohibition or restriction in the growth of opium is in my opinion equally detrimental to the interests of a cultivator, a merchant, and the king. We pray that not any kind of interference should be made in the growth of opium, and that we should be allowed to lead a peaceful and happy life.

9th November 1893.

24.

ABSTRACT of the EVIDENCE of Mr. RAOJI JANARDHAN BHIDE.

I am a B.A. of the University of Bombay. I have been in the service of the Indore State these six years. I was Huzur Treasurer for some time, and am Accountant-General at present.

The following is a summary of my evidence:—

1. The Durbar, the cultivators, the traders, and the landed aristocracy in the State are all vitally interested in opium. Their combined income from it is no less than 55 lakhs yearly, not to speak of the vast investments made by the State and the ryots in irrigation works, the accumulated advances of years made to cultivators and the accumulated outstandings of revenue demand against them; all which would come to several crores of rupees, and is staked on opium alone.

2. There is no other irrigated crop that combines in itself so many advantages as opium, and none could be grown in this part of the country half as successfully or profitably as opium. Under present circumstances wheat would be the best substitute for opium. But it cannot bring to ryot or Sirkar one-eighth of what opium brings.

3. Opium as an article of consumption is highly esteemed by the people. It serves manifold uses, is under no sort of religious or social ban, is not only harmless, but positively beneficial when taken in moderation, and is, for these reasons, consumed very generally. Bad effects follow, not from the use, but the abuse, which is altogether exceptional. Moderation is the rule, and in moderation opium is a blessing as compared with liquor and other stimulants.

4. There is no case made out for the suppression of opium for non-medical purposes. The evil sought to be remedied by it does not exist to any appreciable degree, and if artificially checked may give rise to one greater. Lastly, nothing that India may do will operate deterrently upon China.

5. To carry out the plan of prohibition it will be necessary to institute an extensive preventive machinery, which, besides a heavy burden on the finances, will be extremely vexatious to work, and needlessly oppressive to the people.

6. The suppression of opium will necessarily encourage the spread of liquor, which means physical, moral, social, and religious degradation and misery to India such as no nation ever came to.

7. The suppression of opium will be looked upon by the people as an encroachment not only on their pecuniary interests, but also on their long-cherished usages, rights, and sentiments, and is calculated to cause serious and universal discontent accentuated by a ludicrous notion ruling among the illiterate masses that the whole and sole object of the movement is to encourage liquor at the expense of opium, and aggravated by the inquisitorial and vexatious operation of preventive measures.

8. Supposing that, setting aside these considerations, the British Government resolved to do away with opium in British India, they could not either compel or induce the Indore State to do the same. Considering the political relations between this State and the Paramount Power so far as they are known to and believed in by persons not in the political line, compulsion is out of the question in this matter. Nor can the Indore State allow itself to be induced to adopt the prohibition policy, which means the permanent relinquishment of half its entire revenue as well as of its outstandings and invested capital representing crores of rupees.

9. Similarly, no change in the arrangements in respect of the transit of opium from this State through British territory would be justifiable. The State cannot be deprived of its liberty to export opium so long as it pays the duty imposed by the British Government. Even an increase in this duty beyond the reasonable limit would be unconstitutional, much more would it be so to bar all exportation.

10. The idea of awarding compensation is extremely impracticable. To compensate the Dubar alone is not sufficient. The cultivators, traders, and landholders would be equally entitled to compensation. It is inconceivable how it will be possible to compute the loss and distribute the compensation individually in their case. Lastly, no money compensation can really make up the loss of a natural resource vouchsafed by God to man.

(Signed) R. J. BHIDE,
Accountant-General, Indore.

25.

ABSTRACT of the EVIDENCE of BALKRISHNA ATMARAM GUPTA, Inspector-General of Police and Member of the Indore State Council.

Education and Experience.

Student of the Grant Medical College for three years; author of a treatise on agriculture; member of the Royal Agricultural Society of England and F.L.S.; nine years' experience of collecting raw materials for exhibitions, and preparing compilations, based on personal knowledge of the Indian artisans, for the Bombay Government "Gazetteer"; as Dr. J. M. Campbell's assistant visited England as official delegate to the Government of Bombay at the Colonial and Indian Exhibitions, 1886.

Substance of Evidence.

Soils producing opium in this State cannot as profitably replace its cultivation by the introduction of the ever-thirsty sugar-cane, the already ruined and deplorably under-sold al and indigo dyes through cheaper and fugitive importations, or the much cheaper and more perishable crops of garlic, onion, wheat, linseed, mustard and turmeric.

Opium cultivation is popular among farmers because it requires less time and yields larger profits than other

APP. XIII.
Central India.

APP. XIII.
Central India.

erops, with the unavoidable scanty supply of water in this territory.

As a medical student with special opportunities for studying the habits of Indian artisans, I find that the moderate or gradually increased use of opium does not do any harm, and that, on the contrary, men addicted to its use work more carefully and attentively than others, and can sustain the strain of continuous work much longer. Like the author of a book on phrenology that I read years ago, I would proclaim, "Give me an artisan" or craftsman who eats opium, and I will give him "double the wages," in the place of or rather side by side with his motto, "Give me the man that sings while at work, and I will give him double the wages." A large proportion of the farmers and artisans of this State take opium and give it to their children.

As Inspector-General of Police, commanding a force of about 5,000 men, I find by experience that policemen taking opium are healthy, willing, and reliable watchmen, and are never violent. Among the criminals of the State gaols the proportion of opium-eaters is small compared with others.

As a literary student, and one who has to do hard mental work, I confess that, whenever I feel taxed and over-worked and deprived of sleep, I apply tincture of opium to my head, or, in its absence, opium mixed with water, and positively find great relief.

During old age and infirmity people find opium invaluable.

(Signed) B. A. GUPTA.

23rd December 1893.

26.

ABSTRACT of the EVIDENCE of DAYAMBAKSH MAJOR, acting Adjutant-General, His Highness Maharaja Holkar's Army.

Nearly 50 per cent. of the army take opium.

Opium wards off from an opium-eater the effects of cold and wind.

Poppy-heads are used as medicine and are also given to horses, bullocks, &c.

27.

ABSTRACT of the EVIDENCE of MUHAMMAD HIDAYAT KHAN, Karpardaz of Khilchipur State.

I am an old inhabitant of the Gwalior State, and hold jagirs in that State as well as in Khilchipur. I have been a Karpardaz of this State for six years. The people of my place eat, cultivate, and trade in opium. These are the sources of my information.

The area under poppy cultivation in the State is 6,000 bighas, rental of which amounts to Rs. 27,000. The total income of the State, including cesses, &c., amounts to Rs. 51,000. There is no other crop as profitable as opium. Sugar-cane cannot be grown with advantage owing to bad land and insufficiency of water; besides, its cultivation is expensive and entails much labour. The method of indigo cultivation is not known here, and is, moreover, considered disreputable. Wheat would only pay Rs. 12,000 per annum and cause a loss of Rs. 39,000 per annum to the State.

2. Opium cultivation is over in a short time. It pays the cultivator about Rs. 22 per bigha.

3. Traders have no fear of loss in this trade, as opium does not deteriorate by lapse of time, but improves in quality, whereas other commodities do deteriorate. Poppy supplies oil, oil cakes; poppy seed is also used as vegetable. In opium fields juar and fodder for cattle are also produced. Opium is not used for the sake of luxury, but medicinally to maintain health. It will be difficult for opium-eaters to forsake it. Liquor cannot compete with opium, as it is costly. Opium-eaters do not commit crime or become turbulent, but drunkards do. People must have some intoxicant. The chiefs would not like abolition of the opium cultivation. If any chief do agree to it, he would object afterwards. The British Government would suffer a loss too.

Opium is useful for diseases produced by cold as well as diarrhoea. It is useful to children too.

I think its cultivation should not be stopped.

28.

EXTRACTS from the ABSTRACT of the EVIDENCE of PANDIT SURJ BALI BAJPAI, Pensioned Head Pandit, Sehore High School, at present an Octroi Collector, Sehore, in Central India, and deputed to represent the Guaranteed Thakurates in the Bhopal Agency.

I am a servant of Government of 32 years' standing. I was pensioned in 1891 from Government service in its Educational Department. At present I am an Octroi collector in Sehore. I have been in this country from the last 20 years. I have complete experience of the growth, sale, and consumption of opium.

In the Guaranteed States the land under poppy cultivation is 2,789 bighas; the out-turn of opium from the same amounts to 348 maunds; 48 maunds of this is consumed in the said estates and the rest is exported to Sehore, Ujjain, and Indore.

The population of these estates is, according to late census, 35,920; of these 2,068 are poppy cultivators.

The opium is consumed in two different forms: (1) it is eaten, and (2) it is drunk. Madak and chandu is scarcely known here. In one or two jagirs madak is smoked, but chandu is entirely unknown. The average account of opium consumers comes to 20 per cent. Children are also allowed opium up to the age of three to four years. The opium consumption is commenced generally after the age of 25 to 30 years. The opium consumption protects the consumer from asthma, fasli fever, rheumatism, &c., as well as diarrhoea.

The consumer of opium cannot give up the habit if he has continually enjoyed it for a period of five to six years and his daily dose has gone up to one masha. If they were forced to give up the habit they would prefer committing suicide than to bear the pains of being without the consumption. The man who has resolved to destroy his life is prepared to do anything. In these estates there is hardly a man who does not consume opium, and if the consumer does not receive his daily dose in time he suffers pains in body, and is then utterly useless for any work.

If the cultivation of poppy was prohibited the Guaranteed Thakurs would suffer considerably. They shall not only suffer in person, but that their present receipts will be reduced to one-fourth of what it is at present, and the said chiefs shall be unable to manage their affairs as well as they do at present. The present Guaranteed Thakurs are the descendants of those who robbed and looted in Gwalior and Indore States. The Government of India, when the settlement of Malwa was made most wisely brought them under control and settled them, making due arrangements for their and their families' maintenance. Should their receipt be cut down by the prohibition of opium cultivation and trade they are sure to return to their ancestors' habit (which they have been made to give up with considerable amount of labour and pecuniary outlay) and give trouble in the country. Many idle and out-of-work men may join them. There is every probability.

A jagirdar, when conversing on the subject of prohibition, declared that if the prohibition were to be enforced he had better be killed before any steps to that end were taken. This was uttered by him in excitement, and it was not in joke that he uttered the words.

From this it could be seen that the result of prohibition would bring about nothing but rebellion.

29.

ABSTRACT of the EVIDENCE of THAKUR KESARI SINGH, of Piploda, in WESTERN MALWA.

1. The extent of poppy cultivation in the Khalsa is nearly 2,800 bighas, and the amount of opium produced in each bigha is approximately 10 seers.

2. The tax levied on opium is 13 annas per maund; and one anna extra is charged per maund as the khuta tax. On the whole the duty comes to 14 annas on every maund.

3. The amount of revenue realised from the rent of poppy lands is Rs. 70,000, and that of the duties levied on opium is Rs. 500.

4. In my opinion the indulgence in moderate quantities of opium does no injury to the consumer. But it is better to abstain from indulging in it, than to betake oneself to it.

5. Forty per cent. of the population use opium for medicinal purposes. The old and the infants are the only persons included among those who use it as medicine; and there are 60 persons out of 100 who indulge in it as an article of diet.

6. There are a very few people who injure their health by taking opium in excess, I mean only five or six in a company of 100 persons.

7. Among the persons of all the other castes in general and among the Rajputs in particular the practice of taking laudanum has got so much prominence that none of the persons of any community has been saved from indulging in kasumba, and in consequence of this the practice has not been regarded as degrading or bad.

30.

ABSTRACT OF THE EVIDENCE OF RAI BAHADUR BALA PRASAD, Diwan of Sitamau.

1. About 5,981 bighas of land is cultivated in Sitamau State, and that the opium produced amounts to 1,122 maunds.

2. The poppy land is taxed at an average rate of Rs. 16 per bigha.

3. The amount of revenue realised by the Sitamau State, both from rent of poppy lands and by duties levied thereupon, comes to about Rs. 1,03,758, i.e.—

	Rs.
Rent	95,696
Duties	8,062
	<u>1,03,758</u>

4. The undersigned is of opinion that a moderate consumption of opium is not in any way injurious; but, on the contrary, somewhat beneficial in this part of the country, which is malarious indeed.

5. About 187 maunds of opium is used by the people of Sitamau State as medicine and article of diet within a year.

It is used by the people of the State generally, and not by a small portion of the population.

6. There are very few persons in this State who have injured themselves by taking opium in excess, i.e., perhaps one per thousand out of the opium-eaters.

7. The eating of opium in a moderate quantity is not regarded as bad or degrading by the respectable people; but, on the contrary, a person who does not take opium on ceremonial occasions is considered discourteous in this part of the country. The distribution of opium liquid, which is called kasumba, when exchanged amongst friends by their own hands, is considered a mark of great respect at the time of entertainments.

(Signed) BALA PRASAD,
Diwan, Sitamau State.

Sitamau, 11th January 1894.

31.

ABSTRACT OF THE EVIDENCE OF BIAS HARKISAN, Amin of Bori, in Jhabua.

I am Amin of Bori in Jhabua. I have served the State as revenue officer in different capacities for upwards of 30 years. I am acquainted with opium traders, consumers, and cultivators.

The area under opium cultivation is 978 acres, yielding an annual revenue of Rs. 13,480. The annual production is about 250 maunds, the greater part of which is exported. Opium is the most remunerative crop.

The initial expenditure is less than that of other crops, and the soil yields two harvests.

On account of low prices during the past few years, the cultivation of opium has diminished, the least fertile land being put under different crops.

Opium is cultivated by all classes of agriculturists, but most by the best cultivators, such as Sirvees, Koonbis, and Malis. The average yield per bigha is 11 seers. The net profit to a cultivator may be estimated at Rs. 22 per bigha.

The State does not monopolise the sale of opium or in any way interfere with consumption in any form. All classes use opium, but the habitual one is most common with Rajputs and allied clans, and least common with the Bhils, who prefer alcohol. Opium is taken to counteract the infirmity of old age, to remove pains and weakness resulting from asthma, bronchitis, piles, diarrhoea, dysentery, and rheumatism, and as a preventive against fever.

It is given to infants to prevent colds and cough. Occasional drinking of kasumba is one of the common habits of the people; while smoking is comparatively rare.

Opium is also occasionally used as cattle medicine.

Opium is considered generally wholesome, and habitual consumers become healthier and stronger, provided they, at the same time, get nourishing food; without that they sometimes become emaciated and pale.

Opium is an important preventive against malarial fever, and moderate consumption tends to keep down the mortality rate. Abuse is very rare.

The ordinary dose is small, and is not usually increased.

The total loss resulting from prohibition of cultivation would exceed Rs. 60,000, and two-thirds of this loss would fall on the State, thus necessitating fresh taxation. It would be most unpopular with all classes, and even restrictions could not fail to produce loss and widespread discontent. The State could not undertake to interfere with the consumption of opium without serious risk, and the probability is that any restriction which could be successfully introduced would lead to the more extensive use of alcohol or other drugs.

I can, if desired, give full particulars regarding production and consumption. External trade is, as already said, limited to the export of the raw opium to Rutlam. As regards internal trade, almost every shop-keeper sells opium in small quantities and without restriction.

32.

ABSTRACT OF THE EVIDENCE OF LALA LACHMAN PERSHAD, Munsarim, Salt Department, in the Datia State (Bundelkhand).

My name is Lachman Pershad. I am a Motmid of the Datia State. Formerly I was a Boundary Munsarim.

Twelve months ago a new department for the management of salt, saltpetre, and opium was created. I am now munsarim of that department. When any occasion arises I am deputed to make local inquiries. I can inflict fines and other punishments subject to the approval of the Durbar. I have now been deputed to give evidence before the Royal Commission. To the best of my ability I have made inquiries from the cultivators, traders, and eaters of opium, and from the information thus derived, I am prepared to give the following evidence before the Commission:—

1. Datia is a native State near the border of Jhansi, in Gwalior, and the British districts of Jhansi and Jaloun.

2. Last year in about 252 bighas opium was cultivated, the average produce of which amounts to 31 maunds. This year 315 bighas of land has been brought under poppy cultivation.

Kachhis generally cultivate opium. In the pargana of Seondha, Kachhis have grown opium for many generations. In other parganas, in some years, opium is produced in 5 or 10 bighas, and in some years it is not cultivated at all. On inquiry the cultivators of opium state that they pay Rs. 8 per bigha for opium land as well as for other land in which they cannot grow opium, but still cultivate, simply because by opium cultivation they can well maintain themselves

APP. XIII.
Central India.

and their children, and can easily borrow money on the security of opium fields. Moreover, they can grow, in the irrigation channels of opium fields, vegetables and things which their women sell, and thus support the family. They also say that they like their old occupation. It is well known that one can appreciate the occupation he has been following all along. The cultivators estimate their loss about Rs. 3,000 per annum. If opium cultivation, which is their main occupation, be stopped, they would be ruined, because their marriage and other expenses are provided for from opium cultivation.

3. The ryots say that they give opium to their children as a protection against cold and other kindred diseases. Besides, by giving opium, the children sleep quietly, and allow the women to perform their domestic duties. It is used medicinally for sore eyes, hurts, rheumatism, and for various other diseases. If opium is prohibited they would suffer too.

4. Opium-eaters are very anxious at the idea of this, and think that their lives are at stake, as by use of opium alone can they move about.

5. Traders of opium assert that they never expect a loss in this trade. They say that they purchase crude opium at Rs. 4 per seer, manufacture and sell it at Rs. 8 per seer to retail vendors, who derive a profit of about Rs. 2 per seer; that they get a living out of it; and that this trade does not entail hard labour but gives a good profit. They get a profit of about Rs. 32 per chest. Their estimated loss would be about Rs. 4,000. We export and import opium from Gwalior under passes issued by political agent, Bundelkhand.

6. The direct loss of the State, including land revenue, would be Rs. 5,578.

7. Experience shows that opium is advantageous for cold and diseases produced by cold, rheumatic pains, and eye diseases. In old age its use is beneficial. Its use for youths, as well as the use of chandu and madak, are injurious also when taken in excess; it is injurious if good food is not procurable. But an overdose of everything, even medicine, is bad. This is the general opinion, but whatever Government thinks is right.

8. The Durbar says that very little opium is produced in this State. Whatever Government orders, after hearing the representations of other States in which opium is largely produced, will be accepted by this State as well.

32.

ABSTRACT of the EVIDENCE to be given by Mr. Mahomed Baksh of Bagli.

1. It is customary here to take opium at marriages, festivals, &c., and on occasions of conviviality and mourning.

2. Opium is used as a prophylactic against climatic influences and disease. It is consumed by old and infirm people as also by those who are liable to great exertions. It is given to infants and is used as a medicine.

3. Those who take it in moderation are healthy and perform their ordinary work satisfactorily.

4. Two thousand four hundred and twenty-three bighas of land yield revenue to the Thakurate under the head of opium, and bring in Rs. 31,000 on account of rent, and Rs. 3,432 on account of dues, tax, and levies, making a total of Rs. 34,432.

5. One thousand wells have been sunk at a cost of 3 lakhs of rupees for the purpose of irrigation of opium crops. These would fall into disuse if opium cultivation were to cease.

6. If the cultivation of opium were to be stopped, wheat, gram, and such other grain would be sown. The rate of opium land varies from 15 to 20 rupees, while that of corn land from 1½ to 2 rupees, and consequently Rs. 3,200 only would be realised instead of Rs. 34,432. Under such circumstances the loss may be calculated as follows:—

- (1.) A yearly loss of Rs. 31,232 to the estate, including rent and tax, but excluding the cost of wells, which amounts to 3 lakhs.
- (2.) A yearly loss of Rs. 25,000 to the cultivators and the labourers.
- (3.) A yearly loss of Rs. 20,000 to the traders.

7. The Thakurate seeks to improve the cultivation of opium, and it is hoped that improvement will follow. The income of the Thakurate and its people entirely depends on the cultivation of opium. The Thakurate cannot sustain the losses which would result from the prohibition of the culture of poppy. Even if the above-mentioned losses are recompensed, the Thakurate cannot bear the loss to which it will be subjected in case the opium cultivation is stopped.

APPENDIX XIV.

APP. XIV.
Baroda.

STATISTICS regarding PRODUCTION and CONSUMPTION of HOME-GROWN OPIUM in the BARODA STATE, founded on the figures of the Years 1883 to 1892.

[Presented by A. F. MACONOCHE, Esq., Settlement Officer of the Baroda State. See Question 22,629.]

NOTE.—The last column shows actual consumption of both Baroda and Malwa opium. The rest of the columns treat of Baroda opium only; the last column, therefore, does not tally with any of the others.

APPENDIX XVI.

APP. XVI.
Bhaunagar.CORRESPONDENCE regarding the OPIUM QUESTION in the
BHAUNAGAR STATE.[Handed in by LALUBHAI SAMALDAS, *see* Question
22,899.]

No. 137 of 1893.

SIR, Dated 30th December 1893.

I HAVE the honour to acknowledge the receipt of your letters, Nos. 4,145, and 4,489, dated respectively the 31st October and 29th November last regarding the appointment by Her most Gracious Majesty the Queen Empress of a Royal Commission of inquiry into matters connected with the growth, sale, and uses of opium; and with reference thereto to state that should the Commission feel disposed to have any of its sittings at Bhavnagar, it will give me much pleasure to welcome the members as my guests, and to afford them every means within my power of obtaining the information they are in search of.

2. As regards the existing arrangements with my own State, I cannot do better than forward, for the information of the Commission, a copy of my letter, No. 87, of the 25th June 1891, which contains a brief account of the position of the State in the matter of this drug from the earliest time of British supremacy to the present date. Before 1820 this State was as free as it could be in trading in opium and in growing the poppy, while at the present time the growth of poppy, even for medicinal purposes, is prohibited, and the State is supplied by Government on payment of a pass duty of Rs. 650 per chest, a charge previously unknown.

3. From this, it will, I think, be understood that if the production and use of opium for non-medical purposes are prohibited throughout British India, such prohibition cannot, in my opinion, be extended to the native States without the consent of the States, that is, the willingness of the States to adopt a similar measure; or by payment of proper compensation.

4. I attach a list of names of witnesses whom I would produce to the Commission for examination, whose opinions would, I believe, be their own, based on experienced observations, and expressed under a full sense of the responsibility attaching to the same.

I am, &c.

(Signed) TAKHTSINGJI,

The Political Agent, Maharaja of Bhavnagar.
Kathiawar.

No. 87.

SIR, Dated Bhaunagar, 25th June 1891.

WITH reference to your letter, No. 268, of the 28th February last, on the subject of the traffic in opium, I have the honour to state that the questions put by Government necessitated a search into old records and accounts which were not handy, and my reply has in consequence been delayed.

2. I will take the questions seriatim:—

(1.) Has it been found practicable to enforce the rule as to the minimum retail price?

So far as I am able to ascertain the supervision exercised over the licensed dealers in this State has been of the strictest possible kind, and, with very few exceptions, I have no reason to believe that in enforcing this limitation there has been failure of the terms of the contract, in other words, that the opium obtained at Rs. 10-8 per seer is ever sold at less than Rs. 11-4.

In a letter addressed by me to the Political Agent on the 24th April of last year (No. 40), a copy of which was furnished to your with my letter, No. 55, of the 24th April last, I endeavoured, by taking the normal consumption of one tola per head per annum, to show that it was improbable the Bhaunagar dealers could be possessed of any surplus stock which it would, we might say, be needful for them to dispose of at less than the minimum rate. I have looked well about for some more convincing proofs than this argument affords, but can only fall back on the fact that very few complaints have reached me of the contrary being the case, and these few I will briefly note below:—

(a.) Letter from Major Ferris, No. 1,116, dated 22nd November 1889, intimating that the "Opium sub-inspector of Ahmedabad had reported to the collector that he had personally purchased from the Bhoomli shop four tolas of opium for one rupee, and at each of the shops at Madhda, Vartej, and Trapaj, 8 annas worth at the same rate."

(b.) Endorsement from Mr. Sladen, No. 1,123, of the 4th November 1890, covering correspondence beginning with a petition from the Government vendor of opium at Dhollera complaining that the Bhaunagar licensees in Madhda, Vartej, Gangli, Trapaj, Otaria, and Sandhera were selling opium at less than the minimum rate.

(c.) Letter from Captain Lyde, No. 55, of the 20th April 1891, forwarding an extract from the Dhandhuka magistrate's returns of two cases of smuggling, from "which it appeared that in both cases the opium was smuggled into the Dhandhuka district from the Bhaunagar State."

Every possible inquiry was made into the two first mentioned complaints, with the result that only in reference to Madhda, in the second, could any proofs be found. In the third case I asked for particulars of the evidence alluded to in the magistrate's return, and learn from your letter, No. 809, of the 10th instant, that the accused, who is a British subject himself, said he came from Otaria (a Bhavnagar village), but which he subsequently denied.

On the other hand, as shown in my letter, No. 40, the number of instances in which opium has been smuggled into my State by reason of the large stock in possession

* These two witnesses were examined.

of the Government farmers (as much as six times the normal wants of the Government district) show clearly that the maximum rate is not enforced in the territories surrounding mine.

Briefly, then, I believe the rule is enforced as much as any rule of the nature can be in my own State, but is not enforced in the territory adjacent. Therefore that it is not generally enforced.

3. (2.) If it is found that the rule is generally enforced, has it had any beneficial effect on the opium revenues of the British district or the native State concerned?

My conclusion above that it has not been generally enforced renders any further notice of the question unnecessary; but I contend that it has been enforced in my own State, and in my letter, No. 40, which, as I must refer to very frequently, I attach a copy, I have shown, I think, clearly that this enforcement has resulted in a distinct loss.

4. (3.) Supposing that (1) is answered in the affirmative and (2) in the negative, is the result due to (a.) the minimum retail price having been fixed too high or too low? or (b.) to any peculiarities of the system of opium administration in the British districts or native States concerned? In the latter case, is the defect such as cannot be conveniently remedied?

I can only take this from my own standpoint, and finding (1) in the affirmative and (2) in the negative, proceed to the sub-questions:—

(a.) I do not think the minimum retail price has anything to do with it, unless there is any truth in a report that is in current that Malwa opium can be obtained direct by a Government farmer at Rs. 1-4 less than the same opium is possible to the vendor in a native State. At the same time I do not understand upon what grounds there should be any maximum or minimum price at all, so long as Government can ensure all the opium that is sold in the country being obtainable only from Government stores and treasuries or on Government passes.

(b.) This question, to my mind, touches at the root of the difficulty, and in my letter, No. 40, I have fully entered into the matter. The result is due entirely to the system of farming or sales in the British districts, where the contracts are given to the person who buys the largest quantity of opium irrespective of the possible needs of the district he has contracted to sell in. The farmer must sell the stock within his contract time, and it is, of course, better for him to be satisfied with a low profit than to have a large quantity of the drug on his hands, and what that large quantity is at Gogha I have shown to be six times the normal consumption of the district he supplies.

The remedy to me appears simple. Let sales from treasuries be regulated by the population to be supplied, any excess above this being satisfactorily explained before purchases over and above the normal consumption are permitted. If this plan, which is in strict accordance with paragraph 5 of Major

"The licensed dealer shall not sell opium to anybody not belonging to his district." Ballantyne's notification of September 1820 (Asso Sud 2 of Samvat 1876), was adopted, I believe the sales in my own State would soon rise to the normal estimate of one tola per head.

5. I come now to the last of the questions.

(4.) "If question (1) is answered in the negative, should the status quo ante be restored? or can any other arrangement be suggested?"

The periods which mark the different phases of the trade in opium in Kathiawar are briefly given below:—

Before 1820.—Previous to this year no restrictions whatever existed in the import and export of opium in and out of the province. An open trade with China and other countries was carried on from the different ports of Kathiawar, and poppy was grown wherever it was needed or found to pay.

1820-1828.—In 1820 with a view to prohibit the export of opium, "not for increasing the duty carried thereon," the British Government, by notification of Major Ballantyne, framed rules, subsequently agreed to by the chiefs, in which it was stipulated that the opium required should be obtained only from the Government stores, and the price shall be the aggregate of the original cost of the opium purchased by

Government together with the expense of carrying the same.

1828-1851.—On the 1st October 1828 a yád was issued by Mr. Blane, political agent of Kathiawar, in which, on the chiefs consenting to prohibit opium traffic by foreigners in their territories, the following conditions were prescribed:—

That the opium would be supplied only to the chief or his authorised agent, who should not be a foreigner; that care should be taken for transit and sale, purchases being allowed to the extent of four months' ascertained consumption; that the opium issued should be secured by Government seal; and that one seer of opium in weight, equal to 38 rupees, be issued at the rate of Rs. 5-8 per seer of the first quality and Rs. 4-8 of the second.

1851-1878.—In 1851 Colonel Lang, by notification, increased the price to Rs. 22 per seer in common with the territories administered by Government, but on a representation it was, by the same officer's notification, No. 635, of the 21st October 1857, reduced to Rs. 15, while the rate in the Government districts was retained at Rs. 22. This reduction was nearly proportionate to the then existing amount of pass-fee, viz., Rs. 400 per chest of 140 lbs., but the payment was not reckoned as a pass-fee.

In the interim a notification was issued by Colonel Keatinge in 1863 intimating his fears about smuggling, and requiring strict compliance to existing arrangements. In response to this the Bhavnagar Darbar gave utterance to a grievance generally felt that the opium sold at the stores was Khandesh opium, a much inferior article to good Malwa, and assuring the political agent of strict adherence to the arrangement if an article of good quality was supplied at the settled price.

And in 1870 feeling that the rules were not sufficiently understood, Colonel Anderson issued a notification, No. 7, of the 13th April of that year.

Since 1878.—On the 20th May 1878 (No. 13) the Treasury officer at Rajkot issued a notification that the sale of opium to licensed traders was stopped, but opium would be supplied to those States that will agree to pay the Government pass-fee when Government so desire it. Simultaneously a pass-duty of Rs. 650, hitherto unknown, was imposed.

A few of the minor States agreed, but the others refusing, a memorial was presented to Government protesting against this order as injuriously affecting their right to purchase the drug from Government at cost price. In the meantime the full pass-duty was imposed until Colonel Barton's notification of the 18th February 1882, which ordered a refund of one-third. But this notification placed the relationship of the States with Government on an entirely new footing, for in paragraph 4, while intimating the increase of the rebate to the States on the pass-fee from one-fifth to one-third of the full duty, it also enunciates that—"It must, however, be understood that the right of the British Government to impose the full duty is not affected by this concession."

In November 1882 the pass-duty was increased to Rs. 700 per chest.

To which of these periods, I would ask, am I referred in regard to the first half of the question. In regard to the second half—"Can any other arrangement be suggested?" it is, I assume, any other arrangement than the present one is meant.

6. I recognise most heartily the need of the British Government to hedge around the opium traffic with such safeguards as will bring into the British Treasury the full measure of the income to be derived from this monopoly, and while I have in another place pointed out how the rules now in force trench on my prerogatives of independence guaranteed to me by the Queen-Empress, I approach the question now put in the spirit in which it is put and with a full desire to render to the Paramount Power my hearty co-operation in what is required to be done. I claim, moreover, to have always dealt with the subject in the same manner.

7. Diligent search has been made in my records to arrive at some idea of what the opium revenue in my State has been under the varied conditions through which the traffic has passed, but I regret to say I cannot obtain what I need in any reliable form prior to

APP. XVI.
Bhavnagar.

Bhaunagar.

1870. I give below the information I have been able to collect:—

Year.	Total Sale in Lbs.	Amount received from Ijardar.	Amount of Rebate on Pass-fee.	Total Income.	Average Consumption per Head in Tolas.
		Rs.	Rs.	Rs.	
1870 - "	—	—	—	Rs. 20,737	—
1871 - "	—	—	—	21,048	—
1872 - "	—	—	—	15,513	—
1873 - "	—	—	—	16,925	—
1874 - "	—	—	—	19,494	—
1875 - "	—	—	—	18,178	—
1876 - "	—	—	—	20,878	—
1877 - "	—	—	—	20,636	—
1878 - "	—	—	—	21,886	—
1879-80 - "	6,390	5,510	7,859	13,369	0.60
1880-81 - "	7,260	15,597	16,086	31,683	0.72
1881-82 - "	6,569	13,024	6,470	19,494	0.65
1882-83 - "	4,737	3,682	7,722	11,304	0.47
1883-84 - "	6,567	18,389	10,500	28,889	0.65
1884-85 - "	714	19,001	18,200	37,201	0.86
1885-86 - "	9,048	12,001	5,833	17,834	0.89
1886-87 - "	8,139	12,001	14,700	26,701	0.80
1887-88 - "	8,038	16,601	13,066	29,667	0.79
1888-89 - "	6,811	16,601	11,200	27,801	0.67
1889-90 - "	7,492	16,601	16,683	33,284	0.74

which gives an average for the nine years up to 1878 of Rs. 19,477 per annum, and for the 11 years since of Rs. 25,262. This is, of course, in favour of the present arrangement, but it shows also that if the Government recognised normal consumption of one tola per head per annum had been possible, my average revenue for the 11 years ought to have been Rs. 35,495; in other words, that the peculiar system of farming opium shops in British districts to men who will take the largest amount of opium from the Government stores, has led to an estimated loss to my State of over one lac and Rs. 13,000 in that short period of time.

That this normal consumption in my State was not possible I unhesitatingly assert is due entirely to the smuggling that takes place from British and other adjoining territory. I know of no other avenue by which my people could be supplied; and it is, of course, patent that the more opium that is legally obtained the greater my revenue.

8. As said above, the remedy appears to me to be simple. Let the recognised wants of each district be fixed, and only sufficient opium for the area to be supplied be sold, any demand beyond this being carefully scrutinised. Next, I would suggest that the position of the licensed vendors in both British districts and native States be fixed by a joint settlement with the officials concerned; isolated villages like Chitra, a few miles from Bhavnagar, belonging to the Ahmedabad Collectorate, and Otaria, a Bhavnagar village surrounded by British villages, being prescribed; that the rates at which these vendors can obtain the opium for retail sale be the same everywhere; and, finally, that every case of smuggling or illicit sales be distinctly proven, native States not being required to accept as sufficient proof the simple assertion of any official of illicit sales having occurred, as was required of me in the Shera from your office, No. 1,116, and dated 22nd November 1889, alluded to above.

I am, &c.
(Signed) TAKHTSINGJI,
Maharaja of Bhaunagar.

COPY of LETTER, No. 40, dated 24th April 1890, to F. S. P. LELY, Esquire, C. S. Political Agent, Kathiawar, from His HIGHNESS TAKHTSINGJI, G.C.S.I., Maharaja of Bhaunagar.

SIR,

WITH reference to your endorsement of the 8th August last, calling on me to adduce any instances of the illicit sale of opium in Bhaunagar territory by the farmer of the Gogha district, I have the honour to forward herewith a statement giving the fresh cases tried in my courts of such illegal sales.*

2. In a recent communication from the Assistant Political Agent, Gohelvad, my attention was invited to the falling off in the sale of opium in the Gohelvad Prant in 1888-89, and Major Ferris remarked that "the hypothesis naturally arises that more illicit opium" has passed into the prant than in previous years. "There can, I am sure, be no other conclusion in the matter; but it is not, I submit, through the Gogha Ijardar alone that this smuggling takes place.

3. Interlaced as the prant is with the villages of of Gogha, Dhandhuka, and Ranpur, forming portions of the Ahmedabad Collectorate on one side and with the villages of the Amreli Mahal, belonging to His Highness the Gaikwar, on the other, the strictest vigilance on the part of my police has not succeeded in putting a complete stop to this contraband. It occurs on all sides.

4. The records of the Political Agency will bear testimony to the many and continuous complaints made by my State regarding the loss my State suffers by the arrangements made by the collector of Ahmedabad for the sale of opium in the contiguous Government districts.

In Goghabarra alone retail shops have been permitted in no less than 16 villages, and in Dhandhuka there are a number close on the borders of my territory too. The farm is let to the man who undertakes to sell the greatest quantity irrespective of what must be well known is the normal consumption of the district. If the farmer fails to take the full quantity he stipulated for, he has to make good the loss to Government by payment of the full value of the chests short. He therefore sells all he can at the recognised rate, and the remainder at what he can get. It is more profitable to him to thus reduce his legitimate gain than to bear the entire cost of the opium he cannot legitimately dispose of, but which is forced upon him, if he is to have any chance of obtaining the farm at all.

5. In March 1885 the Commissioner of Customs intimated that a fine of Rs. 1,000 had been imposed on the opium farmer of the Gogha district for vending at rates lower than those fixed by Government, and that the collector had been requested to close the shops where such sales had been effected, and prosecute the salesmen criminally. In October of

the same year the farmer was again fined Rs. 500, "for," in the words of the deputy collector, "selling opium in large quantities to Bhavnagar people at lower rates than those sanctioned by the license." But it was in April of last year that a full acknowledgment was obtained from a Government official of the accuracy of my many representations on this subject.

6. In March 1889 the Abkari constable of Gogha wrote to the Mamlatdar of Gogha complaining that the Abkari constable of Bhaunagar was hindering the sale of opium at Chitra, an isolated Inam village surrounded by my land, and only a few miles away from my capital, containing a population of about 100; but where the sales averaged 2½ maunds per month. After some correspondence my explanation was forwarded to the collector of Admedabad, and by that officer to the Mamlatdar of Gogha, with instructions that he should personally make a searching inquiry into the matter. The Mamlatdar submitted his report on the 23rd April, and the following, I believe, accurately summarizes his finding:—

- That most of the allegations made by my State were substantially true.
- That Bhaunagar people do purchase opium from the retail shops under Gogha.
- That considering the population of the Gogha district, the sale of opium is abnormally large, e.g., at the retail shops of Chitra, Maglana, Kanad, Lakadia, and Kukad.

(d.) That although there are only 20 houses in the village of Chitra on the Gogha-Dhandhuka road, the sale of opium there averaged $2\frac{1}{2}$ maunds per month.

(Memo—The Mamlatdar is in error here in supposing, as he does, that this village is on the Gogha-Dhandhuka road. It is over two miles away from that line of communication.)

(e.) That though the Gogha farmer would not admit abnormally large sales, the Mamlatdar had evidence of sales at four tolas per rupee, and that this cheap rate doubtless attracted purchasers from the Bhavnagar villages.

(f.) That the Gogha farmer showed fictitious accounts, the names of those persons to whom five tolas and upwards were sold not being real.

(g.) That the Gogha farmer sold opium to retail salesmen of the Gogha district at rates lower than those sanctioned by Government, and the retailers again did the same. Instances are quoted which came under the Mamlatdar's own observations.

7. On the strength of this report the Gogha farmer was once more fined; and it seems to me that with this State paper in evidence, it is scarcely necessary for me to say anything more, but I would add the unimpeachable testimony of figures.

One tola per head of population is the average consumption of opium in the Ahmedabad district, and taking the population of the Gogha district to be 29,370 an annual sale of 739 lbs., or, say, six full chests would be expected. But the traffic returns of the Bhavnagar-Gondal-Junagad-Porbandar Railway show that the actual importation into Gogha during 1885-6-7-8 and 9 was 33, 33, 32, 30, and $32\frac{1}{2}$ full chests respectively, being an average of 32 or 26 chests more than Gogha had any need for. In other words, there is here an actual sale of six tolas against a legitimately probable sale of one.

8. I have said above that the Gogha Ijardar was not the only channel by which illicit sales took place. I would now ask that the sales in the Amreli Mahal of His Highness the Gaekwar's territory be also submitted to the test of figures.

The population of that district is 147,468, requiring for a fully sufficient consumption 3,687 lbs., or, say, 27 chests of opium. Compare this with the importation. On the 10th June 1887, 172 half chests were despatched from Sidhpur to Chital; in June 1888 the same quantity; while in 1889 the quantity was increased to 180 half chests, equal to an average of 87 full chests, or 60 chests more than the population could legitimately be expected to use up.

9. In further confirmation I would refer to the information given in the Shero by the Assistant Political Agent, Gohelwad, passed under date the 26th February 1885, to which I have added particulars obtained at page 160 of the Baroda Administration Report ending July 1887, from which it appears that in the Amreli Mahal in—

1878-79	3,310 lbs. were sold	= 0.90 tolas per head.
1879-80	4,165 "	" 1.13 "
1880-81	3,236 "	" 0.88 "
1881-82	7,468 "	" 2.05 "
1882-83	11,514 "	" 3.12 "
1883-84	12,486 "	" 3.38 "
1885-86	11,263 "	" 3.05 "
1886-87	11,294 "	" 3.06 "

which shows in the last four mentioned seasons a sale of over three times the recognised normal consumption. Comparing again the consumption per head of popula-

tion of the Amreli Mahal with three other Mahals of the Baroda State we have in—

APP. XVI.
Bhāunagar.

	1882-83.	1883-84.	1885-86.	1886-87.
Navsāri -	0.28	0.34	0.04	0.42
Baroda -	1.14	1.47	1.49	1.47
Amreli -	3.02	3.38	3.05	3.06
Kadi -	0.50	0.71	0.79	0.74

showing a consumption of double over Baroda itself, four times over Kari, and seven times over Nausari. The poppy is grown at Kari and Nausari, and this would account for the low figures for these districts, but why, it might be asked, should Amreli be more than the double of Baroda. The conclusion, I submit, can only be one, there must have been illicit sales.

10. I would take now the consumption in my own State, numbering roughly 403,000 souls—

In 1885-86	-	9,049 lbs.	= 0.89 tola per head.
" 1886-87	-	8,140 "	0.80 "
" 1887-88	-	8,039 "	0.79 "
" 1888-89	-	6,812 "	0.67 "

or an average of 8,010 lbs., or nearly 0.8 tola per head.

11. And next, taking the actual consumption for 1888-89—

In Bhaunagar -	6,812
" Gogha -	4,550
" Amreli -	12,670

we have a total of 24,032 lbs., which, distributed over the following population—

	Lbs.
Bhaunagar -	430,000
Gogha -	29,370
Amreli -	147,468
In all -	579,838

gives an average consumption of 1.65 tolas per head, and clearly shows that while Government has not been a loser by the sales that have been effected, a point specially mentioned by the Mamlatdar in his report above quoted, my State has suffered in that one year alone a loss of over Rs. 16,000 in revenue as follows:—

Allowing 1.65 tolas as the actual average consumption per head on a population of 403,000, the opium that should have been imported by my State, had contraband not existed, would have been

$$\frac{403,000 \times 1.65}{40 \times 140} = 118.6 \text{ full chests,}$$

while the actual importation has been only 48.6, giving a difference of 70 chests, which at one-third its value, viz., Rs. 233-5-4 per chest equals Rs. 16,333-5-4.

12. I can only add, in conclusion, that I adopted the substance of the draft rules submitted to Government by the Government Resolution, No. 4,963, dated 3rd July 1883. Commissioner of Customs, the main object of which was to effectually prevent the sale of opium in my State by any but licensed vendors; that my officers have been rigid in enforcing those rules, and that with the above particulars before me I see no possibility of any prevention of illicit sales excepting by the one way of Government determining what the needs of a district or State is, and selling only to the vendors of that district a quantity sufficient for the same, requiring full particulars for sales beyond the recognised ordinary consumption.

STATEMENT of the CASES of SMUGGLING of OPIUM tried by the CITY MAGISTRATE of BHĀUNAGAR from 1886 up to 1890.*

No.	Name of the Accused.	Quantity of Opium and the Place from whence it was brought.		Facts of the Case.	Result of the Case tried.
		Quantity.	Place from whence it was brought.		
1	Parhsotam Madhavji	Lbs. tolas. 3 3 $\frac{9}{18}$	Chitra under Gogha.	The accused was on suspicion apprehended with the opium on his person. He admitted the commission of the offence before the magistrate, and was convicted.	The accused was sentenced to pay a fine of Rs. 5, or in default thereof to 10 days' imprisonment with hard labour.
2	Nanchand Bechar -	0 7 $\frac{1}{6}$	Do. -	The accused was on suspicion apprehended with the opium on his person. On evidence of having been in possession of the opium not licitly purchased, he was convicted.	The accused was sentenced to pay a fine of Rs. 2, or in default thereof to eight days' rigorous imprisonment.
3	Bhagwan Ladha -	1 8 $\frac{1}{2}$	Do. -	The accused while returning to Bhavnagar from Chitra, was on suspicion apprehended with the opium in his possession secreted on his person. On evidence he was convicted.	The accused was sentenced to pay a fine of Rs. 25, or in default thereof to suffer one and a half month's imprisonment with hard labour.
4	Ganpat Gokul -	1 22	Do. -	The accused person in this case was a licensed vendor of opium at Chitra. He was apprehended with the opium on his person. Another person who had accompanied him at that time bolted away. The opium found on the person of the accused was of the kind usually sold in the Gogha district by the licensed vendors of that place. On evidence the accused was convicted.	The accused was sentenced to suffer rigorous imprisonment for two months, and pay a fine of Rs. 50, or in default thereof to further imprisonment for one and a half months with hard labour. •
5	Nagji Bhikabhai -	0 21 $\frac{1}{2}$	Tansa under Gogha.	The accused in this case was apprehended with the opium on his person, he having purchased it at the village of Tansa under Gogha from the licensed vendor of that place. He was on evidence convicted.	The accused was sentenced to pay a fine of Rs. 50, or in default thereof to suffer imprisonment for two months with hard labour.
6	Nathuji Muluji -	2 39 $\frac{3}{4}$	Chitra under Gogha.	The accused in this case, who was a Darbari sowar, was persuaded by the licensed vendor of Chitra to take the opium away to Bhāvnagar and give it at his house. The sowar was apprehended with the opium on his person, and was convicted on his own admission and other evidence.	The accused was sentenced to pay a fine of Rs. 50, or to suffer imprisonment with hard labour for two months in default of the fine.
7	1. Bhaya Bhagwan - 2. Jivi, woman, wife of Bhaya Bhagwan. 3. Adamji Kalu.	1 39	Do. -	The accused, Nos. 1 and 2, were apprehended with the opium on their persons, they having purchased it at the licensed vendor's shop at Chitra. On their admission of the commission of the offence and other evidence they were convicted; while the third accused, against whom there was no corroborative evidence, save the statement made by the accused, Nos. 1 and 2, was discharged.	The accused, Nos. 1 and 2, were sentenced to two months' imprisonment with hard labour.
8	Makan Bhana -	0 9	Do. -	In this case the accused was apprehended with the opium on his person. On his own admission and other evidence he was convicted.	The accused was sentenced to pay a fine of Rs. 5, or in default thereof to suffer imprisonment for 10 days with hard labour.
9	Gopal Makan -	0 7 $\frac{1}{8}$	Do. -	The accused in this case, who was apprehended with the opium on his person, admitted before the magistrate that he had purchased it from the licensed vendor at Chitra, at four tolas a rupee. He was convicted on his own admission and other evidence.	The accused was sentenced to pay a fine of Rs. 5, or to suffer 10 days' rigorous imprisonment in default thereof.

The accused, Nos. 1 and 2, were, while on their way from Avania to Bhavnagar, apprehended with the opium on their person, they having purchased the same from the licensed vendor's shop at Avania. Accused, No. 3, was charged with having aided and abetted the accused, Nos. 1, and 2, in the commission of the offence of having been in possession of the opium not lawfully purchased.	Accused, No. 1, was convicted and sentenced to suffer imprisonment with hard labour for 20 days; and pay a fine of Rs. 20, or in default thereof to suffer imprisonment for 10 days. Accused, No. 2, was convicted and sentenced to pay Rs. 8, as fine, or in default thereof to suffer imprisonment for 16 days. Accused, No. 3, against whom there was not sufficient evidence, was discharged.
11	Sawa Purbhai -	0 39 $\frac{6}{10}$	Chitra under Gogha.	On information, the house of the accused was searched, from which the opium secreted in different places was found. He admitted the commission of the offence and was convicted.	The accused was sentenced to pay a fine of Rs. 50, or in default thereof to suffer imprisonment with hard labour for two months.
12	1. Jan Varis - 2. Nur Muhammad Giga.	1 12 $\frac{5}{10}$	Do.	Both the accused were apprehended with the opium on their persons. They admitted having purchased it from the licensed vendor at Chitra, and were convicted.	The accused were sentenced to pay a fine of Rs. 25 each, or in default thereof, to suffer simple imprisonment for one month.
13	Waldas Narbheram -	0 16 $\frac{1}{2}$	Do.	The accused in this case was apprehended with the opium on his person, and on evidence was convicted.	The accused was sentenced to pay a fine of Rs. 10, or in default thereof to suffer simple imprisonment for one month.
14	Jan Varin -	0 18 $\frac{5}{10}$	Do.	The accused while returning from the village of Chitra was apprehended with the opium on his person. He was convicted on evidence.	The accused was sentenced to pay a fine of Rs. 40, or in default thereof to suffer imprisonment for two months with hard labour.
15	Alibhai Madari -	0 19 $\frac{3}{2}$	Do.	In this case the accused, who was a State servant, was apprehended with the opium on his person. He was convicted on evidence.	The accused was sentenced to pay a fine of Rs. 50, or in default thereof to suffer imprisonment for a month and a half with hard labour.

APPENDIX XVIII.

MEMORANDUM on the ADMINISTRATION of OPIUM REVENUE in the MADRAS PRESIDENCY, by the Hon. C. S. CROLE, Member of the Board of Revenue in the Madras Presidency.

Introductory Remarks.—Prior to the extension of the provisions of India Act I. of 1878 to the Madras Presidency in July 1880, the transport, possession, and sale of opium were not regulated by any special or general enactments. The import and export of the drug by sea was, for a time, governed by the Sea Customs Act VI. of 1844, under which an import duty of Rs. 24 per seer of 80 tolas was fixed, and the export prohibited unless covered by a pass. The provisions of this Act relating to opium were finally repealed by the schedule to Act VIII. of 1868, so that at the latter date importation was free, and exportation was not prohibited by any law then in force. To remedy this state of affairs, the Governor-General in Council issued in June 1870 a notification, under section 23 of Act VI. of 1863, prohibiting exportation of opium, not covered by a pass, by sea from any port in the Madras Presidency, or by land to any foreign or native State. But, as the Act under which the notification was framed was purely a Sea Customs Act, the prohibition embodied in it of export by land was considered of doubtful legality, and India Act XIV. of 1871 was accordingly passed on 31st March 1871 to remove the defect noticed. At the same time, the Indian Tariff Act XIII. of 1871 was framed, re-imposing the old rate of import duty and prohibiting export by sea, except under passes.

2. Even after the issue of the notification of 1870, smuggling of the drug was held penal only when the offenders were caught in the very act of exporting or attempting to export. Mere possession, even when coupled with the expressed intention to smuggle, was not cognizable, and the leniency of the law in this respect was

frequently abused and smuggling carried on with impunity. Complaints had already been received from the Collector of Sea Customs about smuggling being rife, but it was thought that the loss of revenue on this account was trivial, and the contraband trade almost non-existent, in view of the large rewards paid to informers and heavy penalties inflicted on the offenders. It was even doubted whether it would be advantageous to place opium on a similar footing to liquor, and whether any decrease in smuggling and any increase in revenue consequent on prohibiting its sale and manufacture would compensate for the disadvantage of adding to the penal statutes and of providing a ready means of false accusation. The Collector of Sea Customs, on the other hand, once more asserted that the loss of revenue was by no means trifling, as thought by the Board, and adduced conclusive proof from facts and figures in support of his contention that Malwa opium did find its way in large quantities into the Madras Presidency and on to the sea coast, and was even exported thence to foreign countries. This he attributed to the then existing state of the law, which allowed the traffic in opium to an unlimited extent without regulation or supervision, and, as the only remedy to this evil, he persuaded the Board of the necessity for prohibiting by law the transport, manufacture, possession, or sale of opium without license under very heavy penalties. The Government, however, considered that the local production or consumption of the drug was not such as to render any excise measure necessary or advisable, and expressed its opinion that a short enactment prescribing such rates of customs duty on import and export by land or sea, as would protect the Bengal monopoly or the Bombay excise, would suffice. Acts XIII. and XIV. of 1871, already adverted to, supplied the want.

3. In June 1871, the India Government suggested, for consideration of the Madras Government, the

advisability of checking the illicit traffic in Malwa opium and imposing penalties upon possession, without making any arrangements for licit sale or possession, and directed the imposition of an export duty of Rs. 600 per chest of two Indian maunds, irrespective of destination. The duty was assented to, but as the export was almost nil it was inoperative. The Board was, however, opposed to any restrictions on the possession or sale of opium within the Presidency, as it was then thought that the extent of consumption was insignificant.

4. *Inquiries instituted in 1873 as to the extent of the consumption of opium in Godavari and other districts, at the instance of Dr. Cornish, tended to show that the consumption of the drug in four districts at least of the Presidency was very considerable, and that a special enactment restricting the traffic was urgently called for, and it was determined to deal with the subject along with that of the hemp drugs for which a Bill was then under preparation by the Local Government. This, however, was not done as the Government of India had, meanwhile, introduced into the Viceregal Legislative Council a Bill for regulating the cultivation of the poppy, and the possession, transport, and sale of opium, which was ultimately passed into law as Act I. of 1878.*

5. *Law.*—The provisions of the Act penalise the cultivation, manufacture, possession, transport, import, export, or sale of opium otherwise than in accordance with the rules framed by the Local Government, which have the force of law. Breaches of the Act and rules issued thereunder are punishable with imprisonment for a term which may extend to one year or fine not exceeding Rs. 1,000, or both, together with the confiscation of the articles in respect of which any such offence has been committed. Where fine is imposed, provision is made for alternative imprisonment for not more than six months. All officers of the Excise, Police, Customs, Salt, Opium, or Revenue Department, superior in rank to a peon or constable, authorised by the Local Government in this behalf, are empowered, on receiving information that opium is unlawfully kept in an enclosed place, to enter, seize, and arrest, and are entitled to such rewards as the magistrate in each case may adjudge. Sums of money due to Government under the Act are recoverable, as arrears of Land Revenue, and arrears to farmers from their licensed vendors are also similarly recoverable, provided application is made to that effect to the collector. Vexatious searches, seizures, and arrests under the Act are punishable, and officers making arrests or seizures are required to report particulars to their superior officers within 48 hours.

6. Though the above Act was passed in 1878 it was not extended to the Madras Presidency till 1st July 1880, as negotiations had to be entered into with His Highness the Nizam's Government to prevent the import of opium from his dominions into the Madras Presidency, and preliminaries adjusted to obviate the confusion, hardship, and fraud incidental to absence of organisation at the outset.

7. *Administration.*—The administration of the opium revenue is regulated by India Act I. of 1878 and the rules and notifications issued thereunder. It is under the management of the Collectors of Land Revenue who are subject to the control of the Commissioner of Salt, Abkari, and Separate Revenue—a member of the Board of Revenue. In the Madras district the Act is worked by the Town Abkari Establishment under the supervision of the Deputy Commissioner of Salt and Abkari Revenue, Central Division. The Collectors and the Deputy Commissioner are assisted in the carrying out of the Acts and rules by a large preventive establishment maintained in connexion with the Salt and Abkari Administration of the Presidency. Offences against the Act and rules are punished by magistrates of not lower rank than the second class.

8. *The Administration of the Agency Tracts.*—The restrictions imposed by the Opium Act and rules led to a considerable increase in the price of opium in the hill tracts of Vizagapatam. It rose from 5 or 6 tolas per rupee to 2 tolas, and in some parts opium was not procurable at all. This produced serious discontent and distress among the hill people, who consume opium largely, the drug being considered a necessary of life in those fever-stricken localities, and it was therefore found necessary to take steps to enable the hill tribes to obtain sufficient quantities at a reasonable price without material difficulty. Inquiries were instituted in Ganjam and Godavari as to the

system to be adopted in regulating the vend of opium in the hill tracts of those districts. The measures finally accepted for the agency tracts in the three districts are briefly noticed below.

9. *Ganjam.*—In the hill tracts of this district free licenses for sale are granted in localities in which there is a demand. The right of supplying opium to the shopkeepers is assigned by contract to one of the renters in the plains, where a maximum retail selling price of As. 8 per tola is fixed.

10. *Vizagapatam.*—It was suggested that the opium required for consumption in the hill tracts might be imported by Government and stored in depôts centrally situated for sale to the retailers at cost price. It was also proposed that some of the hill mittadars and heads of villages should receive free licenses as retail vendors, that inferior kinds of opium should be sold by Government at 5 tolas a rupee, and that the price of superior qualities be gradually raised, the retail price being fixed at 4 tolas per rupee at first, and subsequently at 3½ tolas. The system of selling opium to the vendors on behalf of Government was introduced on 1st April 1881. The opium imported by Government was sold only in the hill tracts above the ghâts at 4½ or 4 tolas per rupee to the vendors (irrespective of quality) who retailed it at not less than 4 tolas. In the agency tracts below the ghâts the supply of opium was left to private enterprise.

11. In 1882-83 and the next year opium was supplied by Government to licensed vendors at rates varying from 4 to 6 tolas, according to the quality, and retailed by them at from 3½ to 5½ tolas per rupee. Under this arrangement a portion of the duty had to be foregone, but as opium was considered a prophylactic against fever, and as it was thought that the people would be seriously inconvenienced if it were placed beyond their reach it was deemed inadvisable to enhance the price materially until more experience had been gained.

12. In 1884-85 the monopoly was left to private enterprise, and was assigned to a contractor on condition of his supplying the shopkeepers licensed by Government at 3½ tolas per rupee. The retail price rose to 3 tolas per rupee, while the price in the ordinary tracts was 2 to 2½ tolas per rupee. In 1885-86, 1886-87, and 1887-88 the monopoly of supply was disposed of by tenders and the retail price underwent no alteration. As this system was not, however, found to work satisfactorily, the Government undertook the supply from 1888-89, the monopoly of vend being sold in auction in selected localities and the retail price of opium being restricted to 3 tolas per rupee as formerly. This was tried as a temporary measure for one year, but as there was only one bidder in 1889-90, whose terms were unreasonable, the system was continued for another year. The privilege of retail vend in shops was sold by auction in localities where the consumption exceeded 3,000 tolas per annum, fixed fees were paid for shops in places where it varied between 1,000 and 3,000 tolas, and free licenses were issued only for shops the average annual consumption in which was less than 1,000 tolas. The retail selling price was enhanced to 2½ tolas per rupee except in the Gudum Hills and in the Paderu and Malkangiri taluks, where it was fixed at 3 tolas. In 1890-91 and the two succeeding years, the privilege of supplying the agency tracts was disposed of by tender, and the retail price in the excepted tracts enhanced to 2½ tolas a rupee, while the monopoly supplier was required to supply the licensed vendors therein at 3½ tolas per rupee and 3 tolas elsewhere. In view of the complaints made by the agency contractors and shopkeepers, the farms in the ordinary tracts of the district were sold subject to the condition that the price charged by shopkeepers should not exceed 2 tolas and should be not less than 2½ tolas per rupee. During the current year, the specially favourable rates in the excepted tracts have been abolished and the retail price assimilated to that prevailing in the rest of the agency tracts, and as the offers made for the monopoly of supply were exceedingly low the tracts have again been placed under direct Government management.

13. *Godavari.*—The Board proposed that the agency tracts in the district should be treated in the same way as the Vizagapatam agency tracts, and that a remission of the pass-duty should be granted, but the Government considered it unnecessary to undertake the supply as no distress or discontent had been caused in the hill tracts by the rise in the price of opium. The agents of the mittas and heads of villages and such other persons as the collector deemed fit were granted free licenses,

APP. XVIII.
Madras.

which, however, did not reduce the price of opium which remained as high as 2½ or 3 tolas per rupee.

14. Between 1884 and 1889 the right of vend in certain villages was sold by auction, while the grant of free licenses for new shops in other parts was prohibited except with the Board's special sanction. Since 1890-91 the privilege has been disposed of by auction on the following conditions :—

- (i.) That the opium sold shall be of good quality.
- (ii.) That not less than 3½ tolas shall be sold for a rupee.
- (iii.) That the maximum quantity to be sold to a single individual be restricted to 6 tolas.

15. Free licenses are also issued by the collector in one or two villages where purchasers may not be forthcoming. Shopkeepers obtain their supply of opium from the taluk renters.

16. It will thus be seen that the system of issuing free licenses for the retail vend of opium is at present in force only in the Ganjam agency tracts and in portions of the Vizagapatam and Godavari agency tracts, in localities in which there is but very little traffic in the drug, and where, owing to difficulty of communication and other causes, it would be a great hardship to deprive the people of opportunities of obtaining this drug when necessary, and that the retail price has been gradually raised from 5 tolas to from 3½ to 2½ tolas per rupee. The opium traffic is carefully watched, and the system has had the effect of discouraging the hereditary habit of using opium on the part of the hill tribes.

17. *Disposal of the Privilege of Vend of Opium in the rest of the Presidency.*—There were no restrictions placed on the sale of opium prior to 1880. The Opium Act, India, I. of 1878, was brought into force throughout the Presidency on 1st July 1880, and the sales of the opium shops took place in the months of July and August following. During the first two years and nine months the monopoly of retail sale of opium was disposed of by auction to the highest bidder at the commencement of each year, the shops being sold singly or in groups at the collector's discretion, except in the hill tracts of Ganjam, Vizagapatam, and Godavari. Under this system the purchasers at auction sales were bound to take out licenses and maintain shops at the localities prescribed and to pay besides the purchase money for the monopoly privilege a monthly duty of 1 rupee for each shop. Complaints having been received that the purchasers of shops under the shop-license system sold opium clandestinely in the outlying villages, and there being no check on illicit sales as there was no contractor for definite areas, whose interest it would be to bring to light such malpractices, the shop-license system was abandoned in 1883 in favour of the farming system, under which the privilege of vending opium and poppy-heads and of manufacturing and vending intoxicating drugs was sold by auction for each taluk in the mofussil and for each municipal division in the town of Madras. This system, however, was not extended to the districts of Kistna, Anantapur, North Arcot, and parts of Ganjam and Cuddapah until April following, as the right to vend in shops according to the previously existing arrangements had been sold by collectors before the Government order sanctioning the farming system was communicated to them. In the town of Madras the sale of the farms by municipal divisions having resulted in the farmers underselling one another and lowering the price of opium the whole district is now disposed of as one farm since April 1884. The sale of poppy-heads was in 1885 separated from the opium farms, and separate licenses have since been granted for the privilege on payment of a small fee of 8 annas.

18. *Disposal of the Privilege of Manufacture and Vend of Intoxicating Drugs prepared from Opium.*—The privilege of manufacturing intoxicating drugs from opium is invariably connected with that of vend. From July 1880 to March 1883 the monopoly was put up to auction at the commencement of each year, the shops being sold singly or in groups, and a license fee of rupee one per mensem was levied on each shop in addition to the amount realised at the auction sale. From April 1883 this was superseded by the farming system and the privilege of manufacture and sale of intoxicating drugs was amalgamated with that of vend of opium, but a separate license was, however, held requisite to enable shopkeepers to exercise this right.

19. *Disposal of the Privilege of Vend of Poppy-heads.*—Licenses for the vend of poppy-heads were formerly granted for a period of one year on payment of an annual fee of Rs. 3. From April 1883 to March 1885 the privilege of selling poppy-heads was included in the monopoly rights sold by farms at auction, since which latter date it has been separated and licenses issued on a fixed fee of annas 8 per annum. This arrangement has been made with a view to secure to the public greater facilities for procuring the article which is in general use as a medicine.

20. *Cultivation.*—The cultivation of the poppy in the Presidency may be said to be almost unknown, except on the Nilgiris, where the plant was cultivated to a very small extent by hillmen prior to 1880, but it has since been prohibited.

21. *Manufacture.*—The manufacture of opium is prohibited, but that of intoxicating drugs from opium is permitted under license from the collector, and is conjointly disposed of with the privilege of vend of the same.

21. *Possession.*—Any person may possess 1 tola of preparations of opium or intoxicating drugs used in smoking or 3 tolas of raw opium, or preparations thereof used for purposes other than smoking, and 5 seers of poppy-heads purchased from Government, or a farmer licensed vendor, or medical practitioner, but no person can possess a greater quantity unless he is a licensed importer, a farmer, or licensed vendor or medical practitioner, or unless specially authorised by the collector with the Board's sanction, in which case he may possess not more than 1 seer of opium or intoxicating drugs. Under a license from the collector a medical practitioner may have, for purely medicinal purposes, 1 seer of opium, 1 seer of intoxicating drug, and 10 seers of poppy-heads, or such large quantities as the Board may in special cases authorise. In the agency tracts of Ganjam and Vizagapatam the maximum quantity which may be possessed is 3 tolas, while it is fixed at 6 tolas in the agency tracts of Godavari.

23. *Sale.*—The sale of any quantity exceeding 1 tola of any preparation of opium or intoxicating drugs used in smoking, or of any quantity exceeding 3 tolas of raw opium or preparations thereof used for purposes other than smoking, or of poppy-heads exceeding 5 seers is treated as wholesale, and the sale of any less quantity as retail. Licensed vendors were formerly permitted to sell by retail at one time to any person up to 3 tolas of opium or intoxicating drugs, and it was but recently that the above limit was reduced to 1 tola in the case of preparations used for smoking, as the result of certain representations made by the society for the suppression of the opium traffic.

24. *Sale by Wholesale.*—A licensed importer or a farmer may sell by wholesale any quantity of opium or poppy-heads to a farmer or a licensed vendor. Licensed vendors also may sell by wholesale to other licensed vendors or farmers, subject to the limitation that an independent licensed vendor cannot sell by wholesale to a dependent licensed vendor in another farm. In all cases of sale to dependent licensed vendors, the seller must satisfy himself that the former has the consent of the renter on whom he is dependent. Wholesale issues may be made to licensed medical practitioners also, but the quantity so delivered must in no case exceed that which they are entitled to possess under the licenses held by them. Provision is also made in the rules for the supply of opium to farmers, independent licensed vendors, or medical practitioners by Government at collectors' offices.

25. *Sale by Retail.*—Opium, intoxicating drugs, or poppy-heads may be retailed by licensed vendors or licensed medical practitioners for medicinal purposes only. Licensed importers are disqualified from retailing opium or poppy-heads, and retail sale at collectors' offices is also prohibited.

26. *Import.*—The opium rules contemplate the import of opium on account of Government, as also by private agencies. Persons desirous of importing opium or poppy-heads are permitted to do so under a license obtained from the Board of Revenue through the collector of the district into which it is intended to import it. All opium must be procured from Indore on production of the license granted by the Board, and must be imported only by such route as may have been prescribed by the Board in the license, and only under the authority of a pass from the opium agent at

Indore certifying to the payment of an import duty of Rs. 700 per chest of 140½ lb. Consignments so imported require to be verified by the collector or other officer in charge of excise revenue of the district on their arrival, and to be stored in a registered place of deposit, whence they cannot be removed except under transport permits. The minimum quantity for which a license is granted is restricted to half a chest, and the quantity covered by a license is never allowed to exceed what can be cleared in one consignment. Imports, other than those made under the authority of the opium agent, Indore, are subject to a duty of Rs. 24 per seer (80 tolas), leviable under section 5 of the Indian Tariff Act XI. of 1882. A concession has, however, been recently made in the case of import for *bona fide* private consumption of half a tola of opium or preparations thereof by travellers crossing from French into the British territory.

No duty is levied at Indore on poppy-heads imported into this Presidency.

27. *Export.*—Opium and poppy-heads may be exported on account of Government. Exports of opium to Mysore, Travancore, Cochin, Banganapalli, Sandur, Pudukkottai, and the French Settlements in the Madras Presidency are permitted if made under the licenses of the respective residents or political agents of these places. But opium booked through from other parts of India by rail to any of these States may be imported and exported if covered by a pass issued by the opium agent, Indore, or granted under the Bombay opium rules. Export of opium to places other than these is strictly prohibited.

28. *Transport.*—Licensed importers, farmers, and licensed vendors wishing to transport opium from one district to another have to obtain a pass in the prescribed form for each consignment from the officer in charge of the opium revenue of the district from which such opium is to be transported. Each package is stamped in the presence of the officer granting the pass with his official seal. No pass is granted unless the person applying for it produces written permission for so applying from the officer in charge of the opium revenue of the district to which the opium is consigned. A copy of every transport pass is sent to the last-named excise officer, who examines the consignment on its arrival and passes it on to the consignee if satisfied that the packages have not been tampered with. These rules apply *mutatis mutandis* to consignments from one taluk to another, if farmed to different renters, with the difference that in this case the Tahsildar of the respective localities is the officer who grants passes and examines consignments. As a preventive measure against possible fraud, certain officers of the Revenue, Excise, and Police Departments are authorised to examine and verify such consignments while in transit.

29. *Confiscation.*—Opium, intoxicating drugs, and poppy-heads, in respect of which any offence has been committed, are liable to confiscation, together with the vessels, packages, coverings, animals, and conveyance used in the commission of the offence, and when the offence is against the rules as to sale the whole of the opium in the possession of the offender is so liable. Opium declared to be liable to confiscation in cases where the offender has been acquitted, and opium not in the possession of any person which cannot be satisfactorily accounted for can also be confiscated. Opium so confiscated is ordered to be immediately destroyed if pronounced unfit for consumption by the civil surgeon or chemical examiner. If fit for use, it is disposed of by sale to licensed vendors for a price not below the duty leviable thereon. Intoxicating drugs confiscated are destroyed, and poppy-heads are disposed of according to the directions of the excise officer of the district. Whenever confiscation is ordered, the owner of the property confiscated may be given the option of paying in lieu of confiscation such fine as in each case may be determined.

30. *Reward.*—When an offender has been convicted under the Act or opium confiscated, a reward not exceeding the value of the property confiscated and the amount of the fine imposed may be granted to the persons who have contributed towards such conviction or confiscation. The rule has had a wholesome influence on the detection of offences under the Act, and there are cases on record where liberal rewards have been sanctioned to informers and other co-operators in the repression of offences.

31. *Shops.*—The following statement shows the number of licenses issued for the sale of opium and intoxicating drugs during the last 13 years:—

1880-81	1,208
1881-82	1,021
1882-83	1,091
1883-84	1,107
1884-85	1,039
1885-86	1,062
1886-87	1,163
1887-88	1,157
1888-89	1,172
1889-90	1,052
1890-91	1,050
1891-92	1,034
1892-93	1,004

It will thus be observed that there has been a steady decrease in the number of licenses issued for the last five years, and that the number last year was conspicuously low as compared with the figures on record of any of the previous years. It may also be noted that no less than 694 of the licensed shops are situated in the four northern districts of the Presidency.

32. No considerations of pushing sales or raising revenue are allowed to operate in fixing the number of shops, and the sole and invariable criterion for determining the number is the actual demand for the drug. Consumption of opium in any shape on premises licensed for sale is strictly prohibited, and every care is taken to see that such premises are not used as rendezvous of bad characters. Artificial stimulus to the consumption of the drug is provided against by the prohibition of sales by barter. Honesty in the daily transactions of the shopkeeper is secured, and fraud controlled and frustrated by the frequent inspection of shops by the land revenue and excise officers, and the compulsory maintenance of accounts in a prescribed form. These precautions effectually prevent increase in the number of shops beyond the reasonable requirements of consumers, and explain the continued diminution adverted to above.

33. *Revenue.*—The opium revenue prior to 1880 was realised from duty on import and export. Since the rules framed under the present Act came into force in July 1880 it is derived from the following sources:—

- (i.) A pass duty of Rs. 5 per lb. on Malwa opium imported into the Presidency.
- (ii.) The sale, by auction, of the right to sell opium and to manufacture and vend intoxicating drugs prepared from opium.
- (iii.) Fees levied on licenses for the sale of poppy-heads.
- (iv.) Fines and forfeitures.

34. Figures for the opium revenue for the last 13 years are given in the appendix to this note. It may be remarked that the four northern districts mainly contribute to the revenue under the above heads.

35. *Consumption.*—The opinion was long prevalent that there was little or no consumption in the Presidency. But searching inquiries instituted about the year 1874 dispelled this idea and showed that it did not represent the actual facts, but that, on the other hand, there was a considerable consumption of opium in the Presidency, especially in the four northern districts of Ganjam, Vizagapatam, Godavari, and Kistna.

36. A few months back a reference was made to the Board as to the alleged existence of a trade in children's opium pills, and the poisoning of many children by its use. It was found that the sale of such pills was confined to a few scattered places in the Presidency. Inquiries further went to show that the administration of opium in very small quantities to children purely medicinally and as an antidote to infantile disorders, or as a soporific, was not uncommon, but that in no case was it attended with any injurious consequences.

(Signed) W. O. HORNE,
Acting Secretary.

Board of Revenue (Separate Revenue),
Madras, 30th November 1893.

APPENDIX XIX.

ABSTRACTS OF EVIDENCE OF WITNESSES WHO WERE
TENDERED FOR EXAMINATION BY THE GOVERNMENT
OF MADRAS, BUT NOT EXAMINED BY THE ROYAL
COMMISSION.

I.

M. R. Ry. P. NAGESWARAM PANTULU, Acting Deputy
Tahsildar.

1. The maximum amount of opium, which large consumers use, is $\frac{1}{2}$ a tola per diem in two equal pills; one in the morning and the other in the evening.

2. It will not interfere with the maintenance of the family of poorer classes, since they live on roots, on tender roots of bamboos, on Vipra flowers, on fruits of Thummika tree, and on mango nuts, &c. Besides eating the above, they will also sell them for money with which they will buy opium.

3. It will not cause any evil effect on them, physically or mentally.

4. It will not induce people to commit any offence. But the poor and idle people, such as Doms, &c., who are accustomed to eat opium when they are unable to get opium, will commit petty thefts.

5. It will help to check the effects of malarious climate.

6. It will not injure the health of children who are born to opium eaters. Those children will rather look strong and healthy.

7. A woman will generally consume six-pie worth of opium, *e.g.*, about three chinnams per diem in two equal pills, and a child three-pie worth of opium in like manner. Some women will use one-anna worth of opium per diem.

8. Even if the women use smaller quantity of opium the health and physical endurance of them is the same as that of men, *i.e.*, no difference.

9. The hill people will give daily about three-quarter chinnam of opium in two equal pills, one in the morning and the other in the evening, to their children from the date of their birth until they attain four years of age. By this habit, their children escape from cold, enlargement of spleen, cough, &c.

10. This habit of giving opium to children will be discontinued after the children attain four years of age if they could manage to do so. But such children when they attain proper age may again use opium.

11. Some of the hill people will swallow opium pills, others will chew and swallow opium. Some of these people will also smoke madat like hooka in addition to opium. Madat will be prepared with boiled opium, mixed with the powder of burnt leaves of gooseberry and made into pills for smoking.

12. The opium consumers will use opium just before taking their meals, both morning and evening. The effect of opium will remain from morning to evening and from evening to morning, at which intervals they use it. Generally the opium eaters will take their meals at 8 a.m. and between 6 and 7 p.m. Some use opium thrice a day, *i.e.*, morning, mid-day, and evening, and these people will also take their meals thrice a day. Some of these will consume one anna worth of opium at each time. If the consumers could not get their meals in time they will swallow opium, and then drink either some water or buttermilk if they could get it. Unless they take opium at the usual time they cannot move a foot or do any work.

13. The opium will stop dysentery, diarrhoea, and cough, &c., and it is the best remedy for the hill people for all sorts of diseases, since they use it daily.

(Signed) P. NAGESWARAM PANTULU,
Ag. Deputy Tahsildar.

Pattingi,
23rd December 1893.

II.

Rai Bahadur, M.R. Ry. K. NARAINSWAMI NAIDU,
Inspector of Police, Vizianagram.

The following is the information which I can offer as regards the use and abuse of opium:—

1. Opium is used by the natives of the Vizagapatam district in all its parts. In the hilly tracts to a greater extent. It is commonly used to check some diseases, such as asthma, consumption, rheumatism, bronchitis, fever, dysentery, stomach-ache, and as a safe-guard against the evil effects of malaria. Of course some people, especially the well-to-do persons, consume it as a luxury.

2. Opium is used in this district by all classes of people without regard to caste, creed, colour, sex, or age. The Musalmans and the Kshatrias take the highest percentage on the plains, and in the hills the percentage of non-consumers is much less than on the plains. The hill people inhabiting the Gollgonda and Gudiem hills, of whom I have got good experience, cannot do without it even for a single day. They know no medicine with which they do not mix opium. They take opium pill at meals. The hill man takes a pill as his means permit, at about 9 o'clock in the morning, and eats some gruel or other food, and then leaves home for his work. At about 1 o'clock he will take another pill when his dinner is ready for him, and then in the evening between 7 and 8 another pill at night meal. His dose ranges from quarter anna to two annas worth of opium. At the pill hour, if nothing is ready to follow the pill immediately after the pill is swallowed, he will at least drink little water, and thereby supply the want of food for the time being. Women and children too have their shares. In fact, there are a very few persons who do not use opium. They think the drug is absolutely necessary to save themselves from malaria, colds, dew, and abundant rains, which are peculiar to the Agency tracts. They practise the drug upon their children from the age of four or five months, and continue to do so till about the ninth year, when they stop it in a very few cases in which children can withstand the causes as stated above, while in all other cases the practice is carried up to the grave. The low-country people frequenting the hills also practice the use of the drug as a precaution against malaria, colds, coughs, &c., and the inclemencies of the weather.

3. Both in the hills and on the plains there are opium eaters who carry the practice to an unnecessary excess, and they immediately look emaciated and restless. To these men night is day and day is night.

4. Both the moderate and immoderate users of opium suffer if they fail to get opium pill at the proper time. Their whole body pulls very badly and becomes languid, and if they fail to get it for a day or two they will catch diarrhoea or dysentery.

5. The use of opium does not seem to have direct effect on the moral condition of the people who are addicted to the use of it, but on the physical condition to some extent. The opium eater first begins the habit with a small dose and gradually increases it as his means permit, until at last he becomes a slave to it. Then he suffers from constipation, want of proper sleep, and disinclination to work, besides becoming very weak.

6. The popular native idea is that the moderate use of opium from the age of 40 years does immense good to the user by keeping up the drooping vigour from age. This proved to be quite true in the case of my old mother. She suffered for many years from some chronic belly-ache, and I tried many medicines to cure it, but without effect. Some one advised her to use opium in small doses, and she followed the advice and she finds herself much better now.

7. The moderate use of opium does not tell upon the health of the consumer's children.

8. It does not incite crime, but want of money wherewith to purchase opium drives the user to that necessity, and that too only amongst the lower classes.

9. Opium is purified and made into pills by the mixture of the roasted stuff of the betel leaves or the

leaves of the babul tree (*Acacia Arabica*). This preparation is called madat, which is said to possess stronger intoxicating properties than the opium itself, and the use of it is resorted to only by those confirmed eaters of opium and who do not satisfy themselves by the use of opium alone. To the madat shops only those people who have little or no regard to respect resort, as the use of it is considered disreputable. Madat consumers are easily detectable by their emaciated bodies, ugly appearances, and gait. It is used not as a medicine at all but as luxury. This habit when once formed cannot be easily got rid of, and has a greater tendency to the contribution of crime than that of opium itself, because the users become altogether indolent and seek for money wherewith to purchase madat by illegal means when their legal resources have exhausted. The madat smokers are

generally composed of lower classes who live hand to mouth.

10. The use of opium or madat is contracted by some as aphrodisiac and carried to excess by degrees when they find themselves deceived by the idea.

11. Native physicians use the drug (opium) by mixing it with other medicines. It is applied externally on parts of the body affected by rheumatism or violence and to heal sores or wounds.

12. In rare instances women mix opium with sweet oil and drink the mixture to kill themselves owing to some family quarrels.

(Signed) K. NARAINSWAMI,
Inspector of Police.

Vizianagram,
13th January 1894.

APP. XIX.

III.

M.R.Ry. GEDA KRISHNAMA, Kannapuram.

Question.

1. What are the effects of opium on the consumer's bodily frame as well as his character?

2. Do people, in general, accept the proposition that "opium should not be used for any other than medicinal purposes," and, if so, are they willing to bear in whole or in part the cost of prohibitive measures?

3. Is it possible to prevent the growth of the poppy tree, or the preparation of opium or the sale of opium except for medicinal purposes?

4. Is it possible to stop the opium trade, otherwise than by prohibiting the growth of poppy and the manufacturing of opium?

5. How is opium supplied in these hill tracts?

6. What portion of the population consume the drug, and to what extent does each man consume?

7. Do the people use opium for any purpose other than that of eating?

8. What other advantages are there by consuming opium?

9. Will they suffer in any way by stopping its use?

10. Supposing people suffer for want of it, cannot they rest satisfied with any substitute?

Reply.

I think, by the consumption of opium, a man's power of "remembrance" is diminished, as also his bodily strength. The practice in these parts is that a man should not take to this habit as long as he is under 40 or 50 years of age. Those over 50, being naturally weak, take to the habit of eating opium, thinking that the latter has the effect of giving temporary strength. I hear from the consumers that, if it is taken in old age, it improves the general strength. I actually see cases when deleterious effects are produced if the consumer is ill-fed.

No. They would not like that the use of the drug should be restricted to medicinal purposes alone, as they have been accustomed to the free use of it for a very long time. If so restricted, they will not be willing to bear any cost of the prohibitive measures.

It is not usual in these parts either to grow the poppy tree or to manufacture opium, and even granting there is such a practice, it will not be possible to stop it, as these people are not amenable to such orders.

I see no other way to stop this trade except by prohibiting the growth of the poppy.

The licensed shop-keepers procure opium from Rajahmundry and sell the same in the weekly markets where there are licensed shops.

Excluding all cases where persons in these hill tracts take opium whenever they fall sick, I think the number of the habitual consumers is about 5 per cent., each man taking on an average $\frac{1}{30}$ of a tola a time, i.e., $\frac{1}{15}$ of a tola a day.

It is used for external applications in cases of "sore eyes" and "headaches." It is not used here in smoking at all.

Those of the consumers that are over 40 or 50 years have their nervous system strengthened, and, by the use of the drug, constant irritation of their bowels is cured.

Aged persons and, who are at the same time, weak, cannot do without it, as otherwise they will be unfit to attend to their ordinary avocations. Those that are habituated to it suffer from pains in the hands and legs if they fail to eat it.

There may be medicines likely to cure the sufferings arising from the disease of opium, but as such medicines are not as easily procurable as opium, people cannot do without it.

GENERAL REMARKS.

I think that in these days under the renting system with a fixed number of shops for sale of opium the consumption of the drugs is far less than in times previous to the introduction of the renting system.

2. I do not think that in these hill tracts this drug is used first (*sic*) for the sake of intoxication and pleasure.

(Signed) GEDA KRISHNAMA.

APP. XIX.

IV.

MR. H. G. PRENDERGAST, District Superintendent of Police, Kistna.

Opium is used to a small extent throughout the Kistna district. Unlike the case of the more northern districts, more of it is consumed in the delta than in the upland taluks. It is used mostly in the solid form, as a prophylactic, and occasionally by those who cannot get a full meal because it enables them to do a day's work or less. The quantity consumed varies from $\frac{1}{8}$ to $\frac{1}{2}$ of a tola. It is also used medicinally. The use of opium is nowhere carried to excess. I do not know of any instance in which injurious effects have followed the moderate or immoderate use of opium. The moderate use of opium has a beneficial effect both morally and physically—morally, because it removes the craving for alcohol, the use of which by natives of this district almost invariably ends in abuse of it and consequent demoralisation, and physically, because it reduces the liability to delta fever, rheumatism and other diseases, and enables a man to do more work without the sense of fatigue than he could otherwise endure without injury to his constitution. The use of opium in no way contributes to the perpetration of crime, but, on the contrary, prevents it in so far as it prevents drunkenness, which does contribute to the perpetration of crime. Moderate opium eating, and this is the rule, with very few, if any exceptions in this district, is cheap, costing from $\frac{1}{4}$ to 1 anna per diem. The use of arrack is an expensive luxury. Toddy drinkers spend from 2½ annas upwards per diem on that beverage, and arrack drinkers spend from 3 annas upwards per diem on their drink. Those who are regular drinkers thus spend about half their earnings on drink and are impoverished. Crime soon follows. The very best men I have had serving under me are Goomsur Oriyas, who are all moderate opium eaters, consuming on an average $\frac{1}{4}$ tola a day. I had these men under me for eight years continuously, and in all that time I had not a single instance of the immoderate use of opium or any evil effects resulting from its moderate use by them. On the contrary, I had during the same time among toddy and arrack drinking telegas several instances of men dismissed for habitual drunkenness and of others invalidated from the effects of excessive drinking. To throw difficulties in the way of the moderate use of opium would, in my opinion, cause widespread discontent that would result in serious danger.

(Signed) H. G. PRENDERGAST.

V.

M.R.Ry. P.S. GANAPATI AIYER, Avergal, B.A.,
Treasury Deputy Collector, Salem.

I was Private Secretary to the Prime Minister of Indore in Central India, between August 1875 and December 1879. During this time I had occasion to visit parts of the Indore State, and also Rutlam and Dhar. I had, therefore, opportunities of studying the opium question.

In Central India opium is used by all classes of people except Brahmans. Some take it as medicine, but the majority take it from habit. When I was at Rutlam with the Prime Minister, as guests of the Maharani, a deputation of her Sirdars, who came to inquire after our health, presented us balls of very superior old opium, and drunk in our presence a preparation of opium called kusumba distilled on the spot. I mention this incident to show that opium-eaters and smokers are not looked down upon. Opium is given in very small doses in Central India to children of all classes—including Brahmans—up to about the age of two. It is given under the impression that it will prevent children from suffering from indigestion, diarrhoea, dysentery, and other disorders of the stomach, and that it will promote sound sleep. People in well-to-do circumstances do not suffer physically if they take opium in moderate quantities. In fact they are in as good health as those who never use opium. People suffering from certain complaints, such as rheumatism and asthma, enjoy better health by using opium than they would otherwise do. Even poor people who cannot afford to feed themselves properly get on well, so long as they use opium in moderate quantities. They work hard and eat well, and are strong and robust. It is the fakirs and other beggars that generally indulge themselves in

excess, mainly with a view to drown their cares and sorrows, and they suffer, getting emaciated and weak, with sunken eyes, wild staring looks, and their whole body shrivelled except their stomach, which is comparatively bloated. Opium in moderate doses seems to have no effect upon people who eat well. My observations do not lead me to think that opium leads to any immorality or crime. On the contrary opium has a sedative effect, and makes people quiet and non-interfering. The criminal class will of course be criminals, whether they take opium or not. It has all along struck me that opium-eaters and smokers, even when they use the drug in excessive quantities, are not nearly so mischievous as people who use spirits or ganja in excess. Here I may state that I have been in charge of the sub-gaol at Salem for over one year, and that I have not yet seen one man sent to it who is an opium-eater or smoker.

In the Salem town opium is used in two forms. Pills made of crude opium are eaten or are dissolved in milk, &c., and drunk. It is made into madat, and smoked. Madat is prepared by adding to an infusion of opium an equal quantity of roasted babul (*Acacia Arabica*) leaves, and then making pills of the product. About 30 pills are made out of each tola of the product. Opium in its crude state is sold at only one place, and madat in two places. The consumers are generally weavers, pensioned sepoys (Muhammadian and Hindu) and beggars. Most of them are poor. The beggars look weak and emaciated, as their brethren in Central India do; the rest look as well as other men in their station of life. Opium is given to children principally by Muhammadans up to the age of two, and then discontinued. The average daily sale from 1st April last amounts to 9 tolas of crude opium, and 5 tolas for madat. The approximate number of people using opium in Salem town is 150. In the taluks the total consumption of opium during 1892-93 is as follows:—

Taluks.	Tolas.
Salem	3,800
Namakkal	190
Tiruchengodu	349
Atur	68
Hosur	3,447
Dharmapuri	1,040
Krishnagiri	2,884
Tirupattur	18,863
Uttangarai	466
Total	31,107

The number of opium consumers in the taluks is about 680, which will give 830 for the whole district.

The following remarks are submitted as to the disposition of the people in regard to—

- the use of opium for non-medical purposes;
- their willingness to bear in whole or in part the cost of prohibitive measures.

(a.) As opium has become almost as indispensable as any other necessities of life to a very large proportion of the Muhammadian and Rajput population in Central India, Rajaputana, and certain other provinces in Northern India, any proposal to prohibit the use of opium for any but medical purposes will be most strenuously opposed, and will, if carried out, produce well-founded discontent, which it would be inexpedient to give rise to.

In the first place, it will be difficult to allow the use of opium for only medicinal purposes, because it would be necessary to restrict the issue of opium only to people who can produce prescriptions from qualified medical men trained according to the European system; and as the staff of such men is exceedingly small, the result of such a restriction would be to deprive people of an admittedly very valuable medicine which is exceedingly useful in the treatment of many diseases which are very prevalent in the country.

In the next place the suppression of opium would practically mean the utter ruin of millions of cultivators who have been accustomed to its cultivation.

It is pretty certain also that if opium is suppressed, the people, who have become habituated to it, will, after undergoing a great deal of inconvenience and misery, resort to ganja or alcoholic drinks. The consensus of medical opinion seems to be that, even as an intoxicant, opium is less injurious both to the individual

and to the society than ganja and alcoholic drinks, and the experience of laymen seems to tally with medical opinion. If so, it seems most undesirable, even from a point of view of morality, to prohibit the use of opium for other than medicinal purposes. It is at all events clear that there will be no gain morally. I am decidedly of opinion, therefore, that it would be politically inexpedient and physically and morally undesirable to prohibit the use of opium for other than medicinal purposes, and I am sure that this view is in harmony with intelligent and unbiassed native opinion in Central India.

In Salem, I have taken some pains to ascertain the views of people who do not use opium, and I find that the few who have any views on the subject agree with me. Here I may be permitted to state that I recently had a conversation with a very intelligent Marvari gentleman settled here for a long time. He informed me that his father was a confirmed opium-eater, and that he himself regularly used it for seven years, then gave it up simply to see if it could be given up, then resumed it for a few years, and then finally gave it up. He thinks that the drug had no injurious effect upon either his father or himself, that even in excess it is much less injurious than ganja or alcoholic drinks, and that in the case of people suffering from certain physical complaints it is a positive boon.

(b.) On the question as to how far the people will be prepared to bear, in whole or in part, the cost of any prohibitive measures, I am decidedly of opinion that, if the matter is explained to them, not one will consent to bear any part of the cost. So far as it affects the people of India, it is clear that the opium consumers themselves regard the drug as a boon, while the others think that, if it is an evil, it is far less serious than ganja or alcoholic drinks. It is not therefore clear how people can be expected to consent to contribute towards the cost of any prohibitive measures. As regards the effect of the drug upon the Chinese, on whose behalf chiefly the present anti-opium movement has been set afloat, it should be remembered that they will have opium, whether India exports it or not, as is evident from the fact that the quantity of opium exported from India to China is very small as compared with that produced in China. It seems useless therefore to attempt to prohibit the export of opium to China. Any such prohibition will also be inconsistent with the manufacture in the country and the importation from Europe and other countries of alcoholic drinks.

The further question has not been put as to how the blank in the Indian accounts arising from the disappearance of the opium revenue is to be filled up. Unless the British Parliament will vote a contribution to India of six or eight millions sterling a year, the deficit must be made good by India as best she can.

It is a large question as to whether India can bear any additional taxation, but it may be permitted to her people to ask of their British rulers that no additional taxation should be imposed upon them because it is considered immoral to export opium to China, which will have it, or because such exportation retards the progress of Christianity in that country.

(Signed) P. S. GANAPATI AIYER,
Deputy Collector.

VI.

Surgeon-Major J. LANCASTER, District Surgeon,
North Arcot.

The nature of the evidence which I have to give is chiefly negative in its character as far as any evil effects of the drug are concerned. The opium habit is not in evidence in the large districts in Southern India in which I am and have been the principal medical officer.

2. My practice in private and in the public service extends over a period of 20 years, and I have been the principal medical officer of districts of over 2,000,000 inhabitants, and in the course of this experience, I have never had any case of opium-poisoning either in the adult or in children brought before me either in hospital or in private practice. For the last five years also no single case occurred among an average annual attendance of 162,000 patients in the dispensaries of this district (North Arcot).

In an extremely large number of cases of wounds and injuries, averaging over 6,000 a year, no single case of injury was induced or caused by the influence of opium,

while on the other hand fully 50 per cent. were due to the influence of alcohol or ganja.

3. I have had under my observation at various times an extremely large number of lunatics sent to me for observation and report, and in no single case was opium the cause of insanity.

4. I have been the medical officer of some of the largest gaols in Southern India, and only in extremely rare cases have I found the opium habit to exist in prisoners, and it is an equally rare event for opium to be smuggled into the gaol; there is no demand for it; the proportion of such attempt as compared to the smuggling in of tobacco or ganja would be 1 opium to 200 of tobacco and 100 of ganja.

I have had occasionally opium-eaters in gaol, though very few indeed. They were chiefly men of Northern India, fakirs and low class Muhammadans. Some of them were victims to old-standing diseases, venereal or urinary fistulae, and had evidently fallen into the habit from attempts to allay pain. The dose of opium given to them daily by me was gradually reduced, and tobacco given to them stopped the craving for the drug. The men soon ceased to crave for opium when good food and tobacco were given them.

5. The opium habit cannot be observed in the general population by its effects.

It is confined to a very small section of the population, and, if you want to find it, you must search for it.

The effects of the use of this drug do not show themselves as in alcohol, the use of which is fast spreading in South India among all classes.

It (opium) is used very largely in native medicines; it is the sheet anchor of the native practitioner in all diseases of the bowels, in diarrhoea, dysentery, cholera, and malarious fevers which are only too common among the people of India.

I have seen it (opium) used largely by pilgrims on long and weary journeys, footsore, sick, half-fed, and surrounded by scenes of squalor and discomfort as in the pilgrim centres of Tirupati and Ramesvaram and Tiruttani.

It (opium) is used by bandy-drivers and jutka men about to start on a long drive. While I had my coffee at daybreak, the shivering bandy-man took his pill of opium and gave five to his pony and then started on a journey without break of 20 to 25 miles.

I have seen it (opium) used by residents of villages in the early morning—possibly to stave off hunger—in villages while on special sanitary duty in the great famine of 1876-77.

In Southern India the habit of eating and smoking opium is chiefly found in the larger towns and among the poor, though a few of the better classes, like pensioned native officers, smoke, having contracted the habit on field service or on the march. Their opinion is that it staves off hunger and supports the system against fatigue. I have visited some of the places where opium is smoked; the habituals are all poor men, chiefly elderly and old. Women in Southern India rarely use it. Prostitutes sometimes smoke and eat it to fight against fatigue, anxiety, and the effects of dissipation. The wives of mendicants and wandering tribes also use it. These places, *i.e.*, the smoking-houses and their surroundings are squalid, poor, and comfortless. The majority of the men after a few whiffs went quietly away to their poor homes. There was no stupor or intoxication. They all agreed that the effects were soothing, and smiled when I asked whether it incited them to any act of violence. One man said it was a great peace-maker. This corresponds with my own experience.

Opium is the poor man's drug; he spends on it 3 to 6 pies daily. Alcohol would cost from 9 pies to 18 or more. The use of alcohol is steadily spreading, and among the better classes its powers of mischief as compared to those of opium are 100 to 1.

I am the doctor of the poor man, *i.e.*, my work for years past has been and is among the poorer strata of the population in town, district, and gaol. My entire sympathy is with this class, and if I felt that opium was doing it harm, I would preach against its use. It is against alcohol in its cheaper and meretricious forms that a crusade should be started. For one man ruined by opium a hundred are destroyed by alcohol.

Opium is the sheet anchor of Muhammadan and Hindu medicine and is used by these practitioners in a vast number of ailments. Any prohibition against its use would be unjust and may raise a ripple of discontent among a contented but poor section of the population. Powerful drugs like arsenic, corrosive sublimate,

APP. XIX.

salts of copper and many vegetable poisons are sold freely in the bazaars; let these be prohibited, for they are the chief agents of secret poisoning, before any steps are taken to prohibit the use of what is the poor man's friend—opium. There is an old Hindustani proverb which runs as follows:—“To the child opium is milk, to the adolescent an arrow, and to the old a stick. It shows that to the growing the use of opium is a danger, but to the old a means of support. This view may be generally accepted.

Surgeon-Major,
District Surgeon, North Arcot.

VII.

Surgeon-Major J. MAITLAND, Acting Senior Surgeon,
General Hospital, Madras.

Having been in medical practice in the Madras Presidency for the past 17 years, and during a great part of that time in civil employment, I have had much to do with natives of all classes. My experience has been chiefly gained in the City of Madras, but also in the districts of Madura, Tinnevely, and the Nilgiris.

With the exception, presently to be mentioned, I believe opium eating to be extremely rare among the natives of the above-mentioned districts. For example during the past 10 months, when I have daily visited from 70 to 80 persons in the Madras General Hospital, I have only met with three opium eaters. The rare instances that one does meet with are usually mendicants, and the majority of them come from Northern India.

The exception above alluded to is the Nilgiri district, where some of the hill tribes (Badagas) are opium eaters. As far as I could ascertain the proportion of persons addicted to the habit amongst these people is under 10 per cent. Those who take opium are rather looked down upon by their more virtuous neighbours. My knowledge of the people is not sufficiently intimate to enable one to say whether the habit is injurious to them or not. I have never had an opportunity of watching the effects of opium given continuously for long periods to healthy persons, but I have frequently watched its effect given for a length of time and in considerable doses in cases of diabetes. In such persons its action is only beneficial.

VIII.

Surgeon-Major O'HARA, District Surgeon, &c.,
Bellary.

Sketch of proposed evidence.—The nature of the evidence which I propose to offer is essentially negative when not favourable to the drug.

Infrequency of the opium habit.—The practice of eating opium is by no means an obtrusive habit in those parts of the country with which I am best acquainted.

Experience derived from hospital and private practice.

—In extended civil medical practice among all conditions and classes of people but few instances of opium-eaters have been met with. These have been almost invariably men from the north or north-west and amongst those who perform pilgrimages to the sacred shrines of Southern India. Subjected to privations and exposure, obliged to traverse long distances on foot and often ailing from distressing and painful diseases, they resort to opium (occasionally becoming excessive consumers) and declare themselves to be unable to exist without it. In cases of great emaciation and exhaustion admitted for treatment into hospital from this class, it is seldom possible to assign the exact degree of injury to the general system resulting from the habitual use or abuse of the drug. Suffice to say that not infrequently such cases—without cessation of the opium habit—regain health and strength from the effects of rest and generous dietary.

Experience derived from Gaols.—From a very extended experience in charge of gaols in South India, it may be asserted that the discovery of opium—as a “forbidden article”—amongst the prisoners is a rare event; that it is confined almost always to men from the north; that the average prisoner in South India has no

acquaintance with the drug, and that there is evidently “no demand” by the prisoners for its surreptitious introduction into gaols.

General observations.—From time to time instances of the “opium habit” have come under observation; the persons concerned would probably be included under the head of “moderate consumers,” taking from one to four pills, about a grain each, per diem. There was nothing in their appearance or conduct to lead to suspicion of the habit, and it certainly had no perceptible effect on their intelligence and activity.

Virtues of the drug.—Unlike alcohol, its use does not excite to crimes of violence; it is invaluable in a variety of chronic and painful ailments, also in malarial anæmia and partial starvation; it sustains nervous power, and as a remedial agent is second to no single drug in the pharmacopœia.

F.I.C., Chemical Examiner to the Government of
Madras.

As to the consumption of opium for non-medical purposes and its effect upon the moral and physical condition of the people I can only speak from general observation, and my opinions are not based upon any special study of the subject.

I was district medical officer of Ganjām for nearly four years, and although the people of this district are not reputedly an opium-eating people, yet it is on the high way to the great Pooree temple and amongst pilgrims, detained in the hospital by illness, there have been opium eaters. Further, situated as this district is between the great opium-eating provinces of Orissa on the one side and Vizagapatam and Godavari on the other, the habitual use of opium in Ganjam must be more general than appears on the surface. During my four years' charge of this district, I had occasion to travel throughout its length and breadth several times. About 15,000 out-patients passed annually through my hospital, and I also had charge of a gaol with about 500 prisoners in it. With these opportunities among classes of people, who might be expected to furnish examples of the baneful effects of opium-eating, I only came across the case of one man whose bodily or mental health was apparently ruined by the habit. This was a comparatively young man, not over 25 years if I remember aright, who was constantly coming into gaol for petty theft. He was well known in the bazaar as a habitual opium eater, and he was constantly overshadowed by the police on account of his well-known propensity for thieving. Whether the crime was the result of the opium habit or only a coincidence I could not determine. This man was always extremely troublesome to manage at first; deprived of his daily dose he was rendered utterly incapable of doing any kind of work, and suffered terribly from abdominal pain and diarrhoea. I used to treat this case with moderate and diminishing doses of solid opium, and in a few days the craving for the drug would be lulled and the man took his place in the working gangs and was a fairly well-behaved prisoner. Under favourable circumstances I believe that this man could have given up the habit and lived an honest life.

Other instances of the opium habit which have come to my notice have been amongst pilgrims admitted for severe diarrhoea and amongst prisoners. It was difficult to determine in the former cases whether the diarrhoea was due to stoppage of the drug or to indiscreet dieting,

but the administration of solid opium usually cured these people in a few days and sent them on their journey again. Among prisoners the desire to have the drug was not shown after a few days, and they did not seem to miss it, or suffer from the want of it.

Ganjam is notably a feverish district, and some of the very worst forms of malarial fever are to be met with there, but I never heard that, or came across any instance in which opium was taken as a prophylactic or cure for malaria. Either its reputed action against malaria is unknown there, or I am badly informed.

I have habitually prescribed solid opium and its B.P. preparations among patients, chiefly for the relief of pain and for procuring sleep; but I have never come across any cases in which harm has resulted from its use.

I have also been in charge of five different Madras regiments, but I never came across amongst sepoys any disease attributable to opium.

With the single exception that I have noted I have not met with any instances of disastrous results, physical or moral, which could be attributed to the use of the drug. I must add that I cannot say the same with reference to alcohol. While the opium eater cannot, as a rule, be recognised by outward signs and appearances the alcohol tippler can, and while I have not met with cases of organic disease attributable to the use or abuse of opium, I can distinctly recall cases which were traceable to the abuse of alcohol. Close upon 10 years ago in a large town in South India I used to be called in to see Brahmin patients, admittedly hard drinkers, whose ailments were aggravated by the habit, and I learnt that, though Brahmins are precluded by caste rules from drinking alcohol, there was a regular practice springing up amongst certain classes of these people there to meet and spend the evenings at imported liquor-shops. I believe that the experience of medical officers stationed

in some of the other larger towns will accord with mine, that while they practically see nothing of the disastrous results of the opium habit, they do see among natives cases arising out of, or aggravated by, the abuse of alcohol, the latter being an experience, I believe, that was quite uncommon 20 years ago.

The use of opium as a poison is comparatively uncommon in this Presidency, and I append a table of figures for eight years (the period for which information in this form is available), from which it will be seen that out of 580 cases in which the presence of poison was established, in only 38 was opium found; and that out of 560 deaths traced to poison, only 24 were attributable to opium. Any restrictions placed upon opium alone would still leave the poisoner a wide choice of easily accessible poisons; hence no advantage will be secured by restricting its sale alone. A general Poisons Act, however, I regard as a necessity.

I take it that opium, wherever it is habitually consumed, is taken for much about the same purpose as alcohol, viz., as a diet, as an exhilarant or to drive away dull care. In many places I can also understand its habitual use by people suffering from chronic abdominal diseases; the use of opium in such cases helping the man to earn the means of support for his family. Under all these circumstances, I do not consider that the opium habit is an appreciable evil, or that it is one which calls for remedy. On the other hand, I consider that restrictions on the liberties of the people of India in this matter would not be justifiable, and that moral reformation, if it must necessarily be brought about by State interference, should commence in the direction of restricting the consumption of ganjah and alcohol rather than of opium.

XI.

Surgeon-Captain C. L. WILLIAMS, Acting Professor of Pathology, Medical College, Madras.

Experience of the witness in the subject; where gained and extent.—Witness was Civil Surgeon of Akyab in Lower Burma, the District of Arracan, for four months in 1893; also Superintendent of the goal there. The Arracanese are an opium-consuming race, and about 30 per cent. of the adult male population eat it in tities varying from one anna's worth (about 10 grains) upwards. Smoking is less common. The population of Arracan is [figures not available at the moment] and of Akyab The average daily population in the goal was about 300, and the number of admissions in the four months I was in charge was (exact figures will be furnished; the number was about 120). Of these admissions [circa 40] confessed themselves opium-eaters. The number of deaths was three (or four) in the goal; one from acute, one from chronic dysentery, and one from chronic granular contraction of the kidney—with a death from sub-acute dysentery recorded in my Akyab notes, but not stated whether in the goal or the civil hospital. The practice was invariably to immediately stop all opium; but occasionally a prisoner would get rather severe diarrhoea, and require a few grains daily for a day or

two to graduate the stoppage of his opium. Sick list in the goal also very small (perhaps two average daily sick). Importance of the small sick and death rates amongst an opium-eating population, in a position (goal) in which very accurate observation is possible, as proving that opium cannot be so very deleterious as some would make out.

Position of Akyab—Akyab lies at the mouth of the Coladyne river on an island within the delta of the river. It is full of malaria, exactly like the Sunderbund on a smaller scale; and it would seem that this is perhaps the cause which has driven the Arracanese to eat opium.

Cirrhosis of liver.—Witness has had now four months' experience amongst Tamil people, and has been much struck with the commonness of cirrhosis of the liver here as compared with its rarity during his four months in Akyab. There he only recollects one case; here he has seen very many. The difference does not lie in the fact that he has seen more patients here, though the numbers are as about 300 to 70 a day in Madras and Akyab, respectively, but in the fact that the great bulk of the population of Akyab is Musulman and of the remainder the majority Buddhists. Neither religion, drink, alcohol, to any appreciable extent, whilst the Madras Pariah indulges freely. This emphasises the

App. XIX. contrast between the physical effects of opium and alcohol.

Abuse—harmful but—not common.—Abuse of opium harmful without doubt, as is abuse of eating, smoking, drinking, exercise. But abuse not common. Akyab, a very moist climate, with a rainfall annually of 200 inches. Agriculturists there much exposed therefore to vicissitudes of weather, and opium probably a protection to their animal economies under the circumstances.

Post-mortem changes in Opium-eaters.—Sir William Moore, having stated that no naked eye changes were produced in the organs of opium eaters, examined *post-mortem*, witness has looked very carefully for actual organic change and is inclined to attribute a cirrhotic condition of the stomach in which the mucous membrane takes on an appearance like crocodile skin, to the abuse of the stimulant. This may possibly be followed by cirrhosis of the liver and even kidneys which was found in one case. But the cirrhosis of liver and kidneys was not advanced, and was only found in one case; cirrhosis of the stomach in four or five. But many *post-mortem* examinations of opium eaters were made (of those who had died of other affections), and as the above changes were found so rarely it seems fair to conclude that actual organic change is rare, and only appears late in heavy consumers.

Dysentery in Opium-eaters.—Of dysentery in connexion with the opium-eating habit, witness has seen a good deal. The abusers of it seem to get dysentery of a very severe type which is fatal, but this usually does not occur till the fourth or fifth decade of life, and can therefore hardly be said to cause early decay. Of course these are the cases that come into a hospital for treatment, and their number, in four months at Akyab, was small. The great mass of opium eaters never come before the Civil Surgeon at all, which they would if they were seriously diseased, or only do so for ordinary diseases, not due to opium, or as prisoners in his gaol, and their absence may be taken as a very fair proof that, at the very least, opium does not interfere with the ordinary animal functions of their economies whereby they earn their daily bread.

Rapid healing in one case of an Opium-eater.—Witness was much struck with one case of an enormous wound made in a Burman's loin at Akyab by a "dah" or very heavy knife like an axe. It went down to the kidney, and easily admitted the whole hand. The patient was an eater of opium, to the extent of about 10 grains a day, yet this enormous wound healed right off by first intention, showing a vitality in the tissues which could hardly exist if opium were as deleterious as many people say. Witness has never before seen such a successful closure of such an enormous wound. [He was given his usual allowance of opium whilst in hospital.]

Visits to Opium Dens.—Witness has visited the so-called opium dens in Monywa, and Yamethin in Upper Burmah, and the retail shop kept by a Chinaman in Akyab, but has failed to find the besotted wrecks described as peopling them.

Crime in connexion with Opium.—Witness has been Superintendent of Mandalay Central Gaol, (over 1,100 prisoners) for six weeks, and of Yamethin and Akyab gaols (2nd and 4th class, with populations of about 300 and 120 respectively) for 15 months, but is unable to say that the criminal classes in those gaols are especially recruited from the opium consumers.

Smuggling.—A significant fact occurred in Akyab during witness' tenure of office there. Some men smuggling opium were detected by the Excise officers, and on the latter's attempting to arrest them, attacked them with such violence that much blood was shed, many wounds given on both sides, and one man very nearly died. This was before the recent order anent the registration of opium consumers in Lower Burmah was issued. From it it seemed fair to draw the conclusion that, if smuggling was carried on merely to avoid payment, of duty, and life thereby endangered, *a priori* would smuggling be carried on to provide an article forbidden by law, and therefore increased value. For this reason witness, as a superintendent of a gaol, regretted the issue of that recent order as it seems

a direct incentive to crime. There is no doubt that for many years yet the Arracanese will have opium; and if they cannot obtain it honestly on payment, from a licensed shop, they are likely to go to any lengths, not short of murder, and including smuggling, to obtain it. To prevent this, the mere increase in the *personnel* of the Excise department will be a serious burden on the Exchequer, and the individuals are not likely to have a task devoid of considerable personal risk. Witness has had considerable experience in Burmah of the Sikh race, having been surgeon to three police battalions of mixed Punjabi, Muhammadans and Sikhs. These men have served in the most malarious and trying districts, but most certainly, at the least, the Sikhs have not fallen victims to the unhealthy climate in any *greater* proportion than the Muhammadans which they should do if their constitutions are undermined by opium.

Surgeon-Capt. Indian Medical Service,
Ag. Professor of Pathology,
Medical College, Madras.

XII.

SYED MOHIDEEN SAHIB, First-class Hospital Assistant, Madras.

As already stated in the sketch of my evidence, the habit of taking opium is not common in the Madras Presidency. With the exception of a few districts in the north of the Presidency, such as Ganjam, Vizagapatam, Godavari and Kistna, and of those which border on the Nizam's dominions, the Madras Presidency may safely be considered to enjoy perfect immunity from this habit. Even in the places above-mentioned where opium eaters are to be met with, the use of the drug is not practised to any injurious extent. It is, in fact, used by the lower orders of the population more as a remedy for exhaustion, starvation, and chronic pains than as a luxury. In this connexion it may be mentioned that the poorer classes are in the habit of dosing their children, especially infants, with opium in the night to keep them quiet and put them to sleep. In all these cases it seems to have a powerful effect. Any excessive consumption of the drug is, of course, dangerous, but during my service of 20 years, during which period I have served both in the northern and southern parts of the Presidency, I have hardly come across any such case.

The opium-eaters who may be found in our hospitals in Madras or the southern districts do not belong to the indigenous population, but are chiefly men from the north of India on pilgrimage to the sacred shrines in Southern India or pensioned Sepoys who contract the habit on field service.

From my own experience as a medical man of 20 years' standing, I have found this drug extremely useful for medical purposes. It has a beneficial effect in all diseases of the bowels, in diarrhoea, dysentery, chronic peritonitis, rheumatism, diabetes, in cases of all chronic and painful ailments, and in malarious fevers. This drug is largely resorted to even by native hakeems and vaidians in such cases.

Its use certainly does not excite to acts of violence and has no powers of mischief when compared to that of alcohol. On perusal of the report on lunatic asylums for the year 1891, under the heading "Causes," it is seen that opium as a cause of insanity takes the last place; whereas alcohol, Indian hemp, and privation take the lead. Again on page 22 of the same report, under the heading "Types of insanity," it is seen that opium smoking caused *no cases* for admission during the year, and that opium eating caused only two cases out of a grand total of 810 admissions, whereas spirit drinking caused seven. As the use of alcohol is now steadily spreading amongst all classes of the population in this Presidency, and as it is in most cases followed by disastrous result, legislation in this direction seems urgently called for.

(Signed) SYED MOHIDEEN,
First-class Hospital Assistant.

APPENDIX XX.

APP. XX.
Bombay.

NOTE on the system of EXCISE MANAGEMENT of OPIUM in the BOMBAY PRESIDENCY, presented by the Honourable T. D. MACKENZIE, Commissioner of Customs, and Superintendent of Opium and Abkari in the Bombay Presidency.

In view of the approaching visit of the Parliamentary Opium Commission, it seems desirable to prepare some brief account of the system of management under which the revenue from opium is realised in the Bombay Presidency, and that the various changes which have from time to time taken place, and the method under which the existing system is worked may be understood, some historical sketch thereof is necessary.

The opium trade of the Bombay Presidency first attracted the attention of the Supreme Government in the early years of the present century, as being likely to injure the revenue derived from the Government monopoly in Bengal, and a desire was expressed for the entire suppression of opium cultivation in British and native territories controlled by the Local Government; but as the Court of Directors on the matter being referred to them considered the measure not absolutely necessary, as the poppy did not appear to be cultivated in the territories under the control of this Government for profit or exportation so much as for local consumption, especially in Gujarat, where it was large, further action was for the time deferred.

But about 1818 much anxiety was caused by the serious danger to the prosperity of the Bengal monopoly, by the competition in the China market of opium from the Native States of Central India, where cultivation was unrestricted, the manufacturers skilful, and the quality of the drug, when ready for the market, exceptionally good. It was found that this opium was brought *via* Baroda and Cambay to Diu and Daman, and thence shipped to China, while yet another route was open *via* Pali and Jaisalmer to Karachi, where it was shipped to Daman, and thence to China.

It was evident that, owing to the high value and the portability of the drug, the difficulties presented by various foreign States, and the enormous line of country which would have to be guarded, any measures for checking this importation into and transit through British territory would be useless, unless arrangements were made with the producing States for restricting cultivation, and introducing a monopoly system, such as prevailed in the Behar and Benares. With this object in view therefore agreements were entered into with the chiefs of Udaipur, Bundi, Kotah, Dhar, Rutlam, the Maharaja Holkar and others, containing provisions to limit cultivation, prohibit sale and transit of opium, and requiring it to be made over at a fixed price to the British Agent, who was to buy up the whole stock, and send it to Bombay for resale. For the same purpose also the Treaty of 1820 was concluded with His Highness the Gaekwar, while the various petty chiefs, owning territories separating Malwa from British Gujarat and the Gaekwari Mahals north of Ahmedabad, signed agreements binding themselves to prevent the transit of Malwa opium through their respective territories. It was hoped that by these means the supply of opium to the foreign ports above-named for transhipment to China would be stopped.

Measures were also taken to regulate the consumption of opium in Gujarat, and to secure a regular revenue therefrom, by establishing depôts for the sale of the drug to persons licensed to retail it, at such rates as might tend to check its inordinate use, and at the same time afford a reasonable supply to consumers, a small fee being charged for each licence. For the supply of opium to Kutch the Political Resident was authorised to prefer indents on the Commissioner of Opium, Bombay, and a depôt was established at Rajkot to provide for the wants of Kathiawar. The agreements made with the Kutch and Kathiawar chiefs in 1820-21 will be found at pages 133-138 of Aitchison's Treaties, Volume IV., edition of 1876, and are still in force. The further arrangements made with them later on, after the Opium Act I. of 1878 came into force, will be noted in their proper place. To return to the earlier period: a duty of Rs. 12 per Surat ser was imposed, by Regulation I. of 1818, on all opium not the produce of the territories immediately dependent of the Presidency of Fort William, which might be brought into the Presidency of Bombay, except on Government account, and by Regulation II. of 1820 rules were promulgated for the more effective prevention of clandestine importation. These were repealed by Regulation XXI. of

1827, which, while reproducing the provisions of the repealed regulations as to import duty and illicit importation, also contained definite rules for regulating the supply of opium for internal consumption and its transit from place to place.

After 10 years' trial, however, the scheme was found ineffectual, as regards the prevention of the exit of Malwa opium to foreign ports for export to China. Sindia, Jeypore, and others had from the first refused to join in the arrangements made with the other chiefs in Central India; Karachi was still available as a port for illicit export, and the high duty imposed on licit importations into Bombay had proved prohibitory and driven the trade to illegitimate channels, with the result that the illicit trade was centred at Daman into which several thousand chests of Malwa opium were annually imported *via* Sind for direct export to China. Besides this, those chiefs in Central India who had entered into the agreements above-mentioned viewed the arrangements with disfavour, their wealthy merchants were on the verge of ruin, and their cultivators, who had previously disposed of their crops in the open market, were discontented at having to sell to the British Opium Agent at a fixed price.

In 1829 therefore the Government of India withdrew entirely from the Malwa opium monopoly, and although the restrictions in force in British and native territories in the Bombay Presidency were still maintained, the trade in Central India was thrown open to private enterprise, and in lieu of the abandoned system, it was decided to raise the revenue by the grant, at a special rate, of passes to cover the transit of opium through British territory to Bombay, for eventual exportation to China. Care was, however, taken to fix the rate at a figure which would make the cost of opium put down in Bombay by the direct route compare favourably with the cost of transmission to the coast by the cheapest of the more circuitous routes through foreign territory. At the same time Regulation XX of 1830 was passed, rescinding sections 1 and 2 of Regulation XXI. of 1827, so far as they related to Malwa opium, and making it lawful to import such opium by direct route into Bombay for exportation by sea, under a pass granted on payment of the prescribed fee, instead of the duty leviable under Regulation XXI. of 1827.

It is worth mentioning that this last-named Regulation had been framed on the assumption that no opium was grown within the limits of the Presidency, and that all the opium required for local consumption had to be imported. So far from this being the case, however, considerable tracts of land in Gujarat, Khandesh, and elsewhere were suited to, and were cultivated with, the poppy, and when the Government of India, in 1838-40, expressed their desire to stop the cultivation, and at the same time their unwillingness to pass a special law for the purpose, it was only by straining the meaning of the words "imported and brought into" in Section 1 of the Regulation, that the cultivation of the poppy was put a stop to, and there was difficulty in dealing with the large stocks of opium, manufactured in Khandesh on Government account by gaol labour, owing to the absence of purchasers at the price—equal to that of Malwa opium—demanded by Government.

In order to remedy this state of affairs, there were lengthy discussions between the local and supreme Governments, the outcome of which was that in 1853 it was decided to pass a law prohibiting the cultivation of the poppy in the Bombay Presidency, to abandon the Khandesh manufacture, to obtain opium for home consumption from Bengal or Malwa, and to closely enforce the rights of restriction in Native States, in which any traffic in opium for exportation by sea was likely to be carried on. The then Commissioner of Customs was directed to draft a Bill to prohibit the cultivation of the poppy, and amend the existing law as to the importation and retail sale of opium. He prepared a Bill accordingly, but as it was found that the repeal of much of Regulation XXI. of 1827, which was proposed therein, would also affect the law relating to Abkari and Poisons, and the many questions involved in the former subject were of a difficult and complicated nature, the result was a series of protracted discussions without change in the Opium Law, for many years.

APP. XX.
—
Bombay.

The Government of India Acts, No. XXIII. of 1876 ("to amend the law relating to opium") and VI. of 1877, postponing the date of coming into force of the former, need merely be noted *en passant*, as they were both repealed by Act I. of 1878, the opium law now in force, with effect from 1st April, 1878. Under this Act "no one shall

- (a) cultivate the poppy,
- (b) manufacture opium,
- (c) possess opium,
- (d) transport opium,
- (e) import or export opium, or
- (f) sell opium."

save under rules to be made by the Local Government with the previous sanction of the Government of India.

The history of legislation regarding opium having thus been briefly traced, there remain for consideration details connected with the

- sources of supply;
- routes prescribed;
- rates of duty imposed from time to time;
- the manner in which duty is payable;
- the examination of opium in transit, and on arrival at its destination;
- the sources from which the opium revenue is derived.

Sources of Supply.

All opium required for consumption in the Bombay Presidency is obtained from Malwa or Rajputana. It is permissible to obtain it also from the Government factories in Bengal, but in practice none has been obtained thence for many years past.

For the weighment of the opium, the issue of the passes, the recovery of pass fees, Government have established scales, and maintain offices at the following places in Rajputana and Central India, viz., Indore, Ujjain, Ratlam, Dhar, Jaora, Ajmir, Mandesaur, Bhopal, and Chitor.

The scales at Ajmir were established in 1877, at Jaura in 1878, at Mandesaur and Bhopal in 1879-80, at Chitor in 1883-84, while those at the other places are of earlier date. In 1857, scales were established at Ahmedabad to meet the emergency arising from the disturbed state of the country at that time. They have been retained up till now, and are used for the weighment and passing, for export to Bombay, of opium grown in the territory of His Highness the Gaekwar, and for the examination of opium imported from Dongarpur. His Highness the Gaekwar, it may be noted, is allowed to cultivate the poppy and manufacture opium in the Kari division for the consumption of his subjects, and for export by sea to China and other foreign countries on payment of the full British pass fee duty.

Routes prescribed.

The rules sanctioned by the Bombay Government, with the previous approval of the Government of India, direct that "no opium shall be imported into the Presidency of Bombay by land unless it be—

- (a) booked through by railway for re-exportation to other parts of British India or to Native States;
- (b) for exportation by sea from Bombay;
- (c) for retail sale by licensed vendors in any district in which the direct importation of opium for such sale is sanctioned by the Local Government, and subject to any conditions which the Local Government may from time to time prescribe";

And further, that—

"no opium shall be imported into the Presidency of Bombay by land except by one of the following routes, that is to say:—

- (a) from any place on the frontier of the Kari Division in the territory of His Highness the Gaikwar, which the Local Government may from time to time appoint, direct to the town of Ahmedabad;
- (b) by railway from Khandwa or *via* Palanpur and Ahmedabad."

Under Bombay Government Notification, No. 3340, dated 29th June 1880, it is ruled that the Palanpur-Ahmedabad State Railway shall be the route by which alone opium from Baroda territory may be imported into the Bombay Presidency for transmission to the scales at Ahmedabad. All opium so imported shall be carried direct to the Government Opium Agency in the town of Ahmedabad. There is but one exception to

the railway being the sole route by which opium can be imported into the Bombay Presidency, and that is for Dongarpur opium. By Government Notification, No. 229, dated 13th January 1886, "opium the property of His Highness the Maharaval of Dongarpur may be imported into Ahmedabad, under an escort furnished by His Highness the Maharaval, by the following route, viz., by Vichvada, Samera, Samlaji, Tintoi, Bakrol, Lembhoi, Dhakrol, Modhuka, Harsol, Ujdia, Dehgam, and Naroda to Ahmedabad.

Rates of Duty imposed from time to time.

The first duty on opium in this Presidency was imposed by Regulation I. of 1818. It was Rs. 12 per Surat ser on all opium not the produce of territories immediately dependent on the Presidency of Fort William which might be brought into the Presidency of Bombay except on account of Government. When Regulation XXI. of 1827 repealing Regulation I. of 1818 was passed, the same rate of duty was continued thereby, but Regulation XX. of 1830 left the rate to be decided by Government from time to time, and the pass fee was fixed at first at Rs. 175 per chest of 140 lbs. In 1835 the rate was lowered to Rs. 125, but in subsequent years it was progressively increased as follows:—

1843 to Rs. 200.	1859 to Rs. 500.
1845 „ 300.	1860 „ 600.
1847 „ 400.	1861 „ 700.

On 1st October 1862, however, it was lowered to Rs. 600, at which figure it remained till 16th July, 1877, when it was raised to Rs. 650, while for opium passed at the scales at Ajmir, which were established a few months before, the rate was higher by Rs. 25 per chest. On 16th September 1879 the rate was raised to Rs. 700, that for Ajmir being Rs. 725. These rates were applicable to all opium, whether imported for local consumption within the Presidency, or for subsequent export from Bombay to China or other foreign ports. On 28th June 1882 the rate for the latter was lowered by Rs. 50 per chest, and on 5th July 1890 this was further decreased by Rs. 50; at present, therefore, the rates are:—

- (a) if imported for local consumption, Rs. 725 at the Ajmir scales; Rs. 700 at all others;
- (b) if imported for export to foreign countries, Rs. 625 at the Ajmir scales; Rs. 600 at others.

Mode of Payment of Duty.

The duty payable—

- (a) at the Ahmedabad Opium Agency is paid either in cash or by hundi payable at sight at the Bank of Bombay;
- (b) at the Ajmir Agency, either in cash or by hundi drawn on some trustworthy firm in Bombay, and payable at sight;
- (c) at all Agencies subordinate to the Opium Agent, Indore, by hundis payable at six days' sight drawn on some trustworthy firm in Bombay. The opium is liable to detention by the Collector of Land Revenue, Customs and Opium, Bombay, at the risk of the consignee until payment of the duty, when it is paid by hundi, has been certified by the Bank of Bombay.

Examination of Opium in transit, and on arrival at destination.

Opium booked through for re-exportation to other parts of British India or Native States shall be detained and examined as to number and weight of, and tampering with packages in transit at such stations in the Presidency as the Local Government may appoint in this behalf. By road route the naka at Samera in the Mahi Kantha has been appointed an examining station for opium imported from Dongarpur, while for opium imported by rail, Dadar, Kalyan, Ahmednagar, Nandgaon and Sabarmati Railway stations are the places appointed for examination.

On the arrival of the opium at its destination the permit and the packages are presented for examination to the Collector. If he considers that the packages have not been opened or tampered with in transit, if their number is complete, and if they are found to be of the full weight specified in the pass, less such allowance for dryage, if any, as the Local Government may from time to time prescribe, the packages may be dealt with by the owner as the law or the rules thereunder prescribe, and the permit is retained by the examining officer.

Sources from which the Revenue from Opium is derived.

These may be arranged under four heads:—

- (a) the export duty on opium for China or other foreign countries;
- (b) the duty on opium locally consumed, which is drawn from (1) the farms for retail vend in British districts, (2) payments by Native States;
- (c) the transshipment fees on Persian Gulf opium;
- (d) collections on behalf of the Madras Presidency.

The manner in which the revenue under head (a) is levied has been described in the preceding paragraphs, and it seems unnecessary here to go into further detail.

As to head (b), the system throughout the Presidency proper, except in a few districts, which will be noted later on, and in Sind, is now to give the farm to a contractor selected by the Commissioner of Opium for a term of one year, and a brief summary of how the present method arose may be of interest. Previous to the reforms introduced in 1873, duty at the rate of Rs. 1,630 per chest was leviable on opium imported for home consumption, the rate on opium for China ranging from Rs. 600 to Rs. 700 per chest. In practice, the full duty rate was not imposed on opium for home consumption, but taxation considerably in excess of the export duty rate was levied on it. The sales of licit opium dwindled to insignificant proportions, and almost the whole wants of the people were met by smuggled opium. After many years spent in discussing various remedial proposals, the conclusion ultimately arrived at was that the rate of taxation levied was prohibitive, and was the main cause of the smuggling which so extensively prevailed. The first measures of reform decided on were,—

(1) the reduction of the duty rate on opium for home consumption, and its assimilation to that obtaining for the time being on opium for the China market;

(2) the abolition of fees for the privilege of vend.

Government determined to be content with the duty realisations, and not to attempt to raise additional revenue by imposing license fees on the retail sale of opium. Another main feature of the scheme introduced in 1873, with the object of displacing contraband opium from consumption, and inducing the opium dealers to confine their transactions to licit opium, was the apportionment to farmers of a sufficient share of the sale proceeds of licit opium to induce them, from motives of self-interest, to act honestly, to repress illicit practices on the part of their retailers, and to enlist their co-operation with Government for the suppression of opium smuggling. The system of giving the opium farms by competition was devised for the application of the above principles, and being tried first in Bombay City in June 1873, it was subsequently extended to Gujarat, the greater part of the Deccan and Konkan, and to Sind.

The scheme succeeded admirably in the first few years after its introduction in displacing from consumption in many districts considerable quantities of contraband opium. There was at first no great competition for the farms, and the minimum vend was guaranteed by the farmers were not forced by competition to too high a figure. Although the sales of licit opium rose rapidly, the farmers were able to sell at, or about, the maximum prices allowed, the full quantities they had undertaken to sell, and they made good profits. But as years went on the progress of licit consumption became slower, the farmers did not exert themselves as they should have done to put a stop to opium smuggling and the consumption of smuggled opium, and it was evident that some of them had entered into bargains out of which they could not make certain of the profit they looked for, if they confined their own dealings and those of their retailers to licit opium. The large profits earned by many of the farmers in the earlier years induced considerable competition for the farms, and many of them were let to speculators, who guaranteed too high minimum vend, and tendered for the farms on terms which left a very small, if any, margin for honest profit. It was clear that the whole object for which monopoly farms were granted was lost if the farmers dealt, or permitted their retailers to deal, in smuggled opium, and it became essential to reconsider the terms on which the farms should be granted, so that the farmers might be assured of a reasonable profit on licit dealings.

It was decided that the competition for the farms must be confined within limits, and no form of auction being possible which would satisfy the condition of restricted competition, the most practicable resource,

while the farming system was continued—and the time for dispensing with the aid of the farmers in suppressing illicit practices had not arrived—seemed to be selection from amongst the candidates for these farms. Government, therefore, in July 1889, directed that arrangements for the disposal of opium farms should be made as follows:—

(1.) The existing license conditions should be maintained intact. (2.) A margin of about Rs. 2-8-0 on each pound of opium sold should be secured to the farmers by limiting the minimum guaranteed vend to quantities which the farmers might reasonably be expected to sell at the maximum selling price allowed. For this purpose the Commissioner of Opium was instructed to estimate carefully the quantities that farmers dealing honestly were likely to be able to sell in each district at the retail selling price allowed, and to enter those quantities in the licenses as the minimum vend which the farmers would be required to guarantee. The commissioner was directed to estimate the minimum vend from the statistics in his office showing the actual sales for a series of years, the number and nature of offences committed against the opium laws, the quantities of contraband opium seized and the amounts paid by farmers as penalties for short sales. It was considered that with these figures and the general experience of the Department to aid him, the commissioner should be able to form a fair idea of the minimum quantities which the farmers ought to be able to sell. He was directed to use his discretion in fixing these quantities, but to be careful not to overburden the farmers, and to fix the minimum vend rather below than above his own estimate of the normal demand at the retail prices fixed.

(3.) Having fixed the minimum vend the commissioner was instructed to publish them with the other terms of the farm licenses, and call for applications for the farms on those terms. He was then to make his selection from among the candidates, and give the farms to the persons whom he might consider most likely to conduct the business satisfactorily.

The system was to be tried experimentally in the first instance for one year, but from one cause or another the term has since then been, as a rule, but one year.

In the districts where the monopoly farm system, either by competition or selection, was never introduced, comprising Bijapur, Dharwar, Belgaum in the Southern Maratha Country, Kanara, and Ratnagiri, where the consumption of opium has always been insignificant, the system has, since the introduction of the Opium Act up to the end of 1892-93, been for the license to pay to Government a fixed amount for the privilege of sale in addition to the duty on the opium actually issued to him from the Government depôts for vend at his shops, the farms being sold either by districts, talukas, or shops.

The further modifications which have been made with effect from 1st August, 1892 are—

- (a) abolition of the minimum guaranteed vend everywhere;
- (b) the reduction of the maximum quantity allowed to be sold by the retail vendors to one person in one day from ten tolas to two without a special permit;
- (c) the prohibition of the sale of opium for consumption on the premises,—in other words, the closing of licensed *chandul* and *madat* shops.

Owing to the term of the farm in Bombay City not having expired till the 31st July 1893, the modification did not take full effect there till the beginning of the current year. By the abolition of the minimum guaranteed vend it will be understood that farmers have now to pay only the duty on opium actually bought by them for sale, and instead of paying any license fees they are required to maintain additional establishments for the supervision of their retailers, and the prevention of smuggling and other illicit practices.

Under sub-head (2)—Payments by Native States—it may be mentioned that, on the introduction of the Opium Act in 1873, the Kathiawar States were informed that the cultivation of the poppy and the production of opium must be discontinued, that they must import their opium under passes granted by recognised authorities, and by specified routes, must take measures to cause opium retailed in their States to be sold under the same rules and at the same prices as opium supplied to consumers in British territory, must furnish half-yearly a statement showing the

APP. XX.
Bombay.

APP. XX.
Bombay.

quantities of opium imported and sold during that period, the proceeds of the sales and the balance of the opium in hand in each division of the State at the end of the half-year, and lastly they were required to pay the full pass fee of Rs. 650 on every chest of opium imported into those States for the use of their subjects. A drawback, however, of Rs. 130 per chest, or 20 per cent. of the pass fee, was to be allowed in the case of opium so imported, on the distinct condition that the Governments of the States, to which the privilege was conceded, should use their utmost endeavours to prevent the smuggling and illicit sale of opium, adopt the British retail system, and not permit opium to be sold by retail within their States at a lower price than that at which it was sold in British territory. It was further laid down that in case of failure to comply with this condition, Government were free to withdraw the concession. Similar instructions were issued as regards Cutch.

That State, as well as those of Kathiawar, memorialised in 1880 the Government of India on the subject of these orders, and in September 1881 they were informed of the decision of the Supreme Government, which confirmed that the Bombay wholly, except for the modification that "the pass duty on re-imported opium" shall be lowered from four-fifths of the full duty to "two-thirds, the prohibition against cultivation and "manufacture being maintained," while it was expressly stated that "the right of the British Government to impose the full duty is not affected by this concession, which has been made in the expectation that the Chiefs will enter into loyal co-operation with the Government of Bombay for the suppression of all illicit traffic."

In December 1881 a further concession was made to the States, in that they were permitted to purchase opium from Bombay, or to import it from Central India for consumption within the limits of their respective States, subject to the condition that they strictly complied with the rules under the Opium Act regulating such traffic. In the beginning of 1882 the Political Agent reported that the States had finally accepted the arrangements determined on by Government, and these arrangements were then duly and publicly notified throughout Kathiawar. They have been worked in these States and in Cutch for some 14 years now, but formal agreements, binding mutually on Government and the States, have not as yet been drawn up and signed. It is expected, however, that these will shortly be completed.

In the Mahi Kantha, the Rewa Kantha, and Palanpur, Government in 1878 decided that the growth of the poppy and the manufacture of opium must be stopped, that the sale of opium should be a State monopoly, that the opium consumed should be procured by the State itself by special arrangements, either by direct importation from Malwa under an official pass, or from the Government opium depôts at Ahmedabad or elsewhere. The Political Agents were instructed to inform the various Chiefs in those States that the Government would insist on the strictest performance of their treaty engagements to prevent the importation of opium across their borders from Malwa, Meywar, or Rajputana. With the view of securing the co-operation of the Chiefs they were permitted to import, free of duty, the quantity of opium actually required by each State for *bona fide* home consumption, but on the distinct understanding that the illicit importation of opium should be completely stopped, and that the opium should not be sold by retail at a less price than that at which opium was retailed in British territory. The full duty per chest was to be paid by the local importers and consumers, but the amount of the duty would form part of the revenues of the Chiefs, and not be charged by or paid to the British Government. The right of withdrawing the privilege and of charging the full duty, in the event of violation of the terms laid down, was, however, reserved by Government. The States were further required to furnish similar returns to those prescribed for Cutch and Kathiawar. The terms were accepted by the respective Chiefs, and are in force up to the present time.

Similar obligations and terms have been imposed on all the Native States in the Presidency, but the history of these the more important opium consuming States has been given in detail. Cambay, alike with Palanpur, the Mah Kantha and Rewa Kantha States, is allowed remission of the whole of the British duty on opium imported for home consumption, the States under the Surat Political Agency, viz., Dharampur, Bansda, and

Sachin that under Thana, viz., Jawhar; under Sholapur, viz., Alkalkot; under Dharwar, viz., Savanur; under Kolaba, viz., Janjira; the State of Savantvadi; and those under the Southern Maratha Country Agency (except Jath with the Dafapur Estate) received one-fifth, while Jath, under the Southern Maratha Agency, Bhor, under Poona, Aundh and Phaltan, under Satara, receive one-tenth remission.

Of Baroda, which though territorially in the Bombay Presidency, is politically subordinate to the Government of India, it is sufficient to say that it enjoys the whole of the revenue derivable under its State monopoly both for home consumption and export to China, and is besides allowed to import from Malwa, free of duty, whatever quantity of Malwa opium it may require for home consumption.

Regarding head (c), "Transshipment fees on Persian Gulf opium," this is provided for under Rule 29 of the opium rules sanctioned under Government Notification, Revenue Department, No. 4472 A., dated 3rd June 1885. The rule is quoted for ready reference:—

"Notwithstanding anything herein-before contained to the contrary, opium not the produce of India may be imported by sea into the ports of Bombay or Karachi, and opium, whether the produce of India or not, may be imported by sea into the port of Aden: Provided in each case that the opium so imported be manifested for transshipment or for re-exportation in the same bottom:

"Opium so imported may be re-exported by sea from the said ports:

"All such opium imported into and re-exported from the said ports in the same bottom shall be liable to a duty at the following rates on each chest not exceeding 140½ lbs. avoirdupois net weight:—

"When the consignment does not exceed 150 chests at Rs. 5 per chest.

"From 151 to 300 chests at Rs. 4 per chest.

"From 301 to 600 " at " 3 "

"601 chests and upwards at " 2 "

"Provided that opium on which a transshipment or re-export fee has been levied at one of the said ports shall be exempt from the payment of a re-export fee at any other of the said ports."

Under head (d), "Collections on behalf of the Madras Presidency," it may be noted that this is really nominal, so far as Bombay is concerned. It includes all revenue collected on behalf of Madras; e.g., opium passed for that Presidency from the scales in Malwa under the Bombay Opium Commissioner, or opium exported by sea from Bombay for Madras ports. It will be understood that all such revenue is credited to Madras.

For the information of the Commission is appended a complete annotated copy of the Opium Act I. of 1878, with the rules in force up to date, and copies of the license forms showing the conditions now imposed on opium vendors.

T. D. MACKENZIE,
Commissioner of Customs, Salt,
Opium, and Abkari.

Camp Bordi, 4th December 1893.

The INDIAN OPIUM ACT, No. I. of 1878, together with the RULES and NOTIFICATIONS issued thereunder and in force in the Presidency of Bombay on 1st December 1893.

ACT No. 1 of 1878.

An Act to amend the Law relating to Opium.

WHEREAS it is expedient to amend the law relating to opium; it is hereby enacted as follows:—

Preamble.

1. This Act may be called "The Opium Act, 1878." Short title.
It shall extend to such local areas as the Governor-General in Council may, by notification in the "Gazette of India," from time to time direct; Local extent.

And it shall come into force in each of such areas on such day as the Governor-General in Council in like manner directs in this behalf. Commence-ment.

The Act came into force in the territories administered by the Governor of Bombay in Council on the 1st April 1878, Government of India Notification, No. 1888, dated the 22nd March 1878.

The Act came into force in the territory of Peint on the 1st April 1887, Government of India Notification, No. 480, dated the 10th March 1887.

2. The reference made to Bombay Regulations XXI. of 1827, and XX. of 1830, in Act No. VII. of 1836, shall be read as if made to the corresponding sections of this Act. Amendment of Act VII. of 1836, s. 1.

[Paragraphs 1 and 2 of section 2:—repealed by Act XII. of 1891.]

Interpretation clause.	3. In this Act, unless there be something repugnant in the subject or context—
"Opium."	"Opium" includes also poppy heads, preparations or admixtures of opium, and intoxicating drugs prepared from the poppy;
"Magistrate."	"Magistrate" means, in the Presidency towns, a Presidency magistrate, and elsewhere a magistrate of the first class or (when specially empowered by the local government to try cases under this Act) a magistrate of the second class;
"Import."	"Import" means to bring into the territories administered by any local government from sea, or from foreign territory, or from a territory administered by any other local government;
"Export."	"Export" means to take out of the territories administered by any local government to sea, or to any foreign territory or to any territory administered by another local government;
"Transport."	"Transport" means to remove from one place to another within the territories administered by the same local government.
Prohibition of poppy cultivation and possession, &c. of opium.	4. Except as permitted by this Act, or by any other enactment relating to opium for the time being in force, or by rules framed under this Act or under any such enactment, no one shall— (a) cultivate the poppy; (b) manufacture opium; (c) possess opium; (d) transport opium; (e) import or export opium; or (f) sell opium.
Power to make rules to permit such matters.	5. The local government, with the previous sanction of the Governor-General in Council, may, from time to time by notification in the local Gazette, make rules consistent with this Act to permit absolutely, or subject to the payment of duty or to any other conditions, and to regulate within the whole or any specified part of the territories administered by such Government, all or any of the following matters:— (a) the cultivation of the poppy; (b) the manufacture of opium; (c) the possession of opium; (d) the transport of opium; (e) the importation or exportation of opium; and (f) the sale of opium, and the farm of duties leviable on the sale of opium by retail. Provided that no duty shall be levied under any such rule on any opium imported and on which a duty is imposed by or under the law relating to sea customs for the time being in force or under section 6. REVENUE DEPARTMENT, Government Notification No. 44724A, dated 3rd June 1885.—In exercise of the powers conferred by sections 5 and 13 of the Opium Act, 1878, and in supersession of all previous rules made under the same sections, the Governor in Council is pleased, with the previous sanction of the Governor-General in Council, to make the following rules for regulating the traffic in opium in the Bombay Presidency (namely):
Short title.	<i>Preliminary.</i> 1. These rules may be cited as the BOMBAY OPIUM RULES. 2. In these rules, unless there be something repugnant in the subject or context,— (1) "opium" has the meaning defined in the Act; (2) "commissioner" means the commissioner of customs, salt, opium, and ábkári; (3) "collector" means any revenue officer in independent charge of a district, and, within the limits of the town of Bombay, the collector of customs; it also includes any assistant collector, deputy collector, or assistant collector of customs duly authorised by such collector to perform all or any of the duties imposed on a collector by these rules; (4) "farmer" means a person who has obtained from the collector a farm under Rule 43; (5) "licensed vendor" means a person who has obtained a license for retail vend under Rule 39 or 45; (6) "Presidency of Bombay" includes Sind; (7) "town of Bombay" means the area comprised in the limits of the jurisdiction of the Presidency magistrates; (8) "warehouse" means the Bombay Opium Warehouse appointed by the Governor in Council, in Government Notification No. 2205, dated 16th March 1885 (published in the "Bombay

Government Gazette" of 19th idem, page 341), under section 7, clause (c), of the Act, for the storage and deposit of opium legally imported into and intended for exportation by sea from the Presidency of Bombay.

Cultivation and Manufacture.

3. The cultivation of the poppy and, except as provided in Rules 22, 39, 43, and 44, the manufacture of opium for sale or export are prohibited within the Presidency of Bombay.

[*Imperatrix v. Kangleo Asao*.—Where a person who had purchased opium from a licensed dealer, and, from such opium had made a preparation called chandul for his domestic use, was convicted of an offence in contravention of the rules prescribed and made by Government under the Opium Act I. of 1878—(*vide* "Government Gazette" for 1885, Part I., pages 704 to 715).

Held, that the conviction was bad and that Rules 3 and 4 (1), read together, must be construed as permitting the manufacture of chandul, by a person for his own domestic use, from opium licitly obtained.

Criminal Ruling, No. 42, dated 12th October 1893. Candy and Fulton, JJ.]

Possession.

4. Except as provided in Rules 5 and 6, or by a special order of the commissioner under Rule 11.

(i) no person shall have in his possession any opium other than—

(a) opium purchased from Government, or from a farmer or licensed vendor, or under Rule 36, or

(b) a preparation or admixture made for his own domestic use from opium so purchased;

(ii) Save as provided in Rule 60,* no person, not being a farmer or licensed vendor, shall have in his possession more than five seers of poppy-heads or two tolas of any description of opium not being poppy-heads.

5. Rule 4 does not apply to—

(i) opium in transit covered by a permit under Rule 7;

(ii.) opium lawfully imported—

(a) during transit to its destination;

(b) when warehoused under the provisions of Rule 21.

(iii.) (c) Opium imported into Ahmedabad under Rule 13a and possessed, subject to such conditions as the commissioner may prescribe, by an authorised agent of His Highness the Maharaval of Dongarpur pending disposal. (Added by Government Notification No. 229, dated 13th January 1886.)

6. The collector may grant:

(a) to any medical practitioner residing within his district, a license in the form marked A., hereto annexed, for the possession of opium for medical purposes only (in such quantity as the collector may fix, which, except in any special case in which the commissioner may authorise a larger quantity, shall not exceed one seer).†

(b) to any person, a special permit authorising him, for a specified period, to have in his possession for private consumption only a specified quantity of opium in excess of two tolas.

The collector, with the sanction of the commissioner, may delegate to the Mamlatdar, or other chief revenue officer of a Taluka, the power of granting special permits given him by sub-clause (b) of this rule under such restrictions and subject to such instructions as he may think fit. (Added by Government Notification No. 491, dated 18th January 1893, published at page 39 of the "Government Gazette," Part I., dated 19th idem.)

* *Vide* Government Notification, No. 5515, dated 31st July 1883, page 688, "Bombay Government Gazette," Part I., dated 3rd August 1893.

APP. XX.

Bombay.

Transport.

7. Save as provided in Rule 60,* the transport from one place to another within the Presidency of Bombay of any quantity of opium exceeding two† tolás in weight is prohibited, except under cover of a permit in Form B., hereto annexed, or in such other form as the commissioner from time to time prescribes, granted—

- (a) in the case of opium to be transported from one place to another within the town of Bombay, or from any place within to any place without the town of Bombay, by the collector;
- (b) in the case of opium to be transported from any place in the Presidency, outside the town of Bombay to the town of Bombay, or to any other place in the Presidency, by the collector of the place from which it is to be despatched :

Provided that—

- (1) in the case of opium imported into the town of Bombay, the permit to cover transport from the railway station to the warehouse may be endorsed on the pass referred to in Rule 16;
- (2) in the case of opium to be exported by sea, the permit to cover transport from the warehouse to the place of shipment may be endorsed on the shipping bill;
- (3) in the case of opium removed from a Government depôt to a retail shop, a permit in the Form C., hereto annexed, or in such other form as the commissioner from time to time prescribes may be granted by the officer in charge of such depôt.

8. Except in the case of transport from one place to another within the town of Bombay or within any district, no such permit shall be granted unless the person applying for it can produce a written permission so to apply, signed—

- (a) if transport to a place within the town of Bombay be applied for,—by the collector of customs;
- (b) if transport to any district be applied for,—by the collector of such district.

A copy of the permit granted shall be sent—

- in case (a) to the collector of customs;
- in case (b) to the collector of the district to which the opium is to be transported.

9. No package containing opium shall be opened during transport.

10. The permit and the packages shall, on arrival, be presented for examination to the collector.

If, after examination, the collector concludes that the packages have not been opened or tampered with in transit, if their number is complete, and if they be found to be of the full weight specified in the pass (less such allowance for dryage, if any, as the Local Government from time to time prescribes), the packages may be dealt with by the owner as the law or these rules allow, the permit being retained by the examining officer. Otherwise the packages shall be detained and dealt with as the law or the orders of any duly authorised authority may direct.

Import.

11. No opium shall be imported into the Presidency of Bombay by sea except in whole or half chests for re-exportation as provided by Rule 29.

Provided, however, that at the port of Bombay only, opium may be imported otherwise than in whole or half chests for re-exportation, subject in all cases to payment of the full duty imposed by the Sea Customs Tariff for the time being in force, and to any special orders passed by the commissioner as to subsequent possession and disposal of the opium imported.

12. No opium shall be imported into the Presidency of Bombay by land, unless it be:

- (a) booked through by railway for re-exportation to other parts of British India, or to Native States;
- (b) for exportation by sea from the port of Bombay;
- (c) for retail trade by licensed vendors, in any district in which the direct importation of opium for such sale is sanctioned by the Local Government, and subject to any conditions which the Local Government may from time to time prescribe :

Provided that any opium imported for either of the purposes mentioned in clause (b) and clause (c) may, after it reaches its destination in the Presidency of Bombay, and with the permission in writing of the collector, be dealt with in any other way permitted by the law for the time being in force. But, subject to any conditions which the local government may prescribe in this behalf, permission shall not be granted by the collector until the difference between the duty on the opium in question, calculated at the rates in force at the date of the application, on opium intended for exportation and on opium intended for retail sale, respectively shall have been recovered or refunded, as the case may be.

Government Notification No. 2365 of 8th May 1878, modified by Notification No. 8157, dated 21st November 1882.

His Excellency the Governor in Council is pleased to permit the direct importation of opium from Málwa into the town of Bombay for retail sale in the said town by persons duly licensed there to retail opium subject to the following conditions:—

- (a) All opium so imported shall be subject to the rate of duty notified from time to time under section 6 of the Opium Act, 1878, to be leviable on opium imported into the Presidency of Bombay for consumption therein, and payment of the duty leviable thereon shall be made in accordance with the provisions of the rules made under section 5 of the Opium Act;
- (b) All opium so imported shall, on arrival at Bombay, be deposited either in the Government opium godown, or in the licensed shop of the licensed vendor importing the same;
- (c) Opium deposited in the Government godown will remain there at the risk of the importer, who shall be at liberty to keep it in his own boxes and under his own keys and seals, and to remove it in reasonable quantities at a time to his shop as he requires it for use; but he shall not be entitled to have access to the godown except during office hours, nor without special permission from the collector of customs oftener than twice a week.
- (d) The quantity of opium to be removed from the Government godown shall on each occasion be presented to the officer in charge of the Opium Department of the Custom House for weighment and registration, and shall be covered by a pass in the Form C. attached to the rules.

Similar permission for direct importation from Malwa and direct purchase in Bombay from wholesale dealers has been accorded to licensed retailers in—

Ahmedabad, Kaira and Panch Mahals.—By Government Notification No. 5214 of 2nd October 1880, modified by Notification No. 8157 of 21st November 1882.

Broach and Poona.—By Government Notification No. 6341 of 26th October 1881, modified by Notification No. 8157 of 21st November 1882.

dealers in Bombay, subject to the following conditions, viz. :—

- (1) that permission be in every case obtained as required by the proviso to No. 12 of the said rules;
- (2) that the differential duty, if any, leviable on the opium under the said proviso be duly paid;
- (3) that the opium be purchased by whole or half chests only;
- (4) that it be shown to the satisfaction of the collector of customs and opium that the whole of the opium purchased has been obtained from the Bombay Opium Warehouse, and not from any other place;
- (5) that the opium purchased be forthwith transported to its destination, and lodged for issue in the same manner as if it had been imported direct from Malwa or Meywar, as the case may be.

GOVERNMENT NOTIFICATION NO. 7594, dated 9th October 1889.—Under the provisions of section 12 (c) of the rules framed under sections 5 and 13 of the Opium Act, 1878, and notified in Part I. of the "Bombay Government Gazette" of the 4th June 1885, his Excellency the Governor in Council is pleased to permit the direct importation of opium from Malwa or Meywar into the district of Khandesh for retail sale in the said district by the person duly licensed to retail opium in that district, subject to the following conditions :—

- (a.) All opium so imported shall be subject to the rate of duty imposed, for the time being, on opium imported into the Presidency of Bombay for home consumption, and payment of the duty leviable thereon shall be made in accordance with the provisions of Rule 17 of the rules under the Opium Act, 1878, for the payment of duty on opium intended for exportation by sea.
- (b.) All opium so imported into the Khandesh district shall, on arrival, be deposited in the Government Treasury at Dhulia, or in the *Mamlotdar's Treasury at Jalgaon*. (The words in italics were added by Government Notification, No. 8120, dated 17th November 1890.)
- (c.) Opium deposited as aforesaid will remain there at the risk of the importer, who shall be at liberty to keep it in his own boxes and under his own keys and seals, and to remove it to his shops at such times as the collector of the district may determine, and in such quantities at a time as he may require for use, not being less than the minimum quantity to be fixed by the collector; he shall not be entitled to have access to the place of deposit except during office hours, nor without special permission of the collector or other officer duly empowered by the collector to grant such permission.
- (d.) The quantity of opium to be removed from the place of deposit shall, on each occasion, be presented to the officer in charge of the place for weighment and registration, and shall be covered by a pass in the Form C. attached to the rules.

2. The person duly licensed to retail opium in the aforesaid district is further permitted to supply himself with opium by purchase direct from wholesale dealers in Bombay, subject to the following conditions :—

- (1) that permission be in every case obtained as required by the proviso to No. 12 of the rules;
- (2) that the differential duty, if any, leviable on the opium under the said proviso be duly paid;
- (3) that the opium be purchased by whole or half chests only;
- (4) that it be shown to the satisfaction of the collector of customs and opium that the whole of the opium purchased has been obtained from the Bombay Opium Warehouse and not from any other place; and
- (5) that the opium purchased be forthwith transported to its destination, and lodged for issue in the same manner as if it had been imported direct from Malwa or Meywar, as the case may be.

Similar permission for direct importation from Malwa or Meywar has been accorded to the licensed retailer in the Surat district by Government Notification, No. 2533, dated 11th April 1893.

13. No opium shall be imported into the Presidency of Bombay by land, except by one of the following routes, that is to say :—

- (a) from any place on the frontier of the Kadi division in the territory of His Highness the Gaikwar which the Local Government may from time to time appoint direct to the town of Ahmedabad;
- (b) by railway from Khandwa, or *via* Palanpur and Ahmedabad.

His Excellency the Governor in Council is pleased to rule that the Palanpur-Ahmedabad State Railway be the route by which alone opium from Baroda territory may be imported into the Bombay Presidency for transmission to the scales at Ahmedabad. All opium so imported shall be carried direct to the Government Opium Agency in the town of Ahmedabad.—Government Notification, No. 3340, of 29th June 1880.

13A. Notwithstanding anything contained in Rule 13, opium, the property of His Highness the Maharaval of Dongarpur, may be imported into Ahmedabad, under an escort furnished by His Highness the Maharaval, by the following route, viz., from Kherwada, by Vichwada, Samera, Samlaji, Tintoi, Bakrol, Lembohi, Dhakrol, Modhuka, Harsol, Ujdia, Dehgam, Naroda to Ahmedabad, and subject to examination as to number, weight, and tampering in transit, at any of the above places which the local government may appoint in this behalf. (Added by Government Notification, No. 229, dated 13th January 1886)

14. Opium booked through for re-exportation to other parts of British India or Native States shall be detained and examined as to number, weight, and tampering in transit at any railway station in the Presidency which the local government may appoint in this behalf.

Dadar Station on the G. I. P. Railway has been appointed an examining station for opium booked through for re-exportation.—Government Resolution, No. 2250, dated 5th April 1882.

Kalyan Station on the G. I. P. Railway has been appointed an examining station for opium booked through from Khandwa to Hyderabad and stations on the Nizam's State Railway.—Government Notification, No. 6004, dated 8th November 1879.

Ahmednagar on the Dhond-Maumad State Railway has been appointed an examining station for opium booked through for Madras, Hyderabad, and stations south of Ahmednagar.—Government Notification, No. 6466, dated 3rd December 1879.

Sabarmati railway station on the B. B. and C. I. and Rajputana-Malwa Railway has been appointed an examining station for opium brought by Rajputana Malwa Railway and booked through for stations north and south of Ahmedabad.—Government Notification, No. 6045, dated 8th September 1887.

Nandgaon Railway Station on the G. I. P. Railway has been appointed an examining station for opium booked through from Indore for the Aurungabad Opium Warehouse in the territory of His Highness the Nizam.—Government Notification, No. 3243, dated 12th May 1891.

15. Opium imported by land for exportation by sea shall be brought direct to the town of Bombay, and there deposited in the manner provided in Rule 21, until such time as it may be disposed of.

16. No opium shall be imported by land except after payment of the duty, if any, imposed by the Governor-General in Council under section 6 of the Act, and under a pass in Form D. hereto annexed, or in such other form as the commissioner from time to time prescribes granted by the Government Opium Agent at Indore, Chitor, Ujjein, Rutlam, Dhar, Ajmir, Ahmedabad, Mundisaur, or Bhopal, or by some other officer duly authorised in that behalf by the Governor-General in Council or the local government respectively.

16A. Notwithstanding anything contained in Rule 16 opium imported from the Kari division of His Highness the Gaikwar's territory under clause (a), Rule 13, and opium imported under Rule 13A from the territories of His Highness the Maharaval of Dongarpur, shall be allowed to be brought to the scales of Ahmedabad on provisional passes to be granted by the Opium Agent, Ahmedabad, in such form as may be prescribed by the commissioner from time to time without previous payment of duty. But no such opium shall be allowed to be passed from the scales, except on payment of duty, if any, and under a pass as provided in Rule 16.

APP. XX.
Bombay.

APP. XX.
—
Bombay.

(Added by Government Notification, No. 6914, dated 14th September 1889.)

Resolution of the Government of India, No. 3689, dated 17th November 1879.

"Read the following telegram, dated 22nd October 1879, from the Agent, Governor-General for Central India:—

"Collector Kistna issues passes unstamped to merchants for a large quantity of opium to be imported from Indore. Merchants slip from Malwa with consignments evading scales and will often get away. This system will strengthen smuggling. No pass should be given for Malwa opium, except through this office. If any collector desires opium imported, requisition should be sent to Indore, not made over direct, as pass, by him to merchant."

Resolution.—Under several local rules and regulations, the import of opium from Malwa for local consumption is permitted, under passes granted by revenue officers.

2. The Governor-General in Council has resolved that no pass shall, in future, be thus granted, excepting by the Opium Agent at Indore.

3. Officers desiring to authorise the import of Malwa opium, under sanctioned conditions, should accordingly address the Opium Agent at Indore, who will issue the required passes under such conditions, and with such precautions as he thinks necessary for the safety of the opium revenue which he supervises.

4. Each local government concerned will determine and inform the Opium Agent what officers are authorised to move him to issue passes under these orders."—*Vide* Government Notification, No. 6465, dated 3rd December 1879.

17. The duty on opium intended for exportation by sea shall be payable as follows:—

At the Ahmedabad Opium Agency, in cash or by hundi payable at sight at the Bank of Bombay;

At the Ajmir Agency, in cash or by hundi drawn on some trustworthy firm in Bombay and payable at sight;

At all agencies subordinate to the Opium Agent, Indore, by hundis drawn on some trustworthy firm in Bombay, and payable at six days' sight.

18. Intimation of the passes granted and hundis received daily shall be sent by the officer granting and receiving the same direct to the collector of customs, and to the Bank of Bombay (in the case of hundis thereon); and when the opium concerned is intended for retail sale by licensed vendors, or for immediate re-exportation from the Presidency of Bombay to another part of British India, or to a Native State, to the collector or political officer of the locality to which the opium is to be sent. The passes shall be delivered to the importers to cover their consignments.

19. Save as permitted in Rules 11 and 20, no opium shall be imported into the Presidency of Bombay:—

(a) except in whole chests containing 140 lbs. of opium, or half-chests containing 70 lbs., plus such allowance, if any, for dryage as the local government may from time to time prescribe;

(b) unless each such chest or half-chest be marked with the consecutive number of the pass, the total number of chests forming the consignment, and the distinctive brand of the office from which the pass was issued.

20. Notwithstanding anything contained in Rule 19, opium booked through by railway for re-exportation to the Presidency of Madras may be imported in strong wicker baskets subject to the following conditions:—

(a) each basket shall be stoutly and securely sewn over with leather, and shall contain 10 lbs. of opium;

(b) seven of such baskets shall be packed in a strong gunny or cloth bag, which shall be securely sewn;

(c) each bag shall have a label sewn on it, showing the number of its covering pass and its weight at the scales, and a distinguishing number or mark.

21. Opium imported into the Presidency for exportation by sea shall be conveyed to Bombay and shall, on arrival, be presented to the collector, together with the pass covering the same. The consignment shall be verified in the manner specified in Rule 10, and conveyed direct to and deposited in the warehouse:

Provided that any such opium may be detained by the collector at the risk of the consignee, until payment of the duty, when it is paid by hundi, has been certified by the Bank of Bombay, or until any other condition prescribed by this rule has been fulfilled.

22. Opium imported into the town of Bombay may, for export purposes, be manufactured into chandul, but such chandul shall continue liable to all the restrictions on transport which under these rules apply to opium. The manufacture shall be conducted under licenses to be issued by the collector on such conditions as the commissioner may from time to time prescribe.

Export.

23. Opium imported under Rule 12 for exportation by sea may be so exported from the port of Bombay only.

24. Opium so exported by sea shall be packed in whole or half chests containing the weights specified in Rule 19.

25. When opium is to be removed for exportation by sea, the exporter shall enter in the shipping bill under which the opium is to be exported the marks and numbers of packages and the number of packages of each mark to be removed from the warehouse. The shipping bill so prepared shall be checked with the warehouse register and removals noted therein.

26. Opium converted into chandul under Rule 22 may be exported under the same conditions as are provided in Rules 23 to 25 for ordinary opium, at the rate of 140 lbs. of chandul to 70 lbs. of opium.

27. When any person desires to export opium from the Presidency of Bombay into any foreign state, or into any other part of British India, he shall obtain a pass for each consignment, in such form as the commissioner may from time to time prescribe, from the collector of the district from which such opium is to be exported, or in the case of export from the town of Bombay, from the collector of Customs.

The pass shall specify—

(1) the name of the person in charge of the consignment,

(2) the name of the consignee,

(3) the number of the packages and the weight and contents of each, and

(4) the destination of the consignment.

But no such pass shall be granted unless the person applying for it produces a written permission so to apply, signed by the collector of the district, or the political officer accredited to the foreign State into which such opium is to be imported.

28. The collector may thereupon grant a pass for the export of such opium.

Each package shall be sealed in the presence of the officer granting the pass and with his official seal.

Transshipment and Re-export.

29. Notwithstanding anything herein-before contained to the contrary, opium not the produce of India may be imported by sea into the port of Bombay or Karachi, and opium, whether the produce of India or not, may be imported by the sea into the Port of Aden or Perim,* provided in each case that the opium so imported be manifested for transshipment or for re-exportation in the same bottom.

Opium so imported may be re-exported by sea from the said ports.

All such opium imported into and re-exported from the said ports in the same bottom shall be liable to a duty at the following rates on each chest not exceeding 140½ lbs. avoirdupois net weight:—

When the consignment does not exceed 150 chests, at Rs. 5 per chest.

From 151 to 300 chests, at Rs. 4 per chest.

From 301 to 600 chests, at Rs. 3 per chest.

601 chests and upwards, at Rs. 2 per chest.

Provided that opium on which a transshipment or re-export fee has been levied at one of the said ports shall be exempt from the payment of a re-export fee at any other of the said ports.

30. Small parcels of opium imported under Rule 11, on which full customs duty has been paid, may be exported by sea or land under the special orders of the commissioner.

* Added by Government Notification, No. 7482, dated 18th December 1886.

Notification under Section 133 of the Sea Customs Act, VIII. of 1878, published at page 28 of the "Bombay Government Gazette," Part I., dated 11th January 1883:—

Bombay Castle, 10th January 1883.

No. 221.—In supersession of Government Notification No. 67, dated 6th January 1880, published in the "Bombay Government Gazette Extraordinary" of the same date, and in exercise of the power conferred by Section 133 of Act VIII. of 1878 (The Sea Customs Act), his Excellency the Governor in Council is pleased, with the previous sanction of his Excellency the Governor General of India in Council, to declare that a fee on opium not the produce of India imported by sea into the Ports of Bombay, Karachi, or Aden* or Perim and transhipped in any of the said ports shall be levied at the following rates on each chest not exceeding 140½ pounds avoirdupois net weight:—

When the consignment does not exceed 150 chests, at Rs. 5 per chest.
From 151 to 300 chests, at Rs. 4 per chest.
From 301 to 600 chests, at Rs. 3 per chest.
601 chests and upwards, at Rs. 2 per chest.

(Government Notification No. 618, dated 11th September 1883.)

Opium on which a transhipment or re-export fee has been levied at one of the said ports shall be exempt from the payment of a transhipment fee at any other of the said ports.

General Rules as to Opium transported, imported, and exported.

21. No railway company shall receive or convey opium not covered and accompanied by a permit or pass of an officer competent under these rules to grant the same; or shall convey opium otherwise than direct, and in custody of its own officers, to the station at which, according to the route prescribed in such permit or pass, it should leave the railway.

32. The bulk of a consignment of opium in transport or in transit in the course of importation or exportation shall not be broken; and any revenue officer not inferior in grade to a Mahalkari, or any inspector or sub-inspector in the abkari or opium department, or any police officer not inferior in grade to a head constable, may at any time examine such a consignment.

If, after such examination, the officer concludes that the packages have not been opened or tampered with in such transport or transit, if their number corresponds with the number specified in the permit or pass, and if they be of the full weight specified in such permit or pass (less the allowance, if any, granted for dryage), the consignment shall be allowed to proceed. Otherwise the consignment shall be detained and disposed of according to law.

33. Opium, the property of a farmer licensed by His Highness the Gaikwar for the retail sale of opium in His Highness's territories, and intended for the supply of the said farmer's retail shops, may be imported into and transported through or exported from British territory when taken direct from one or other of the depôts and sub-depôts† mentioned in the foot-note under cover of permits issued and signed by a Naib-Subha of a division or of a taluka of His Highness's territories to the retail shop at which it is to be sold. Such permit shall be in Form C. appended to these rules.

33A. The conditions subject to which the transport through British territory of opium which has been seized as liable to confiscation in any part of the territories of His Highness the Gaikwar of Baroda, but which has not been ordered to be confiscated, shall be permitted, are as follows:—

- (a) that the opium shall be transported by the most direct route from the place of seizure, to the place at which its liability to confiscation is to be decided.

- (b) that it shall be covered by a pass which shall contain the following particulars:—

- (i) the route by which, the time during which, and the places from and to which transport is to be effected;
- (ii) the quantity of the opium to which the pass refers.

- (c) that every such pass shall be—

- (1) in the Form F. hereto appended,
- (2) signed by the Naib-Subha of the division,
- (3) kept during transport in the possession of the person in charge of the opium,
- (4) produced on demand made by any British officer of the departments of land revenue, police, opium, and abkari;

- (d) that no quantity shall be so transported in excess of that mentioned in any pass granted or produced in respect thereof, or by any route other than that mentioned in such pass;

- (e) that intimation of the route by which any such opium is to be transported shall be given to the police patel of the first village in British territory through which the opium may have to pass, not less than 24 hours before the transport through such village is commenced. (Added by Government Notification, No. 4426, of 30th June 1891, page 538 of the "Bombay Government Gazette," Part I., dated 2nd July 1891.)

33B. The conditions subject to which the import into, transport through and export from British territory shall be permitted of opium which is the property of a farmer licensed by His Highness the Maharaja of the Idar State, and which is to be taken direct from the depôt in His Highness's territory, in and through British territory for the supply of the said farmer's retail shops in His Highness's territory, are as follows:—

- (a) that the opium shall be imported, transported, and exported by the most direct route from the State depôt of the Idar State to the place where it is to be licitly sold;

- (b) that it shall be covered by a pass which shall contain the following particulars:—

- (1) the route by which, the time during which, and the places from and to which import, transport, and export are to be effected,
- (2) the quantity of the opium to which the pass refers;

- (c) that every such pass shall be—

- (1) in Form G. appended hereto,
- (2) signed by the Treasury officer of the Idar State,
- (3) kept during import, transport, or export in the possession of the person in charge of the opium,
- (4) produced on demand made by any British officer of the departments of land revenue, police, opium, and abkari;

- (d) that no quantity shall be imported, transported, or exported in excess of that mentioned in the pass granted in respect thereof, or by any route other than that mentioned in such pass;

- (e) that not less than 24 hours before the import into British territory is commenced, intimation of the route by which any such opium is to pass shall be given to the police patel of the first village in British territory through which the opium may have to pass;

- (f) that a duplicate of every such pass shall at the time of its issue be forwarded to the Mamlatdar of every taluka in which a British village through which the opium will have to pass is situated. (Added by Government Notification, No. 8811, dated 9th November 1892, page 1093 of "Bombay Government Gazette," Part I. of 10th idem.)

Sale.

34. Opium is said to be sold "retail" when a quantity less than half a chest of 140 lbs. is sold in a single transaction. It is said to be sold "wholesale" when half such a chest or any larger quantity is so sold.

35. No person shall sell any opium to any person not legally authorised to possess the same.

36. Opium deposited in the warehouse Rule 21 may be sold wholesale in the town of Bombay pending its disposal, subject to the provisions of these and of the Bombay Opium Warehouse Rules as to removal from

the warehouse, and provided that only whole chests or half chests shall be so sold.

36A. Opium imported into Ahmedabad under Rule 13A may be sold wholesale to Native Chiefs and British farmers or licensed vendors in the city of Ahmedabad pending its disposal, subject to the provisions of these rules as to transport or export, as the case may be, and provided that only whole chests or half chests shall be so sold. (Added by Government Notification No. 229, dated 13th January 1886.)

37. No person shall sell opium by retail without a licence in this behalf; provided that a medical practitioner, who holds a licence granted to him under Rule 6 (a), may sell medical preparations containing opium to the extent and subject to the conditions prescribed in his said licence. Amended by Notification No. 6292, dated 3rd August 1892, page 773 of 4th idem.)

38. Save as provided in Rule 60*, no retail vendor shall sell more than two tolás of the inspissated juice of the poppy, or of any preparation or admixture thereof, or of any intoxicating drug prepared from the poppy, or more than five sers of poppy-heads, except to a licensed vendor or farmer or to a medical practitioner or other person holding a special permit granted by the collector under Rule 6, or under a special order from the commissioner or a collector.

39. Licences for the retail of opium or for the manufacture and retail of all or any intoxicating drugs prepared from the poppy may be granted for the town of Bombay by the collector of customs, and for other parts of the Presidency, by the collector of the district. Such licences shall be in the Form E. hereto annexed, or in such other form as the commissioner from time to time prescribes.

40. Whenever a licence is granted for the retail of opium, the officer who grants it shall demand such payments, and shall impose in the licence such conditions on the licensee as may from time to time be prescribed by the commissioner.

41. (Cancelled by Government Notification No. 9061, dated 10th November 1885.)

42. Licences for retail shall be granted for one year only, unless the commissioner shall otherwise specially direct.

43. With the general or special sanction of the commissioner, the collector may let in farm the right to retail opium, or to manufacture and retail all or any intoxicating drugs prepared from the poppy, in any local area under his control, for a term not exceeding five years. The commissioner may prescribe rules,—

(a) for the invitation and acceptance of tenders for such farms,

(b) for the requisition of security for the due fulfilment of the engagements entered into by the farmers, and

(c) as to the form and conditions of such leases.

Any breach of such engagement shall render the lease liable to annulment by the authority by whom the farm was sanctioned.

44. When any such farm is given, the farmer may make his own arrangements for the appointment of subordinate vendors, and for the manufacture of intoxicating drugs, within the limits of his farm and subject to the conditions of his lease; provided that no opium except that supplied from a Government dépôt and opium lawfully imported under clause (c), Rule 12, and opium otherwise lawfully obtained, shall be retailed or used in the manufacture of such drugs.

45. Licences for the retail of opium, or of intoxicating drugs prepared from the poppy, by persons appointed by the farmer to retail on his behalf, shall be granted by the collector in such form and on such conditions, consistent with the conditions of the farm as the commissioner from time to time prescribes.

46. With the sanction of the commissioner, the collector may cancel any lease granted under Rule 43; or may, within the period of the lease, impose any new reservation of restriction on the farmer.

If any such lease be cancelled for any cause other than a breach of the conditions thereof, or if any

reservation or restriction with respect to the grant of licences be imposed during the lease, the commissioner shall award such compensation as he thinks reasonable to the farmer for any damage sustained by him by reason of such cancellation, reservation, or restriction.

47. If any licensed vendor or farmer shall have in his possession, on the expiry of his licence or farm, any opium which he is unable to dispose of, to the satisfaction of the collector by private sale to other licensed vendors, or farmers, he shall surrender the same to the collector; and the incoming licensed vendor or farmer, or, if the expired licence or farm is not renewed, any licensed vendor or farmer within the district, when required by the collector, shall be bound to purchase the opium aforesaid to the extent of two months' supply at such price and in such quantities as the collector shall adjudge; provided that the price of opium thus adjudged shall in no case exceed the rate at which it can be procured from the Government: provided also that, if such opium be in the opinion of the collector unfit for use, the collector shall cause it to be destroyed.

48. Central and subsidiary dépôts of opium for issue to licensed retailers and farmers and for other Government purposes shall be established at Bombay, and such other places as the local government may from time to time direct.

49. The opium required for these dépôts shall be imported from Malwa or Bengal, or otherwise procured as the local government may direct, and shall be stored in the first instance at the central dépôts, whence it will be supplied on indents to the subsidiary dépôts as required.

50. Opium shall be issued from the Government dépôts to licensed vendors at a price to be fixed and notified from time to time by the local government.

Under Rule 50 of the rules under the Indian Opium Act I. of 1878, published at pages 704 to 715 of the "Bombay Government Gazette," dated the 4th June 1885, Part I., and in supersession of Government Notification, No. 3128A, dated the 31st March 1892, it is hereby notified for general information, by order of His Excellency the Right Honourable the Governor in Council, that on and after 15th February 1893, and until further intimation, opium will be issued from the Government dépôts at Aden, Rajkot, Palanpur, Sadra, and Baroda Cantonment, and from those in the Province of Sind, and in the British Districts of Ahmedabad, Kaira, the Pauch Mahals, Broach, and Surat at the fixed rate of Rs. 10 per lb. of 40 tolás, and from those in all other districts of the Presidency at the fixed rate of Rs. 9 and As. 8 per lb. of 40 tolás. (Government Notification, No. 903, of 1st February 1893, published at page 65 of "Bombay Government Gazette," Part I. of 1893.)

Import, &c., on behalf of the Government.

51. Nothing contained in the foregoing rules shall be deemed to affect the possession, transport, import, export or sale of opium by or on behalf of the Government.

Permission to import, export, transport, and sell Opium.

52. Subject to the prohibitions, conditions, and regulations imposed and prescribed by the foregoing rules, the manufacture, possession, import, export, transport, and sale of opium are permitted.

[For Rules 53 to 57, see notes under section 13.]

Control.

53. All collectors shall, as regards any matter arising in the administration of these rules, be subject to the general control of the commissioner.

** Special Exceptions as to Crude Opium in Part of the Thar and Parkar District.*

60. In applying, so far as concerns crude opium, the provisions of Rule 4 (ii.), Rule 7, and Rule 38, to such portion of the Thar and Parkar District as lies east of

+ *Vide* Government Notification, No. 6437, dated 10th August 1892, page 802 of the "Bombay Government Gazette," Part I., dated 11th idem.

* Added by Government Notification, No. 5515, dated 31st July 1893, page 688, "Bombay Government Gazette," Part I., dated 3rd August 1893.

the Eastern Nara Canal, those rules shall be read as if for the words "two tolas," wherever they occur therein, there were substituted the words "ten tolas."

6. The Governor-General in Council may from time to time, by notification in the "Gazette of India," impose such duty as he thinks fit on opium or on any kind of opium imported by land into British India or into any specified part thereof, and may alter or abolish any duty so imposed.

With reference to Financial Notification, No. 2027, dated 28th June 1882, and in exercise of the powers conferred by section 6 of Act I. of 1878 (the Opium Act, 1878), the Governor-General in Council is pleased to notify that, till further orders, all opium imported by land into the Presidency of Bombay, and not covered by a pass for exportation by sea from the port of Bombay, granted in accordance with Rule 14* of the Rules made under the Opium Act, 1878, and published by the Government of Bombay, will be subject to the following duty upon each chest weighing net 140½ lbs. avoirdupois weight, namely:—

	Rs.
When the pass for such opium is granted at Ajmir	725
When the pass for such opium is granted elsewhere	700

(Government of India's Notification, No. 4709, dated 3rd November 1882, republished at page 965 of the "Bombay Government Gazette," Part I., dated 9th November 1882.)

In exercise of the powers conferred by section 6 of Act I. of 1878 (the Opium Act, 1878), the Governor-General in Council is pleased to reduce by Rs. 50 per chest the duty on opium imported by land into the Presidency of Bombay for exportation by sea from the port of Bombay.

Accordingly it is hereby notified that, till further orders, all opium imported by land into the Presidency of Bombay, and covered by a pass for exportation by sea from the port of Bombay, granted in accordance with Rule 16 of the rules made under the Opium Act, 1878, published by the Government of Bombay in their Notification, No. 4472A,† dated 3rd June 1885, shall be subject to the following duty upon each chest weighing net 140½ lbs. avoirdupois weight, namely:—

	Rs.
When the pass for such opium is granted at Ajmir	625
When the pass for such opium is granted elsewhere	600

(Government of India's Notification, No. 3242, dated 5th July 1890, republished under Bombay Government Notification, No. 4767, dated 9th idem.)

7. The Governor-General in Council may, by order notified in the "Gazette of India,"

(a) authorise any local government to establish warehouses for opium legally imported into, or intended to be exported from, the territories administered by such local government, and

In exercise of the powers conferred by section 7 (a) of the Opium Act, 1878, the Governor-General in Council is pleased to authorise the Governor of Bombay in Council to establish a warehouse for opium legally imported into or intended to be exported from the territories administered by him — (Government of India's Notification, No. 757, dated the 2nd May 1884, page 363 of the "Bombay Government Gazette," Part I., dated 15th idem.)

(b) cancel any such order.

So long as such order remains in force, the local government may, by notification published in the official gazette,

(c) declare any place to be a warehouse for all or any opium legally imported whether before or after the payment of any duty leviable thereon, into the territories administered by such government, or into any specified part thereof, or intended to be exported thence, and

(d) cancel any such declaration.

An order under clause (b) shall cancel all previous declarations under clause (c) of this section relating to places in the territories to which such order refers.

So long as such declaration remains in force, the owner of all such opium shall be bound to deposit it in such warehouse.

Government Notification, No. 2205, dated 16th March 1885. Under the power vested in him by section 7,

clause (c), of the Opium Act, and with the previous sanction of His Excellency the Right Honourable the Governor-General in Council, His Excellency the Right Honourable the Governor in Council is pleased to appoint the building known as the Port Trust Apollo Bonded Warehouse, situated in Marine Street, within the Port of Bombay, to be the place for the storage and deposit of opium legally imported into the Presidency of Bombay and intended for exportation by sea therefrom.

This Notification shall come into force from the 1st June 1885.

8. The local government, with the previous sanction of the Governor-General in Council, may, from time to time, by notification in the local gazette, make rules consistent with this Act to regulate the safe custody of opium warehoused under section 7; the levy of fees for such warehousing; the removal of such opium for sale or exportation; and the manner in which it shall be disposed of, if any duty or fees leviable on it be not paid within 12 months from the date of warehousing the same.

Government Notification, No. 4472, dated 3rd June 1885.—In exercise of the power conferred by section 8 of the Opium Act, 1878, the Governor in Council is pleased, with the previous sanction of the Governor-General in Council, to make the following rules relating to the warehouse appointed in Notification, No. 2205, dated 16th March 1885 (published at page 341 of the "Bombay Government Gazette," of the 19th idem), for the storage and deposit of opium legally imported into the Presidency of Bombay and intended for exportation by sea therefrom, viz.:—

1. The said warehouse shall be known as "the Bombay Opium Warehouse," and these rules may be cited as "the Bombay Opium Warehouse Rules."

2. In these rules, unless there be something repugnant in the subject or context, any word or expression which is defined in the Opium Act, 1878, or in the Bombay Opium Rules, shall be deemed to have the meaning attributed to it by that Act or those rules.

3. Opium brought to the warehouse for deposit shall be accompanied by the passport covering it issued at the scales.

4. At the time of receipt of the opium into the warehouse the warehouse-keeper, or some other officer authorised by him in this behalf, shall examine the marks, numbers, and other particulars on the chests or half-chests and verify the same by comparison with those entered in the passport.

5. If the marks, numbers, and other particulars on the chests or half-chests are not found to correspond with those given in the passport, the warehouse-keeper shall at once report the fact for the orders of the collector, the opium being held in safe custody pending such orders.

If they correspond, the opium shall be stored in the warehouse.

6. After storage of the opium, the warehouse-keeper shall stamp across the passport the word "warehoused," and shall enter therein, in the place provided for the purpose, the number of the compartment of the warehouse in which the opium has been stored with the date and his signature.

The passport shall then be sent to the opium department.

7. On receipt of the passport in the opium department, the particulars thereof shall be entered in a register; the passport shall then be stamped with the word "cancelled" and retained in the opium department. The date of warehousing shall also be noted in the register of passports.

8. All opium deposited in the warehouse as above shall be at the disposal of the owners, to be dealt with as provided in the Opium Act and the Bombay Opium Rules.

9. No warehoused opium shall be removed from the warehouse until application in writing has been made to the collector and a permit for such removal has been obtained from him.

This rule shall not apply to the removal of opium from one compartment of the warehouse to another.

10. Before removal of warehoused opium for exportation by sea, the exporter's shipping bill, which shall be in the form of Schedule A., or to the like effect, and shall be prepared in the manner provided in No. 25 of the Bombay Opium Rules, shall be presented to the warehouse-keeper, together with the collector's permit authorising such removal.

APP. XX.
Bombay.

Power to
make rules
relating to
warehouses.

Duty on
opium imported
by land.

Ware-
housing
opium.

* Now Rule 16.

† Published at pages 704 to 715 of Part I., of the "Bombay Government Gazette" of the 4th June 1885.

APP. XX.
Bombay.

11. As the opium is passed out of the warehouse, the warehouse-keeper, or some other officer authorised by him in this behalf, shall compare the marks and numbers and other particulars on the chests or half-chests with those entered on the shipping bill and shall permit the removal of the opium only on finding the particulars to correspond.

12. When all the opium covered by a shipping bill has been passed out of the warehouse, the warehouse keeper or other officer aforesaid shall note on the shipping bill the fact of the removal of the opium and the date thereof.

13. The warehouse keeper shall then note in the shipping bill the hours between which the opium shall be transported from the warehouse to the place of shipment, and return it to the exporter.

14. Before removal of any warehoused opium, under the proviso to No. 12 of the Bombay Opium Rules, for consumption within the Presidency of Bombay, or for exportation under No. 27 of the said rules into any foreign State or into any part of British India outside of the Presidency of Bombay, the pass required by No. 7 or No. 27 of the said rules, as the case may be, shall be presented to the warehouse keeper, together with the collector's permit authorising such removal.

15. Previous to permitting removal of any opium under Rule 14, the warehouse keeper shall check by weight the contents of each chest or half-chest, and shall compare the weight with that given in the pass, and in the case of opium which is to be exported under No. 27 of the Bombay Opium Rules, shall seal each package as required by No. 28 of those rules.

16. On the removal of any such opium from the warehouse the warehouse keeper shall note on the pass the fact of the removal and the date thereof, returning the pass to the person who presented it.

17. Before any warehoused opium is removed, whether under Rules 10-13 or Rules 14-16, the warehouse-keeper or other officer authorised by him in this behalf, shall mark each chest or half-chest with the Government stamp provided for this purpose.

18. Unless the collector by a special order otherwise directs, no opium shall be taken into, or passed out of, the warehouse, except in whole or half-chests, and in the manner prescribed in the foregoing rules.

19. Every operation connected with the deposit and removal of opium in or from the warehouse, the bringing of the same to the proper place for examination and weighing, and putting thereof into and out of the scales, and the opening, sorting, lotting, marking, and numbering of packages of opium, in accordance with or for the purposes of these rules, shall be performed by or at the expense of the owner of the opium.

20. The warehouse-keeper, or any person duly authorised by the collector, may at any time enter any compartment or part of the warehouse, and may weigh or otherwise take an account of any opium that may be there.

21. All assays, tests, examinations, and samplings shall be performed within the warehouse.

22. Assaying, testing, and other operations in which the use of fire is necessary shall be carried on only in the part of the warehouse premises set apart for that purpose, and known as the "testing-rooms."

23. The balance of opium, if any, remaining after assay or test shall be removed from the testing-rooms and again deposited in the portion of the warehouse set apart for its storage.

24. The use of fires and naked lights and smoking within the warehouse are absolutely prohibited except in the testing-rooms.

25. The use of covered lights and lanterns may be permitted by the warehouse-keeper whenever it is shown to his satisfaction that it is necessary to allow the packing and sorting of opium to be proceeded within the warehouse after sunset. The use of petroleum or other inflammable or dangerous oils for the purpose of lighting is strictly prohibited.

26. The warehouse shall be closed on Sundays and on New Year's Day, Good Friday, the Empress' Birthday, Christmas Day, and all other days on which the closing of public offices is ordered by Government. The collector, however, may, on application, permit the warehouse to be opened on these days on payment of such fees as the collector, with the sanction of the commissioner, may from time to time fix.

(The scale of fees sanctioned by the commissioner in his No. 775, dated 8th February 1887, is Rs. 10 for attendance of warehouse-keeper, Rs. 5 for each gatekeeper, annas 12 for the naik, and annas 8 for each peon.)

27. The ordinary working hours in the warehouse shall be from 10 a.m. to 5 p.m. But when the owner of any opium to be deposited in the warehouse, or of any opium already in the warehouse, makes—

(a) a verbal request that the warehouse be kept open at any other time between sunrise and sunset, or

(b) a written application, giving sufficient reason for the request, that the warehouse be kept open after sunset up to an hour not later than 10 p.m., the warehouse-keeper shall open or allow the warehouse to remain open as desired.

28. No opium, or any other article, shall be brought into or removed from the warehouse except between the hours of sunrise and sunset; provided that opium unavoidably detained in transit to the warehouse and brought to the warehouse after sunset may be received in safe custody pending verification in the manner specified in Rule 4.

29. The warehouse shall be opened and closed only in the presence of the warehouse-keeper, who shall be responsible that all doors and windows giving access to the warehouse are properly closed and secured at the end of each day, and at the time of closing shall see that no person remains within the warehouse after it is closed, and that all lights and fires have been properly put out.

30. After the closing of the warehouse the warehouse-keeper shall place the keys of all locks in a box provided for the purpose, and after locking the said box, shall forward it to the Superintendent, Preventive Service, or other officer for the time being residing at the town Custom House; one key of the said box shall remain in charge of the warehouse-keeper and a duplicate with the officer aforesaid.

31. The responsibility of securely closing the doors and windows of the several compartments within warehouse shall rest with the respective occupants of such compartments, and the keys shall remain in their charge.

32. Every person who enters or leaves the warehouse shall be liable to be searched for the purpose of ascertaining if he has opium secreted about him.

33. All cases, bundles, and other articles shall be liable to examination when being taken into or removed from the warehouse.

34. Any person found guilty of any breach of the Opium Act, or of any rule framed thereunder, or otherwise committing any offence in respect of the warehouse or of the warehouse officials, or of any property contained in the warehouse, may be excluded from and prohibited entry into the warehouse by the collector.

35. The owners of opium stored in the warehouse shall ordinarily pay monthly in advance rent at the rates specified in Table I. of Schedule B., but the Commissioner of Customs and Opium may at any time substitute therefor fees at the rates specified in Table II. of the same schedule (Government Notification No. 6,315, dated 5th August 1885).

36. In the event of any rent (or warehouse fee) not being paid when due, the collector may detain any opium in the warehouse, the property of the person or persons by whom such rent (or warehouse fee) is due, until the claim be satisfied, and no opium in respect of which rent (or warehouse fees) have not been paid shall be removed from the warehouse until they are paid.

37. The allotment of compartments and of testing rooms in the warehouse shall rest with the collector, who may at any time revise or alter any such allotment previously made by him.

38. Nothing contained in the foregoing rules shall be deemed to affect opium in the warehouse belonging to or which is to be purchased by or on behalf of Government.

9. Any person who, in contravention of this Act, or of rules made and notified under section 5 or section 8,

(a) cultivates the poppy, or

(b) manufactures opium, or

(c) possesses opium, or

(d) transports opium, or

(e) imports or exports opium, or

(f) sells opium, or

(g) omits to warehouse opium, or removes or does any act in respect of warehoused opium,

and any person who otherwise contravenes any such rule,

Penalty for
illegal cul-
tivation of
poppy, &c.

shall, on conviction before a magistrate, be punished for each such offence with imprisonment for a term which may extend to one year, or with fine which may extend to Rs. 1,000, or with both;

and, where a fine is imposed, the convicting magistrate shall direct the offender to be imprisoned in default of payment of the fine for a term which may extend to six months, and such imprisonment shall be in excess of any other imprisonment to which he may have been sentenced.

Presump-
tion in
prosecu-
tions under
section 9.

10. In prosecutions under section 9, it shall be presumed, until the contrary is proved, that all opium for which the accused person is unable to account satisfactorily is opium in respect of which he has committed an offence under this Act.

Confiscation
of opium.

11. In any case in which an offence under section 9 has been committed—

- (a) the poppy so cultivated;
- (b) the opium in respect of which any offence under the same section has been committed;
- (c) where, in the case of an offence under clause (d) or (e) of the same section, the offender is transporting, importing, or exporting any opium exceeding the quantity (if any), which he is permitted to transport, import, or export, as the case may be, the whole of the opium which he is transporting, importing, or exporting;
- (d) where, in the case of an offence under clause (f) of the same section, the offender has in his possession any opium other than the opium in respect of which the offence has been committed, the whole of such other opium,

shall be liable to confiscation.

The vessels, packages, and coverings in which any opium liable to confiscation under this section is found, and the other contents (if any) of the vessel or package in which such opium may be concealed, and the animals and conveyances used in carrying it, shall likewise be liable to confiscation.

Order of
confiscation
by whom to
be made.

12. When the offender is convicted, or when the person charged with an offence in respect of any opium is acquitted, but the magistrate decides that the opium is liable to confiscation, such confiscation may be ordered by the magistrate.

Whenever confiscation is authorised by this Act, the officer ordering it may give the owner of the thing liable to be confiscated an option to pay, in lieu of confiscation, such fine as the officer thinks fit.

When an offence against this Act has been committed but the offender is not known or cannot be found, or when opium not in the possession of any person cannot be satisfactorily accounted for, the case shall be inquired into and determined by the collector of the district or deputy commissioner, or by any other officer authorised by the local government in this behalf either personally or in right of his office, who may order such confiscation: Provided that no such order shall be made until the expiration of one month from the date of seizing the things intended to be confiscated or without hearing the persons (if any) claiming any right thereto, and the evidence (if any) which they produce in support of their claims.

The collector of salt revenue has been authorised, under paragraph 3 of this section, to inquire into and determine cases of adjudications "so far as regards" any opium or other thing seized by himself or by "any officer subordinate to him." (Government Notification, No. 3578, dated the 20th June 1879, published at page 609 of the "Bombay Government Gazette," Part I., dated 26th idem.)

Power to
make
rules, re-
garding

13. The local government may, with the previous sanction of the Governor-General in Council, from time to time, by Notification in the local gazette, make rules consistent with this Act to regulate—

disposal of
things
confiscated
and rewards.

- (a) the disposal of all things confiscated under this Act; and
- (b) the rewards to be paid to officers and informers out of the proceeds of fines and confiscations under this Act.

Government Notification, No. 4472A, dated 3rd June 1885.—In exercise of the powers conferred by sections 5 and 13 of the Opium Act, 1878, and in supersession of all previous rules made under the same sections, the Governor in Council is pleased, with the previous sanction of the Governor-General in Council, to make the following rules for regulating the traffic in opium in the Bombay Presidency (namely):

[For Rules 1 to 52, see notes under section 5.]

Disposal of Things confiscated.

APP. XX.

Bombay.

53. Opium confiscated under the Act shall be examined by the collector, and, if declared by him to be fit for use, shall be sent to the nearest depôt. If declared to be unfit for use, it shall be immediately destroyed.

54. If the opium so sent to a depôt be of quality sufficiently good for retail purposes, it shall be added to the stock at the depôt. But if such opium be of inferior quality, it may be issued to retail dealers at a special rate proportioned to its quality, but shall be subject in other respects to the same conditions as other opium.

55. All property, other than opium, which is confiscated under the Act shall be sold under the orders of the magistrate or other officers by whom the confiscation was adjudged.

Rewards to be paid to Officers and Informers.

56. Any magistrate convicting an offender under section 9, or any magistrate or other authorised officer ordering the confiscation of opium under section 12 of the Act, may grant, in such proportions as he thinks fit, to any person or persons who have contributed to the seizure of the opium, or the conviction of the offender, a reward not exceeding the value of the opium and other articles confiscated in the case plus the amount of any fine imposed; or may place such aggregate amount to be awarded at the disposal of the head of the department, any officer or officers of which may have contributed to the seizure of the opium or the conviction of the offender, to be distributed by such head of the department in such proportion as he thinks fit among persons whom he may consider to be entitled to reward in connexion with such seizure or conviction.

Government Notification, No. 7007, dated 20th October 1888.—In exercise of the powers conferred by section 13 of the Opium Act, 1878, the Governor in Council, with the previous sanction of the Governor-General in Council, is pleased to make the following rules, and to direct that they shall be inserted as sub-sections of No. 56 of the Rules under the said Act published at pages 704 to 715 of Part I. of the "Bombay Government Gazette," dated 4th June 1885:—

1. Every order for reward shall state exactly the sum of money awarded as a reward from—

- (a) the value of the opium and other articles confiscated in the case, and
- (b) the amount of fine imposed.

2. For the purpose of determining the amount of reward under head (a) above, the value of the opium shall invariably be calculated at the rate of Rs. 6 per lb. (unless the officer passing the order considers the opium to be decidedly valueless and records an opinion to that effect), and the value of other confiscated articles shall be appraised by him at his discretion.

3. Immediately after an order for a reward is passed, a warrant shall be issued on the Treasury for the prompt disbursement of the amount of reward adjudged under the head (a), Rule 1., and for the payment of the amount adjudged under the head (b) after the recovery of the fine shall have been certified by the magistrate concerned, a copy of the warrant being at the same time given to the intended recipient.

4. The sufficiency of the amount adjudged as a reward in each case should be judged (a) by the importance of the seizure, and (b) by the dexterity displayed, and the trouble and risk undergone, by the informers, captors, and others concerned, acting in good faith.

5. If the fine is not paid within 24 hours, or only paid in part, the convicting magistrate may, within a limit of Rs. 100, order payment of its full amount or of the unrealised balance, as the case may be, from the Treasury. (Government Notification, No. 8664, dated 5th December 1890.)

6. If an officer who passes an order for a reward considers the maximum amount of reward which he is competent to grant or the amount actually available for reward to be insufficient, or if the district magistrate is of opinion that the reward granted in any case by a subordinate court or officer is insufficient, the district magistrate may, on the application of the officer concerned in the former case, and of his own accord in the latter case, apply for the sanction of the commissioner to supplement the reward by a further reward under Rule 57 of the Opium Rules of such amount as the district magistrate may deem fit to

APP. XX.
Bombay.

recommend, submitting at the same time a clear statement of the case, and of the grounds for his recommendation. The commissioner may sanction, modify, or reject the district magistrate's recommendation as he may think fit in each case.

57. In any case in which, in the opinion of the commissioner, any person has performed any service of special merit in respect of the prevention or detection of opium smuggling or of any offence against the Act, the commissioner may grant to such person a reward not exceeding in amount of Rs. 500.

The commissioner, or, with the sanction of the commissioner, a collector or the collector of salt revenue, may incur at his discretion expenditure not exceeding Rs. 500 in each case for the employment of informers or for any other purpose connected with the prevention or detection of opium smuggling or of any offence against the Act.

The commissioner shall from time to time report to the Government the circumstances under which any reward may have been granted or expenditure may have been incurred under this rule.

[For Rule 58, see notes under section 5.]

Control.

59. The decision of the collector as to the value of opium which has been seized shall be final.

Any officer of any of the departments of excise, police, customs, salt, opium, or revenue, superior in rank to a peon or constable, who may in right of his office be authorised by the Local Government in this behalf, and who has reason to believe, from personal knowledge or from information given by any person and taken down in writing, that opium liable to confiscation under this Act is manufactured, kept, or concealed in any building, vessel, or enclosed place, may, between sunrise or sunset,

- enter any such building, vessel, or place;
- in case of resistance, break open any door and remove any other obstacle to such entry;
- seize such opium and all materials used in the manufacture thereof, and any other thing which he has reason to believe to be liable to confiscation, under section 11, or any other law for the time being in force, relating to opium; and
- detain and search, and if he thinks proper, arrest any person whom he has reason to believe to be guilty of any offence relating to such opium, under this or any other law for the time being in force.

Government by Notification No. 3578, dated 20th June 1879, published at page 609 of the "Bombay Government Gazette," Part I., dated 26th idem, have authorised the officers named below to act under this section, within the limits of their respective charges:—

All officers of the revenue department invested with magisterial powers, all police officers superior in rank to a head constable, all sarkarkuns and inspectors in the departments of opium and abkari, the collector, deputy collector, and all assistant collectors of salt revenue, the superintendent of the coastguard service, and all coastguard inspectors, frontier inspectors, sarkarkuns of Talukas, and supervisors of distilleries subordinate to the collector of salt revenue.

Sub-inspectors in the department of opium and abkari have been authorised to act, within the limits of their respective charges, under this section. (Government Notification No. 9339, dated 19th December 1883, published at page 1000 of the "Bombay Government Gazette," Part I., dated 20th idem.)

Inspectors of salt revenue in Sind have been authorised to act, within the limits of their respective charges, under this section. (Government Notification No. 7249, dated 7th September 1885.)

The superintendent and the assistant superintendents of the salt preventative establishment in the Thar and Parkar district have been authorised to act, within the limits of their respective charges, under this section. (Government Notification No. 2362, dated 4th April 1893, published at page 340 of the "Bombay Government Gazette," Part I., dated 6th idem.)

In exercise of the powers conferred by section 14 of the Opium Act, 1878, his Excellency the Governor in Council is pleased to authorise, within the limits of the town and island of Bombay, the gaugers and clerks of the abkari department employed within the said limits when performing the duties of inspectors or sub-inspectors under the orders of the collector of land revenue, customs, and opium, Bombay, to exercise the

powers conferable under the said section. (Government Notification, Revenue Department, No. 3569A, dated 16th May 1893.)

In exercise of the powers conferred by section 14 of the Opium Act, 1878, and in continuation of the notifications under the said section specified in the footnote,* the Governor in Council is pleased to authorise, in right of their offices, the officers of the police department herein below specified to exercise within the limits of their respective charges all the powers conferable under the said section, that is to say:

All head constables specially appointed—

- for the protection of the opium revenue in the Bombay Presidency, including the Province of Sind,
- for the protection of the abkari revenue in any part of the Presidency of Bombay other than the Province of Sind.

(Government Notification No. 7157 dated 2nd October 1893, Revenue Department, page 933, "Bombay Government Gazette," Part I., dated 5th idem.)

15. Any officer of any of the said departments may—

- seize, in any open place or in transit, any opium or other thing which he has reason to believe to be liable to confiscation under section 11, or any other law for the time being in force, relating to opium,
- detain and search any person whom he has reason to believe to be guilty of any offence against this or any other such law, and, if such person has opium in his possession, arrest him and any other persons in his company.

Power to seize opium in open places.

Power to detain, search, and arrest.

16. All searches under section 14 or section 15 shall be made in accordance with the provisions of the Code of Criminal Procedure.

Searches, how made.

17. The officers of the several departments mentioned in section 14 shall, upon notice given or request made, be legally bound to assist each other in carrying out the provisions of this Act.

Officers to assist each other.

18. Any officer of the said departments who, without reasonable ground of suspicion, enters or searches, or causes to be entered or searched, any building, vessel, or place, or vexatiously and unnecessarily seizes the property of any person on the pretence of seizing or searching for any opium or other thing liable to confiscation under this Act, or vexatiously and unnecessarily detains, searches, or arrests any person, shall for every such offence be punished with a fine not exceeding five hundred rupees.

Vexatious entries, searches, seizures, and arrests.

19. The collector of the district, deputy commissioner, or other officer authorised by the Local Government in this behalf, either personally or in right of his office, or a magistrate, may issue his warrant for the arrest of any person whom he has reason to believe to have committed an offence relating to opium, or for the search, whether by day or night, of any building or vessel or place in which he has reason to believe opium liable to confiscation, to be kept or concealed.

Issue of warrants.

All warrants issued under this section shall be executed in accordance with the provisions of the Code of Criminal Procedure.

The collector, deputy collector, and all assistant collectors of salt revenue have been authorised to issue warrants under this section within the limits of their respective charges. (Government Notification No. 3578, dated 20th June 1879, published at page 609 of the "Bombay Government Gazette," Part I., dated 26th idem.)

20. Every person arrested, and thing seized, under section 14 or section 15, shall be forwarded without delay to the officer in charge of the nearest police station; and every person arrested and thing seized under section 19 shall be forwarded without delay to the officer by whom the warrant was issued.

Disposal of person arrested or thing seized

Every officer to whom any person or thing is forwarded under this section, shall, with all convenient despatch, take such measures as may be necessary for the disposal, according to law, of such person or thing.

* Notification No. 3578 at "Bombay Government Gazette," Part I., for 1879, page 609.

Notification No. 9339 at "Bombay Government Gazette," Part I., for 1883, page 1000.

Notification No. 7249 at "Bombay Government Gazette," Part I., for 1885, page 1102.

Notification No. 2362 at "Bombay Government Gazette," Part I., for 1893, page 340.

Notification No. 3569A at "Bombay Government Gazette," Part I., for 1893, page 428.

Power to enter, arrest, and seize, on information, that opium is unlawfully kept in any enclosed place.

LIST OF APPENDICES.

21. Whenever any officer makes any arrest or seizure under this Act, he shall, within 48 hours next after such arrest or seizure, make a full report of all the particulars of such arrest or seizure, make a full report of such arrest or seizure to his immediate official superior.

22. In the case of alleged illegal cultivation of the poppy, the crop shall not be removed, but shall, pending the disposal of the case, be attached by an officer superior in rank to a peon or constable, who may in right of his office be authorised by the Local Government in this behalf; and such officer shall require the cultivator to give bail in a reasonable amount (to be fixed by such officer) for his appearance before the magistrate by whom the case is to be disposed of, and such cultivator shall not be arrested unless within a reasonable time he fails to give such bail:

Provided that, wherever Act No. XIII. of 1857 (An Act to consolidate and amend the law relating to the cultivation of the poppy and the manufacture of opium in the Presidency of Fort William in Bengal), or any part thereof, is in force, nothing in this section shall apply to such cultivation.

All collectors, assistant and deputy collectors, mamlatdars, mukhtiar-kars, awal karkuns, and head munshis have been authorised to act under this section, within the limits of their respective charges. (Government Notification No. 3578, dated 30th June 1879, published at page 609 of the "Bombay Government Gazette," Part I., dated 26th idem.)

23. Any arrear of any fee or duty imposed under this Act or any rule made hereunder, and any arrear due from any farmer of opium revenue, may be recovered from the person primarily liable to pay the same to the Government, or from his surety (if any), as if it were an arrear of land revenue.

24. When any amount is due to a farmer of opium revenue from his licensee in respect of a license, such farmer may make an application to the collector of the district, deputy commissioner, or other officer authorised by the Local Government in this behalf, praying such officer to recover such amount on behalf of the applicant; and on receiving such application such collector, deputy commissioner, or other officer may, in this discretion, recover such amount as if it were an arrear of land revenue, and shall pay any amount so recovered to the applicant.

Provided that the execution of any process issued by such collector, deputy collector, or other officer for the recovery of such amount, shall be stayed if the licensee institutes a suit in the civil court to try the demand of the farmer, and furnishes security to the satisfaction of such officer for the payment of the amount which such court may adjudge to be due from him to such farmer.

Provided also, that nothing contained in this section or done thereunder shall affect the right of any farmer of opium revenue to recover by suit in the civil court or otherwise any amount due to him from such licensee.

All assistant and deputy collectors, mamlatdars, mukhtiar-kars, and mahalkaris have been authorised to act under this section, within the limits of their respective charges. (Government Notification No. 3578, dated the 20th June 1879, published at page 609, of the "Bombay Government Gazette," Part I., dated 26th idem.)

An appeal against an order passed by a collector under this section lies to the commissioner of the division and not to the Commissioner of Opium. (Government Resolution, Revenue Department, No. 1108, dated 6th February 1885.)

25. When any person in compliance with any rule made hereunder gives a bond for the performance of any duty or act, such duty or act shall be deemed to be a public duty, or an act in which the public are interested, as the case may be, within the meaning of the Indian Contract Act, 1872, section 74, and upon breach of the condition of such bond by him, the whole sum named therein as the amount to be paid in case of such breach may be recovered from him as if it were an arrear of land revenue.

Schedule repealed by Act XII. of 1891.

1. Form A.—Special license to medical practitioner (see Rule 6 under section 5).

2. Form B.—Permit for transport of opium (see Rule 7 under section 5).

3. Form C.—Permit for conveyance of opium from Government depôt to shop for retail sale (see Rule 7 under section 5).

4. Form D.—Import pass (see Rule 16 under section 5).

5. Form E.—License for retail sale of opium for the town and island of Bombay and the districts of Ahmedabad, Kaira, Panch, Mahals, Broach, Surat, Thána, Násik, Khándesh, Ahmednagar, Sholapur, Poona, Satara, and Kolaba (see Rule 39 under section 5).

6. Form E.—Do. for the province of Sind only (see Rule 39 under section 5).

7. Form E1.—Do. for the districts of Bijapur, Belgaum, Dharwar, Ratnagiri, and Kanara (see Rule 39 under section 5).

8. Form E3.—License for the retail sale of opium by a person appointed by the farmer to retail on his behalf (see Rule 45 under section 5).

9. Form F.—Pass for the transport through British territory of opium liable to confiscation in any part of the territories of His Highness the Gaikwar of Baroda (see Rule 33A under section 5).

10. Form G.—Pass for the import into, transport through, and export from British territory, of opium which is the property of a farmer licensed by His Highness the Maharaja of the T'dar State (see Rule 33B under section 5).

11. Schedule A.—Form of Export Shipping Bill (see Rule 10 under section 8).

12. Schedule B.—Scale of warehouse rent and fees (see Rule 35 under section 8).

A.—SPECIAL LICENSE TO MEDICAL PRACTITIONERS. (See Rule 6 (a).)

Special license is hereby granted under No. 6 (a) of the Bombay Opium Rules, to A.B., following the profession of _____ at _____ for the possession of opium (*in quantity not exceeding), subject to the following conditions, viz.:—

1. That he shall procure and have in his possession only such opium as he *bond fide* requires for making up medical preparations or prescriptions;

2. That, except when taking or sending medical preparations from one place to another, as herein-after permitted, he shall keep all opium in his possession at _____ and nowhere else;

3. That he shall procure all crude opium which he requires for the said purposes either from a Government depôt or from a licensed retail vendor of opium, and not from any other place or person;

4. That he shall keep the seals on all balls of opium in his possession intact, except the seal on the ball at any time in actual use;

5. That he shall not sell crude opium to any person except on a *bond fide* medical prescription from a medical practitioner, and shall in no case sell to any one person on any one day more than two tolas† of crude opium;

6. That except to a medical practitioner holding a license under No. 6 (a) of the Bombay Opium Rules, he shall not sell to any one person in any one day more than 10 tolas (4 ozs.) of any of the following preparations of opium, viz.:—

Powdered opium,
Extract of opium,
Tincture of opium;

7. That if he sells to a medical practitioner holding a license as aforesaid, any such preparation as aforesaid, in quantity exceeding in any one transaction, or in one day 10 tolas (4 ozs.), he shall satisfy himself, before permitting the removal of the preparation,

* Added by Government Notification No. 4561, dated 24th June 1893.
† In filling in the form one or more places may be specified according to circumstances.

that the purchaser has obtained from the proper authority* a permit to cover the transport thereof;

8. That if he himself wishes to carry with him from place to place crude opium, or any such preparation as aforesaid in quantity exceeding 10 tolas (4 ozs.), he shall obtain a similar permit to cover the transport thereof;

9. That if he wishes to take or send any such preparation as aforesaid in quantity exceeding 10 tolas (4 ozs.) from the city of Bombay to any district, or from one district to another district, or to the city of Bombay, he shall, when applying to the proper authority* for a permit to cover the transport thereof, produce a written permission from the proper authority* of the place to which the same is to be transported;

10. That if he wishes to export any such preparation as aforesaid in quantity exceeding 10 tolas (4 ozs.) to a Native State, or to any territory administered by a Local Government other than the Government of Bombay, he shall before doing so obtain from the proper authority* an export pass, producing, with his application therefor, a written permission from the Political Agent of the Native State, or the collector of the British district to which the export is to be made; and if he wishes to bring back any preparation so exported, he shall obtain from the proper authority* an endorsement on the export pass permitting such re-importation;

11. That he shall keep an accurate and regular account showing from time to time the quantities of dry opium and of extract and of tincture of opium purchased by him, and also, in each case, the date of purchase and the name of the purchase from whom the purchase is made;

12. That he shall produce the said account and this license, and also any dry opium and any extract or tincture of opium that may be in his possession, for inspection on demand by any officer duly authorised in this behalf by the proper authority.*

* In the City of Bombay, the collector of land revenue, customs, and opium; elsewhere, the collector of the district or other officer authorised by him.

FORM E.

License for Retail Sale of Opium.

District
Number of license in the Register
Name of retailer
Locality of shops

Be it known that
resident at _____
in the town of _____
is hereby authorised to sell opium by retail at the shops
above mentioned from the _____ day
of _____ to the _____ day
of _____ (both inclusive) upon the following
conditions :—

1. That he will purchase from the collector confiscated opium and opium surrendered to the collector by the retiring licensed vendor or farmer of the district, in such quantities not exceeding two months' supply, and at such price not exceeding the rate at which opium can be procured from a Government depôt, as the collector shall adjudge.

2. That he will sell no opium but such as may have been previously approved and passed by the collector or by some other officer authorised by the collector to approve and pass the same, and no opium but such as he may have—

- (a) purchased from a Government dépôt, or
(b) purchased from a wholesale dealer in Bombay and transported for retail sale in accordance with the provisions of the Opium Act and the rules framed thereunder, or
(c) lawfully imported for retail sale in accordance with the same Act and rules, or
(d) purchased from the collector under the provisions of clause 1 of this license.

That he will not receive or have in his possession any opium obtained in any other manner.

3. That he will bring all opium purchased by him from a wholesale dealer, or lawfully imported by him, under the last preceding clause, direct to the (Bombay Opium Warehouse)* to be there examined by the collector or other officer nominated by the collector to examine and pass opium for retail sale; that he will remove and dispose of forthwith in some lawful manner other than for retail sale at his shops any portion of the opium tendered for examination which the collector or other officer aforesaid may reject as being unsuited for retail sale in the locality concerned; and that he will lodge such opium as may be passed by the collector or other officer aforesaid, as well as all opium purchased from a Government dépôt, or from the collector under clause 1 of this license, at such place, in such manner, and under such custody, and will remove and transport opium from such place of deposit at such times, in such quantities, and in such manner as the collector or other officer aforesaid may from time to time direct.

4. That he will keep in stock at the place appointed by the collector under clause 3 above, at all times between the 1st August 189 and the 1st July 189 , inclusive, a quantity of opium passed for retail sale by the collector or other officer aforesaid, or of opium purchased from a Government dépôt or from the collector under clause 1, amounting in the aggregate to at least lbs. weight, or that he will deposit with the collector the value thereof rupees.

5. That he will keep in a book, bound and paged, each page of which shall bear the seal of the collector, plain and correct accounts written up to date daily of opium lodged into, removed from, and in store at the place of deposit mentioned in clause 3, and of opium daily received, sold, and in stock at each of his retail shops, as well as the price realised by sale, together with a list showing the names and addresses of all persons to whom opium may be sold in quantities exceeding two talas at one time, and will render to the collector on or before the 5th of each month a statement, showing the number of pounds of opium lodged into, removed from, and in store at the place of deposit mentioned in clause 3, and the number of pounds of opium received, sold, and in store at each of his shops during the preceding month, and will furnish forthwith on demand by the collector such other accounts, returns, and information respecting his dealings and arrangements under this license as the collector may require; and that the keeping or rendering of incorrect accounts, statements, or information will constitute a breach of the conditions of this license.

6. That the collector shall have a lien on all opium held in stock by the licensee at the place of deposit mentioned in clause 3 for the recovery of the (license fees and†) contribution for establishment, recoverable under clause 21 and of any fine levied on him under clause 25.

7. That the licensee will, immediately after the expiry or recall of this license, surrender to the collector all opium remaining unsold on his hands on the date of the expiry or recall of this license as he may have been unable to dispose of in lawful manner, and will receive from the collector such price, including duty, as the collector shall adjudge for so much of the opium so surrendered as may not be liable to confiscation, and as may be declared by the collector to be of good quality and fit for retail sale; but he will not be entitled to receive any payment whatever for any portion of the opium so surrendered which may be liable to confiscation, or which may be declared by the collector to be unfit for retail sale.

3. That he will not sublet any of his opium shops without permission of the collector, or employ for the retail sale of opium any person for whose employment in that behalf he may not have previously received written sanction and a separate license signed by the collector, authorising such person to sell opium on behalf of the licensee.

9. That he will cause each ball of opium intended for sale to be threaded and stamped with the collector's (or mámlatdár's) official seal, at his own expense and in such manner as the collector may prescribe; that in

* The addition applies to Bombay only; for other districts the name of the depôt or other place to be specified in writing.

† One month's estimated sales of the district.

APP. XX.
Bombay.

retailing opium only the quantity required by each successive customer shall, as far as possible, be cut of from a sealed ball; that he shall not have in his possession at each of his shops more than one broken ball of opium at a time for sale to customers.

10. That he will retail opium only in the shops above mentioned, and that he will open and maintain new shops and close existing shops, and shall maintain at each shop such minimum stocks of opium as may be required by the collector from time to time during the currency of this license.

11. That he will keep and use for selling opium by retail, and other purposes of this license, such weights as the collector may direct.

12. That, except to a medical practitioner or other person holding a special license from the collector, he will not sell more than two tolas weight of opium to any person at one time, or on any one day in the aggregate.

13. That he will not adulterate or admix any foreign substance or material whatever with the opium sold by him.

14. That he will not receive any wearing apparel or other goods in barter for opium; that he, his servants, agents, and his sub-tenants will not sell opium on credit nor at prices below* the rates notified from time to time for the issue of opium from the nearest Government depôt, or exceeding such rates by more than one anna for a tola, unless specially authorised by the collector in writing to sell opium at a higher rate.

15. That he will not open his shop or make sales therein before sunrise; that he will not keep it open or make sales therein after o'clock p.m., and that he will not harbour any person therein during the night.

16. That he shall keep all his shops open daily during authorised hours. If the collector requires him to establish any new shop, the licensee shall open the same immediately on receipt of the collector's order.

17. That he will not allow the consumption of opium on the premises; that he will not permit persons of notoriously bad character to resort to his shop; that he will prevent gaming and disorderly conduct therein, and that he will give information to the nearest magistrate or police officer of any suspected person who may resort to his shops.

18. That he will have constantly fixed up at the entrance of his shop a signboard bearing the following inscription in legible characters in the English and vernacular languages:—

(Name of vendor).

"Licensed to retail Opium."

"Price of Opium per Tola, annas . . ."

19. That he will produce forthwith for inspection on demand of any revenue, police, excise, or customs officer above the rank of jamádár the accounts of any of his retail shops, or of the place of deposit mentioned in clause 3 of this license, as well as the whole quantity of opium in his possession, and that he will not prevent any revenue, police, excise, or customs officer of whatever grade from entering any of his shops at any hour of the day or night.

20. That the "pound" mentioned in this license will be a pound equal in weight to 40 tolas, a tola being reckoned as equal to 180 grains.

21. That the licensee shall pay into the collector's treasury monthly the sum of (Rs.† as license fees, and a further sum of) Rs.‡ as contribution towards the cost of the Government establishment employed for the prevention of opium smuggling in the district. The first payment shall be made not later than the 31st August 189 , and subsequent payments not later than the last working day of each successive month during the term of the license. That the licensee shall employ and maintain sufficient establishments for the inspection of shops and the prevention of irregularities or malpractices therein, contrary to the conditions of this license or to the law for the time being in force; that he shall also maintain establish-

ments, expend money in the payment of rewards and otherwise, and exert himself to the utmost for the purpose of checking the illicit manufacture and sale of opium and all illicit opium traffic within the licensee's district, and of securing on the part of all the persons employed by him in the carriage and sale of opium, a strict adherence to the law and to the provisions of the engagements entered into by them and by him; and if it comes to his knowledge that a breach of the law or of any of the said provisions has been committed, he shall forthwith bring the same to the notice of the collector, in order that the penalties prescribed for the offence may be enforced.

22. That he has deposited with the collector the sum of Rs.* in cash or Government promissory notes as security for the due performance by him of the conditions prescribed in this license, and that the said amount or such portion of it as may not have been appropriated by the collector in liquidation of Government demands against him will be returned to him after the expiry of the license and after all demands against the licensee shall have been fully satisfied.

23. That this license may be recalled by the collector—

(a) for default of punctual payment of the amount mentioned in clause 22; or

(b) for default in or violation of any of the conditions specified in this license; or

(c) if the holder thereof be convicted of a breach of the peace, or of any other offence during the currency of this license; or

(d) if he infringes any of the conditions imposed on him by the Opium Act, 1878, or by the rules in force thereunder.

24. That any loss caused to Government in consequence of the recall of this license for any of the aforesaid causes shall be recovered from him from the cash deposited by him with the collector, or by attachment and sale of the stocks of opium held by him, or in such other lawful manner as the collector shall direct. He shall not be entitled to any sum that may be realised over and above the sum payable by him by putting the license to sale in consequence of his default, nor shall he be entitled to any compensation or refund of any sums paid by him. Should the collector desire to cancel this license before the expiry of the period for which it has been granted for any causes other than those specified in the preceding clauses, the collector shall give him three months' previous notice, and absolve him from all liabilities under this license for the unexpired term of the license, or if notice be not given, shall make such further compensation in default of notice as the Commissioner of Customs, Salt, Opium, and Abkâri may direct.

25. That the collector shall have power at any time to impose a fine not exceeding Rs. 1,000 on the licensee instead of recalling this license, for infringement by the licensee, or by any of his servants, agents, or sub-tenants of any of the conditions of this license, and to recover the amount of the fine so imposed from the cash deposited by the licensee, or by attachment and sale of the opium lodged under clause 3, or in such other lawful manner as the collector may think fit. Nothing contained in this clause or in clauses 23 and 24 shall, however, affect the liability of the licensee to criminal prosecution under the Opium Act.

26. That this license does not cover the manufacture and sale by the licensee of chandul, madat, or any other preparation of poppy juice, other than opium.

27. That he will comply with all police regulations as to the closing of shops on the occasions of the Mohoram and other festivals; no compensation or allowance will be made on account of such closure.

No. 1.

FOR THE PROVINCE OF SIND ONLY.

FORM E.

License for Retail Sale of Opium.

District _____
 Number of License in the Register _____
 Name of Retailer _____
 Locality of Shops _____

Be it known that _____ resident at _____, is hereby authorised to sell opium by retail at the shops above-mentioned from the _____ day of _____ to the _____ day of _____ (both inclusive) upon the following conditions:—

1. That he will purchase from the collector confiscated opium, and opium surrendered to the collector by the retiring licensed vendor or farmer of the district, in such quantities not exceeding two months' supply, and at such price not exceeding the rate at which opium can be procured from a government depôt, as the collector shall adjudge.

2. That he will sell no opium but such as he may have—

- (a) purchased from a government depôt, or
- (b) purchased from the collector under the provisions of clause 1 of this license.

That he will not receive or have in his possession any opium obtained in any other manner.

3. That he will lodge all opium purchased from a government depôt, or from the collector under clause 1 of this license, at such place, in such manner and under such custody, and will remove and transport opium from such place of deposit at such times in such quantities and in such manner as the collector or other officer nominated by the collector may from time to time direct.

4. That he will keep in stock at the place appointed by the collector under clause 3 above, at all times between the 1st August 189 and the 1st July 189, inclusive, a quantity of opium purchased from a government depôt or from a collector under clause 1, amounting in the aggregate to at least* _____ lbs. weight, or he will deposit with the collector, the value thereof rupees.

5. That he will keep in a book, bound, and paged, each page of which shall bear the seal of the collector, plain and correct accounts written up to date daily of opium lodged into, removed from, and in store at, the place of deposit mentioned in clause 3, and of opium daily received, sold and in stock at each of his retail shops, as well as the price realised by sale, together with a list showing the names and addresses of all persons to whom opium may be sold in quantities exceeding two tolas at one time, and will render to the collector on or before the fifth of each month a statement showing the number of pounds of opium lodged into, removed from, and in store at, the place of deposit mentioned in clause 3, and the number of pounds opium received, sold and in store at each of his shops during the preceding month, and will furnish forthwith on demand by the collector such other accounts, returns, and information respecting his dealings and arrangements under this license as the collector may require; and that the keeping or rendering of incorrect accounts, statements or information will constitute a breach of the conditions of this license.

6. That the collector shall have a lien on all opium held in stock by the licensee at the place of deposit mentioned in clause 3 for the recovery of contribution for establishment under clause 21, and of any fine levied on him under clause 25.

7. That the licensee will, immediately after the expiry or recall of this license, surrender to the collector all opium remaining unsold on his hands on the date of the expiry or recall of this license as he may have been unable to dispose of in lawful manner, and will receive from the collector, such price, including

duty, as the collector shall adjudge for so much of the opium so surrounded as may not be liable to confiscation and as may be declared by the collector to be of good quality and fit for retail sale; but he will not be entitled to receive any payment whatever for any portion of the opium so surrendered which may be liable to confiscation, or which may be declared by the collector to be unfit for retail sale.

8. That he will not sub-let any of his opium shops without permission of the collector, or employ for the retail sale of opium any person for whose employment in that behalf he may not have previously received written sanction, and a separate license signed by the collector authorising such person to sell opium on behalf of the licensee.

9. That he will cause each ball of opium intended for sale to be threaded and stamped with the collector's or Mamlatdar's official seal, at his own expense and in such manner as the collector may prescribe; that in retailing opium only the quantity required by each successive customer shall, as far as possible, be cut off from a sealed ball; that he shall not have in his possession at each of his shops more than one broken ball of opium at a time for sale to customers.

10. That he will retail opium only in the shops above-mentioned, and that he will open and maintain new shops and close existing shops and shall maintain at each shop such minimum stocks of opium as may be required by the collector from time to time during the currency of this license.

11. That he will keep and use for selling opium by retail and other purposes of this license such weights as the collector may direct.

12. That except to a medical practitioner or other person holding a special license from the collector, he will not sell more than two tolas weight of opium to any person at one time, or on any one day in the aggregate.

13. That he will not adulterate or admix any foreign substance or material whatever with the opium sold by him.

14. That he will not receive any wearing apparel or other goods in barter for opium; that he, his servants, agents, and his sub-tenants will not sell opium on credit nor at prices below the rates notified from time to time for the issue of opium from the nearest government depôt, or exceeding such rates by more than one anna for a tola, unless specially authorised by the collector in writing to sell opium at a higher rate.

15. That he will not open his shop or make sales therein before sunrise; that he will not keep it open or make sales therein after _____ o'clock p.m., and that he will not harbour any person therein during the night.

16. That he shall keep all his shops open daily during authorised hours. If the collector requires him to establish any new shop, the licensee shall open the same immediately on receipt of the collector's order.

17. That he will not allow the consumption of opium on the premises; that he will not permit persons of notoriously bad character to resort to his shop; that he will prevent gaming and disorderly conduct therein; and that he will give information to the nearest magistrate or police officer of any suspected persons who may resort to his shops.

18. That he will have constantly fixed up at the entrance of his shop a signboard bearing the following inscription in legible characters in the English and vernacular languages:—

(Name of Vendor.)

"Licensed to Retail Opium." "Price of Opium per Tola, Annas _____."

19. That he will produce forthwith for inspection on demand of any revenue, police, excise, or customs officer above the rank of jamádár, the accounts of any of his retail shops, or of the place of deposit mentioned in clause 3 of this license as well as the whole quantity of opium in his possession, and that he will not prevent any revenue, police, excise or customs officer of whatever grade from entering any of his shops at any hour of the day or night.

20. That the "pound" mentioned in this licence will be a pound equal in weight to 40 tolas, a tola being reckoned as equal to 180 grains.

* One month's estimated sales of the district.

APP. XX.
Bombay.

*21. That the licensee shall pay into the collector's treasury monthly the sum of Rs. as contribution towards the cost of the government establishment employed for the prevention of opium smuggling in the district. The first payment shall be made not later than the 31st August 189 , and subsequent payments not later than the last working day of each successive month during the term of the license.

That the licensee shall employ and maintain sufficient establishments for the inspection of shops and the prevention of irregularities or mal-practices therein contrary to the conditions of this license or to the law for the time being in force; that he shall also maintain establishments, expend money in the payment of rewards and otherwise, and exert himself to the utmost for the purpose of checking the illicit manufacture and sale of opium and all illicit opium traffic within the licensee's district, and of securing on the part of all the persons employed by him in the carriage and sale of opium a strict adherence to the law and to the provisions of the engagements entered into by them and by him; and if it comes to his knowledge that a breach of the law or of any of the said provisions has been committed, he shall forthwith bring the same to the notice of the collector in order that the penalties prescribed for the offence may be enforced.

22. That he has deposited with the collector the sum of Rs.* in cash or Government promissory notes as security for the performance by him of the conditions prescribed in this license, and that the said amount or such portion of it as may not have been appropriated by the collector in liquidation of government demands against him will be returned to him after the expiry of this license and after all demands against the licensee shall have been fully satisfied.

23. That this license may be recalled by the collector :—

- (a.) for default of punctual payment of the amounts mentioned in clause 21; or
- (b.) for default in or violation of any of the conditions specified in the license; or
- (c.) if the holder thereof be convicted of a breach of the peace or of any other offence during the currency of this license; or
- (d.) if he infringes any of the conditions imposed on him by the Opium Act, 1878, or by the rules in force thereunder.

24. That any loss caused to Government in consequence of the recall of this license for any of the aforesaid causes shall be recovered from him from the cash deposited by him with the collector, or by attachment and sale of the stocks of opium held by him, or in such other lawful manner as the collector shall direct. He shall not be entitled to any sum that may be realised over and above the sum payable by him by putting the license to sale in consequence of his default, nor shall he be entitled to any compensation or refund of any sums paid by him. Should the collector desire to cancel this license before the expiry of the period for which it has been granted for any causes other than those specified in the preceding clauses, the collector shall give him three months' previous notice and absolve him from all liabilities under the license for the unexpired term of the license, or if notice be not given, shall make such further compensation in default of notice as the commissioner of customs, salt, opium, and abkari, may direct.

25. That the collector shall have power at any time to impose a fine not exceeding Rs. 1,000 on the licensee, instead of recalling this license, for infringement by the licensee or by any of his servants, agents, or subtenants of any of the conditions of this license and to recover the amount of the fine so imposed from the cash deposited by the licensee, or by attachment and sale of the opium lodged under clause 3, or in such other lawful manner as the collector may think fit. Nothing contained in this clause or in clauses 23 and 24 shall, however, affect the liability of the licensee to criminal prosecution under the Opium Act.

26. That this license does not cover the manufacture and sale by the licensee of chandal, madat, or any other preparation of poppy juice, other than opium.

27. That he will comply with all police regulations as to the closing of shops on the occasions of the Mohoram and other festivals; no compensation or allowance will be made on account of such closure.

Granted this the day of 189 .

TABLE II.

WAREHOUSE FEES.

(As amended by Government Notification No. 5447, dated 5th August 1890.)

	Rate per chest.	Payable.
When deposited in any compartment in the warehouse.	At the rate of 10½ annas on each chest or two-half chests.	Before receipt of opium into warehouse.

NOTE.—This rate does not include rent for testing rooms, which will be charged for separately as provided for in Table I.: that is, at the rate of Rs. 30 each per mensem, payable monthly in advance, in the case of rooms Nos. 1 and 7 and of Rs. 15 each per mensem, also payable in advance, in the case of rooms Nos. 2, 3, 4, 5, 6, 8, 9, 10, 11, 12 and 13.

SUPPLEMENTARY EVIDENCE PLACED BEFORE THE ROYAL OPIUM COMMISSION BY THE HONOURABLE T. D. MACKENZIE.

Though I have in some measure touched upon the question of opium smuggling in the printed statement I have already submitted, I think it is desirable that some further particulars on a point which so peculiarly affects the Bombay Presidency should be given. It was with the view of checking smuggling and illicit practices generally that the minimum guaranteed vend system was introduced. I have given some account of this system and the reasons which led to its discontinuance at pages 7-9 of my "Note on the System of Excise management of Opium," and the matter is further dealt with in the letter from the Government of India to the Bombay Government, No. 4,120, dated

1st October 1891, printed as Appendix No. 15 to the despatch from the Government of India to the Secretary of State, No. 289, dated 14th October 1891, printed at pages 76-79 of the "Collection of Papers relating to the Consumption of Opium in India." My object now is mainly to show—

- (a) from reports of officers with special knowledge of the subject;
- (b) from statistics;

that opium smuggling was excessively prevalent before 1878; and that the introduction of the minimum guaranteed vend system materially checked this smuggling and caused licit largely to replace illicit opium.

2. Under head (a) I would call attention to—

(1) Mr. C. W. Bell's report, dated 1st October 1869 on the Abkari system in this Presidency, from which I extract the following paragraphs on the then system of retailing opium:—

"63. I now come to the opium retail business. For many years past the system of levying a fixed fee from the licensee has been done away with, and after fixing the number of shops required, the license for each has been separately put up to auction. The licensee is bound to take the opium he is to retail from the Government stores. At one time, but only for a few years, the licensees obtained their supplies at a little over cost price and free of duty, but for the last 30 years they have charged the duty as well.

"64. This system acts pretty well in districts where there are no great opportunities afforded for smuggling, and where the consumption is almost entirely confined to what is used by mothers to keep their infants quiet, as in the Konkan, Deccan, and Southern Maratha country: but in Gujarat, where a large proportion of the population are inveterate opium eaters, and the adjacent Native States produce the drug at half the price at which Government supply it to the licensed retailer, the system works badly. The licensee takes a little opium from the Government stores as a blind, but the mass of what he retails is smuggled. One has only to refer to Statement No. 49, column 6, in the Appendix, to see that, even if the retailer sells, as he asserts, at 50 per cent. advance on the price he pays Government for the opium supplied, he would rarely make enough out of the Government opium to pay for his license. Again, from the said statement, column 11, one sees how entirely disproportioned is the issue from the Government stores to what must be the local consumption of the drug. The per-centage of opium eaters and the annual consumption per head shown in column 8 and 10 are fixed at rates, in almost every case, far below what the local officers estimated. The excess of local consumption over issue from Government treasuries in the Regulation Provinces is shown by me at 775 maunds, and may be relied on as much below the mark. This quantity represents 457 chests of opium and about 2½ lakhs of rupees duty. The receipts from licenses in our Regulation Provinces in 1867-68 do not contrast favourably with the receipts from the same source in the province of Sind, being only Rs. 81,472 against Rs. 52,994.

"65. I need not dwell on this part of the subject as the Government records for many years teem with reports from local officers in Gujarat, placing the fact of the existence of opium smuggling beyond a doubt. The primary cause apparently is that Government insist on the retail of the most expensive kind of opium at an enormous price in a district where the drug can be got illicitly with little fear of detection for half the price. A secondary cause is the prohibition of the production of opium. That this has encouraged smuggling seems to be evidenced by the fact that for the three years previous to the suppression of the cultivation of the poppy, the average supply from the Government stores to retailers in Ahmedabad was about 381 maunds against an average of 126 maunds for the three following years. The issue in 1867-68 is a little over five maunds."

(2) Mr. W. G. Pedder's report, No. 103, dated 30th July 1870, on "The Internal Management of the Salt Department," in which he incidentally, paragraph 105, touches on the opium question:—

"Nothing can be a more legitimate source of revenue than the internal consumption of opium. We are supposed to tax it heavily, our Collectors have strained the law to prevent its production in our own districts, yet the only effect has been that our cultivators are debarred from profiting by the cultivation of the poppy, while the use of the drug is not checked in the smallest degree, and the consumption is supplied entirely by smuggled opium grown in foreign territory. In 1832 the licit sale of opium in the Ahmedabad Collectorate was Indian maunds 448-28, and the revenue from it Rs. 2,36,408. In 1886 the licit sale was Indian maunds 5-9, and the revenue Rs. 5,450. I have no hesitation in saying that if the present actual consumption of Ahmedabad and Kaira was licit, the revenue would be at least 10 lakhs of rupees."

(3) Mr. (now Sir Charles) Pritchard's "Notes on the manufacture, importation, and consumption of opium in Gujarat, with suggestions for the repression of opium smuggling," dated 17th October 1873. He writes as follows:—

"11. It is the duty of the preventive force on the Kathiawar Runn and Marwar frontiers to prevent opium from passing westwards into Cutch and Kathiawar, and southwards (from Rajputana) into the States under the Pálanpur Superintendency; but this precaution can be of little value so long as the road from Malwa, Meywar, and Udepur, across the eastern frontier of the Presidency is left entirely open.

"12. *Prevalence of Smuggling.*—It is so generally known and admitted that almost the whole of the opium consumed in Gujarat is smuggled, that little need be advanced here in proof of the assertion. Indeed, so long as Malwa opium has free access along the whole length of our eastern boundary, and opium manufacture is permitted in foreign territory interlaced with our own, it cannot be expected that people will buy the taxed drug.

"13. A mass of conclusive evidence on the subject is collected in Mr. Fernandez's (printed) reports, Nos. 357 and 436 of 1871, and in Mr. Bell's Abkari report. The following table carries Mr. Bell's statistics of opium consumption down to the latest date, and fully confirms all that he has written on the subject:—

Years.	AHMEDABAD.		KAIRA.		BROACH.		SURAT.	
	Licit Consumption.	Population.	Licit Consumption.	Population.	Licit Consumption.	Population.	Licit Consumption.	Population.
	Mds. s.		Mds. s.		Mds. s.		Mds. s.	
1868-69	11 33	829,637	1 13½	782,733	—	285,015	8 10	731,936
1869-70	9 8½		1 0		1 30½		6 33½	
1870-71	14 0		0 23½		2 24½		6 35½	
1871-72	20 17½		0 27½		2 25		7 19½	
1872-73	17 12½		0 28		2 25		6 27½	

Mr. Bell says:—"The licensee takes a little opium from the Government Stores as a blind, but the mass of what he retails is smuggled."

"14. Mr. Pedder remarks (paragraph 27 of his able Salt report) that not one-twentieth of the opium consumed in Kathiawar is licit. Further on (paragraph 105) he writes:—

"In Statement 49 of Mr. Bell's valuable Abkari report, he estimates that the proportion of opium eaten to the adult male population in Ahmedabad and Kaira

is 9 per cent., and that if each consumes 20 tolas per annum (and many Rajputs eat half a tola a day), the actual annual consumption is 376 Indian maunds, the licit consumption being little over six maunds. At the rate of Rs. 26 per ser, or Rs. 1,050 per maund, the revenue ought to be nearly four lakhs of rupees. But Mr. Bell has much under-estimated both the number of consumers and the average quantity each consumes. Having been long a Settlement Officer in Gujarat, I am well acquainted with the habits of the people, and

APP. XX.
Bombay.

feel sure that a majority of the adult male population of Northern Gujarat, of all classes except the mercantile and literary, are habitual consumers of the drug.*

"Again, in the same paragraph, he writes:—'In 1832 the licit sale of opium in the Ahmedabad Collectorate was 448 Indian maunds, 28 sers, and the revenue from it Rs. 2,36,408; in 1861 the licit sale of opium was Indian maunds 5, sers 9, and the revenue Rs. 5,450.'

"15. It is impossible to make an accurate estimate of the whole quantity of illicit opium that enters British Gujarat; but the quantity *known* to pass into the province is very large indeed. It has been ascertained from the accounts of the Idar State and the returns of sale at the Samlaji fair, that on an average 1,800 Indian maunds of Málwa opium, exclusive of 'Pass' opium for China, *pay transit duty* every year on passing through Idar and other petty States in the Mahi Kantha. The accounts of the Panch Mahals also show that the 1,200 Indian maunds of untaxed Málwa opium annually enter Gujarat through that district. It has further been shown (paragraph 9 of my report, No. 1,138, dated the 5th March last) that at least 1,000 chests of Visnagar (Gaikwar) opium are smuggled into British territory every year. This makes up a total of 2,745 chests, the duty on which for home consumption at Rs. 24 per ser amounts to the enormous sum of 46 lákhs rupees; and besides an undetermined quantity of untaxed opium is known to be imported *via* Rajpipla and the Mewasi States under Khandesh.

"17. * * It is difficult, of course, to form a reliable estimate of the produce of the Gaikwar's districts; but the Wahiwatdar of Visnagar has lately informed Mr. Carey that his collections on account of the Rs. 135* duty average four lakhs a year, and it is probable, as he farms the revenue, that he would not *overstate* them. This represents an export of about 3,000 chests, the whole of which *ought* to go to Ahmedabad, as Idar and Palanpur (which with British territory circumscribe the Gaikwar's northern Mahals) produce more than sufficient opium for their own consumption. But from information, with which Mr. Fernandez has favoured me, it appears that the average number of chests of Visnagar opium brought to the scales at Ahmedabad during the last 10 years is less than 2,000, and that the

number is steadily decreasing year by year, and last year fell as low as 1,300 and the year previous to 800. From all I could learn while in the Gaikwar's districts, it would appear that the cultivation of the poppy is not decreasing, and there can be no doubt that some quantity of manufactured opium finds an exit from His Highness's dominions without paying his export fee. It may then, I think, be positively stated that *at least* 1,000 chests of Visnagar opium, the duty on which at 12 rupees per ser amounts to 17 lákhs rupees, are smuggled into or through British territory every year.

"This opium mostly goes to Cutch and Kathiawar, which are supposed to consume taxed opium supplied by Government. The adult population of those provinces are opium-eaters almost to a man; but Cutch does not now take an ounce of taxed opium, and the consignments to Kathiawar are less than 500 maunds a year, notwithstanding a special reduction in the rate of duty and the strenuous endeavours of the Political Agent to induce the chiefs to indent on Bombay for their supplies. That Government should lose the revenue from the opium consumption of Cutch and Kathiawar is a serious matter in itself, but the failure of existing arrangements to secure that revenue involves a consideration of far greater moment. If those two large provinces are able to smuggle sufficient for their home consumption, what is there to prevent their smuggling for export to China also?"

3. The first point I wish to make by referring to these reports is that these officers writing long before 1878 asserted that opium smuggling, chiefly in Gujarat of course, very largely existed, and that in consequence of their reports, measures were taken which resulted in the Opium Act No. 1 of 1878, and the rules thereunder.

The second point will be to show by the statistics which follow how far those officers were justified in their assertions.

As regards head (b)

4. I have in paragraph 6 of my "Abstract of Evidence" shown the quantities of licit opium which passed into consumption during each of the 10 years ending 1892-3, and I now supplement that with a similar table for the nine years from 1874-75 to 1882-83:—

Districts.	1874-5.	1875-6.	1876-7.	1877-8.	1878-9.	1879-80.	1880-1.	1881-2.	1882-3.

I would draw special attention to the average consumption for three years previous to 1877-78:

(a) in the five Gujarat districts;

(b) in Bombay City;

and to the consumption in the same localities for the first complete year 1879-80 under the Opium Act, and the minimum guaranteed vend system.

In the former the average annual consumption of licit opium for each of the three years was 4,490 lbs., while in 1879-80 the consumption had risen at a bound to 36,352 lbs.

In the latter the average consumption for each of the three years was 919 lbs., while in 1879-80 it was

* The duty levied by the Gaikwar on opium exported beyond his own territory.

9,246 lbs. In the one case the consumption was, in round numbers, multiplied 84, in the other 10 times. Is not the only fair inference not that the general opium consumption had increased so enormously in some 18 months, *but that licit opium had replaced that which was formerly smuggled for consumption?* The original minimum guaranteed vend system was in force in the Gujarat districts and in Bombay in 1879-80, and I submit that the above figures prove conclusively that smuggling was, as asserted by Messrs. Bell, Pedder, and Fritchard extensively prevalent in Gujarat before the introduction of the operation of the Opium Act, that it also largely prevailed in Bombay, and that a most decisive check was given to it by the minimum guaranteed vend system.

APPENDIX XXI.

NOTE by Mr. HORNE on the SIGNATURES to the PETITION in favour of the PROHIBITION of the use of OPIUM, except for MEDICAL PURPOSES, presented to PARLIAMENT by certain MEDICAL PRACTITIONERS in Bombay (*vide* Question 25,603).

I have shown that every means was taken to give publicity to the petition after it had been presented to Parliament.

Nine months after the portraits of Dr. Atmaram Pandurang and Dr. Khory appeared in the "Guardian," the illuminated petition was issued as a supplement to the "Bombay Guardian" on October 14th, 1893, and in the "Banner of Asia" for November 1893.

From "Times of India."

Dr. Atmaram Pandurang says:—"I do not remember, but I may have signed the petition without carefully reading it, for when I now read it carefully, I do not agree with it."

I have already shown how Dr. Pandurang signed the petition twice, which makes it hard to believe that it was done without his agreeing to the contents of it. When I visited him, he said that he did not know when he was being interviewed by the "Times of India" correspondent that the result of the interview would be made public. A fuller knowledge of the "Times of India" correspondent than they then had would also have tended to make the doctors cautious as to what information they gave him. The correspondent is Rustomji Pestonji Jehangir, Chief Opium Inspector, Bombay. To this fact Rev. A. W. Prauteh, Mr. Man Sukh Lal, and others can witness.

Dr. J. Gerson da Cunha says he never signed the petition, and Dr. Khory could not have done so, "because he is known to be a pro-opiumist."

In the "Bombay Gazette" of January 11th, 1894, Dr. Ranina wrote that Dr. J. Gerson da Cunha signed in his presence. To which a reply was given, and Dr. da Cunha was represented as saying that he always signed his name in full "J. Gerson da Cunha" and that that was "the nomenclature given to me in every book or paper in which I have the honour to be mentioned." In McLean's Guide to Bombay, however, for 1892, I find Dr. J. G. Cunha, and in the "Guide" for this year I find Dr. J. G. de Cunha. Also Dr. da Cunha's second public denial of his signature to the petition is somewhat qualified, which his first was not.

Dr. Bhalchandra Krishna says:—"I have read the petition to Parliament. I believe, so far as I remember, I signed a petition which was not worded in the manner this is worded, I really do not agree with the sentiments expressed in the petition."

Dr. Krishna pleads that he did sign a petition, but that it was not the petition we are considering. His name was deciphered in England as Bhalchandra Kinbun, and on the receipt for my registered letter which the Post Office brought back to me his signature might easily be read Kinbun. This is incidental proof that the petition Dr. Krishna signed was the petition we are now dealing with.

Dr. Mehta says:—"I have never signed the petition, and I am in favour of the drug."

There is a great difference in these two statements. I have not personally seen Dr. V. N. Mehta, but he is evidently not prepared to maintain the statement which the "Times of India" attributes to him.

Dr. N. P. Mehta:—"I have never signed the petition, being in favour of opium eating rather than alcohol drinking."

I learn from other sources that Dr. N. P. Mehta's statement in the "Times of India" was not made on the merits of the petition only, but was influenced by other questions.

Dr. Madon says:—"I am quite sure and remember well that I have not signed the petition. In my opinion the moderate use of opium, even as a habit, apart from its use in certain chronic diseases, where it is certainly beneficial, does no harm to the system generally."

On November 14th the leading Bombay daily paper published a list of 13 doctors who were represented as either denying their signatures to the petition, or in some way qualifying them. On November 27 and November 28 further lists of doctors were given, and a long leading article on the alleged "Anti-Opium Fraud." From it I read, "The communication which we publish to-day practically completes the disavowals, one by one, of the petition by those who are represented as having signed it."

I now comment upon a few of the extracts from the "Times of India," and letters from the doctors to myself, which for convenience in comparing, I have arranged side by side.

From Letter to Myself.

No reply received.

J. Gerson da Cunha:—"I have no idea of having signed the petition you refer to. I know, however, that the name attached to the printed petition is not mine."

Bhalchandra Krishna:—"I have received your printed letter, by registered post, dated the 22nd instant. In reply to it I have to state that I certainly did not sign the petition which has been published as the Anti-Opium Petition. The statements in it are so grossly wild and exaggerated that I could never subscribe to them."

V. N. Mehta:—"So far as I remember I never signed the petition. However, I cannot say one way or the other in the matter unless I see personally my signature."

No reply received.

Framji Edulji Madon:—"In reply to your letter of yesterday's date, I have the honour to give my honest and true opinion as follows: That to the best of my knowledge I well remember to have never signed the Anti-Opium Petition. I once remember to have signed a petition concerning the temperance movement. I was and am still strongly against the use of spirits by the masses. That I have not read the Anti-Opium Petition I am positive and certain. Whether one was offered to me to read I do not remember. My views regarding the use of opium I had expressed before in connexion with the use of Balagholi (containing opium) in children. According to my honest belief the moderate use of opium is not harmful, but beneficial."

A.P. XXI.

From "Times of India."

From Letter to Myself.

Dr. A. G. Viegas says:—"I did sign the petition, but do not agree with the sweeping and condemnatory remarks in the petition which has been now read to me. Opium in moderate quantities is certainly beneficial in some cases and a sheet anchor in a few diseases. Its indiscriminate use is certainly dangerous, and proper restrictions should be placed, but care should be taken that this effect should not lead to substitution of alcohol for opium by the people, the latter being a much more deadly poison."

Accacio G. Viegas:—In answer to your letter I have to say that I did sign an Anti-Opium Petition, and that I am against the indiscriminate use and sale of opium; but I am also of opinion that the drug in suitable cases and in proper doses is most beneficial, and in certain diseases it is our sheet anchor. It is certainly desirable that its sale and use should be controlled by proper restrictions.

I was shown a petition in which it is said, or hinted, that some opium eaters will go the length of selling their wives and children to get the drug; I repudiate this statement, if it does occur in the petition in question, as I have not known or heard of any opium eater having done so. You will know from this short letter what my views on opium are.

In this case the second statement is more qualified than the first.

Dr. Cowasji Pestonji says:—"I remember having signed the petition, taking it as a whole to do some good. I do not agree with all the points therein contained, particularly what is mentioned in paragraphs Nos. 2, 4, and 6."

Cowasji Pestonji:—Since you are prepared to put a wrong construction on one's silence to your registered letter of yesterday's date, I beg to state that I did sign the medical Anti-Opium Petition, but when I saw extravagant paragraphs in the printed petition in the daily papers regarding selling of wives and children by the opium eaters, I was obliged to repudiate my signature thus far. In doing so I have qualified my statement, and I did it with my full will.

In one case three paragraphs are challenged, in the second only one paragraph.

Dr. A. F. Fernandez says:—"I remember having signed the petition, but probably under some misrepresentation, for I do not quite share the views therein stated. Only when abused opium produces its bad effects, and not when taken in moderation."

No reply received.

Dr. M. R. Sethna says:—"I remember having signed the petition, but to say the truth I had no time to read it, as I was very busy at the time. I am for opium, and had I read the contents I should not have signed it."

No reply received.

Dr. A. P. Andrade says:—"I signed the petition under misrepresentation."

Left. Letter returned.

Dr. Dinshaw Dorabji says:—"I remember to have signed some petition about opium but I have done so without reading such an exaggerated account as I find it in the accompanying petition. If I had read it carefully I would not have signed it."

Dinshaw Dorabji:—"I have received your registered letter to-day. I wish to withdraw my signature from the petition, as I find it to contain an exaggerated account."

Dr. Phirozsha Pallonji says:—"I remember having signed the petition, but I cannot say how I could have done so, when my views are very contrary to those contained in the petition. Perhaps I read something else, or must have signed it under some misrepresentation."

Phirozsha Pallonji:—In reply to your letter of yesterday's date, I beg to inform you that although I have a faint recollection about my having signed a petition anent opium (but what it was I do not remember now), still I can affirm, that I could not possibly have signed the petition in question, which has been lately made public, as my views have been, and are, different from those contained in the said petition.

These statements do not agree.

Dr. Cowasjee Motabhoj says:—"I remember to have signed the petition without reading it, but now on careful perusal of it I am of views quite contrary to those contained in the petition."

Cowasjee Motabhoj:—I beg to acknowledge the receipt of your letter of the 22nd instant, and in reply to the enquiry therein made, to inform you that I signed the petition without a careful perusal of the contents thereof, but when my attention was drawn to them subsequently, I could not, but with regret, repudiate my signature to it, as I did then and do now hold views quite contrary to what was embodied in the petition.

My letter refused.

Dr. Pereira says:—"I remember signing a petition about opium consumption. I signed it hurriedly, as I was busy at the time. I am in favour of a moderate use of opium, and therefore do not agree with the petition that appears in the 'Anti-Opium News' for September 1892."

S. W. Kane:—I regret there has been considerable delay in replying to your note of the 22nd January last. I hope you will excuse me for it. I am sorry I have not been able to get a copy of the Petition which you refer to, and which contains my signature, I was so anxious to see it again before writing this. I am, however, prepared at once to admit that I did sign some such Petition soon after this anti-opium agitation was set on foot, though it will be difficult or nearly impossible for me now to identify it. I also recollect that it contained signatures of some of my brother practitioners. But I have reason to believe, from the few extracts that were now and then published in some of the local papers, that it contained some exaggerated

Dr. S. W. Kane says:—"I remember to have signed some such petition. But now I find that I cannot subscribe to all the views therein expressed. On proper consideration of the question, I have come to believe that opium-eating is not always injurious to health as it is declared by the anti-opiumists to be."

From "Times of India."

Dr. A. M. De Souza says:—"I remember to have signed some petition without a careful perusal of the document. On reading the petition as it now appears in the 'Anti-Opium News' for September 1892, I have reason to disagree with it. In my opinion a moderate use of the drug is not only harmless, but necessary to certain persons under many conditions."

Dr. F. X. Ferreira says:—"I remember having signed a petition, but did so under some misapprehension. I am for opium."

Dr. L. D. Almeida says:—"I have faint recollection of signing a petition about opium consumption. . . . I must have signed under some misunderstanding or wrong information."

The following do not remember signing:—

Dr. Shantaram Vithal says:—"I do not remember having signed the petition. If I have done so it was perhaps after a hurried perusal of the document. On reading the petition now carefully I have reason to disagree."

Dr. R. N. Permanand says:—"I do not remember signing the petition, a copy of which appears in the 'Anti-Opium News' for September 1892, and to which my signature has been attached. I do not agree with the views contained therein."

Dr. Joshi says:—"I do not remember to have signed the petition taking an extreme view of the opium question. I am of opinion that opium used in moderate quantities by people accustomed to its use proves of great benefit to them, and that the total abstinence from it would lead the people to vices of a worse nature."

Dr. Merwanjee Kuvarjee says:—"I do not remember having signed such a petition. If I have it must have been under some misrepresentation, for my views are quite the contrary."

Dr. Eduljee says:—"I do not remember having signed the petition, but if I have done so it must have been under some false representation, or without a careful reading of it. On carefully reading it now I quite disagree with it."

From "Letter to Myself."

statements to which I cannot conscientiously subscribe. Besides, I freely confess that, within the last year or two, my own personal observation of the effects of small doses of opium on my opium-eating patients, and a careful consideration of the question, have led me to change my views; and this is another reason why I cannot allow my signature to remain in the petition.

A. M. De Souza.—I am in receipt of your letter of the 22nd instant, and in reply I wish to state that some years ago I recollect to have signed, with a half mind I may say, a petition as regards the subject matter; but I am quite certain that I could never have signed the petition in question, I mean the one containing that abominable statement, viz.:—An opium eater, especially perhaps a native, will not have any scruple to sell his wife and children for the sake of procuring the drug, &c., &c.

During the last 20 years of my practice in Bombay and out of Bombay I have never observed such a thing, nor have I heard this said by my patients, even from the books, or dens, or by anybody else.

Yes, I have heard such and similar statements or remarks from those natives, and especially the Eurasians and the Anglo-Indians, addicted to the use or rather the abuse of alcohol; and they have told me that such is the case more in the United Kingdom.

I say, let the alcohol traffic be abolished or greatly checked by a heavy duty, and let the natives enjoy moderately the juice called toddy, which compares more favourably than even the best beer itself; and I say, not to encourage or seek to encourage by some such means as the petition in question, which I again declare I could not have very probably signed in the form you mention, since I know fully well that the injurious effects of opium were not half so bad as those of alcohol, especially of foreign brand, which is now being forced on the people of India to the great benefit both of the Government and the missionary societies, and which is done to the great detriment of the people, especially the natives, otherwise there would be prosperity everywhere amongst the subjects of Her Gracious Majesty the Queen and Empress of India.

No answer.

L. D. Almeida.—I have received your registered letter, and in reply I wish to state that I wish to repudiate my signature formally in the petition concerning the consumption of opium. I do not know how I happened to sign such a petition, with which my views are quite the contrary.

No answer.

R. N. Permanand:—I am in receipt of your letter dated the 22nd ultimo. I ought to have replied to it immediately, but I have been too ill to write till now. With reference to your query permit me to say that I surely did not put my signature to the memorial which has appeared as the Anti-Opium Memorial. Some of the statements in it are so grossly exaggerated that I could never agree to subscribe to them.

No answer.

No answer.

Edulji Nushirwanji:—In reply to your registered letter dated the 22nd instant, I beg to inform you, that though I might have put down my signature to the Anti-Opium Petition under circumstances of which I have now no recollection, I now do formally withdraw it, or repudiate it as you term it, and that for the reason, that when I happened to read a printed copy of the petition bearing my signature, I found that it contained statements for the truth of which I could bear no testimony.

APP. XXI.

From "Times of India."

Dr. A. Hyams says:—"I do not remember having signed a petition with a photo attached to it. At any rate my views are quite opposite to those contained in the petition."

Dr. P. J. L. De Souza says:—"So far as I remember I do not think I have signed such a petition. My views are quite at one with those of the gentlemen who have signed above."

Dr. Shivdas Permanandas says:—"I may have signed the petition. I have no recollection of it now. My views at present are more in favour of opium than against it."

Dr. E. C. Tukina says:—"As far as I remember I have never signed such a petition. While I am generally in favour of the beneficial effects of opium on its habitué, how can I have said to have signed such a petition?"

Dr. F. N. Bisni says:—"I do not remember to have signed the petition as appears in the 'Anti-Opium News' of 15th September 1892. I am in favour of using opium in moderate and judicious doses."

Dr. R. M. Mody says:—"I do not remember having signed the petition as appears in the 'Anti-Opium News' for 15th September 1892; but if I have done it, it must be under some false representation or without carefully reading it. My views are quite contrary to what appears in the paper."

Dr. V. Desai says:—"I do not remember to have signed the petition as appears in the 'Anti-Opium News' for 15th September 1893."

Dr. Khote says:—"I do not remember to have signed the petition as appears in the 'Anti-Opium News' for 15th September 1892, I am not against moderate opium-eating under certain restrictions."

Dr. E. F. Sethna says:—"I do not remember to have signed the petition; and if I did, I must have done so without reading it. I am in favour of a moderate use of the drug."

Dr. Manji says:—"I do not remember at all having signed the petition. If I have, it must be without my reading it or under misrepresentation. As far as my experience goes, a moderate use of opium is not harmful."

Dr. Kandawala says:—"I do not remember having signed the petition. My views are in favour of the use of opium."

Dr. F. L. Kapadia says:—"I do not agree with the exaggerated accounts that appear in the petition published in the 'Anti-Opium News' for September 1892. If a person could do without opium, much better; but a moderate use of it to certain persons under certain conditions would not be harmful."

Dr. Dalal says:—"I do not remember having signed the petition. My views, on the contrary, are in favour of it."

Dr. H. N. Contractor says:—"At this date I do not remember whether or not I signed the petition. If I have, it was through misrepresentation, as my views were and are in favour of a moderate use of the drug."

From Letter to Myself.

No answer.

No answer.

Shivdas Permanandas:—"As it appears in the 'Times of India' of Monday the 27th November 1893, I wrote in a book that was brought to me what appears under the heading, 'How anti-opium petitions are got up,' viz., 'I may have signed the petition. I have no recollection of it now; my views at present are more in favour of opium than against it.'"

I now add that had I been aware of the nature of the petition which I have since come to know, I should certainly not have signed the petition (if I did so) in the first instance.

Edulji Cawasji Tukina:—"In reply to your printed registered letter sent to me this day I beg to inform you that I never recollect to have ever signed an Anti-Opium Petition. As I am in favour of the beneficial effects of opium, I now beg to inform you that I now repudiate my signature to the petition sent to the Parliament. I wonder how my name appeared in that petition when I cannot recollect to have ever signed it, and when I am in favour now of the good effects of opium."

No answer.

Ratansha Manekji Modi:—"In reply to your letter dated the 22nd instant, I do not remember to have signed the Anti-Opium Petition. I do not think I have done it. I hold different views on the subject to those expressed in the petition."

My letter refused.

No answer.

No answer.

My letter refused.

H. N. Contractor:—"Your letter to hand yesterday. In reply, I should say, I do not remember now whether I signed the Anti-Opium Petition or not. Had I, I might have through misrepresentation, misunderstanding, or mistake, because I am in favour of the appropriate use of the drug—but, not its abuse."

APPENDIX XXII.

EXTRACT from "LIVES OF BOMBAY OPIUM SMOKERS,"
by MR. RUSTOMJI JEHANGIR. (See question 27,094.)

Syed Ulfat Hussein, a fairly well set up man, said:—I am a *beggar*, and am 50 years of age. I was born at Azimabad in Patna; I have smoked opium for the past 30 years, I took to the habit in consequence of bad health. My earnings are about eight annas a day, and I smoke between two and three annas worth of opium daily. If I do not take the opium I feel very sick and miserable, but if I get my daily supply I have a good appetite and feel cheerful. I was married and had one child, but both wife and child are now dead.

Bahadurshaw Balashaw, who seemed to enjoy the best of health, said:—I am 55 years of age. I am now a mendicant. Formerly I had a *chundool* licence in Nassick. I began to smoke opium 16 years ago on the advice of a doctor who was attending me for asthma. The asthma does not trouble me so long as I get the *chundool*, but when I go up-country and cannot get it my old complaint returns. After I have smoked *chundool* I do not feel in the least intoxicated, on the contrary, I am quite active, and could easily walk 12 or 15 miles. I am very strong, and will lift any weight you like to give me, but I could not do it without *chundool*. I have three children, but none of them smoke *chundool*. I earn from 12 annas to one rupee a day, and spend two annas of my dailings earnings on *chundool*.

Sheik Abdul Sheik Rehman, a tolerably healthy-looking man, said:—I am a lascar. My age is 30. I began smoking *chundool* when I was 16. I was then suffering from intestinal colic and dysentery, and went to a doctor who gave me some medicine, but as it did not do me any good he gave me opium. Since then I have always smoked *chundool*, as I find it does me more good than eating dry opium; the latter always gives me flatulence. Ever since I have taken *chundool* I have had good health and a good appetite. If a person has no food and is starving then he would be injured by smoking *chundool*, but a man who has good food is not injured at all. I earn about eight annas a day, and smoke about ten *pice* worth of *chundool* every day. I am a married man, but have no family.

Sheik Hussein Sheik Hamad, who appeared to have a good constitution, stated:—I was born in Indore. I am 40. I started to smoke *chundool* 15 or 16 years ago. I learnt the habit from some friends. My earnings average six annas a day, and I spend about two annas in *chundool*. I was formerly a farmer in Indore, but when my parents died I became a mendicant. I work five or six hours a day, and always have good health.

Baldev Parsadi, a well-built man, said:—I am a Purdasi, and was born at Agra. I am about 40. Formerly I was a railway porter, but now I work at docks. I have smoked *chundool* for the last eighteen years. I took to it in consequence of pains in my chest which was caused by a fall while I was in the railway service. Since taking to the habit, I have had very good health. If I gave up taking it I should be sick. When I am away and unable to get *chundool* I get asthma. I smoke about two annas worth of *chundool* every day.

Premji Devji, a well-set-up young man, said:—I am 28. I took to smoking *chundool* three years ago. I was then suffering from diarrhoea, and my uncle who had smoked *chundool* for the last 20 years advised me to try it. I am a sweatmeat seller, and earn about 10 annas a day, and spend two annas in *chundool*. I work about six hours a day.

Ibrahim Joseph, a good specimen of his race, said:—I belong to Kutch Mandvi, and am 50 years of age. I am a tailor and earn from Rs. 40 to Rs. 60 a month. I smoke four annas worth of *chundool* every day. I acquired the habit 25 years ago from some friends. It always gives me strength. I work seven hours a day, and if I did not get the *chundool* I should die. I am a married man and have four children; none of them smoke *chundool*.

Fazul Khan Kher Khan, a somewhat thin but healthy looking man, of bright disposition, stated:—I am 50 years old, and was born at Nagar. I am a Victoria driver and work 12 hours a day. I earn from eight annas to a rupee a day and spend two annas of it in *chundool*. I learnt the habit from friends 30 years ago. If I did not smoke *chundool* I should not be able to work. I am married and have five children. It is not true that *chundool* intoxicates a man, but it makes him cheerful and happy.

Hussein Syed Nasib, a sturdy young fellow, said:—I was born at Kutch Mandvi. I am 35, and have been a smoker of *chundool* for 10 years. I work about seven hours a day. I make about three annas, and get my food. I smoke about two annas worth of *chundool* every day, because it gives me an appetite, and makes me feel well.

Cassam Hyderbeg, a bright, intelligent looking man, stated:—I am a maker of tooth-picks, and am 38 years of age. I make four or five annas a day, and regularly spend two annas in *chundool*, which I have smoked for about 20 years. Some friends introduced me to the practice. I have always had good health since I took to smoking it.

Rama Gunesh, apparently a man of active habits, said:—I was born at Goa, and am 50 years old. I am a goldsmith, and get three annas a day and my food. I work six hours a day. I took to smoking *chundool* 20 years ago, and smoke about three *pice* worth a day. I learnt the habit from some friends.

Mahomed Hussein Ali, a well developed Mahomedan, said:—I was born at Delhi, and am 30 years of age. By trade I am a gold embroiderer, and earn 10 annas a day, in which I work seven hours. I have acquired the habit of smoking *chundool* from friends five years ago, but I am not a regular smoker. When I take *chundool* I smoke three annas worth at a time. My health is very good.

Abdoola Currim said:—I was born in Bombay, and am now 65 years of age. I am a Victoria driver, and work 13 hours a day. I have smoked *chundool* for the last 30 years. My daily earnings are from 12 annas to one rupee. I smoke about three annas worth of *chundool* every day. If I did not smoke it, I should get sick and not be able to do my work. I am married and have several children, but none of them smoke.

Kaloo Noor Mahomed stated:—I am 37 years of age. I work for my brother, an hotel-keeper, who gives me my food and 8 annas a day. I learnt to smoke *chundool* 22 years ago from a friend who then held a *chundool* licence. I smoke three or four annas worth of opium every day. I work seven hours a day, but could not do half my work if I did not have the *chundool*.

Yakoot Noor Mahomed, a well-built young man, of healthy appearance, said:—Mangroli, in Kathiawar, is my native place. I am 25 years of age. I am a bottle seller, and make about eight annas a day. I took to smoking *chundool* by way of a luxury five years ago. When I first took to habit I consumed two annas worth a day, but now I smoke three annas worth. I work from six to seven hours a day. The *chundool* gives me a good appetite and keeps me in very good health; if I did not smoke it I should not be able to walk.

Ali Mahomed Soomar, who appeared to be in very good health, and had plenty of flesh on his bones, stated:—I am a native of Verawal, Kattiawar, and am 38 years of age. I am a bottle seller, and work five hours a day, during which I make eight annas. When I first learnt to smoke from some friends eight years ago, I smoked only six *pice* worth of *chundool*, but now I take three annas worth a day. If I leave off *chundool* I feel pains in my body, but as soon as I take it again it makes me active and fit for work.

Mahomed Cassum, a medium sized, bright, healthy-looking man said:—I am 50. I am a Victoria driver, and earn from Rs. 2 to Rs. 3 a day, and work from 12 to 14 hours a day. About 20 years ago I was

APP. XXII.

suffering from piles, and on the advice of friends took to opium. I keep all right as long as I smoke *chundool*, but when I leave it off I get sick and cannot do my work. I smoke from two to three annas worth a day. I have one child; my wife is dead.

Bava Sahib Ismail, a fleshy, well-set-up man said:—I was born in Sholapore, and am 40 years of age. I was a weaver in Sholapore, and come to Bombay to find work; but as not having succeeded in getting employment as a weaver, I now earn my living as a musician. I earn from eight annas to one rupee a day, and smoke four *pie* worth of opium daily. I learnt the habit from a friend in Sholapore. Formerly, I used to smoke only two *pie* worth. I am married, and have five children; none of them smoke *chundool*. My appetite is good when I get *chundool* regularly, but not otherwise.

Khervo Per Mahomed, a tall, muscular man, stated:—I was born at Aurangabad, and am 30 years of age. I am a butcher, and earn from 10 to 12 annas a day. I am married, and have two children. I have smoked *chundool* for the last 11 years. Some friends taught me the habit. Formerly I smoked five annas worth a day, now I have decreased the quantity to two annas for I cannot afford to spend more. I work 11 hours a day, but I could not do my work if I did not get opium. I left off smoking some time ago, but as I got diarrhoea I had to take it again.

Malook Kanjee, a good-looking, powerful young fellow, said:—I belong to Kattiawar, and am 20 years of age. I am a Victoria driver, and earn about 12 annas a day. I work from 10 o'clock in the morning till six in the evening, and from eight at night till eight in the morning. I have smoked *chundool* for the last two years, and could not do half the work I now do if I did not take it.

Lampow Assoo, a bright, healthy looking Chinaman, said:—I am 51 years of age. I am proprietor of this *chundool* shop, and earn from Rs. 36 to Rs. 50 a month. I have been 30 years in Bombay, and contracted the habit of *chundool* smoking 20 years ago. I smoke from two to six annas worth a day. I take it as a luxury. I am very healthy and have a good appetite. I am a married man, and have one child.

Salu Mahomed Ismail, thin, and not very bright, said:—I was born in Mauritius 35 years ago. I was formerly a grain merchant there, but am now a tailor, and earn from 12 annas to one rupee a day. I have smoked *chundool* for the last 20 years. I used to smoke between Re. 1 and Rs. 1-4-0 worth every day, but now I smoke only two annas worth. I work seven hours a day. I have never tried to do without *chundool*, because I know if I leave it off I shall suffer, and not be able to do my work.

Odhvadas Hemraj, thin, but extremely bright and cheerful, said:—I am a native of Shikarpur, and am 30 years old. I am an indigo dealer, and earn about one rupee a day. I have smoked *chundool* for a year and a half, and now smoke two annas worth a day. I learnt the habit from friends. I also take *ganja* when I feel sick. I work 10 hours a day. If Government close the *chundool* shops, I shall be perfectly satisfied to take dry opium.

Khivji Moolje, a thick-set man, said:—I was born at Porebunder, and am 32 years of age. I am employed by my uncle, who is a pearl broker, and I work seven or eight hours a day. I learnt to smoke *chundool* one and a half years ago from some friends. I smoke two annas worth a day. When I cannot get *chundool* I take dry opium. I should not be able to do my work if I do not take opium. I am married, and have one daughter, who is eight years of age.

Gotrungar Motigur, in good condition for his years, said:—I was born at Benares, and am 60 years old. I am a mendicant, and make from eight annas to two rupees a day. I acquired the habit of *chundool* smoking 40 years ago, and formerly smoked from 12 annas to one rupee's worth of *chundool* daily; I now smoke four annas worth. My health is very good.

Latiff Ismail, well formed, and in fair condition, said:—I belong to Kutch Mandvi, and am 30 years old. I am a fireman, and get Rs. 18 a month. When I am on shore I drive a Victoria, and work 16 or 17 hours a day. I learnt to smoke *chundool* 12 years ago, but I am not a regular smoker. When at sea I take dry opium, about 1 *pie* worth a day.

When on shore I smoke four or five *pie* worth of *chundool* daily, but would smoke more if I had more leisure time. I am married, and have one son.

Cassum Mir Hamad Mir, a tall, stalwart man, said:—I come from Kattiawar and am 35 years old. I am a tailor, work seven or eight hours daily, and earn eight annas a day. I have smoked *madat* for the last five years. I take it as a luxury. I am healthy, and have a good appetite. I am married, and have got three children.

Goolab Russool, nice looking old man, and apparently in good condition, said:—I was born at Baroda, and am 65 years of age. I am a mendicant, and get four or six annas a day and my food. I go out begging about five hours a day. I began to smoke *madat* 30 years ago. I took it for piles, and it has cured me. I smoke four annas worth of *madat* daily. I have two children.

Mahomed Chotoo, a powerfully-built man, said:—I am 25, and was born in Bombay. I am a dock labourer, and earn nine annas a day. I have smoked *madat* for the last two years. I smoke two annas worth a day. I learnt the habit from friends. My work lasts the whole night, and I am always able to do it.

Peroo Mir Alam Khan, tall, well-built, said:—I was born in Quetta, and am 40 years of age. I am a cook in a hotel and earn from ten annas to one rupee a day. I work about ten hours. I began to smoke *madat* four years ago. Some friends learnt me the habit. I smoke about four *pie* worth of *madat* daily. If Government close the smoking houses I shall take dry opium.

Suleman Tar, in very fair condition, stated:—I belong to Bombay, and am 30 years of age. I am a coal seller and earn six annas a day. I have smoked *madat* for eight years. Formerly I smoked eight annas a day but I have reduced the quantity to three annas, because I could not afford more. I acquired the habit from friends. I work from seven to nine hours a day, and am always fit to do my work when I take *madat*. If I did not take it I should want two men to carry me out of this place.

Kalekhan Nathikhan, a wonderfully fine old man, said:—I was born at Jeypore, and am 70 years of age. I am a serang in the service of the P. and O. Company, and earn from Rs. 30 to Rs. 35 a month. I learnt the habit of *madat* smoking from friends 20 years ago, and smoke four annas worth a day. I work eight hours. I am a married man and have had seven children, but two of them are dead.

Phamdandass Jugundass, well built and of cheerful disposition, said:—I was born at Faizabad, and am 30 years of age. I am a mendicant and get a little money and my food and clothes. I started to smoke *madat* 10 years ago, but I am not a regular smoker.

After smoking several balls of *madat* this man played the *sitar* and sang some native songs in clear ringing voice.

Ali Bakat, well developed, bright, and intelligent, said:—I come from Teheran, and am 30 years old. I am a baker and earn from 12 annas to two rupees a day. I began to smoke *madat* 10 years ago. I was then suffering from eyesight, and was advised by friends to take it. Since taking it my eyesight and general health has improve. I smoke six *pie* worth a day. Formerly I took dry opium.

Ismail Ahnas, strong, active, said:—I was born in Muscat, and am 40 years of age. I am a Victoria driver and earn from 12 annas to one rupee a day. I commenced smoking *madat* 20 years ago for asthma. Since taking it I have not been troubled with that complaint. I smoke from five to six annas worth a day. I am married and have three children. I work 10 hours a day.

Gophur Baba, a handsome man of fine physique, said:—I was born at Rajapur in Rutnaghiri, and am 50 years of age. I am the owner of a *fattimar* and make from Rs. 500 to Rs. 1,000 a year. I have smoked *madat* for the last seven years. I took it to reduce myself as I was too fat. I take four *pie* worth daily. Since taking it I am less corpulent, but my appetite is very good. Before taking opium I could not do my work.

Suleman Cassum, tall and strong, said:—I come from Rajapur in Rutnaghiri, and am 50 years of age. I am a dyer and earn from eight annas to one rupee a day. I took to smoking *madat* several years ago on account of rheumatism. I am now much better and enjoy good health. I smoke from two to four *pie* worth of *madat* every day. I am married and have one child.

Rama Mahadoo, of medium height and good condition, said:—I am 40 years of age, and come from Hyderabad. I am a dyer and earn from 10 to 12 annas a day. I work eight or nine hours. I began to smoke *madat* six or seven years ago for rheumatic pains. Since taking it I am feeling well, and have a good appetite. I smoke four pice worth of *madat* a day. I am married and have four children.

Kisingur Barogir, strong, bright, and healthy, said:—I was born at Benares, and am 45 years old. I am a *sadoo* and get a little money and my food. Twenty years ago I suffered from enlargement of the spleen and piles and was advised by a friend to take opium. I took to it and have been much better ever since, but if I leave off taking it my old complaint returns. I smoke two or three pice worth *madat* every day.

Balishah Casimghab, a poor weakly looking man, said:—I come from Hyderabad, and am 20 years old. I am a dyer and earn from eight to twelve annas a day. I was suffering from dyspepsia a year ago, and in consequence took to *madat*. I smoke two pice worth a day. Since taking *madat* I am feeling very much better.

Narsoo Rama, rather thin, but bright and intelligent, said:—I was born in Bombay and am 20 years of age. I am a mill hand, and earn Rs. 15 per month. I began to smoke *madat* six months back, but I do not smoke every day. I took to it as I was suffering from indigestion. When I smoke I take two pice worth of *madat*. I am feeling better since taking to it.

Din Mahomed Abdul Rehemam, a good specimen of his race, said:—I come from Nagpur, and am 40 years old. I am a kallassi, and earn eight annas a day. I have smoked *madat* for the last 12 years. A *hakim* advised me to take opium for intestinals colic, and an enlarged spleen. I smoke four pice worth of *madat* a day, and now feel very well.

Kurrim Khan Ghoree Khan, a man standing about six feet high, of healthy appearance, said:—I come from Delhi, and am 40. I am a bricklayer, and earn one rupee a day. Twenty years ago a doctor in Bhussaval recommended me to take opium for rheumatism from which I was then suffering. Since taking it, the rheumatic pains have not troubled me. I smoke two annas worth of *madat* daily.

Allabuku Pir Goolam, good-looking and apparently in thorough health, said:—I am a native of Benares, and am 30 years old. I am a hawker, and earn from eight to ten annas a day. I have smoked for 10 years. I take about two annas worth a day. When I do not take it I feel lazy and unable to do my work.

Cassum Joseb, in fairly good condition, said:—I belong to Kattiawar, and am 30 years of age. I am a fruit seller, and make Rs. 20 a month. I took to smoking *madat* 14 years ago, on account of have an enlarged liver. If I leave off smoking the pain returns. I smoke three annas worth of *madat* daily. I am married and got two children.

Sandoo Sarviji, apparently in good health, said:—I am 40, and was born in Bombay. I am a milkman, and earn 12 annas a day. I was advised to take *madat* three years ago for rheumatism. I smoke two pice worth a day. I do not get the rheumatic pains now. I have good appetite, and my general health is very good.

Tookaram Mahipatram, in fair condition, said:—I am 30, and belong to Satara. I am a dock labourer, and earn eight annas a day. I smoke between two and three pice worth of *madat* a day. I was advised to take it 10 years ago for fever and an enlarged spleen.

Aga Mahomed, healthy looking, though not very stout, said:—I am 53, and belong to Bombay. I am the licensee of this shop, and earn about Rs. 50 a month. I work from 6 in the morning till 10 at night and enjoy very good health. I commenced to smoke *madat* 35 years ago, and smoke two annas worth daily. I take it as a luxury. I am married and have had two children, but only one of them is living.

Kadershaw Booranshaw, tall, thin, but healthy, stated:—I was born at Hyderabad, and over 50 years of age. I am a beggar, and go out begging three hours a day. I have smoked *madat* for the last 20 years. I also take dry opium. I smoke only one pice worth a day. Some friends taught me the habit.

° Mahomed Amir, a tall, well set-up man, said:—I am a native of Calcutta, and am 46 years of age. I am a

lascar in the service of the P. and O. Company, and earn Rs. 24 a month. I took to smoking *madat* 10 years ago, on account of indigestion. I am now very much better, and have got a good appetite. When on shore I smoke one anna's worth of *madat* a day, but when at sea I take only dry opium. I am married and have four children.

Sheik Enoos, in good condition for his years, said:—I am 65, and come from Rutnaghiri. I am a grocer, and earn eight annas a day. Ten years ago a *hakim* advised me to take opium for rheumatic pains in my joints. I smoke two pice worth *madat* daily. I am married and have two children.

Cassum Abdoola, short, but securely strong, said:—I come from Satara, and am 25 years of age. I am a lascar, and earn Rs. 12 a month. I took to smoking *madat* as a remedy for enlarged spleen three years ago. I smoke four pice worth a day. I am keeping very good health now.

Jamatsha Dilsha, rather languid looking, said:—I belong to Fazabad, and am 50 years of age. I am a mendicant, and get from six to ten annas a day, and my food and clothing. I took to smoking *madat* as a luxury 25 years ago. I smoke five annas worth a day, and keep very good health. I have not had any smoke yet, that is why I feel and look tired. As soon as I have had it I shall be active again.

Wahad Ahmed Ally, a well-conditioned man, said:—I was born at Hyderabad (Deccan), and am 39 years of age. I am a fortune teller, and earn from eight annas to two rupees a day. I have smoked *madat* as a luxury for the last 15 years. I smoke about four annas worth a day. I am married and have four children. My general health is very good. Nothing will induce me to give up opium smoking. It does me no harm. On the contrary, it gives me appetite, and I always feel cheerful.

Enait Ally Bashratli, a fine, handsome old man, in splendid condition, said:—I am 75 years of age and was born at Lucknow. Formerly I was a fireman in the G. I. P. Railway Company, but now I do no work. My son, who earns Rs. 26 a month, supports me. I have smoked *madat* as a luxury for the last 50 years. I smoke two annas worth daily. My eyesight is very good, and so is my general health. I have two children. I always advise my friends to take opium, for if taken in small quantities it does one lot of good.

Esoob Ally Khan Mahomed, a splendid specimen of his race, said:—I am 30 years old, and come from Mooltan. I am a dock labourer, and earn seven annas a day. I have smoked *madat* for the last four years. I take it for my cough. I smoke one pice worth daily. My health now is very good. I work about eight hours every day. If I did not smoke *madat* I would not be able to do half the work I do at present.

Abdool Rehman, a man of weak constitution, said:—I belong to Jubulpore, and am 46 years of age. I am employed in a shop, and earn six annas a day. I began to smoke *madat* when I was 25 years old. I smoke one anna's worth a day. I am married and have one child.

Sekh Baba, a well-built, and bright-looking young man, said:—I belong to Zanzibar, and am 25 years of age. I am cabman, and earn from eight annas to one rupee a day. I have smoked *madat* as a luxury for the last four years. I smoke three annas worth a day. I work 12 hours a day. I am married and have one child.

Sekh Chand Mahomed, over six feet and well-built, said:—I come from the Berars, and am 40 years of age. I am a beggar and earn about ten annas a day and food. I go out begging between seven and ten hours daily. I have smoked *madat* as a luxury for the last 15 years. I smoke two annas worth a day.

Ebrahim Balaram, rather delicate looking, said:—I belong to Calcutta, and am 22 years of age. I was formerly a measurer of ground, but am now getting my living by begging, as I cannot find a situation on account of ill-health. I have smoked *madat*, for fever, for the last two years. I smoke an anna's worth daily.

Mahomed Jaffer, tall, bright-looking, but not very strong, said:—I was born at Janjira, and am 35 years of age. I was formerly a lascar, but am now a sub-licensee for the sale of *madat*, and make about Rs. 12 per month. Ten years ago I suffered from severe pains in my right side, and consulted many

APP. XXII.

doctors, and spent much money on trying to get cured, but without success. I was advised to take opium, and since doing so my pains have disappeared. I smoke about six pice worth of *madat* daily. I am married and have two children.

Alishaw Mahomedshaw, bright, and in good condition, said:—I belong to Allahabad, and am 37 years of age. I am a beetle leaves seller, and make nine annas a day. I have smoked *madat* for the last eight months. A friend advised me to take it as I was suffering from diarrhoea. I smoke three pice worth a day, and am feeling much better. I am married and have one child.

Haji Aga Khan, a big, well-built man, said:—I am 36, and belong to Bokhara. I take one pice worth of dry opium every day, as it keeps me active. I attend to my work daily. I am married and have two children.

Nazirshaw Omarshi, tall, and somewhat weakly, said:—I am 48, and was born at Hyderabad. I began to smoke *madat*, for asthma, ten years ago. I smoke six pice worth a day, and feel well so long as I take it. I earn my living by begging.

Abdool Mahomed, a short, thick-set man of very happy disposition, said:—I am 45, and come from Arabia. I was formerly a soldier in the Hyderabad army, but left it in consequence of ill-health. I am now earning my living by begging, and make from six to eight annas a day. I have smoked *madat* for the last six years. I smoke about four pice worth a day. I am married and have one child. My health has very much improved since I began smoking *madat*, and I am now trying to find out some employment for me.

Mahomed Ismael, well-preserved for his years, said:—I was born in Hyderabad, and am 70 years of age. I am a coffee-seller, and work eight hours a day. I have taken opium for the last 40 years. Formerly I smoked *madat*, but now I take crude opium, as it is cheaper. I take opium as a luxury. I have two children and am quite happy.

Vazir Shai, tall, and of fine physique, said:—I am 45, and am a native of Delhi. I was a sowar in the Nizam's cavalry, but left it on account of ill-health. I now make my living by begging, and get about six annas a day and food. I have smoked *madat* for the last 10 years as a cure for asthma. It has done me much good, but if I leave it off my asthma returns. I smoke four pice worth a day. I am married and have one child.

Abdool Karim, thin, but healthy and cheerful, said:—I belong to Ahmednagar, and am 30 years of age. I am an ear-cleaner. I have to move about in the town the whole day. I earn from six to eight annas a day. I take *madat* to keep away a cough from which I suffer. I have smoked *madat* for the last three years. I take two or three pice worth daily. I have good appetite.

Sekh Chand Dada, short, but well built, said:—I am 30 years of age, and was born at Hyderabad. I have smoked *madat* as a luxury for the past six months. I smoke two pice worth a day. I earn my living by begging. My general health is very good.

Haji Oosman, in fair condition, said:—I was born at Poona, and am 36 years of age. I am a lascar, work eight hours a day, and earn Rs. 15 a month. I have smoked *madat* as a luxury for the last 10 years. I smoke two pice worth daily. Opium smoking has done me no harm. My health is good, and I have good appetite. Why should I leave off smoking?

Haji Fakir Mahomed, tall, and in good health, said:—I belong to Kutch Mandvi, and am 46 years old. I am a hawker, and earn 10 annas a day. I have smoked *madat* as a luxury for the last 15 years. I smoke two annas worth daily. If I find that smoking does me harm, I will give it up.

Telwar Bahadur, a fairly strong man, said:—I was born at Malwa, and am 45 years of age. I am a beggar, and get about six annas a day and food. I began to smoke *madat* 20 years ago. I smoke two annas worth of *madat* a day. I take it as a luxury. I go out begging for five hours and sometimes seven hours a day.

Alivar Khan Kalekhan, somewhat delicate-looking, said:—I was born at Gwalior, and am 30 years old. I am a singer, and earn eight annas a day. I took to smoking *madat* as a luxury four years ago. I smoke one anna worth a day. My general health is good, but just at present I have fever and have taken no food.

Mahomed Khan Goolam Khan, medium-sized man, in fair condition, said:—I am 35 years of age, and was born in Delhi. When the Burmese Prince was dethroned I was then in the Commissariat, but I am now working as a bricklayer, and earn eight annas a day. I began to smoke *madat* five years ago. I took it for hernia. I am now very much better, and am able to do my work. I smoke two annas worth daily.

Bahadur Khan Fatekhan, of medium height, healthy appearance, and bright disposition, said:—I am a native of Jubulpore, and am 35 years of age. I go out begging, and earn one rupee a day. Five years ago I was suffering from lung complaint, and took to smoking *madat*. I am much better now, but if I do not smoke I feel very bad. I smoke two annas worth every day.

Hussein Cassum, medium-sized, but strong looking, said:—I am 30 years of age, and come from Poona. I am a dock labourer, and earn from nine to 12 annas a day. I have smoked *madat* for the last two years. I learnt the habit from friends. I smoke one anna worth of *madat* daily. I work about 10 hours a day.

Ramjan Bax well built, and of a very happy disposition, said:—I come from Allahabad, and am 39 years of age. I am a hawker, and earn from one rupee to one rupee and four annas a day. I have smoked *madat* as a luxury for the last eight years. I smoke four annas worth a day. I am married and have two children. My health is very good.

Soobhan Ruttonjee, small, but well set up, said:—I belong to Poona, and my age is 35 years. I am a butcher, and earn 12 annas a day. I have smoked *madat* as a luxury for the last two months. I smoke four pice worth a day. Formerly I took *ganja*, but since taking to *madat* I have given it up. My health is very good, and I attend to my work regularly every day.

Asgir Ally Nazir Ally, good looking, well built, and very intelligent, said:—I am 40, and belong to Patna. I am a lascar in the P. and O. Company's service, and earn Rs. 25 a month. I have smoked *madat* for 12 years. I learnt the habit from friends. I smoke two annas worth a day when I am on shore, but when at sea I do not smoke at all.

Mohidin Salamat, apparently about 35 years of age, in good condition, said:—I come from Madras, I do not know how old I am. I am a lascar, and earn from eight to 10 annas a day. I have smoked *madat* as a luxury for the past 10 years. I smoke 11 pice worth a day. My health, as well my appetite, is very good.

Goolabdass Lalooobhai, a smart, good looking young man, said:—I come from Ahmedabad, and am 27 years of age. I am a letter-writer, and earn Rs. 16 a month. I have smoked *chundool* as a luxury for the past five years. I smoke four annas worth a day. When I go to my native country I stop taking it. For the first two or three days I miss it, but, after that, the desire for it leaves me. I am married, and provide for my wife, and also my mother.

Baboo Sekh Amir Oola, bright, but in broken health, said:—I come from Delhi, and am 45 years of age. I make my living by selling beetle-leaves, my earnings being from six to eight annas a day. I work 10 hours daily. I have smoked *chundool* as a luxury for the last 10 years. I smoke five pice worth daily. Four years ago I tried to leave off the habit, but at once felt sick, and so I took to it again.

Khare Khan, a fine handsome old Arab, objected at first to answer the questions put to him, as he thought an agitation was being got up to close the smoking houses. After much persuasion, he stated that he was a horse-dealer, that he had smoked two annas worth of *chundool* daily for the last six years, and that his health was very good.

Mir Abbas Mir Khan Ally, a handsome looking man of splendid physique, said:—I come from Lucknow, and am 55 years of age. I am in the employ of a horse-dealer, and earn Rs. 1-8 a day. I have smoked *chundool* as a luxury for the past 20 years. I smoke five annas worth a day. If people get good food and *chundool* it will never hurt their health. It only injures the starving. I keep very good health, and am very strong. If you wish to gauge my strength I am willing to fight. I am married and have three children.

Abdool Rehman, tall, and not very strong, said:—I belong to Ajmere, and am 39 years of age. I have

smoked *chundool* for the past eight years. I took to it as I had asthma. I now feel very much better, but if I leave off *chundool* my old complaint returns and I pass restless nights. I smoke four pice worth a day.

Sekh Baban, strong and healthy, said:—I am 30 years of age, and come from Poona. I am a fireman in one of Messrs. Greave's Cotton Mills, and earn Rs. 18 a month. I work six hours a day. I was suffering from a severe cough two years ago, and took to smoking *chundool*. I smoke one anna's worth a day, and feel much better for it.

Haji Sulleman, in splendid condition for his age, active, and intelligent, said:—I am 70 years of age. I am a cabman, work 10 hours a day, and earn 12 annas. Twenty years ago I was very weak and had pains in my stomach. I took to smoking *chundool* on the advice of some friends. Since then I have been keeping good health. I smoke four pice worth daily. I am married and have three children.

Aboo Bukur, cheerful and robust, said:—I come from Malabar, and am 40 years of age. I am a lascar in the P. and O. Company's service, and earn Rs. 20 a month. I have smoked *chundool* as a luxury on and off for the last six years. When I am at sea I do not take opium in any form. When on shore, I smoke *chundool*, four pice worth a day. I am married and have four children. I also support my old mother.

Mahomed Ally, a very good specimen of a healthy old man, said:—I am 75. I am a Persian-writer and earn Rs. 20 a month. I have smoked *chundool* as a luxury for the past 40 years. I smoke three pice worth daily. I keep good health and work all day, but I must have my *chundool* or dry opium. My wife is dead, but I have two children.

Hurry Kherdari, small, but in good condition said:—I come from Satara, and am 40 years of age. I am a cabman, and earn from twelve annas to one rupee a day. I work ten hours a day. I have smoked *chundool* for the last eight years. I am not injured in any way. I smoke two annas worth a day. If I did not have it I should feel ill.

Sayed Sadoo, a remarkably fine man for his age, said:—I belong to Surat, and am 65 years old. I am a cabman, and earn about 12 annas a day. I have taken opium for the last 30 years as a luxury. Formerly I took *madat*, but now I smoke *chundool*. I smoke one anna's worth a day. If I did not take opium in some form I should not be able to do my work. I am quite healthy and have a good appetite. I am married and have two children.

Ahmed Yakub, of healthy and active appearance, said:—I am a native of Viramgaum, and am 25 years of age. I am a milkman, and earn from Rs. 2 to Rs. 2-8 a day. I have smoked *chundool* as a luxury for the last five years. I smoke four annas worth a day. I have never stopped the habit, and do not mean to do so. My wife is dead, but I have two children living. They do not eat or smoke opium.

Ahmed Rahim, a big, well built man, said:—I was born at Nasik and am 33 years of age. I am a lascar in the service of the P. and O. Company, and earn eight annas a day. I have smoked *chundool* as a luxury for five years. When I stop smoking it for a few days I get dysentery. I am very healthy and have a good appetite.

Sekh Ahmed Sekh, in good condition, said:—I am 45, and belong to Poona. I am a cloth-seller, and earn seven annas a day. I have smoked *madat* as a luxury for the last four years. I smoke three pice worth a day. I have good health while I take it, but if I could not get it I should die.

Sekh Ahmed, not looking very well on account of suffering from fistula, said:—I was born at Barreilly, and am 40 years of age. I am the keeper of a *madat* shop, and earn from 12 annas to one rupee a day. I have smoked *madat* as a luxury for the last 15 years. I smoke two annas worth a day. My general health is very good, as is my appetite. I do not look well on account of little sickness, besides, I am worried on account of my wife having been ill for the last five months.

Sulleman Moossa, a good-looking, healthy man, said:—I was born at Gogo, and am 45 years of age. I am a milkman, and earn from one rupee to two rupees a day. I have taken dry opium for the last 12 years for a cough with which I used to be troubled. I am very much better since taking it, and my appetite has also improved.

I 82588.

Sekh Ismael Sekh Mahomed, rather thin but enjoying good health, said:—I am a native of Janjira, and am 60 years of age. I keep a *chundool* shop, and earn 10 annas a day. I have smoked *chundool* for the last 30 years as a luxury. Formerly I smoked 12 annas worth a day, but I have now reduced the quantity to two annas a day. I stopped smoking so heavily because it did me some harm. I am keeping very good health now.

Buxshoo Ebrahim, in fair condition, said:—I am 50 years old, and come from Cochin. I am a knife-seller, and make eight annas a day. I have smoked *chundool* as a luxury for the last 20 years. I smoke two annas worth a day. I enjoy good health. I am married and have two children, but none of them take opium.

Mahomed Joolan Hussein, tall, and not very strong, said:—I am 37 years old, and come from Calcutta. I am a weaver, and earn Rs. 15 a month. Two years ago I was in a delicate state of health, and took to smoking *chundool*. I am feeling strong now, and my appetite has also improved. I smoke one anna's worth daily.

Mir Sekh Hussein, in rather poor condition, said:—I am 50 years old. I am a seller of bangles, and earn six annas a day. I have smoked *chundool* as a luxury for the past ten years. I smoke two annas worth a day. My health keeps good, so long as I get the *chundool*.

Ebrahim Esmael, healthy, active, and intelligent, said:—I am a native of Kattiawar, and am 38 years of age. I am a cabman, earn 12 annas a day, and work all night. I have smoked *chundool* as a luxury for the last 12 years. I smoke four annas worth daily. It has not done me any harm. In fact I get sick when I do not take it. I once left off *chundool*, but during that time I took dry opium.

Rahim Khan Mir Jan, healthy, and of cheerful disposition, said:—I am 55 years old. I am a tailor, and make Rs. 20 a month. I work ten hours every day. I have taken dry opium, as a luxury for the last 20 years. I take three pice worth a day. I am married and have two children. I have been twice to Cabul in the hospital service. I am very strong, and if Government want my services I am quite ready to join the army.

Fareed Bux Mahomed, well-developed and intelligent, said:—I am 38, and come from Aurungabad. I am a cabman, earn eight annas, and work nine hours a day. I have smoked *chundool* as a luxury for 10 years. I smoke two annas worth a day. My health is good so long as I take *chundool*.

Aloo Din Rahim Bux, healthy and smart-looking, said:—I come from Delhi, and am 30 years old. I am a gold embroiderer, and earn Rs. 34 a month, and work nine hours a day. I am not a regular smoker of *chundool*. I smoke every third day. I smoke four pice worth a day. I take it as a luxury. I began smoking *chundool* when I was 24 years old. I am not married, but I support my mother, who is in her native country.

Baboo Sadubhai, a small man, bright and intelligent, said:—I was born in Goa, and am 60 years of age. I am a tailor, and earn eight annas a day. I have smoked *chundool* for the last 20 years. I take dry opium when I go to my native country. I keep good health as long as I take *chundool*. I am married and have four children. I smoke two annas worth of *chundool* daily.

Chand Rajan Ahmed, of slender-build, but bright and active, said:—I am 40 years of age. I get my living as a tin-maker. I make about 10 annas a day. I have smoked *chundool* for the past 12 years for fever. My health now is good. I smoke two annas worth a day. I am married and have one daughter.

Ashun Bux Hussein, a fine, well-built man, said:—I am 25, and come from Fattipur. I am a dyer, and earn 12 annas a day. I have smoked *chundool* as a luxury for the past five years. I smoke two annas worth a day. I am married and have one child. I send part of my earnings to my old mother, who is in her native country.

Abdool Rehman Sekh Cassum, well-conditioned, said:—I am 45, and belong to Bombay. I am a gold embroiderer, and earn Re. 1 to Rs. 1-8-0 a day. I have smoked *chundool* as a luxury for the past 12 years. I smoke four pice worth a day. It would do me harm if I did not take it. I am married, have two wives and children. I work 10 hours a day.

Sekh Hyder Goolzar, thin, and rather delicate looking, said:—I come from Indore, and am 45 years of age. I sell country tobacco, and earn eight annas a day. I have smoked *chundool* as a luxury for the past 20 years.

3 Q

APR. XXII.

I smoke three annas worth a day. My health is good, and so is my appetite. I work nine hours a day.

Sirdir Khan Buddur Khan, splendidly built, and of capital physique, said:—I come from Lucknow, and am 37 years of age. I am a goldsmith, and earn Rs. 35 a month. I have smoked *chundool* for the last three years. I smoke four pice worth daily. I take it as a luxury. My health is very good, and so is my appetite. My parents are living, and I provide for them. I work ten hours a day.

Din Mahomed Bhugvandass, in good condition, and cheerful disposition, said:—I belong to Bhopal and am 45 years of age. I am a beggar, and get three annas a day and my food. I have smoked *chundool* as a luxury for the past 10 years. I smoke three pice worth a day.

Nathoo Lalubhai, in the enjoyment of good health, said:—I come from Ahmedabad, and am 50 years of age. I am a cook, and earn eight annas a day and get my food. I have smoked *chundool* as a luxury on and off for the last 30 years. I smoke five pice worth a day. Sometimes I leave it off for a few days, but it does not make any difference to me. I am married and have four children.

Gunpat Narayan, tall and thin, said:—I belong to Poona, and am 25 years of age. I am a coolie, and earn six annas a day. I have smoked *chundool* as a luxury for the last 10 years. I smoke six pice worth a day. I work from early in the morning till late in the evening. My mother is living, and I provide for her.

Mahomed Esoo, thick-set and healthy, said:—I was born at Ooran, and am 25 years of age. I am a fitter, and earn eight annas a day. I have smoked *chundool* for the last five months as a luxury. I smoke one anna's worth a day. My health is good, and I do my every day's work regularly.

Syed Jalal, under-sized, said:—I come from Nasik, and am 50 years of age. I am a seller of old clothes, and make eight annas a day. I have smoked *chundool* as a luxury for the last 30 years. It has done me no harm. I smoke three annas worth a day. I have never dropped the habit. I had five children, but two are dead. My wife is living, she does not smoke opium.

Sekh Mahomed Sekh Hussein, a big strong man, said:—I was born in Bombay, and am 38 years of age. I am a fireman in the service of the P. and O. Company, and earn from Rs. 18 to Rs. 20 a month. I have smoked *chundool* as a luxury, on and off, for the past eight years. I smoke two annas worth a day. When I go to sea I take dry opium. I work nine hours a day. My health is good, and so is my appetite. I am married, and have two children.

Esooji Pitale, tall wiry man, said:—I belong to Nagpore, and am 55 years of age. I took to smoking *chundool* as a luxury in Delhi 40 years ago. I smoke two annas worth a day. I am healthy, and have a good appetite. I am married, and have two children. I get my living as a cabman, and earn eight annas a day.

Hakim Ramjan Ally, in very good condition, said:—I am 70, and come from Faizabad. I am a native doctor, and earn from Rs. 20 to Rs. 30 a month. I have smoked *chundool* as a luxury for the past 20 years. I smoke four annas worth daily. I am married, and have three children. The moderate use of opium will never injure anybody. If there was any truth in such a contention, I should not have reached my present good old age. My father was an opium-eater, and he died at the age of 85.

Ranezan Ally Budul, somewhat thin, but healthy, said:—I come from Faizabad, and am 45 years of age. I am a weaver, and earn eight annas a day. I have smoked *chundool* as a luxury for six years. I smoke two annas worth daily. My appetite is very good. I work eight hours a day.

Mahomed Hussein Goolam Hussein, thin but healthy, said:—I am 40, and come from Barreilly. I earn my living by begging. I get about seven annas a day. Some years ago I went wrong in my head, and took to opium. Now I am in my full senses and able to work. Opium is a blessing, otherwise I should have before this died in a lunatic asylum.

Abdool Rehman, a fine, healthy, muscular man, said:—I am 45 years of age, and belong to Bombay. I am a lascar, and earn Rs. 16 a month. I have smoked *chundool*, on and off, for the last 12 years as a luxury. When on shore, I smoke from two to three annas worth opium a day, but, when at sea, I take dry opium. Six

years ago I had a *chundool* shop near the Royal Albert Docks in London, and all the lascars used to come there, but after two years some people did me out of some money, and so I had to take to the sea again. My health is very good, and when at sea I work 10 hours a day.

Abdool Rehman, healthy and cheerful, said:—I am 37 years of age, and come from Kutch Mandvi. I am a dyer, and earn Rs. 12 a month. I have smoked *chundool* as a luxury for the last seven years. I smoke three annas worth daily. I left it off some time ago, but had to take to it again, as I felt pains in my joints. If my health were not good I should not be able to work eight or 10 hours a day, as I do.

Soobratr Soolar, whose weakly appearance was accounted for by an internal complaint, said:—I come from Cawnpore, and am 45 years of age. I am a weaver, and earn seven annas a day. For the last 12 years, I have smoked six pice worth of *chundool* daily. I am married, and have one child.

Cumroodin Mahomed Essa, tall, and in very good condition, said:—I am 45, and come from Aurangabad. I am employed by the licensee of a *chundool* shop, and earn Rs. 30 a month. I have smoked *chundool* for the last 22 years. I smoke five annas worth a day. I took to opium as I was suffering from dysentery, and it cured me. Four years back I left it off for two or three days, but as I felt very bad, I took to it again. I was in a hospital for two months, but the medicines I was given did me no good. I am married, and have two children.

Husun Mumdul, healthy, well-built man, said:—I am 40, and come from Cambay. I am a cook, and earn Rs. 20 a month. I have smoked *chundool* as a luxury for the past 15 years, but my health is not injured in any way.

Ramjan Adam Saheb, tall, thin, but quite healthy, said:—I am 35, and come from Kurachi. I am a shampooer, and make from four to six annas a day and get my food. I learnt the habit of smoking *chundool* from friends 18 years ago. Formerly I smoked eight annas worth a day, but when my father died I had not so much money to spend, and so I reduced the quantity to two annas. Besides, I was formerly a bachelor, but now I am married, and have one child.

Ahmed Ally, Subedarally, well-built, and smart looking, said:—I belong to Bombay, and am 30 years of age. I am a tailor, and earn 10 annas a day. I work 10 hours daily. I have smoked *chundool* as a luxury for eight years. I smoke three annas worth daily.

Abdul Kadir, a fine powerful man, said:—I am 50, and come from Allahabad. I am a cloth seller, and make Rs. 30 a month. I have smoked *chundool* for 20 years, as a luxury. Formerly I smoked one rupee's worth daily, but now I smoke only four annas worth. I reduced the quantity because the excess did me some harm. I am now keeping very good health, and work nine hours a day. I am married, and have six children, but none of them smoke.

Haji Ally, big well-built man, said:—I am 57, and come from Arabia. I am a lascar, and earn Rs. 20 a month. I have smoked *chundool*, on and off, for the last 10 years, as a luxury. I learnt the habit in company with friends in China. I am not a regular smoker. When I do smoke, I take four pice worth. I am always cheerful and happy. My health is very good.

Hussein Juma, stout, and in good health, said:—I am 45, and belong to Kathiawar. I am a baker, and earn six annas a day. I have smoked *chundool* for 15 years. I took it as I had bleeding piles. I was in the Sir Jamsetji Jeejeebhoy Hospital for eight months with that complaint, but the medicines did not do me any good, and I left the hospital. Then I was under the treatment of some native doctors for another year, but I was not cured. Ultimately, friends advised me to take a little opium every day. I did so, and since then am much better, and my appetite has also much improved. I smoke three annas worth of *chundool* every day.

Aboo Bukkur Sekh Ally, tall, thin, and active, said:—Bombay is my native place, and I am 60 years of age. I am a moola (priest), and get five annas a day and food. I have smoked *chundool* as a luxury for 20 years. I smoke four pice worth daily. My health is good.

Elahi Kadur, a big, well-set-up man, said:—I was born in Cawnpore, and am 64 years of age. I am employed as a mill-hand, and earn 14 annas a day. I

learnt to smoke *chundool* from some friends 14 or 15 years ago. When I first took to the habit, I smoked four pice worth a day, but I now take two annas worth. I am married, and have one child. My wife and child are in Cawnpore, and I send them part of my pay every month.

Moosaffkan Hyder Khan, over 6 feet, a powerful man, said:—I was born in Lucknow, and am 29 years of age. I am a tailor, earn 10 annas a day, and work 12 hours daily. I learnt to smoke *chundool* from friends 10 years ago. I smoke four annas worth daily.

Goolam Hussein Boolki, short, but strong, said:—I am 52, and come from Benares. I am a weaver, and earn eight annas a day. I have smoked *chundool* for the past 16 years. I took it as I was suffering from colic. I was under medical treatment for one year and a half, but got no relief. Some friends advised me to take opium. I did so, and got much better. Four years ago I felt completely recovered, and gave it up for four months. The result was that my health began to fail, and my eye-sight became dim. On the advice of a native doctor I again took to opium. I smoke two annas worth of *chundool* every day, and now enjoy excellent health. I am married, and have two children.

Syed Oosman, thin, but healthy and intelligent-looking, said:—I am 60, and come from Aurungabad. I earn my living as a beggar. I have smoked *chundool* as a luxury for 30 years. Formerly I smoked nine annas worth a day, but as I do not get so much money now, I have reduced the quantity to two annas worth. I go out begging at 6 a.m., and return at 10 a.m., and again go out in the evening from 6 p.m. to 11 p.m. I am in the enjoyment of good health.

Yakub Mahomed Hussein, a good specimen of his race, said:—I am 45, and was born in Deccan Hyderabad. I am a bricklayer, and earn 12 annas a day. I have smoked two annas worth of *chundool* daily for the last 20 years. A native doctor advised me to take it, as I was suffering from dropsy. When I go up country I take dry opium, as I cannot get *chundool*. I am married, and have two children. I am enjoying very good health.

Mazim Din Kalekhan, strong, healthy-looking man, said:—I am 30, and come from Cawnpore. I am a lascar in the P. and O. Company's service, and earn Rs. 25 a month. I take *chundool* as a luxury. But I am not a regular smoker. When I do smoke *chundool* I take from two to three annas worth. I have practised the habit for the last two years.

Nunekhan Hazi, a well-built man, standing over six feet, said:—I am 50, and was born at Teheran. I am a sweetmeat seller, and earn from six to eight annas a day. I have smoked *chundool* as a luxury for the last 20 years. I smoke two annas worth daily. A person who wishes to live long and enjoy good health must take opium.

Ganga Gir Ramgir, a robust handsome man, said:—I come from Nasik, and am 45 years of age. I get my living by begging, which brings me in from eight annas to one rupee a day. I have smoked *chundool* as a luxury for the last 20 years. I smoke from one to two annas worth a day. I had left off smoking for about two years, but took to it again as I liked it. A year ago I was offered a place of a peon, but I would not take it, as I earn more by begging.

Sulleman Noor Mahomed, medium height, of good physique, said:—I was born at Poona, and am 30 years of age. I am a singer, and earn from 12 annas to one rupee a day. I have smoked four pice worth of *chundool* as a luxury for the past two months.

Balla Hurry, well-built and intelligent, said:—I am 25, and was born at Poona. I am a vegetable-seller, make 12 annas, and work 10 hours a day. I have smoked *madat* as a luxury for the past nine months. I smoke three pice worth daily. Since I have taken to opium my health has very much improved.

Mir Ally Hook, in good condition, said:—I come from Cutch Mandvi, and am 55 years of age. I am a shopkeeper. I have taken one pice worth of dry opium daily for the past seven years. If I did not take opium I should not be able to do my work. I am married and have six children, but none of them take opium. Why do Government want to close the opium shops? Opium has done us no harm; besides, we have never raised any complaint. Why should Government hear the Padris and Mooktifauwallas (clergymen and Salvationists). They know nothing about the matter. It is the

duty of Government to consult the opium consumer themselves before taking any steps in the matter.

Abdool Ibrahim, in rather poor condition, said:—I am 29, and come from Poona. I am a cloth seller, and make six annas a day. I have smoked two annas worth of *chundool* daily for the past 12 years. I left it off once for a short while, but as I began to lose my appetite I again took to *chundool*. My appetite now is as good as I could wish it to be.

Samen Khodabux, tall and well developed, said:—I was born in Deccan Hyderabad, and am 30 years of age. I get my living by selling rings, and make about eight annas a day. I have smoked *chundool* as a luxury for 14 years. I smoke six pice worth daily. My appetite is good and so is my health.

Syed Hussein Syed Ally, a strong healthy man, said:—I am 30, and come from Hyderabad. I am a horse broker, and make Rs. 40 a month. I have smoked *chundool* as a luxury for the past six years. I smoke six annas worth a day. I am not married. I have my parents whom I give half of my earnings.

Sooryat Ally Maudishaw, tall and healthy, said:—I was born at Hyderabad, and am 35 years of age. I am a labourer, and earn six annas a day. I have smoked *chundool* for the last 10 years. I smoke three pice worth a day. Some friends taught me the habit. When I leave of *chundool* I take dry opium, but if I do not take one or the other I get dysentery. If Government close these *chundool* shops I shall take dry opium.

Abdoola Khan Aliar Khan, healthy and of cheerful disposition, said:—I come from Delhi, and am 40 years of age. I am a cabman, and earn Rs. 13 a month. I have taken *chundool* as a luxury for the past 20 years. I smoke three annas worth a day. I once left it off, but did not feel any ill effects from doing so. I am married and have had five children, but only three of them are alive.

Sayed Mir Adar Alli, healthy and bright, said:—I am 24, and come from Lucknow. I am a carpenter, earn 12 annas, and work nine hours daily. I have smoked one anna's worth of *chundool* daily as a luxury for the past two years. I am married and have one child.

Osman Khan Sorab Khan, a well built healthy man, said:—I am a native of Delhi, and am 45 years of age, I am a tin-maker, earn from 12 annas to two rupees, and work eight hours a day. I have smoked *chundool* as a luxury for the last six years. I smoke four annas worth a day.

Shekh Amir Sekh Hussein, short and rather delicate looking, said:—I was born at Khundwar, and am 35 years of age. I am a tea seller, and make six annas a day. I have smoked *chundool* for the past ten years as a luxury. I smoke two annas worth a day. I once left it off for a time but could not take my food. Immediately after resuming the habit my appetite improved.

Mohidin Cassum, who seemed to be in very poor health, said:—I am 25, and come from Nasik. I am a singer, and earn ten annas a day. I have smoked *chundool* as a luxury for eight years. I smoke two annas worth daily. I have been suffering from fever these last 10 days.

Amik Luman Adookh, a fine, big, strong man, said:—I am 24, and come from Persia. I am an Arabic writer, and earn about one rupee a day. I have smoked four pice worth of *chundool* daily as a luxury for the last 12 months.

Sayed Daod, a fine healthy-looking old man, said:—I am 56, and come from Bahrampur. I have smoked *chundool* for the past 30 years. I smoke four annas worth a day. I enjoy the best of health, and am quite happy. I have 11 children. I am a pensioner.

Ram Govind, a strong, good-looking man, said:—I come from Satara, and am 36 years of age. I am a beggar, and earn six annas a day and my food. I have smoked *chundool* for nearly four years. I smoke four pice worth a day. I left it off for a month or two, but during that time I took dry opium. I go out begging seven hours every day.

Samuel Benjamin, well set up, said:—I am 36 years of age, and belong to Bombay. I am a Naik in the 18th Bombay Infantry, and get Rs. 18 a month. I smoke six pice worth of *chundool* a day. I learnt the habit in Cabul. I keep very good health, otherwise I should be compelled to retire. I know many men in the army who take opium, without which they would not enjoy the excellent health they do now.

APP. XXII. Mir Khan Bahadur Khan, short, good-looking, and in the best of health, said :—I come from Deccan Hyderabad, and am 25 years of age. I am a Persian letter writer, and earn 12 annas a day. I have smoked four annas worth of *chundool* daily as a luxury for the last two years.

Fakir Mahomed Sekh Mahomed, stout, healthy and intelligent, said :—I am 29, and was born in Hyderabad (Deccan). I am a fireman in the service of the P. and O. Company, and earn Rs. 18 a month. I have smoked *chundool* as a luxury for the past six years. I do not, however, smoke every day. I smoke every second or third day. I take three annas worth. While at sea I sometimes take dry opium. I have been keeping very good health.

Mahomed Yusuph, over 6 feet, strong, and well proportioned, said :—I am 28, and was born at Peshawar. I am a tailor, earn eight annas, and work seven hours a day. I have smoked *chundool* as a luxury for the last four years. I smoke two annas worth a day. If I do not take it I should not be able to do my work. My appetite is very good.

Sallum Noor Mahomed, very robust, said :—I was born at Poona, and am 39 years of age. I am a singer, and earn one rupee a day. I have smoked four pice worth of *chundool* daily for the past two months as a luxury. Formerly I used to drink country liquor.

Ebrahim Khamisin, thin, but of fairly healthy appearance, said :—I am 37, and come from Junaghad. I am a Victoria driver, earn from 12 annas to one rupee, and work from eight to ten hours a day. I have smoked *chundool* as a luxury for 12 years. I smoke four annas worth a day.

Sayed Hyder, tall, strong, and active looking, said :—I come from Sholapur, and am 30 years of age. I am a stevedore's foreman, and earn one rupee a day. I commenced to smoke *chundool* eight years ago. Some friends taught me the habit. I do not smoke every day; when I do I take three pice worth.

Ulphat Sekh Hussein, in excellent health, said :—I am 25, and was born in Bombay. I am a beggar, and get three annas a day and my food. I have smoked six pice worth of *chundool* daily as a luxury for the past three years.

Bhiroo Nathoo, good looking, bright, and healthy, said :—I was born at Benares, and am 35 years of age. I am a sweetmeat seller, and earn six annas a day. I have smoked *chundool* for the last two years. I smoke two pice worth a day.

Mijikhan Mamookhan, stout, active, and intelligent, said :—I was born at Lucknow, and am 50 years of age. I am a gold embroiderer, and earn from Rs. 10 to Rs. 20 a month, and work eight hours a day. I was always strong and healthy. Some years ago I took a chill from sleeping on damp ground, and this brought on rheumatism. I had dreadful pain in my legs, in the sides, and between the shoulders. For several months I went on in this way. I was under the care of the doctor for many months, but as I got no better, one of my friends recommended me to take opium. I did so. By degrees I got stronger and stronger, and the pain left me. My appetite also improved, and I have never ailed anything to speak of since. When I do not take opium I cannot eat. I smoke four annas worth of *chundool* daily. I am married and have three children.

Itoo Manaji, tall, but not very strong, said :—I come from Kolapoor, and am 30 years of age. I am a cooly, and earn six annas a day. I smoke two annas worth a day. I work six hours daily.

Dugroo Bhicaji, well-conditioned, said :—I am 30, and come from Poona. I am a blacksmith, and earn 10 annas a day. I have smoked *chundool* for the past 12 years. I smoke one anna's worth daily. The *chundool* shops were closed in Poona last year, and as I did not get *chundool* my health began to fail me, so I came down to Bombay, and am carrying on my business here. I am all right now. I am married and have one child. They live with me.

Ramprasad Bhavani, thin and weakly, said :—I come from Dharwar, and am 30 years of age. I am a sweetmeat seller, and earn four annas a day. I am suffering from asthma, which is the reason for my taking opium. So long as I get my smoke I keep fairly in good health. I have smoked *chundool* for the last 10 years.

Gormoo Maini, a well-built young man, said :—I was born in Calcutta, and am 20 years of age. I am a lascar in the P. and O. Company's service, and earn

Rs. 13 a month. I have smoked *chundool* for about one year and a half. When on shore, I smoke four pice worth daily. When I go to sea I take dry opium for the first two or three days, and I then leave off the habit till I return to shore. My parents are living, and I give them part of my earnings.

Babaji Laximan, healthy, fine-looking man, said :—I was born at Alibag, and am 30 years of age. I read religious books amongst the Hindus, and earn Rs. 30 a month. I began to smoke *chundool* as a luxury six years ago. I smoke five annas worth of *chundool* every day. My health is very good, and so is my appetite. I am married, and have one son.

Sekh Abdool Rehman, tall and robust, said :—I am 30, and belong to Tallegam. I am a lascar, and earn Rs. 18 a month. I have taken *chundool* since I was 12 years of age. I now smoke four annas worth a day. I work hard all day. While I take *chundool* my health and appetite are good.

Amrit Laximom, of medium height, and in good condition, said :—I am 35, and belong to Ooran. I am a cabman, and earn from Rs. 2 to Rs. 4 a day. I have smoked *chundool* as a luxury for the last 18 years. I smoke four annas worth a day. Three months ago I went to my native country, and not being able to get *chundool* there, I became sick, and had to return to Bombay. So long as I get *chundool* my health is good and am able to work. I work 10 hours a day. I am married and have two children. I also support my old parents.

Damodar Rupjee, small, but in good condition, said :—I belong to Jamnagar, and am 30 years of age. I am a coconut seller, and earn seven annas daily. I began to smoke *chundool* as a luxury four years ago. I smoke two annas' worth daily.

Fez Mahomed Goolam Khan, well built and in good health, said :—I am 48, and come from Lucknow. I am a commission agent, and earn from Rs. 60 to Rs. 100 a month. I commenced to smoke *chundool* 20 years ago, but I am not a regular smoker. When I do smoke I take four pice worth. Sometimes I take dry opium. Some years ago I smoked one rupee's worth of *chundool* a day, but it was too much for my health, and I thought it was an expensive luxury, so I reduced the quantity. I am married and have two children.

Ahmed Hussein, in fairly good condition, said :—I come from Barreilly, and am 37 years of age. I am a tailor, and earn eight annas a day. I began to smoke *chundool* 11 years ago. Formerly I used to take it in large quantities, but now I am not a regular smoker. When I do smoke I take only four pice worth. I take it for asthma. I am now feeling considerably better. I send part of my earnings to my parents, but when I was taking *chundool* to excess I was unable to send them anything.

Noor Mahomed Goolam Mahomed, health broken, said :—I am 28, and come from Benares. I am a beggar, and earn 10 annas daily. With the exception of two or three annas for food I spend all my earnings in *chundool*. I have smoked *chundool* for the past seven years. My general health is not very good.

Abdool Rehman, strong, good-looking man, said :—I am 26, and come from Nussarabad. I am a beggar, and earn about eight annas a day. I have smoked *chundool* as a luxury for the past three years. Formerly I smoked four annas worth a day, but I have now reduced the quantity to two annas worth.

Samat Khan Bunde Khan, tall, thin, and of a very happy disposition, said :—I come from Delhi, and am 40 years of age. I am a blacksmith, earn 12 annas, and work 10 hours daily. I have taken *chundool* as a luxury for the past 12 years. I smoke two annas worth a day. My health and appetite are both good. I am married and have three children.

Nobob Mirza, thin, with shortened leg, but intelligent, said :—I am a native of Lucknow, and am 45 years of age. I am an Arabic teacher, and earn Rs. 15 a month. Some years ago I got a fall while flying a kite. I had to take to my bed, and was attended by a doctor. After a month I was able to move about, but the pain in my stomach and the chest did not leave me. Sometimes I felt better, sometimes worse, but never well. Some friends advised me to take opium. I did so and after a few days the pain disappeared. The habit afterwards settled on me. When I do not take *chundool*, my old complaint returns. I smoke one anna's worth daily. I am married and have one daughter.

Garib Farath, strong, well-built, active man, said:—I was born at Hyderabad, and am 40 years of age. I am a butcher, and earn 10 annas a day. I work 10 hours daily. I have taken *chundool* as a luxury for the last 16 years. I take four pice worth daily. I always have good appetite and health.

Badshaw Laloo, tall, strong, and healthy, said:—I was born at Oodepore, and am 30 years of age. I am a cook, and earn Rs. 10 a month. I have smoked *chundool* as a luxury for the past 10 years. I smoke six pice worth daily.

Valoo Virchand, tall, robust, and in good health, said:—I am 22, and come from Guzerat. I am a Brahmin (priest). I get Rs. 6 a month, and food and clothes. I smoke two annas worth of *chundool* daily. I have taken it for the last two years.

Sekh Munir Sekh Currim, tall, well-developed and active, said:—I am 37, and belong to Mhow. I am a shopkeeper, and make Rs. 25 a month. I commenced to smoke *chundool* as a luxury six years ago. I am not a regular smoker, but when I do not have *chundool* I take dry opium. I smoke one anna's worth of *chundool* every day.

Kalidass Purundass, tall, thin, but healthy, said:—I belong to Lucknow, and am 40 years of age. I am a beggar, and get eight annas a day and food. I have smoked *chundool* as a luxury for 20 years. I smoke three annas worth a day. When I went to Cabul as a porter in the Commissariat Department I had to drop the habit as I could not get *chundool*. For the first few days I suffered, but the craving left me. I keep good health while I take it regularly. I earn more in begging, and so I do not care to serve any one.

Abdool Rehman Khan Ismail Khan, of average height and good health, said:—I am 45, and come from Delhi. I am a hawker, and make Rs. 13 a month. I began to smoke opium as a luxury 25 years ago. I smoke one anna's worth daily. My health is good and so is my appetite.

Ismail Alli, a robust young man, said:—I am 26, and belong to Bombay. I am a dock labourer, and earn eight annas a day. I have smoked *chundool* as a luxury for the past two years. I smoke two pice worth daily. I work ten hours every day.

Mahomed Essoo, a nice-looking healthy young man, said:—I am 25, and was born in Bombay. I am a shopkeeper, and earn from eight annas to a rupee a day. I took to smoking *madat* two months ago on account of fever. I am now better. As soon as I am thoroughly recovered I shall leave off smoking *madat*, but I will continue taking dry opium, as it is a good preventive for fever.

Abdool Latif, strong, healthy man, said:—I was born in Bombay, and am 40 years of age. I am a landowner, and have an income of Rs. 100 a month. I have smoked *madat* for 15 years. I smoke eight annas worth a day. My general health is very good. I am married and have four children.

Ismael Moosa, a small man, health broken, said:—I was born in Bombay, and am 40 years old. I am a watchmaker, and earn Rs. 2 a day. I have smoked *madat* for the last 13 years. I smoke two annas worth a day. My health is not good. I never was strong. Thirteen years ago a friend advised me to take opium and I did so. Since then I am feeling somewhat better. Without *madat* I should be simply miserable.

Raja Khan Ghore Khan, a healthy old man, said:—I was born at Poona, and am 65 years of age. I am a milkman, and earn a rupee a day. I have smoked *madat* as a luxury for the past 30 years. I smoke one anna's worth daily, and drink two seers of milk. My wife is dead, but I have four children living with me. I also support my old mother. She does not smoke *madat*, but she takes little dry opium every day. She is 80 years old.

Abdool Rahman, tall, healthy, and active, said:—I belong to Allahabad, and am 38 years of age. I am a biscuit seller, and make Rs. 10 a month. I have smoked *chundool* as a luxury for the past four years. I take six pice worth daily. My parents are alive and I send them part of my earnings.

Cassum Khan Abdool Khan, tall, muscular, and full of vigor, said:—I am 35, and come from Dehra Dun. I am a gymnast, and make Rs. 20 a month. I have smoked from two to four annas worth of *chundool* daily during the last 12 years,

Mahomed Pir Mahomed, a very respectable looking old man, said:—I come from Peshawar, and am 80 years of age. I am a tobacco seller, earn eight annas, and work six hours a day. I have smoked *chundool* as a luxury for the past 60 years. Formerly I smoked one rupee worth a day, but now I generally smoke two annas worth. When I earn more I smoke more. My wife is dead, but I have four children and six grand-children.

Goolam Rusul, strong, robust young man, said:—I am 25, and come from Jafferabad. I am a weaver, and earn eight annas a day. I have smoked two annas worth of *chundool* daily for the past two years. Last year I left it off for a few days, but was not able to do much work, so I took to it again. My health is good. I laugh, I eat, I drink, and am happy. I am not married, but I am engaged to a girl.

Syed Nazar, a healthy-looking old man, said:—I am 65, and come from Lucknow. I am a beggar, and get my food and eight annas a day. Twenty-two years ago a native doctor advised me to take opium, as I had dreadful pain in my hips and legs. My appetite left me and I had a bad taste in my mouth. I smoke five pice worth of *chundool* daily. My health now is very good. Smoking does not injure those who are well fed.

Gagita Sadoola, in fine condition, said:—I am 30, and come from Lucknow. I am a dyer, and earn 10 rupees a month. I have smoked *chundool* as a luxury for the last two years, but I am not a regular smoker. When I smoke I take two pice worth daily. My health is very good. I am married and have one child.

Naiz Ally Mohulril, slightly withered, said:—I am 50, and belong to Ajmere. I have smoked *chundool* as a luxury for the last 15 years. I smoke four pice worth a day. I am married, and have two children.

Mahdoo Davul, a thin wiry man, said:—I belong to Hyderabad, and am 40 years of age. I am a butcher, and earn two rupees a day. When I was 35 years of age I was attacked with rheumatism. A doctor advised me to take opium. I did so and felt better. I smoke three annas worth daily. I work 10 hours a day. I am married, and have three children.

Mahomed Bakir, in poor condition, said:—I am 50, and come from Ahmedabad. I have smoked *chundool* as a luxury for the last 16 years. Formerly I used to smoke 12 annas worth, but since the last few months I have reduced the daily quantity to two annas worth. I wish the *chundool* shops were closed, then I would take dry opium, which would not cost more than two pice.

Munekhan Chunekhan, medium height, strong, and cheerful, said:—I come from Rampur, and am 30 years of age. I am a tea seller, and earn 10 annas a day. I have smoked *chundool* as a luxury for the last six years. I smoke two annas worth daily. I am not married, but I have my parents. They live in Rampur, and I send them 5 rupees a month. I earn from 10 annas to 14 annas a day.

Narayan Baboo, a fine, robust young man, said:—I was born at Lucknow, and am 25 years old. I am a cloth merchant, and earn 40 rupees a month. Five years ago some friends taught me to smoke *chundool*. I smoke two annas worth a day. I am much benefited by its use. Before I commenced smoking *chundool* my health was not very good. Now I am enjoying good health. I am married, and have one son.

Sekh Hussein Sekh Maneck, slenderly built, said:—I am 35, and come from Patna. I have taken dry opium for the last four years. I take one pice worth a day. I was in the Hospital Department during the last Afghan War. There I took a chill from sitting on some wet grass. Then I was seized with pains in the chest and back. Some friends advised me to take opium, and I did so. I am much better now, but have not quite recovered.

Fazul Fadoo, tall, thin, but of healthy appearance, said:—I was born at Decca, and am 37 years of age. I am a blacksmith, and make from 12 annas to one rupee a day. I commenced to smoke *chundool* as a luxury 12 years ago. I smoke six annas worth a day. I am married, and have two children. I also support my old mother.

Sekh Bahadur Abdool Rehman, tall and powerful looking, said:—I come from Hyderabad, and am 36 years of age. I am a beggar, and make from eight

APP. XXII.

to 10 annas a day. Some friends taught me to smoke *chundool* 18 years ago. I now smoke two annas worth a day. If Government close the *chundool* shops I will take dry opium. I am very strong, and enjoy the best of health.

Dost Mahomed Bhisti, sickly looking, said:—I am 50, and come from Thana. I began to smoke *chundool* 22 years ago. I am a beggar, and earn four annas a day, and get my food. I smoke three annas worth daily. When the Government closed the *chundool* shops in the Thana District I had to come to Bombay, as my health got bad.

Allabux Rujub, a powerful young man, said:—I am 20, and come from Lucknow. I am a weaver, and earn six annas a day. I have smoked *chundool* as a luxury for the last three years. I smoke three pice worth a day. I work 10 hours daily.

Dost Mahomed Goolam Mahomed, in very good health, said:—I am 100 years old. I am a beggar, and earn eight annas a day. I have taken two pice worth of opium as a luxury for the last 45 years. My wife is dead, but I have six children living.

Hematali Khan Mir Mahomed Khan, a well built man, said:—I am 40, and am a gold embroiderer. I work 10 hours, and earn a rupee daily. I have taken *chundool* worth six pice daily as a luxury for the last 20 years. I am married, and have two children. My general health is good.

Pir Khan Sayed Khan, in good condition said:—I am a dyer, and am 60 years old. I work seven hours daily, and earn about 10 annas. I have commenced smoking *chundool* since the last two months. I take it for fever.

Mahsum Sekh Esub, a nice looking robust man, said:—I am 35. I am a wood seller, and earn 12 annas a day. I have smoked two annas worth of *chundool* for the last 10 years. My general health is very good. If you wish to try my strength, I am willing to fight the best boxer in Bombay.

Sayed Survar Jamal, health-broken, said:—I am a beggar, and am 50 years old. I earn four annas a day. I have smoked two annas worth of *chundool* daily for the last eight years. I sometimes smoke *ganja* also. My general health is not good.

The following persons are all soldiers in the Sikh Army. Most of them are between 24 and 35 years of age, and have seen service in Afghanistan, Burmah, Egypt, and North-west Frontier. They are regular opium-eaters. They have been consuming it almost since their birth. They are all specimens of fine warriors. Their energy, endurance, and bravery are not at all affected by their addiction to opium. They are physically, morally, and mentally, one of the finest races in India. They say that without opium they would soon be useless:—

Brahmsing Martahsing.	Succhesing Dulesing.
Brahmsing Daftawarsing.	Kevalsing Jeysing.
Bursing Kirhasing.	Sundersing Metapsing.
Atraursing Molasa.	Chandsing Dhunsing.
Pakursing Tehansing.	Karamsing Nihalsing.
Menjabsing Hursing.	Kisamsing Miasing.
Brahmsing Fatesing.	Mooluksing Boosar.
Bahasing Metahsing.	Hurnamsing Chotesing.
Polasa Ramsing.	Sundersing Kansing.
Chagarsing Gurdensing.	Kakusing Nakasing.
Achersing Gurdensing.	Naransing Fatesing.
Sundersing Bellasing.	Hurnamsing Hirasing.
Pausa Chiasam.	Budumsing Namsing.
Chandasing Jeversing.	Gujersing Ramsing.
Gurdensing Tarasing.	Mungalsing Kansing.
Dayabsing Balatsing.	Moolsing Zohichand.
Sundersing Bhavansing.	Hirasing Satsing.
Malatsing Ratlamsing.	Hakimsing Malsing.
Lachmansing Bukursing.	Bejansing Fatesing.
Bulakasum Kansing.	Naransing Mangalsing.

Haji Ahmed Moti, in very good health, said:—I am 55. I am a salt merchant, and earn two rupees a day. I have smoked six annas worth of *chundool* daily for the last 30 years. I always take good food, and that is the reason why I keep good health. I am married, and have three children.

Zerab Ally Shaw Isphan Ally Shaw, a tall, well built man, said:—I am 50 years old. I am a beggar, and earn 12 annas daily. I have smoked six annas worth of *chundool* daily for the last 20 years.

Kedir Rehman, a healthy old man, said:—I am 60 years old. I am a butcher, work six hours a day, and earn 12 annas daily. I have smoked three pice worth of *chundool* daily for the last two years. I took it for asthma. I feel better now. I am married, and have three children.

Hakim Mahomed Hussein, a tall healthy looking man, said:—I am 56 years old. I am a doctor and earn from two rupees to four rupees daily. I have smoked six annas worth of *chundool* daily for the last 40 years. I am married, and have six children.

Rahim Gangaji, a strong young man, said:—I am 25. I am selling hides and skins. I earn 12 annas daily. I have smoked two annas worth of *chundool* daily for the last eight years. My health is very good. I am married and have one child.

Sadia Aga Mahomed, a stout healthy looking woman, said:—I am 65 years old. I am selling *madat*, and earn Rs. 40 a month. I have smoked four annas worth of *chundool* daily for the last 40 years. I am married and have eight children. Two of them smoke *chundool*.

Bhagoo Waman, health-broken, said:—I am 50 years old. I am a beggar, and earn five annas daily. I have smoked two annas worth of *chundool* daily for the last 20 years for asthma. I keep fairly good health so long as I get my *chundool*, but when I do not get it I feel very sick. If Government wishes to close the opium-smoking houses I would advise them to first open a few hospitals.

Pirbhai Nurbhai, in good condition, said:—I am 35 years old. I am a mill-hand, and earn Rs. 18 a month. I have smoked one anna's worth of *chundool* as a luxury for the last six years. I am married and have two children. I work ten hours daily.

Goolam Rusul Sekh Husen, a robust man, said:—I am 29 years old. I am a fitter. I work 10 hours a day, and earn about 12 annas. I have smoked *chundool* for the last six years.

Khoja Mahomed Taj Mahomed, a healthy looking man, said:—I am 50 years old. I am a cart-driver, work 10 hours, and earn eight annas daily. I have smoked two pice worth of *chundool* daily for the last 20 years. I am married and have two children.

Fate Mahomed Sekh Chand, in very good condition, said:—I am 40 years old. I am a lascar, work 10 hours and earn eight annas daily. I have smoked one anna's worth of *chundool* daily as a luxury for the last eight years. I am married and have two children.

Rehanshaw Mavashaw, a cheerful, healthy looking old man, said:—I am 50 years old. I am a beggar, and earn seven annas daily. I have smoked two pice worth of *chundool* for the last 12 years. It has done me no harm.

Sekh Buchoo Sekh Mohidin, said:—I am 52 years of age. I am a beggar. I earn eight annas a day, and get my food. I have smoked two annas worth of *chundool* daily for the last 10 years. My general health is very good.

Goolam Mahomed Buksh, a powerful looking man, said:—I am 50 years old. I am a weaver, and earn eight annas daily. I have smoked one anna's worth of *chundool* daily for the last 15 years. I am married and have four children.

Diliyar Khan Bahadur Khan, a robust man of cheerful disposition, said:—I am 45 years old. I am a cabman. I work 10 hours daily, and earn about a rupee a day. I have smoked three annas worth of *chundool* daily for the last eight years.

Nabab Khan Bahadur, said:—I am 45 years old. I am a tin-maker. I work nine hours, and earn 10 annas daily. I have smoked three annas worth of *chundool* daily for the last 10 years. I am married and have children. My health is very good. I have nothing to complain.

Sekh Ali Mahomed, in very good condition, said:—I am a baker, and am 40 years old. I earn 10 annas daily. I have smoked two annas worth of *chundool* daily for the last 10 years. I am married and have three children.

Sawlal Bal Govindlal, a well-built young man, said:—I am 29 years old. I am a photographer, and earn about three rupees a day. I have smoked six pice worth of *chundool* daily for the last three years. My health is very good. I work seven hours daily. I am married and have two children.

Sawli Rama, in very good health, said:—I am 30 years old, and am a cart-driver. I work 12 hours daily, and earn 10 annas. I have smoked one anna's worth of *chundool* daily for the last five years.

Din Mahomed Ekoo, slightly withered, said:—I am 50 years old. I am a beggar, and earn six annas daily. I have smoked two annas worth of *chundool* daily for the last 10 years. I took it for asthma. I am better now, but have not completely recovered.

APP. XXII.

APPENDIX XXIII.

ABSTRACTS OF EVIDENCE of the HON. W. LEE-WARNER, C.S.I., and the HON. FAZALBHAI VISHRAM, absent at Calcutta on duty with the Council of the Governor General when the Royal Commission was at Bombay.

[See page 373 of this Volume.]

The Honourable Mr. W. LEE-WARNER, I.C.S., C.S.I., Secretary to Government, Political Department, Bombay.

Replies to questions based on paragraph 5 (1) and (2) of letter from the Government of India, No. 3915 Ex., dated 8th September 1893.

1. What is your experience as regards the consumption of opium by the different races of people in the districts with which you are personally acquainted? Please name the districts:—Since my attention is specially called to the effect which the proposed prohibition would have on the Native States, I content myself with submitting the briefest remarks upon the other and more general questions.

2. What is your experience as regards the effect of such consumption on the moral and physical condition of the people:—I am acquainted with the districts of Satara, Nasik, Poona and Karachi, the City of Bombay, and the States of Kolhapur and the southern Maratha Country, in which I have served in various capacities. I have visited most of the Native States and every district in Sind and the Presidency on tour. I have served as political agent, as under secretary, Political Department, Bombay, and as under secretary in the Foreign Department to the Government of India, also for many years as political secretary to the Government of Bombay. The experience I have gained does not enable me to answer the first question, since my first impressions in one district have been corrected in another, and the only conclusion I have drawn is, that between province and province, and district and district, the greatest contrast exists in the matter of the extent to which, and the classes by whom, opium is consumed.

3. What is your opinion as to the disposition of the people of India (a) in regard to the use of opium for non-medical purposes; (b) as to their willingness to bear in whole or in part the cost of prohibitive measures? But it is possible upon the above-mentioned experiences to express an opinion on the next question. I cannot honestly attribute any of the moral or physical degeneracy, which is common in India, and more marked in some districts than in others, to the use of opium. I attribute it to other moral and social causes, e.g., vicious habits and early marriages.

4. Should, in your opinion, the sale of opium in British India be prohibited except for medical purposes? Could such prohibition be extended to Native States with which you are acquainted? Supposing total prohibition to be impracticable, can you suggest any change in the system at present followed for regulating and restricting the opium traffic and for raising a revenue therefrom? Be good enough to state what, in your opinion, would be the political effect upon Native States in this Presidency resulting from the prohibition of opium therein, and how such prohibition would be regarded by the people thereof. Be good enough to frame an estimate, if possible, showing on what it is based, of what would be the claims for compensation in the Native States of this Presidency, exclusive of Baroda, which would result from restrictive measures: I have frequently discussed the opium question with high Native officials and non-officials. I apprehend that the restriction of opium to medicinal purposes, unless each man is to be his own doctor, would be bitterly resented by all classes, by those who never use it as well as by those who use it, indicating a dangerous departure from the tolerant principles of British rule.

I am convinced that the taxpayers would not willingly consent to pay for the prohibition, and I believe that they would equally resent such a measure even if the British taxpayer paid the cost of the necessary compensation to opium-growers or proprietors, and made good the loss of revenue to the Indian treasury.

5. Reserving the second clause of question 4, I am of opinion that there is no moral justification for restricting the sale of opium to persons requiring it for medical purposes. I feel that, as a matter of sentiment, it would be desirable if the British Government did not manufacture or sell opium, but that as a matter of honesty and morality there is no difference between selling the right to manufacture or to sell opium, and selling the produce of the poppy direct. I foresee that any alteration of the present system would involve a sacrifice of revenue, an adulteration of the article, an increased supply and distribution of it, and fresh taxation, which would strain beyond the limits of endurance the loyalty and contentment of the people of India.

6. I now proceed to the main question, as to whether the prohibition of the sale of opium, save on medical certificate, could be extended to the Native States.

To answer this question, which raises momentous issues affecting British relations with the Native States, I must

- (a) submit some remarks on our principles of interference;
- (b) examine the past history of our opium dealings with the Native States;
- (c) inquire whether the price to be paid for such prohibition would correspond to the advantages gained by it.

7. *Principles of interference with the States.*—As to (a) I assume, for the sake of argument, that the British Government having legislated and imposed upon British subjects legal restrictions as to the growth and use of opium, desires to impose upon the allied States under British protection, the obligation to legislate in a similar manner for their own subjects. The question is, how such an obligation can be justified. The paramount protecting power has, by treaty and usage, acquired and exercised its rights of interference under four heads, namely, (i) for the common defence; (ii) for the settlement of the external affairs of the States; (iii) in the exercise of the royal prerogative; and (iv) for the regulation of the internal administration of the States. Clearly any action taken in this matter will fall under the fourth division. But whereas the rights of the British Government to station troops in foreign territory or regulate native armaments therein; or its right to undertake for the States all international or interstatal settlements, and to bind them by its own diplomatic action, or its prerogative to settle disputed successions, and take charge of the administrations during minority, rest in every case upon the clearest titles and admissions of the Queen's allies, and in many cases upon principles declared in the statutes of the Imperial Parliament, the right of the British Government to interfere in the internal administrations of the States, opens up a question of great delicacy and controversy. If the measure of intervention now proposed is to be examined by the light of public faith and policy, it is essential to analyse British rights of interference in the internal affairs of the States in order to see whether past theory, practice, and treaty will justify a demand for their co-operation in suppressing the sale of opium.

Notwithstanding treaties disclaiming interference and theories of sovereignty, interference with the internal affairs of native states has been justified in the past, either—

- (a.) when adopted in the interests of the states, or
- (b.) when adopted in the interests of the British Government.

APP XXIII.

Under class (a) history affords instances of six recognised grounds of intervention, namely,—

- (i.) to settle disputes as to succession,
- (ii.) to prevent the partition and dismemberment of a State,
- (iii.) to suppress rebellion against the lawful ruler,
- (iv.) to arrest gross misgovernment,
- (v.) to secure religious toleration,
- (vi.) to check offences against natural law or public morality.

Under class (b.) the British Government, in the interests of the whole empire, has (i.) asserted jurisdiction over Europeans and Americans, over railways that are parts of the general system, and over telegraphs, and has protected its mails in foreign territory; it has (ii.) occasionally suppressed a mint which issued spurious coin; and it has (iii.) asserted a right, which every nation possesses against other nations and *a fortiori* against subordinate allies, of protecting vital British interests at all hazards where the safety or paramount interests of the empire require it. My first proposition then is, that the interference now suggested can only be justified, if it is justifiable at all, under class (a.) (vi.) “to check offences against public morality,” or under class (b.) (iii.) to protect “vital British interests.” Interference to prevent suttee is justified under the former, and the opium agreements taken for the protection of the British revenue are the furthest step yet taken in the direction of the latter. A scrutiny of these precedents shows that by no logical process could the obligation to suppress the sale of opium under the altered conditions now proposed be forced on the states. Lord William Bentinck had the courage to make suttee a criminal offence in British India on the 4th of December 1829. Six years later the widow of a Bombay Native Chief in the Mahi Kantha was burned alive, despite the protest of British officers. In 1854 the obligation of personal liberty was still so imperfectly recognised that Sir Henry Lawrence negotiated with Udaipur for the suppression of seizing people for sorcery, and in May 1860 Lord Canning included a provision against suttee in the Patiala Sanad. No doubt public opinion would now in 1894 endorse the punishment of suttee in every protected Native State, because the public conscience of united India, at last, if not universally at least sufficiently condemns it. But other crimes like those punished by the age of consent Act, are not yet ranked as offences against public morality, and no one can pretend that the conscientious objections of certain British subjects to the opium trade constituted a moral obligation to break treaties and public pledges against interference in the Native States, on the ground that “natural justice,” or the law of nature compels the paramount power in this instance to set aside treaties and break pledges in deference to a higher law. An appeal to the law of nature brings into the arena of discussion the *tu quoque* argument. If the conscience of a few on the subject of opium justifies action, which was not taken in the case of suttee, where the whole of civilised opinion was on one side, until the lapse of many years, and which is not now taken in the age of consent question, why does the British Government turn a deaf ear to the millions of Mahomedans who would prohibit the import or sale of liquor, or to the greater millions of Hindus who detest the consumption of flesh? It cannot seriously be contended that the law of nature demands in this case the abandonment of pledges given to the Indian sovereigns, that the Company and the Crown (Statute 21 & 22 Vict. c. cvi. s. 67) will uphold their treaties which guarantee in the clearest terms their sovereign rights in the internal administration of their principalities. Nor, again, can it be urged that the “vital interests” of British rule require this sudden change of policy from the production and sale of opium to its suppression despite the protests of the Native States.

The past History of our Opium Dealings with the States.

8. British action in the past would give the contradiction to such a proposition. Between the interference which has been exercised in Bombay with the opium dealings of the Native States, and that which is now under discussion, there is all the difference between yea and nay. The vital interests of the British Government have justified the action hitherto taken, but that very action, and the arguments by which it has been supported, cut the ground from under the fresh position which the advocates of suppression of

the trade seek so take up. We have justified a departure from the rule and pledge of non-interference because the British from the date of their first contact with the States proclaimed their right to raise a revenue from opium, with which right the otherwise admissible rights of the States were incompatible. The new position is that we are to change our minds and abandon the revenue, and yet impose on the States disabilities not in the solid or vital interests of our revenue and of the imperial expenditure which confers so many benefits on the States, but in the interests of our own view of morality. In short, we abandon the fiscal justification recognised by the States, and plead a moral justification which the States do not accept, and which, for the reasons given, it would be contrary to our policy and pledges to enforce against their consent. We have never claimed a right to impose our conscience on the Queen's allies except where our conscience was the conscience of the civilised world, and the evil we have sought to prevent was an offence against humanity, or, what I have called, the law of nature.

I shall endeavour now to support my argument that our interference with the States of India, and the particular form of it which has been adopted in Bombay, have been based avowedly on the vital requirements of Indian finance. Under the Moghal Empire, from which we derived our rights in Bengal, an opium monopoly was asserted. As the Moghal power declined their rights also fell into abeyance, until in 1773 Warren Hastings assumed the monopoly in the Company's possessions in Bengal, Behar, and Orissa. The contract system was abandoned in favour of the direct agency system at the close of last century. The fall of the Peshwa and the break up of the Maratha confederacy extended British ascendancy to Rajputana, Central India, and Bombay by the year 1817, A.D. Our increased knowledge of the country proved that the Bengal monopoly could not be maintained without co-operation in Western and Central India. After some attempts to prevent the export of opium from that side of India by buying up the produce of a restricted cultivation, we settled down in 1829 to the principle which has in the main been followed since then, although owing to faulty regulations the principle was worked defectively until Mr. Pritchard restored its efficiency. Briefly the scheme was this. Central India and Rajputana were allowed to grow what they pleased, but their opium was not to leave the States save under passes granted at a special rate of duty to cover the transit to the ports whence it was shipped or the markets it was to reach. The flaw in the scheme was, that sufficient checks were not devised to prevent the introduction of opium into our own adjoining districts. The Bombay States in their turn paid the penalty due to geographical conditions. If they too had been allowed to grow opium it would have been impossible to protect the revenue, since their ready access to the sea would have defied proper supervision. If, then, Rajputana and Central India were to be allowed to produce opium, and if the Bengal monopoly and British finance were to be protected, the Bombay States must submit to differential treatment. It was just possible to treat Baroda, whose isolation from the sea line was completed by other arrangements more liberally than Kathiawar, girt by the sea, or Cutch in the same position, or Cambay, Savantvadi, Janjira, and even Kolhapur, and other States close to the seaboard. Accordingly Baroda got the benefit of the possible exemption from the prohibition to the growth which was enforced in the case of the other States. We have evidence of the views of Government in 1820 in a letter addressed by Secretary J. Farish to the Resident at Baroda, No. 1,031, dated August 16th, 1820. The Gaekwar was requested to fall into line with the intention of the Bombay Government to enforce Regulations I. of 1818 and II. of 1820. In informing him that His Highness would be supplied with Malwa opium from Kaira, the words were added, “at such rates as may check the inordinate use of it; and yet besides a profit to the retailers, be within the reach of those who may have been accustomed to indulge in opium, and yield a revenue to the Gaekwar Government.” I quote this to support any argument that the rights of the Native States to make a revenue out of opium were recognised in 1820, subject to the conditions that their systems did not injure British finance, and in certain cases that special British rights acquired from the Peshwa were safeguarded. The State of Baroda got the benefit of its position in 1820, and it has retained its advantages in the engagement of 1878,

which introduced a sort of State monopoly, which was intended to prevent smuggling into British territory. I believe that some 3,500 acres in Baroda are under poppy cultivation. The rest of the Bombay States fared worse, because in their cases the paramount fiscal interests of the British Government and their special rights over opium could not be otherwise safeguarded. Under the approved system introduced by Mr. Pritchard, the Bombay States cannot cultivate the poppy of manufacture opium, and they adopt the British system of passes, of purchases from a depôt or from Malwa, and of retail sale, while they receive three benefits in exchange—

- (a.) A supply of free opium for their requirements to Cambay, the Palanpur, the Mahi Kantha and the Rewa Kantha Agencies; and a supply at a reduced rate of duty, viz. $\frac{3}{4}$ ths of the duty, to Cutch and the Kathiawar States, $\frac{9}{10}$ ths of the duty to the Satara Jaghirs, and $\frac{4}{5}$ ths of the duty to the other States;
- (b.) Compensation to certain States as follows for the loss of transit duties and cesses on manufacture, viz. :—

	Rs.
Palanpur -	31,500
Mahi Kantha -	7,228
Rewa Kantha -	7,137
	45,865

- (c.) Certain profits on the retail sale.

The duty remitted by Government under (a.) varies, of course, with the amount supplied, but in 1891-92 it was estimated at Rs. 1,47,354, which was less than in the previous year, I believe. If, then, an estimate is required of the cost to the British taxpayer of suppressing the opium traffic in the Native States of Bombay, the account would have to include these items, the value of the opium duty now refunded to the States, say Rs. 1,50,000 + the compensation of Rs. 45,865 now paid to them + something for loss of retail profits + Rs. 2,02,500 which the British Government now retains as its share of the duty on opium consumed in the States + a further compensation (which cannot be estimated without detailed discussion with the States), representing the value of their full rights to administer their estates as they please, which rights they would have a claim to resume when the vital fiscal interests of the paramount power no longer require compulsion on the protected States to adapt their administration to the Imperial monopoly. Their requirements for medicinal purposes would also have to be met.

The Profit and Loss Account.

9. Would the advantages gained compensate for the cost? The prohibition of the growth or manufacture or sale of opium except for medicinal purposes in British India would either be accompanied by a similar pro-

hibition in the Native States, or it would not. If it were not so accompanied, a complete failure of our attempts to suppress the traffic may be confidently anticipated. Despite an army of Customs officers on our frontiers, we never could prevent the drug from reaching our own people at a rate which would greatly stimulate the consumption of it.

A glance at the map of Bombay with its patchwork of foreign territory, its irregular frontiers, and the frequent *enclaves* of foreign jurisdiction will establish the proposition. If the prohibition is enforced against the Native States by compensating them and their raiats for the revenue they now raise in Baroda, Rajputana, and Central India, or for the revenue which they might raise when the argument of vital interests is withdrawn, and the revenue they do raise under present conditions in compensation and refunds in whole or in part of the duty in the States of Bombay, then a further question arises whether the prohibition which the law imposes can be enforced in fact. With due deference I submit that it could not be enforced. I take the instance of Cutch, with its area of 6,500 square miles, with its single British Agent to represent supervision, and with its ruler pointing to Article 10 of his treaty of 1819, "the Rao, his heirs, and successors, shall be absolute masters of their territory." Could the Rao and the British Agent enforce the simpler prohibition against infanticide practised by only one class of the community? On October 13th, 1819, the Rao "engaged to join heartily in abolishing the custom generally through the Bhayads." Twenty-one years later the Foreign *(sic)* Chiefs confessed, "in 1835 we renewed our engagement." "Now the two Governments have no confidence in the fulfilment of our engagements." Six years later another engagement was taken, and a few years ago the Bombay Government still felt no confidence that the practice had ceased to exist. A restrictive law against an article in popular demand passed in the teeth of public opinion would not only not be enforced, but it would entail opposition and resentment. Once this feeling gained ground amongst the 67 millions of people subject to the Native States, the 221 millions of people subject to the Queen-Empress would catch the contagion. I have no doubt that more than 260 millions of the population of India are not aware that the question of interference with their right to take opium if and when they desire it is under discussion. If their attention could be roused to the fact I should apprehend serious consequences; but confining my remarks to the feelings of the ruling families, I am convinced that not merely Nawabs like those of Cambay and Junagadh, who use it for purposes of hospitality, but scores of Chiefs who never use it at all would view with the greatest alarm the extension of interference by the paramount power to matters in which disputed views of morality, and not the recognised necessities of finance or public tranquility, could alone be pleaded as the justification for abandoning the principle of non-intervention in the internal affairs of the country princes.

Honourable Mr. FAZALBHAI VISHRAM, Member of His Excellency the Viceroy's Legislative Council, and one of the leading Merchants of Bombay.

REPLIES to questions based on paragraph 5 (1) and (2) of letter from the Government of India, No. 3,915-Ex. dated 8th September 1893.

Questions.

1. What is your experience as regards the consumption of opium by the different races of people in the districts with which you are personally acquainted? Please name the districts?

2. What is your experience as regards the effect of such consumption on the moral and physical condition of the people?

3. What is your opinion as to the disposition of the people of India—

(a.) in regard to the use of opium for non-medical purposes?

(b.) as to their willingness to bear in whole or in part the cost of prohibitive measures?

4. Should, in your opinion, the sale of opium in British India be prohibited except for medical purposes?

Could such prohibition be extended to Native States with which you are acquainted?

Answers.

1. Contact with different classes of people in Bombay and Kathiawar.

2. In my opinion opium eating in moderation has no demoralising effect on the people, and there is no physical degeneration either.

3. (a.) It is considered to be a non-stimulant and an agreeable sedative, besides being most valuable for medical purposes.

(b.) I am sure the people are unwilling, as well as unable, to bear any portion of the cost of prohibitive measures.

4. Certainly not.

6. What, in your opinion, would be the effect on the finances of India if the production and consumption of opium were prohibited, taking into consideration clauses (a.), (b.), and (c.) of the Resolution of Parliament, copy of which has been sent to you?

8. Supposing total prohibition to be impracticable, can you suggest any change in the system at present followed for regulating and restricting the opium traffic and for raising a revenue therefrom?

6. I have no statistics by me at present, but it goes without saying that the effect on the already crippled finances of India will be something enormous. Any prohibition of the production and consumption of opium will be most unwise.

8. On the whole, I think the present system is working very well, but I think that if Government were to take all the farms into their own hands and not let them out to contractors, the revenue is sure to increase materially. Under the present system it is a well known fact that opium contractors or "farmers" (as I believe they are called) make large profits in their contracts with Government from year to year.

APPENDIX XXIV.

NOTE ON CHILDREN'S PILLS OF BALA GOLIS, by Mr. J. M. CAMPBELL, C.I.E.

[Presented to the Royal Commission in continuation of his Evidence.]

In March 1891 inquiry showed that the number of shops at which Bala Golis were sold had risen from 150 in 1887 to nearly 300 in 1891; and also that bhang, dhatura, aconite, and other drugs harmful to children were occasionally used in addition to opium, and that the quantity of opium used was most uncertain, varying from a minute particle to a dose large enough to cause injury. It further appeared that most of the opium used in these pills was illicit.

To put a stop to these irregularities, in August 1891 it was arranged that children's pills should be prepared under the supervision of the licensed opium farmer, and that the regulation pills should contain nothing but a variety of harmless spices and from 9/50 to 9/25 of a grain of opium. On samples of these pills recently (27th January 1894) submitted to him for testing, Surgeon-Major Parker, the Superintendent of Government Drugs, reports, No. 586, dated 30th January 1894, that though the practice of using opium pills to quiet children may be open to objection it is inseparable from native habits and customs. Dr. Parker holds that the pills sent to him, being free from aconite, bhang, and dhatura, are comparatively harmless, and that to withdraw the existing supervision and restrictions on the manufacture of bala golis or children's pills would be a most dangerous procedure calculated to increase the rate of infantile mortality.

While few authorities deny that the pills are given not with the object of freeing the mother from the annoyance of a fretful child but with the intention of benefiting the child, Bombay professional opinion is almost equally divided on the question whether opium is beneficial or hurtful to children. Of 84 statements obtained in 1893 from members of the Grant College Medical Society, 27 were in favour of the use of the drug, 30 were against it, 25 gave no opinion, and two were doubtful. At the same time it is to be remembered that practitioners and physicians associate with opium cases of sickness in which the child is out of health either in spite of or because of the use of opium. Doctors do not as doctors see any of the mass of children who are given opium and who benefit from its use. The view that opium is beneficial to children finds support in the fact that the people of Malwa have been giving opium to their children for the last 300 years. In Bombay the case of the North Gujarat Memons and Khojas, two of the most vigorous and prosperous of the trading classes, is important evidence in support of the tonic virtues of opium. In 1893, when the rumour spread that the use of children's opium pills was likely to be stopped, over 350 Khojas and Memons, including leading men of both communities, petitioned the collector against the proposed prohibition. They and their fathers had always taken opium as children. It secured sleep, helped digestion, and kept off fever. To deprive their children of opium pills would be a serious evil. The case of the Khojas and Memons, which to a less extent is the case of the Banias and Bhatias from North Gujarat, is important not only from their notable robustness of body and mind but

because they are well-to-do. That Khoja women give their children opium is an answer to the common statement that such pills are given solely by the poor to keep their children quiet. It is beyond doubt that Khoja and Memon women give their children opium for their children's benefit. The practice is the result of long experience. There seems no reason to suppose that the lesson of experience is a mistaken lesson.

This experience of the higher classes of Gujaratis is supported by the experience of the higher classes of Hindus in the Bombay Dakhan, where Brahmans and Marathas, classes of notable keenness and endurance, commonly give their children opium from a few months to two or three years old. Rao Bahadur Balvant Ramchander Nathu, a Sirdar and Inamdar of the Dakhan, a competent witness of robust bodily and mental health, states (23rd January 1894) that he was dosed with opium as a child. He says the practice is most common. He has never heard of the death of an infant from eating opium. He knows of no instance of a lad or a man made a dullard or a failure from the effects of opium taken in childhood. Mr. K. Raghunathji, a Prabhu gentleman of Bombay, of unusual intelligence and information, writes on the 3rd of February 1894: Gujaratis and Marathas alike, more especially Marathas, use Balgolis or baby pills. They give these pills to their children to soothe them and also as a tonic. These Balgolis always do good. I have no knowledge of any child dying, I know of no lad turning out a failure because of Balgolis. Maratha women give their children opium in tiny pills varying from a poppy to a millet seed. The opium is given either dry or in milk. It is a soothing agent. Under its influence the child thrives.

It may be asked why should not the making of Balagolis be left to medical practitioners. The answer is medical practitioners never have and never would make children's pills. The ingredients are too many; the profit is too small. The pill making is grocer's not doctor's work. The bulk of the people who use the pills are at home in a grocer's shop, they are ill at ease in a practitioner's consulting room. Nor should the making be left to grocers. Grocers would use either illicit opium or other cheaper and more dangerous materials. They would take no care that the pills are of uniform strength. The pills would be made in hundreds of shops. No opium staff could check the manufacture. Whether opium is on the whole hurtful or beneficial to infants, it is a matter of the first importance that as the belief in the efficacy of opium is widespread, parents should be able to obtain pure opium instead either of adulterated opium or of arsenic bhang or dhatura. During the year ending 31st July 1893, under the contractor's supervision about 240 pounds of opium mixed with spices have been made into about 12 lakhs of children's pills.

17th February 1894.

J. M. CAMPBELL,
Collector of Bombay.

APPENDIX XXV.

APP. XXV.

Hyderabad
State.

LETTER from the MINISTER to His Highness the NIZAM to Mr. Plowden, the Resident at Hyderabad, containing the views of the Nizam's Government on the Opium Question.

[Handed in by Mr. Dunlop. See Question 27,898.]

Hyderabad, Deccan,

MY DEAR MR. PLOWDEN, 8th December 1893.

I HAVE much pleasure in complying with the request conveyed in Mr. Tucker's letter, No. 1891, dated 1st instant, to the effect that I should state in writing the views of His Highness' Government on the opium question which is now being inquired into by a Royal Commission.

2. If there were reason to believe that the use of opium is being carried to such an extent that it is physically or morally affecting the population, or any large class of the population, His Highness' Government would not hesitate to adopt measures to check, at least, the inordinate consumption of the drug. But nothing short of very strong evidence of the evil effects of opium would justify such an extreme measure as the general prohibition of the use of opium except for medicinal purposes.

3. So far as Hyderabad is concerned there is no doubt that the use of opium is not a public evil. On the contrary, there is a general feeling that opium in moderation is necessary for many persons, and that the use of it, far from being attended with bad results, is beneficial to those who have become accustomed to it.

4. Opium is used to a considerable extent in Mahomedan families, and is almost invariably given to young Mahomedan children. The Sikhs and Rajpoots are regular consumers of opium, and show no bad results from it. It is also used by many other classes in the city of Hyderabad, and in the Western Districts of the Dominions. In the Telingana Districts there is very little consumption of opium, the people being more addicted to drink.

5. In the year 1881 Sir Salar Jung, who was then Minister, acting under the advice of the Government of India, suppressed the cultivation of poppy and arranged to obtain supplies for licit consumption from Malwa, the Government of India undertaking to levy a pass duty on behalf of His Highness' Government of British Rupees 10 per seer.

This arrangement was regarded at the time with considerable dissatisfaction by many Jagirdars who had been in the habit of receiving a high rental for opium lands, and also by the ryots who cultivated opium. But all classes have now become accustomed to the existing arrangement, and it has certainly been a profitable one to His Highness' Government, for, whereas the revenue from opium prior to 1881 was estimated at H. S. Rs. 41,871 (British Rs. 36,000) it is now, including His Highness' Sur-fi-khas District, about British Rs. 4,37,000. At the same time the consumption of opium has decreased. It was estimated that in the year prior to the introduction of the new system the quantity of opium for consumption was about 31,000 seers. The average imports during the past three years is 26,000 seers, or 5,000 seers less than when the local cultivation of the poppy was permitted. This is no doubt the result of having raised the price of opium by the system of pass duty.

6. The average consumption of opium in the whole of His Highness' dominions is as little as 18 tolas per annum per 100 head of population. In the City of Hyderabad and its suburbs the annual consumption is 72 tolas per 100 persons, or rather less than three-fourths of a tola to each person per annum.

7. In the face of these statistics, and with the fact before us that no single class of the population can be pointed to as having become degraded by an over-indulgence in opium, His Highness' Government would be strongly opposed to any prohibition of the use of opium.

8. The suggestion that it should be prohibited except for medicinal purposes, seems to me a singularly impracticable one, for there are no druggists in His Highness' Districts who could be employed as agents for the sale of opium, nor are there medical men who could regulate the supply; and, moreover, how could it be ascertained that a purchaser required the opium for *bonâ fide* medicinal use and not as a luxury?

9. The existing rules which were framed in communication with the Government of India provide an effective check on the import and transit of opium from one district to another. It is also provided that a licensed dealer shall not sell to any one person at one time more than 5 tolas of opium.

The result of the import duty of Rs. 10 per seer, and the sale of opium contracts in districts, has been to raise the retail price of opium so that it now sells in the City at from 2½ to 2¾ tolas per rupee, and in the districts at 2 tolas per rupee. At these rates the ordinary classes of the people cannot afford an over-indulgence in opium.

10. Taking the questions referred to me *seriatim*, I would sum up the views of His Highness' Government as follow:—

1. Whether if the production and use of opium for non-medicinal purposes are prohibited throughout British India such prohibition could be extended to Native States?

His Highness' Government would be strongly opposed to the introduction of any such measure in these Dominions because—

(1.) there are no valid grounds for such a high-handed procedure; (2.) the distinction desired to be drawn between opium required for medicinal and non-medicinal purposes is an impracticable one; (3.) interference with the normal consumption of opium would be resented by those who are in the habit of regularly using the drug, and in the city of Hyderabad would be likely to engender a feeling the results of which might be most embarrassing to the Government; (4.) if the supply of opium is cut off, opium eaters will be likely to take to ganja or strong spirits, both of which are worse than opium.

2. The nature of the existing arrangements with the Native States in respect of the transit of opium through British Territory, and whether such arrangements could be with justice terminated?

The arrangements by which the opium supply for His Highness' dominions is obtained from Malwa is regulated by the agreement entered into with the Government of India on the 29th October 1893.

It is true that the Government of India could, under Article IV. of this agreement, withdraw from the arrangement on giving 12 months' notice, but in the event of such a course being adopted, and the supplies of Malwa opium cut off, His Highness' Government would certainly maintain its right to resume the system of local cultivation of the poppy, and I need scarcely say that the effect of this would probably be highly inconvenient to the adjoining British Provinces, for it would be almost impossible to check the smuggling of Hyderabad grown opium across the frontier.

3. To what compensation would the Native States be fairly entitled in the event of measures of prohibition being adopted?

I feel so strongly the practical impossibility of prohibiting the consumption of opium as proposed, that it seems almost unnecessary to refer to this question. But, supposing for a moment that the inquiry of the Royal Commission were to lead to results that would adversely affect the revenue derived from opium in the Hyderabad State, His Highness' Government would certainly expect to be compensated for any loss that might be caused thereby.

11. I have in the foregoing, frankly and without reserve, expressed the views of His Highness' Government on this subject, because the proposals now under inquiry by the Royal Commission are of grave importance both socially and politically; and believing, as I do, that there are no valid grounds for prohibiting the consumption of opium and that the course suggested by the anti-opiumists would not only be a dangerous one for any Government in India to adopt, but would be harsh and unjust to the people, I have felt it incumbent on myself to say that His Highness' Government would not, under the present circumstances of the case, accept any measure that might be calculated to unduly interfere with the consumption of the drug to the moderate extent it is now generally used.

Believe me,

Yours very sincerely,

VIKAR-UL-UMRA.

APPENDIX XXVI.

APP. XXVI.
Hyderabad
State.

MEMORANDUM on the SYSTEM of OPIUM EXCISE in the HYDERABAD STATE, by Mr. A. J. DUNLOP, Senior Member,
Board of Revenue in the HYDERABAD STATE.

[Handed in by Mr. Dunlop. See Question 26,754.]

System of Administration.

Up to the year 1880 there was no restriction on the cultivation of poppy nor on the local manufacture of opium; nor was any special attention paid to the sale of opium.

The supply of opium was derived partly from local sources and partly from Central India, or British territory.

2. In 1878-79 the area under poppy cultivation was—

	Bigas.
Government and Surfkhas lands	4,553
Jagir lands	1,944
Total	6,497

or about 5,000 acres, and it was estimated that the local production of opium amounted to 17,302 seers. In the same year the imports of opium into Hyderabad amounted to 14,291 seers, and, deducting 636 seers exported, it was estimated that the opium available for consumption in 1878-79 was 30,957 seers, equivalent to about 442 chests of 140 lbs. each.

Opium imported, either from beyond the frontier or from the districts, into the City of Hyderabad, and also opium exported beyond the frontiers, were subjected to a uniform customs duty of Rs. 1 per seer.

The total income from opium in 1878-79 (1288 Fasli) was estimated as follows:—

Government and Surfkhas.

Revenue from lands under poppy cultivation, *H. S. Rs. 22,941 = Government Rs. 19,622.

Export and import duty on opium, H. S. Rs. 18,930 = Government Rs. 16,193.

Total, H. S. Rs. 41,871 = Government Rs. 35,815.

Jagirs.

Revenue from land under poppy cultivation, H. S. Rs. 27,191 = Government Rs. 23,258.

Total, H. S. Rs. 69,062 = Government Rs. 59,073.

3. Shortly after the enactment of the India Opium Act (I. of 1878) and a consequent change in the opium system of the British provinces adjoining Hyderabad, it was found that the opium revenue of these provinces was likely to be affected by the absence of a sufficient control over the cultivation, manufacture, and sale of opium in His Highness the Nizam's dominions.

4. Negotiations were accordingly entered into with the Nizam's Government with a view to raising the price of opium in Hyderabad to the level pertaining in the adjoining provinces, so that there would not be the same inducement to smuggle opium from Hyderabad into British territory. It was finally resolved by Sir Salar Jung, who was then Minister and Regent of the Hyderabad State, to adopt, in accordance with the Resident's advice, the same system as had been shortly before introduced into Berar with good results, viz., to prohibit the local cultivation of poppy in both Government and Jagir lands, and to obtain supplies of opium from Indore in Central India, the Government of India undertaking to collect, on behalf of the Nizam's Government, a duty on all consignments of opium at a rate of not less than Rs. 600 per chest of 140 lbs.

5. In pursuance of this arrangement, a notification was issued on the 2nd October, 1880, prohibiting the cultivation of the poppy and the manufacture of opium throughout the whole of His Highness' Dominions.

6. At the same time Opium Rules (having the same effect in Hyderabad as a legal enactment) were framed very much on the same lines as the Berar Rules, and on the 10th October 1880 it was notified that these Rules would be brought into effect from the 1st January 1881, from which date the import of opium was prohibited except under a pass issued by the Opium Agent at Indore, the rate of duty being fixed at Rs. 10 per seer, or Rs. 700 per chest.

The export of opium was at the same time prohibited, provision being made for the transit of opium through

the Hyderabad State, from Bombay or Central India to the Madras Presidency.

7. Subsequently, on the 29th October 1883, the terms of the new system were embodied in a formal memorandum of agreement between the British Government and the Government of His Highness the Nizam, a copy of which is as follows:—

"Memorandum of agreement between the British Government and the Government of His Highness the Nizam of Hyderabad.

"For the protection of the common interests of the British Government and the Government of His Highness the Nizam of Hyderabad in the matter of the opium revenue, His Highness the Nizam of Hyderabad has agreed, as regards His Highness' territories, that—

"(1.) The cultivation of the poppy and the manufacture of opium shall be absolutely prohibited.

"(2.) With the exception of opium booked through by rail to the Madras Presidency, no opium shall be imported without a license from His Highness the Nizam.

"(3.) With the same exception, no opium shall be exported.

"(4.) The import of opium shall, as far as possible, be confined to what is absolutely requisite for licit home consumption.

"(5.) The transport, possession, and retail sale of opium shall be permitted only under license from His Highness the Nizam.

"II. His Highness the Nizam further agrees to communicate to the Resident at Hyderabad all alterations which it may from time to time be found necessary to make in the rules which have been framed to give effect to the above conditions, and not to make any alterations the effect of which will be to diminish the securities provided by the rules for due observance of the said conditions.

"III. And the British Government has agreed that the Opium Agent at Indore shall issue passes for the transport from Indore to Hyderabad of such quantities of opium as may from time to time be applied for by His Highness' Government through the Resident at Hyderabad; and shall levy on the same, on behalf of His Highness' Government, pass duty at the rate which may, from time to time, be fixed by the British Government; and shall remit the said duty through the Resident at Hyderabad in such manner as may be from time to time arranged: provided that, if the British Government fix a rate of pass duty lower than Rs. 600 (six hundred) per chest of 140 lbs. avoirdupois, the rate charged on opium supplied to Hyderabad shall not be less than Rs. 600 per chest of 140 lbs. avoirdupois, except with the previous consent of His Highness' Government.

"IV. Lastly, it is provided that either of the parties to this agreement shall be at liberty to withdraw from it after giving to the other party 12 months' notice."

This agreement remains in force to the present day, and the rate of duty has been maintained at Rs. 700 per chest.

8. Up to the year 1892 the whole of the opium imported under the new arrangement was brought by rail to the City of Hyderabad, from whence it was sent by dealers under passes issued by the Excise Officer to the different districts. It was found, however, that the trade, which had to supply an area of 82,698 square miles, was inconvenienced by being centralised at Hyderabad, and in 1892 it was arranged with the Resident that opium may be imported from Indore to either Aurangabad in the northern part of the State, Gulburgah on the western side, Warangal on the eastern side, of the City of Hyderabad as a central depot.

9. Rules for the control of imports of opium have been framed by the Resident and are appended.

10. Government opium godowns are established at the four places to which opium can be imported, and all consignments are weighed on arrival and kept in the godown until they are sold or despatched to the districts. Opium issued from the godowns is covered by a pass

* H. S. is Halli Sikka, the term for the Hyderabad coinage in rupees.

which shows the quantity and destination of the opium, and this pass has to be delivered up to the officer in the district or taluka to which the opium has been sent.

System of Controlling the Internal Opium Trade.

11. Any person may import opium for wholesale dealings, on his obtaining a permit from the Resident (the application being submitted through the Nizam's Government) and on his paying at Indore a duty of 10 British rupees per seer. But he can only sell the opium to a licensed retail vendor or wholesale dealer, and is prohibited from selling a smaller quantity than five tolas. A wholesale dealer is required to take out a license, for which the charge is Rs. 16.

12. For the official year that has just commenced, the excise commissioner has sold the monopoly of importing opium from Indore to one person, who has undertaken to pay H. S. Rs. 30,000 = Government rupees 25,661 for it. Some objections have been raised to this departure from the usual course, and the matter has not yet been finally decided by His Highness' Government.

13. The monopoly of the retail vend of opium is sold at auction by districts or sub-divisions of districts. Retail vendors are prohibited from selling to one person at one time more than five tolas of opium. The number of shops is fixed by the revenue officers. Opium cannot be sold at any but recognised shops. The licensed vendors are bound to keep an account of the opium sold daily, showing both the name of the purchaser and the quantity of opium sold to him. Shops have to be kept closed from 9 p.m. to sunrise.

A clause is inserted in the license to the effect that drunkards, persons of notoriously bad habits, or gamblers, shall not be allowed in the opium shops.

Muddutkhanas and chandul shops, known in Hyderabad as bambookhanas, because the chandul is smoked through a bamboo pipe, are prohibited by law, and the police have instructions to prevent the opening of any such places.

14. The rules, in short, provide for a very thorough control over the opium trade, and heavy penalties are imposable for any breach of them. My experience, however, is that the rules are not so strictly enforced in the Hyderabad State as they are in the adjoining districts of Berar under British Administration.

15. In the city and suburbs of Hyderabad, including the Military Cantonment of Secunderabad, persons were formerly allowed to establish shops for the retail sale of opium on taking out a license, for which the charge was Rs. 16. This system was stopped in 1889, and since then the monopoly of the retail sale in the city and suburbs has been put up to auction in the same way, and under the same conditions as have been described above for the districts.

16. Since the stoppage of cultivation of poppy, the quantity of opium annually imported into Hyderabad, and the revenue obtained by the Nizam's Government from the pass duty of Rs. 10 per seer are shown below :—

Years.	Chests of 140 lbs.	Duty.
		Govt. Rs.
1882	306	2,14,550
1883	375	2,62,500
1884	371	2,59,700
1885	356	2,48,100
1886	368	2,57,250
1887	364	2,54,800
1888	391	2,73,500
1889	347	2,43,250
1890	319	2,22,950
1891	396	2,77,550
1892	425	2,97,850

The average imports of 11 years is 365 chests, on which the duty is Government Rs. 255,500.

17. It is to be regretted that when the Nizam's Government decided to stop the cultivation of opium, they did not at the same time arrange for the sale of opium in jagir estates, by Government agency. It would have been better at that time for Government to have acquired a complete monopoly of the opium trade, giving, of course, compensation to Jagirdars for any loss they might sustain. The population of the

Hyderabad State is 11,530,450, which is distributed as follows :—

	Population.	Percentage of total population.
Government Districts, including City and Surfkhas managed by Government.	7,988,484	69
Surfkhas under His Highness -	228,643	2
Jagirs -	3,313,323	29
Total -	11,530,450	100

It will thus be seen that 29 per cent. of the population belongs to jagir estates, and as the Jagirdars, although bound to observe the opium rules already referred to, are free to make their own arrangements for the wholesale and retail sale of opium with their jagirs, the result is that there is competition between the Government and jagir contractors, which prevents Government realizing the same revenue for opium farms (and thus indirectly raising the price of opium) as is obtained in the adjoining province of Berar, where the monopoly of the sale of opium is undisturbed by the private rights of any Jagirdars.

18. Taking for comparison the Berar figures for 1891-92, the consumption of opium in that year in Berar was 18,898 seers, on which the Government realized a pass duty of Rs. 188,980 and by sale of opium contracts Rs. 300,800, making a total revenue for the year of Rs. 489,780, so that the Berar Administration realised Rs. 25-13-0 for every seer of opium consumed.

The imports into Hyderabad for 12 months of about the same period were 27,755 seers. It is not possible to show the actual revenue derived from the farms for the retail sale of this quantity, because 5,604 seers were sold in jagirs, but a fair estimate of the total revenue in 1891-92 may be taken as follows :—

	H.S. Rs.	Govt. Rs.
Pass duty -	-	2,77,550
By sale of Government farms	215,135	= 1,84,000
Jagirdars' income, about	-	40,000
Total -	-	5,01,550

These figures give an average of nearly Rs. 18 per seer, or Rs. 7-13-0 per seer less than the amount realised in Berar.

19. It is now under consideration to get over the difficulty of divided jurisdiction by leasing the rights of Jagirdars in the matter of opium, but nothing has yet been decided.

20. The quantity of opium consumed in each district in the past three years and the revenue derived therefrom, are shown in the accompanying statements.

The average revenue derived by His Highness' Government and Surfkhas from opium in the three years 1890 to 1893 is as follows :—

	H.S. Rs.	Govt. Rs.
Pass duty -	-	2,66,117
Opium farms in districts -	84,310	= 72,217
Government revenue in the City of Hyderabad -	87,469	= 74,820
Surfkhas revenue -	27,464	= 2,464
Total -	-	4,37,618

21. The average imports of opium in the three years referred to are 26,600 seers. In 1878-9, prior to the introduction of the new system, the imports were 14,291 seers and the local production about 17,302 seers, giving a total, as already shown, of 30,957 seers. It will thus be seen that the consumption of opium has fallen off, and this is the natural consequence of the increase in the selling price of opium.

At the same time the Government revenue has risen from Government Rs. 36,000 in 1878-79 to an average of Government Rs. 4,38,000 in the past three years.

22. As I have shown, the Government revenue on a seer of opium is about Government Rs. 18, and adding about Rs. 6 for original cost and carriage, the price to the wholesale importer cannot probably be less than Rs. 24 per seer.

APP. XXVI.

Hyderabad
State.

23. The retail price of opium is from 2½ to 2½ tolas per Halli Sicca rupee in the City, and about 2 tolas per rupee in the districts, which is equal to from Government Rs. 34-3-0 to 24-12-0 per seer.

24. The incidence of revenue per head of population in the whole of the dominions is 3 pies.

25. The average consumption of opium per 100 head of population is 18 tolas per annum, or 32 grains per head per annum. In the City and suburbs it is 72 tolas per 100 persons, or about one-third of a grain per head per day.

Proposal to prohibit the use of Opium.

26. On the general question as to whether the use of opium should be prohibited except for medicinal purposes, my view is that such an extreme course could only be justifiable if it were proved, beyond all doubt, that the use of opium is carried to such an extent, and so abused that it is undermining the health, strength, and moral character of the population, or any large class of the population. Nothing short of this would justify interference with the habits of the people. My own experience, gained from 24 years' service in the country, the last 10 of which have been in Hyderabad, is that there is absolutely no evidence to show that opium is consumed to such an extent in the Hyderabad State as to amount to an abuse of it. Medical evidence, based on experience gained from hospital or private practice, may or may not show that there have been cases in which persons have ruined themselves by an over-indulgence in opium, but any such isolated cases cannot be held to justify a Government in decreeing the prohibition, except for medicinal purposes, of opium. For my own part I can only say that, while I see much drunkenness among the lower classes of the native population caused by excessive indulgence in country spirits, and while the consumption of European liquor is seriously increasing, I cannot recall a single instance in which I have seen a person the worse of opium smoking or eating.

27. Since the question has been raised in its present form, I have heard many people remark on the good effects of a moderate use of opium and of the necessity for it under certain conditions; but in connexion with this I wish merely to confine myself to saying that, if there is to be any interference with the habits of the people from philanthropic motives, or on moral grounds, then such interference would be better directed towards checking the consumption of European liquor, for this habit is growing among the younger generation in Hyderabad, and is infinitely more injurious, and more prevalent, than the habits of excessive opium smoking or eating.

28. Opium is used to a considerable extent in Mahomedan families, and it is almost invariably given to young Mahomedan children as a preventative or cure for their ailments. Any interference on the part of Government with this practice would, I believe, be much resented.

Rahtores and Marwaries also use opium freely. Sikhs, of whom there are 4,600 according to the last census, are also regular consumers of opium. The poorer classes, which form the greatest mass of the population, cannot afford much opium at its present price, and confine themselves mainly to liquor drinking.

29. It seems to me practically impossible, even if it were desirable, to give effect to the suggestion that the use of opium should be limited to medical purposes, for who is to decide that opium demanded by a purchaser is going to be used medicinally or as a luxury?

30. As I have already shown, our rules limit the quantity of opium which any single person may hold at a time to five tolas. The present value of this quantity is about Rs. 2, and in practice it is found that the sales are of much smaller quantities. There are no druggists' shops or medical practitioners in the Hyderabad districts to whom the duty of selling opium could be entrusted, and I regard this suggestion as a singularly impracticable one.

31. It is in my opinion possible for His Highness' Government to make opium still more expensive to the consumer. This is the really effectual way of checking an over-indulgence in opium and is all that is necessary. The prohibition of the general use of opium in a large native City like Hyderabad would, I believe, arouse a bitter feeling among the consuming classes, the results

of which might be most embarrassing both to His Highness' Government and to the Government of India, and it is an entirely impracticable measure.

It would also drive the people to the use of liquor, which is worse for them than opium.

32. It is instructive to note that Sir Salar Jung, who knew well the feeling of people in Hyderabad, and who seems to have been reluctant to suppress the cultivation of opium, stated in his order of October 1880 to Jagirdars and others that the cultivation and manufacture of the poppy are prohibited *under the advice of the Resident*. I should be sorry to predict the results if the present Government in Hyderabad were to issue an order that the use of opium was prohibited under the advice of the British Government.

33. The present Minister, the Nawab Vikar-ul-Umra Bahadur, has, in his letter of the 8th December 1893, to the Resident, expressed very decided views on this question.

In reference to the proposed prohibition of the use of opium the Minister has said:—

"His Highness' Government would be strongly opposed to the introduction of any such measure in these dominions, because (1) there are no valid grounds for such a high-handed procedure, (2) the distinction desired to be drawn between opium required for medicinal and non-medicinal purposes is an impracticable one, (3) interference with the normal consumption of opium would be resented by those who are in the habit of regularly using the drug, and in the City of Hyderabad would be likely to engender a feeling the results of which might be most embarrassing to the Government, (4) if the supply of opium is cut off, opium eaters will be likely to take to ganja or strong spirits, both of which are worse than opium."

On the question of compensation to Native States, the Minister has said:—

"I feel so strongly the practical impossibility of prohibiting the consumption of opium as proposed, that it seems almost unnecessary to refer to this question. But, supposing for a moment that the inquiry of the Royal Commission were to lead to results that would adversely affect the revenue derived from opium in the Hyderabad State, His Highness' Government would certainly expect to be compensated for any loss that might be caused thereby."

And in concluding his letter the Minister said:—

"I have, in the foregoing frankly, and without reserve, expressed the views of His Highness' Government on this subject, because the proposals now under inquiry by the Royal Commission are of grave importance both socially and politically, and believing, as I do, that there are no valid grounds for prohibiting the consumption of opium, and that the course suggested by the anti-opiumists would not only be a dangerous one for any Government in India to adopt, but would be harsh and unjust to the people, I have felt it incumbent on myself to say that His Highness' Government would not, under the present circumstances of the case, accept any measure that might be calculated to unduly interfere with the consumption of the drug to the moderate extent it is now generally used."

34. The existing arrangements with the Government of India may, as I have shown, be terminated on 12 months' notice. But supposing that the Government of India were to prevent the import of opium into Hyderabad, His Highness' Government would then be entitled to remove the restriction on the local cultivation of the poppy, and the Government of India would find itself in a worse position, for not only would the Hyderabad State produce sufficient opium for its home consumption, but it would also, in all probability, manufacture largely for export, and the expense to the British Government of preventing smuggling on the frontiers of so large a territory would be so heavy that it could not be entertained.

35. On the other hand, if the Government of His Highnesses the Nizam were induced, against their own convictions, to prohibit the use of opium as proposed, they could not reasonably be expected to adopt this course without receiving compensation for the loss of revenue, and such compensation could not be fixed at less than the amount of revenue the Government is now receiving from opium, plus the Jagirdars' losses, and the whole may be stated at about 5 to 5½ lakhs of British rupees annually.

**RULES for IMPORT of OPIUM by RAILWAY into the
HYDERABAD STATE.**

Extracts from Residency Orders, No. 16 and 15, dated respectively the 15th August 1892 and 1st August 1893.

* * * * *

I.—No station master shall, without the special orders of the Resident, receive any opium offered for consignment to any station outside His Highness' territories.

II.—The importation of opium into the dominions of His Highness by rail is prohibited unless—

- (a) it has been consigned from Indore;
- (b) it is consigned to the Hyderabad Station to the care of the Talukdar of the Abkari, or to Gulburga or Warangal station to the care of the First Talukdar of these districts;
- (c) it is covered by a pass granted by the Deputy Opium Agent, Indore.

Should opium consigned to any place in His Highness' dominions not mentioned in clause (b) arrive at any railway station in Hyderabad territory, the station-master must detain it and report the matter, through the Superintendent, Railway Police, for orders of the Resident.

N.B.—Opium can also be consigned to Aurangabad via Khandwa and Nandgaon, but as such consignments do not enter His Highness the Nizam's territory by rail, they do not come within the scope of these rules.

III.—Opium consigned to any of the places mentioned in clause (b), Rule II., shall be made over to the consignee or his agent on his producing the pass mentioned in clause (c) of the same rule in the presence of the senior officer of the railway police, and of the Customs officer at the station. It shall be the duty of these officers to see, before the opium leaves the station, that

the seals of the packages are unbroken, that their weight tallies with that entered in the pass, and that the term for which the pass is valid has not been exceeded. The date on which the package reaches the station shall be deemed to be the date of import, and not the date on which the delivery may be made. Should it appear to the railway police officer that the package has been opened *en route*, or that there is other reason for suspicion, he is authorised to open the package and weigh the opium.

IV.—The Superintendent of Railway Police shall keep a register in the form attached, and he should report all suspicious cases for the orders of the Resident.

V.—There are no restrictions on the transport of opium from stations in the territories of His Highness to the other stations within the same territories, but immediate information regarding such consignments shall be given to the senior police officers at the station of despatch and receipt by the respective station masters.

Opium in transit through the Bombay Presidency is liable to be examined at Ahmednagar. Therefore, when opium under transport from one station to another in His Highness the Nizam's dominions will have to pass through Bombay territory, the sender must, prior to despatch, report the consignment to the Superintendent of Railway Police or the senior officer of railway police present at Hyderabad, who will despatch an advice of it in the form annexed direct to the Collector of Ahmednagar, granting a duplicate to the sender.

The duplicate must be produced before the station master of the station of despatch at the time of booking, and that officer shall refuse to receive any consignment that does not agree with the particulars entered in the duplicate. All such refusals shall be reported without delay to the Superintendent, Railway Police.

APPENDIX XXVII.

APP. XXVII
Hyderabad
State.

ABSTRACTS OF EVIDENCE OF WITNESSES tendered for Examination at HYDERABAD from the HYDERABAD STATE and not Examined by the ROYAL COMMISSION.

CASE II.—(Hospital).

Malarious Remittent Fever with Complications.

Miss H., age 21.

I.

Memorandum by Surgeon Lieutenant-Colonel EDWARD LAWRIE, Residency Surgeon, Hyderabad.

I have served in India for 21 years, during the last eight years of this period in Hyderabad.

2. I was stongly prejudiced against opium, even as a remedy, when I came out to India in 1872. I regarded all opium eating and smoking as vice, and hardly dared to employ opium at all in diseases of children. The opinions I now hold are founded upon facts and circumstances which have come under my own observation.

3. My experience of opium as a remedy is probably the same as that of hundreds of other medical men. At first I was much astonished to find that opium in full medicinal doses does not necessarily produce sleep. I then discovered that, though it does not produce sleep in cases where it is intended to do so, its general effect is almost invariably beneficial. The third stage in my personal experience of opium consists in the employment of the drug in bowel complaints, such as diarrhoea, enteritis, dysentery, and cholera, in which diseases its advantages are universally acknowledged, and also as a prophylactic and curative agent in certain forms of malarial disease. The statement which has been put forward of late—that opium is of no use in malarious fever except to relieve the pains of the disease—is incorrect. Fact takes precedence of opinion in a question of this kind, and the following facts disprove it. Malarious remittent fever was unusually prevalent in Hyderabad during the last three months of 1893, and the clinical charts which are here reproduced form part of the record of two recent cases in which this disease was arrested by one of the alkaloids of opium:—

CASE I.—(Private).

Uncomplicated Malarious Remittent Fever.

Mrs. P., age 29.

In the first of these cases, the patient had been ill for five days, and in the second for three, before coming under my observation. Both were characterised by intolerable headache, which prevented sleep, uncontrolled vomiting, and the absence of any intermission of the fever. All the known remedies had been tried without relief. In each case a full dose of morphine was given at about 9 o'clock p.m. The effect was that the headache disappeared, refreshing sleep was obtained, and both patients woke up next morning free from fever.

4. Opium is employed as a domestic remedy by all classes of people in India; it is given to Indian children from the age of a month up to two years, by the poor, to keep them quiet, and by poor and rich alike as a prophylactic against the bowel complaints, fevers, and other diseases which are incidental to dentition. It is taken by adults in Hyderabad to protect them against cholera, of which they stand in great dread, as well as against fever, diarrhoea, and dysentery. Personally, I believe that opium does afford very efficient protection against bowel disorders, such as acute enteritis in children, and diarrhoea, dysentery, and cholera in adults. I have proved above that it exercises a curative action in malarious disease, and it is not unreasonable to suppose that it may have a prophylactic effect in the case of both bowel disorders and malaria, if only by protecting the system against chills.

5. In India, the opium habit (*adat*) is generally contracted on the advice of friends or of Hakims (*doctors*), much in the same way as the alcohol habit is in England. I may state at once that in Hyderabad the ordinary opium eater, whether male or female, is entirely above the suspicion of vice. Though the use of opium is frequently begun as a prophylactic after attacks of cold or bowel complaint, or as a remedy in painful diseases, it is taken by regular opium eaters and smokers as a stimulant or exhilarant, never as a narcotic. Among the higher classes it is very occasionally employed by young married men as an aphrodisiac. Its only alleged value in this respect is to

Medicinal
use of opium
by the
people.

The opium
habit.

APP. XXVII.

Hyderabad
State.

postpone or delay the orgasm. Opium eaters begin by taking a small quantity once or twice a day, and as soon as they become accustomed to it they increase the amount until they arrive at an average or habitual dose, which they seldom exceed. As a rule, opium eaters accustom themselves to a dose, which varies from two to eight grains, taken twice a day before their principal meals. But the regular dose may go far beyond this, and many opium eaters take from 30 to 40 grains of solid opium twice a day every day of their lives (*vide* Appendix A). The reason of this appears to be that when the opium habit is acquired the individual derives so much benefit from the drug that he increases the quantity under the impression that the more he takes the better he will be. A small number of people take the average or habitual dose three times a day, and a still smaller number take it whenever they feel inclined. The latter class are to a certain extent objects of ridicule and go by the name of "yad-aphim" (*yad* memory, and *aphim* opium). The ordinary mode of taking opium in Hyderabad is either alone as a pill or made into a pill with sweet almonds. A few people smoke it in the form of *madat* or *chandru*.

The effects
of the opium
habit.

6. I have had to treat patients for opium poisoning, and in two instances (one Native and one European)* for the effects of sudden discontinuance of large doses of opium; but I have never yet been called upon to treat, nor have I ever met with a diseased or depraved state of the constitution due to the opium habit; and during the time I have had charge of the Afzul Gunj and Residency Hospitals in Hyderabad 671,595 patients have passed through my hands. There is no indication that I know of whereby an opium eater can be recognised as such, and opium most assuredly does not produce emaciation. My experience and conclusions have led me irresistibly to the opinion that opium taken regularly, in no matter what dose, provided the habit has been fully acquired, has no deteriorating effect upon the physical or moral condition. On the contrary, I am firmly convinced that the habitual use of opium is beneficial. No doubt at first and sometimes afterwards it causes disagreeable constipation (*vide* Appendix A.) and therefore possibly drowsiness and malaise; but when once the opium habit is confirmed, and it is surprising how quickly this state is arrived at, these unpleasant results as a rule completely wear off. The constipating effect is no longer disagreeable, as the opium now merely prevents looseness and irregularity of the bowels, and this is unquestionably one of the actions of the drug which is most highly prized in India. But there is a great deal more than this to be said for the opium habit. Opium eaters assert, and I am persuaded they are right, that opium conduces to the regularity of all their functions:—regularity of meals, regularity of sleep, and of digestion; and that it keeps them cheerful, contented, happy, and well. The opium eater takes his pill, or pills, of opium half an hour or so before his early meal at 7 or 8 a.m., and again before his afternoon meal or dinner at 2 or 3 p.m.; the drug digests slowly with his food, and, instead of feeling drowsy or heavy after meals, as non-opium eaters often do, that is invariably the time when his mind is most active and his body most vigorous (*vide* Appendix A). The popular or prevailing notion that opium produces sleep, lethargy, or sloth in the habitual opium eater is an entire delusion (*vide* Appendix B), and such terms as "drowsy," "stupor," "heavy," "drugged," "narcotised," and "sleeping off the effects of the opium," etc., applied to the opium eater are altogether unmeaning and misleading. The opium eater can sleep at normal times like anybody else, but he probably sleeps less than people who do not take opium and he never takes opium as a hypnotic (*vide* Appendix A).

The effect of
sudden
discon-
tinuance of
opium.

7. The result of sudden complete cutting off of opium depends on the amount to which the individual has been accustomed. If the amount has been small and the health good, it is insignificant. The results of suddenly stopping opium which has been taken in large quantities may be stated as follows:—

- (a.) Opium delirium tremens.
- (b.) Pains all over the body.
- (c.) Disorders of digestion.
- (d.) Diarrhoea and bowel complaints.
- (e.) Coma and convulsions.

* The case of the European was that of a young man who arrived in Lahore, where he was not known, and the chemist refused to supply him with the enormous doses of laudanum, four ounces daily, to which he had been accustomed.

Opium delirium tremens is the name given to the condition of melancholia and moroseness, with loss of appetite and sleeplessness, which occur when the opium habit of large doses is suddenly checked. If the opium eater is suffering from very acute and high fever or inflammatory disease, the sudden discontinuance of his opium while in this state may be followed by coma and convulsions. The opium habit can be dropped suddenly with impunity under all circumstances if a dose of belladonna, proportioned to the amount of opium the patient has been in the habit of taking, is substituted for it at the accustomed times and continued in diminishing doses for a week or ten days after the stoppage of the opium.

Comparison
of the
effects of
opium and
alcohol.

8. There is no comparison between the effects of the opium habit and the habitual use of alcohol. The dietetic use of alcohol is of doubtful benefit, and even when employed in moderation it may lead to excess. The excessive use of alcohol means the tendency to drunkenness and chronic alcoholism, or the production of insidious effects on the general health, which destroy numerous lives in Europe every year, and would do the same in India if the alcohol habit were to become general. On the other hand, the use of opium is always beneficial; the largest habitual quantities of opium never produce degrading or disastrous results; and there is no such thing as excess if the opium habit has been fully acquired. Finally, my experience in Hyderabad, where habits of drinking are doing infinite harm, has taught me that the one chance for inebriates of escape from disgrace and ruin lies in the substitution of the opium habit for the abuse of alcohol. If this is so in India why not in England? Surely it would be much better to enquire fully into the assured advantages of the substitution of the opium habit for alcoholism, in England, than to attempt to interfere with the ancient custom of opium eating in India, about which the very least that can be said is that it has done more good than harm.

Is the
opium habit
to be recom-
mended?

9. I have no hesitation in recommending the habitual use of opium in European children during the period of dentition; and whereas formerly many children used to die in my practice from enteritis, which is the scourge of European infant life in India, now I rarely if ever lose a case from this disease. As regards adults, I believe it is likely that the habitual use of opium in Europe would save or prolong many of the lives which end in acute and chronic lung diseases, and that it would promote longevity and happiness just as it does in India. In the case of people in arduous and responsible positions in England, such as engine-drivers and railway signalmen, it would appear to be a legitimate subject for investigation whether the opium habit would not tend to keep their minds clear and on the alert while on duty, and prevent the drowsiness which, as is well known, so often leads to accidents and loss of life.

It is difficult to publish one's honest opinion on the advisability of recommending the opium habit without laying oneself open to misinterpretation. My deliberate opinion, formed, as stated above, by conviction and experience in the face of previously conceived and almost inveterate prejudice against the drug, is perfectly clear and definite, that, if stimulants are to be taken at all, the opium habit may be consistently recommended on the ground that opium is the only stimulant which does no harm whatever and at the same time may possibly do a great deal of good.

EDWARD LAWRIE,
Surgeon Lieutenant-Colonel,
Residency Surgeon, Hyderabad (Deccan).

APPENDIX A.

INTERVIEWS WITH OPIUM EATERS.

(Two Hyderabad Gentlemen.)

(1.) Nawab, A. J., ætat. 68: hale, hearty old man. Has always enjoyed good health and was never ill but once, with dysentery when he was 30. Began to take opium at the age of 22. At that time he was very stout and he took it by advice of his friends to reduce his fat. Began with a two-grain dose, soon took two grains twice a day, and at the end of seven months gradually increased the amount, until at the age of 35 he had become habituated to 90 grains a day. Never took less than 90 grains a day after that until he was 65 years

old; and then, as he heard rumours that the sale of opium was likely to be restricted, he commenced reducing the dose and he now takes 70 grains a day, 25 before his morning meal and 45 before his afternoon meal. He states that from the time he began to take opium his general health improved and his corpulency decreased, so that at the age of 30 he was like other people. He has never taken opium as a hypnotic and has never suffered from sleepiness or laziness, and he does not as a rule sleep in the daytime, even in the hot weather. He goes to bed at 9.30, and gets up at 4.30, and this has always been his custom. The Nawab is a strictly religious Mahomedan and has never taken alcohol. When I asked him if he looked upon opium eating as in any sense wrong or a vice, the only reply he gave was, "I say my prayers five times a day." When asked if opium ever made him sleep he said that he had several times taken half as much again as his usual dose and that it had not made him sleepy. The only bad effect opium has ever had is that it made him constipated when he first began to take it. Now it does not do so.

(2.) M. Y. A., ætat. 51. Spare, wiry physique, and healthy appearance. Never ill and has only occasionally suffered from slight ailments. Says he began to take opium when he was 18 years old. He had wounded his hand and lost a large quantity of blood, and his friends advised him to take opium to obtain relief from pain and from the effects of the hæmorrhage. At the end of three months, when the wound had healed and he had acquired the opium habit, he began to increase the dose from two to four grains twice a day, until at the age of 40 he was taking 24 grains a day. Says he had no particular reason for increasing the dose after this, but ten years ago he went to Baghdad and then began to take more in order to prevent himself from feeling the cold. Now he takes 16 grains of opium before his morning meal and 32 before his afternoon meal. He does this regularly every day and his general health is excellent. Opium never acts as a narcotic. When I asked him how long he slept at night he replied "Never more than an hour." He meant by this, however, that he wakes up habitually every hour throughout the night, *i.e.*, that he is a very light sleeper. He goes to bed at nine and rises at four. Opium has never increased his tendency to sleep and he never suffers from lassitude and never drinks alcohol. He is always full of vigour in every way.

APPENDIX B.

The following extract is taken from notes of an inquiry into opium eating at the Jail, conducted by my Assistant, Dr. Mahomed Abdul Ghany:—

OPIUM EATING INQUIRY.

Central Jail, Hyderabad, Deccan.

- (1.) Number.—1.
- (2.) Name, age, and sex.—Nhunay Sab, æt. 22, male.
- (3.) Occupation.—Drummer.
- (4.) Amount of opium taken daily.—36 grains twice a day.
- (5.) Duration of opium taking.—8 years.
- (6.) Cause of addiction to opium taking.—"Drummers, to rise early in the morning, take opium."

The reason for the opium habit in this case is given in my assistant's own words, and at the time they were written he had no idea why the inquiry was being made. Their meaning is plain. Drummers are a class who have to get up very early in the morning, and in order to make sure of being able to do so they take opium. This confirms the statement put forward in paragraph 6, that the opium habit means alertness of all the faculties, and that it is of itself incompatible with laziness or sloth.

APPENDIX C.

Memorandum by Mrs. DORA FLOWERS, M.D., in medical charge of the Zenana Department of the Afzulgunj Hospital, Hyderabad (Deccan).

My experience of opium eating amongst the female population of Hyderabad is, that five women out of every ten are addicted to it. Opium is much more

consumed by the upper classes than by the poorer women. As a rule, women take to opium eating when verging on middle age, and I have seldom found it taken by women under 30. Almost invariably the reason given for the habit is that it was resorted to for the relief of dyspeptic and neuralgic troubles so common amongst women here. In most cases the advice of a Hakim or an experienced friend has induced them to begin eating it. As regards its effects, I have never seen it produce any repulsive symptoms, nor does it lead to vicious habits of any sort. In fact, it is not used by the women as an intoxicant, nor for sensual self-indulgence at all. Indeed, the majority of opium eaters are very pious ladies, much given to religious observances, who do not know what vice is. They are always half apologetic when mentioning the habit, but state that it gives them relief from feelings of illness, and enables them to perform household and other duties with more ease and comfort than they could do without it. The dose is generally increased up to a certain point, at which it remains fixed. I have known it consumed in from two-grain to ten-grain pills of the crude opium, which is that most generally used. I do not think opium eating amongst women here is to be reprobated, as it certainly gives them a strength, perhaps artificial, yet essential to the performance of their duties. It corresponds to the glass of Burgundy or claret that a delicate European lady takes to support her strength; and it is not so injurious, as the tendency to take alcohol often grows till it is taken in excess and produces all the repulsive and dreadful consequences of alcoholism and drunkenness. The opium eater never exhibits such symptoms. The cases of vice and moral degradation I have met with amongst the women of Hyderabad are always associated with the habit of drinking alcohol. This vice is met with here, and is attended with painful results. In fact, the increasing consumption of alcoholic liquors is leading many to moral degradation and poverty. The habit of giving opium to infants is extremely prevalent in Hyderabad. In the majority of cases it does no harm, in fact, I have been surprised to see how well children thrive on it; but I have come across two or three cases where an over-dose has been given and the child has been saved with difficulty. I have had two such cases, and have heard of death resulting in one or two others. Opium is the poison usually taken when a woman is tired of life and commits suicide, but drowning is just as frequently resorted to. The only objection I have ever had to the habit of eating opium is that it has appeared to me difficult to cure a confirmed opium eater of diarrhoea or dysentery when these supervene in spite of the daily dose, as they occasionally do. At the same time I have found these diseases far less prevalent amongst opium eaters than amongst those who do not partake habitually of the drug.

Précis of Evidence of the Ladies and Nurse of the Salar Jung Zenana.

There are about 200 ladies in the Zenana of the late Sir Salar Jung and his brother the late Nawab Munir-ul-Mulk Bahadur. Many of them are of advanced age, one is 95, and all are well preserved and in an average state of good health. Every one of them takes opium habitually, some began its use at the age of 10. They take it in quantities varying from two to 12 grains twice a day before their principal meals, early in the morning and about six in the evening. They do not take it to produce sleep, but as a stimulant to give them strength and energy. They also say that taking it prevents cold, bowel complaints, rheumatic pains in the joints, and cramps in the limbs. In the majority of the Begums it has no constipating effect. Mrs. Bourillon, who is employed as nurse to the infant son of the late Sir Salar Jung, and has lived in the Zenana for four years, knows all the Begums well. She states that to deprive them of opium, or to make it dearer or more difficult to procure, would in their opinion be to rob them of a reliable safeguard against ill-health.

Mrs. Bourillon volunteered the statement that she is herself an opium eater. She has taken opium habitually for the last six months. She had a severe cold with tightness of the chest, and she began to take it by the advice of the Begum Sahib. Since she has become accustomed to it, her general health and condition have improved in the most surprising manner. Formerly she used always to feel drowsy in the day-time, in fact, she could not do without her daily sleep. Now she

APP. XXVII.
Hyderabad
State.

never sleeps in the day, and has not the smallest inclination to do so. She used to take a glass of brandy and water every afternoon. Since she has taken opium she has ceased to feel any desire for this stimulant, and has therefore given it up. She does not suffer from constipation. The most satisfactory benefit she has derived from the use of opium is the effect it has had on her tendency to obesity. For a long time before she took to opium she suffered great distress of body and mind on account of increasing stoutness. She could take no walking exercise, and always felt fatigued. Now, after her morning pill of opium, she is equal to any amount of work and exertion, and is free from the feeling of lassitude in the day. She can walk long distances not only without fatigue, but with enjoyment. If anything, her stoutness is decreasing, but, whether this is so or not, it no longer gives her any trouble. She feels fit and well, which she had not done for a long time before she began to take opium.

Précis of the Evidence of Umtu Begum of the Salar Jung Zenana, aged 50 years, fat and healthy.

Has taken opium for 40 years, ever since she was 10. She was given opium as an infant, but it was stopped at the age of eight. When she was 10 years old it was given to her again on account of dysentery. She has taken it ever since, and now takes 16 grains in the morning and 16 in the evening. She goes to bed any time between 10 and 12 at night, rises at 7, takes opium at 8 or 9 o'clock before her morning meal, and again at 6 p.m. before her dinner. Sometimes she sleeps in the day, if she feels inclined, but not regularly. She never takes opium as a hypnotic. It strengthens her and enables her to get through her household work with ease. The opium keeps her bowels regular, and she has never had dysentery since she began to take it. She says people take opium for all kinds of complaints, but they employ it as a medicine, not with the idea of promoting intoxicating or pleasurable effects. She thinks that if opium were stopped, very many people would take to other forms of stimulants, or, if too respectable to do this, they would die; and that without opium no matter what medicines they got they would not be cured of any of their ailments. There is no disgrace or anything to be ashamed of in eating opium, such as there is in taking alcohol. She herself would take her opium pills before anybody; but if she took wine, which she does not, she would never take it before people. She has never seen any harm result from eating opium. When people take it to excess it does them no injury as long as they keep to the doses to which they have become accustomed, and she believes they only take the larger quantities, not from any vicious motive, but because they think it may do them good. Thinks the Queen ought to stop alcohol, because it destroys men's lives; but never opium, because it keeps them in health, happy, and contented. She is very anxious to know why the Queen wishes to put a stop to opium, and would like Her Majesty to be informed that opium does not impoverish those who use it, as the amount a man spends on opium is small, and does not run away with much of his pay; whereas if he drinks alcohol he may spend the whole of his pay or more on the quantity required to satisfy him for one day. Her own income is 60 rupees a month. Out of this she spends about five on opium, and the precise value she gets out of this expenditure is that it enables her to thoroughly enjoy the remaining 55 rupees.

The Begum finished by saying "Tell the Queen to cut down the trees" (meaning the toddy palm trees), "and to break all the bottles" (meaning wine bottles), "but never to stop our opium."

[The Begum's statement is given in her own words: it was made in Urdu, and translated by Mrs. Fellowes, M.D.]

Précis of the Evidence of B. A., stout and healthy looking.

B. A., a native of Hyderabad, began the use of opium, while on tour in the Deccan 21 years ago, on account of a severe attack of diarrhoea. He acquired the opium habit after recovering from the attack, and then found that it enabled him to walk and shoot all day long without getting tired.

He has taken opium off and on ever since with no other bad effect than constipation. He has never found any difficulty in giving it up when he wanted to do so, but has always commenced it again because he enjoys better health with it than without it. For example, when he tried to do without it he invariably suffered

from indigestion, which always disappeared when he began it again. R. A. paid a visit to England with the late Sir Salar Jung (the elder), in the year 1876. He did not suffer from the cold in Europe like others did who did not take opium, and he could always stand any amount of out-door exercise without fatigue. This was particularly shown when they stayed with the late Duke of Sutherland at Dunrobin. No one ever dreamed that he was an opium eater, and he used to astonish everybody by his endurance, and by the amount of walking he got through on shooting and other excursions. He returned to Hyderabad in the best of health. The same thing happened when he went a few years later to the Nilgherries. Those of his party who took opium did not suffer from the cold or from hill-diarrhoea and could take plenty of exercise. Those who did not take opium felt the cold extremely, and were constantly laid up with dysentery and diarrhoea.

R. A. states that whenever he has to undergo any unusual fatigue, such as stopping up all night on duty, or whenever he is ill, all he does is to increase his dose of opium, and this is attended with the happiest results. He said (and Dr. Lawrie can vouch for the truth of his assertion) "No one who knows me can say that I ever show signs of drowsiness or fatigue in the daytime, or that I am emaciated, or of a vicious disposition. I am never happier than when taking exercise, and if I want to undergo any unusual exertion all I have to do to enable me to go through it with ease is to increase my dose of opium."

[The above statement was made to Surgeon Lieutenant-Colonel Lawrie, who knows R. A. well, and can confirm its accuracy. R. A. is a man of temperate appearance, and no one could tell that he eats opium. Dr. Lawrie knew R. A. intimately for five years before he discovered that he is an opium eater.]

Précis of Evidence of Nunnay Sab, aged 22 years, drummer.

This witness is the individual mentioned in Appendix B. of Surgeon Lieutenant-Colonel Lawrie's Memorandum on Opium. He is brought before the Commission on Opium as an example of a young man who takes opium to excess. He is a spare youth of average physique, and has what would be called in England a "soft" look; he is not the least unhealthy in appearance.

He has taken opium for 12 years, since he was 10 years old. He began it because being a drummer, and having to rise very early in the mornings, his friends advised him to take opium as the surest means of enabling himself to do so. At first he took small doses, but he gradually accustomed himself to smoke *madak* as well as to eat opium, and now he smokes and eats as much of the drug as he can get. He eats 40 or 50 grains of solid opium two or three times a day, and smokes *madak* to the extent of about 200 grains in the 24 hours. He is never ill as long as he can get large quantities of the drug, and he is not drowsy or sleepy during the day; but he is an absolute slave to opium and is miserable without it. If by any chance he is short of money, and cannot procure the amount of opium he wants he begs about the city until he obtains enough to buy it. Dr. Lawrie was a little sceptical about the quantity he is stated to take. He therefore, at Dr. Lawrie's request, brought his opium and *madak* to the hospital, and ate and smoked before the class. He first ate 48 grains of crude opium, and he then sat down and smoked 30 grains of *madak*. He showed no more sign of any effect than an ordinary person would after smoking a cigarette. He was asked if eating and smoking such a quantity gave him no sensation of sleepiness or of intoxication, and he replied that he had not taken enough to produce any unusual sensations. He is willing to appear before the Commission, and eat and smoke as much as they like.

II.

EVIDENCE OF MR. DORABJI, Commissioner of Customs, His Highness the Nizam's Government.

In my opinion it is a matter of utter impossibility to expect that by prohibiting the consumption of opium any of those benefits which the Government anticipates will be derived. Thousands and thousands of people in India are addicted to the use of opium, and the habit will never be dropped by them. The habitual use of other intoxicating drugs can be broken off, but it is impossible to eradicate the acquired practice of consuming opium, and those who are slaves to this drug

endure the greatest agony if they are deprived of it. It is also a matter of some consideration that an inebriate if deprived of one intoxicant to which he has been addicted will, as a matter of course, have recourse to another. Let us suppose that opium is put a stop to, the result will be that the consumption of liquor will be increased and the latter is much more harmful in its effects than opium.

An examination of the criminal records will show that liquor often incites crime, but that the use of opium does not do so.

(Signed) DORAJI.

III.

EVIDENCE by NAWAB IMAD NAWAZ JUNG BAHADUR,
Abkari Commissioner.

1. I have been in the service of His Highness the Nizam's Government for the last 29 years, and have occupied various posts in the city as well as in the districts. In my opinion a wrong notion has spread abroad in Europe that opium has a poisonous effect on its consumer and that it renders him incapable of any work. In fact this is not the case; the people of this place do not call it a poison but an antidote of poisons. The use of opium produces many valuable effects. *Magzannul Adwiyah*, in which the nature and quality of every article have been minutely described and which is held to be a book of authority on Yunani medicine, has the following paragraph in praise of opium:—

"In pains of a most severe nature no other medicine than opium has a more soothing effect, and none intervenes so successfully between ailment and death. In diseases resulting from cold, diseases of the eye and the ear, in coughs and asthma produced by heat, and in old standing fevers of a malarious nature, opium is very useful. In diarrhoea and ulceration of the bowels, no other medicine is more effective; and when a patient is subject to grief and sorrow, and in cases of weakness of the heart, thirst and hunger during a famine, in severe cold seasons, on occasions of removing one's teeth, in colic and inflammations of the urinal canal, opium has a marvellous effect. In the diseases of the head such as neuralgic headache, brow-ague, tetanus, delirium and insanity, also in diseases of the eye such as eye-ache, eye-sore, &c., ulceration and inflammation of the ear, opium is equally useful. If given with other ingredients which may be found necessary, opium is also useful in reducing swellings, pain in the joints, gout, and red rash."

2. When taken in large quantities it has, no doubt, bad effects, as is the case with every other thing when taken to excess. If taken in small doses it is not only not injurious, but also strengthens the nervous system and improves the health and acts as a powerful preventative with respect to other diseases. Consul Gardiner says that the Chinese Protestant Christians, who do not use opium and are dissuaded from marrying early, largely succumb to the effects of old fevers. Chinese are of opinion that the use of opium prevents them from suffering from phthisis. Dr. Porter Smith, the great missionary doctor of China, has recorded as his opinion that a moderate use of opium is not dangerous to the health. Really the use of *Chandu* to a proper extent agrees very well with the constitution of mankind and reduces the severity of cough and consumption and checks the attacks of malarious fever.

3. The most important effect of opium is that it maintains the health and establishes the vital powers of man. In the province of Hyderabad there is not a child to whom opium will not have been administered until three years. Warlike races such as the Sikhs, Rajputs, Moguls, and Patans invariably use opium, but it does not interfere with their activity, vigour, and bravery to any extent. Especially the labouring classes acquire an incomprehensible power of endurance from the use of this drug. *Chandu* smoking is harmless so also is the drinking of opium dissolved in water. A moderate use of it improves the intellect and gives an additional tone to the organs of work. Opium consumption does not produce illness except when it is taken to excess—which, however, emaciates the body, and such cases are very rare. An opium-eater has generally a sanguine temperament, he does not quarrel with his neighbours, nor does he ill-treat his wife; but one subject to the effects of alcohol does all these ordinarily. The use of alcohol produces the diseases of the kidneys, lungs, and the heart, while opium protects one from such direful maladies. If it is used very carelessly, to an excess, it is undoubtedly injurious, but this is the mistake of the consumer and not the opium.

4. I am perfectly certain that if the use of opium be totally stopped in this country, the step would result in the loss of several lives, and it would be most difficult for weak and dilapidated persons to preserve their lives. Indeed, the use of a military force or some coercive measures of a serious nature would be necessary to stop the use of opium entirely. I have personal experiences of an incident which occurred the year before last, when on a certain day the opium contractor of the city had closed his shops. A large number of people evidently disaffected gathered round my bungalow and showed signs of a turbulence and seemed ready to sacrifice their lives; some of them had fallen prostrate from exhaustion and weakness as if they were suffering from years of sickness. I was obliged to take immediate steps to open the shops, by which the lives of several people were saved. Opium is for the people of this country as harmless and beneficial as wine is for the people of Italy or France or the beer to the people of England and Germany. Opium is used from an immemorial time in this country and the quantity consumed is so small that we may fairly presume that it is not in use at all. In the earliest days Arabs were the people who introduced opium in China and India with a view, no doubt, to prevent the consumption of alcoholic drinks, to which they were deadly opposed. Even now we see that in those countries where opium is largely used, the consumption of spirituous liquors is proportionately small. Opium is an antidote of the poisonous effects of alcohol, it not only replaces the habit of using spirits, but removes its bad effects also. The Nizam's Government never endeavoured to increase the consumption of opium, but on the other hand it tried to minimise its use as far as practicable by raising its selling price to a proper limit. The increase observed in the quantity consumed is more due to the increase of population than to anything else, and it must also be remembered that the quantity shown as consumed is not wholly used by men, a portion of it is also given as medicine to animals, especially to horses. As far as my experience goes, I can firmly assure the Commission that the use of opium among the people of this country is day by day on the decrease. Should the price of opium be raised so high as to render it inaccessible to the people, then as a necessary consequence the people will not be contented with only trying to smuggle it from other parts but will assuredly take to the use of other powerful and stupefying intoxicants such as *Ganja* and *Bhang*, the plant of which can be easily grown in one's own compound, or perhaps acquire the habit of drinking a more dangerous beverage such as the spirituous liquor is.

5. It must also be remembered that the cultivation of the poppy and manufacture of opium were going on from an immemorial time in this country, and that the local consumption was not in any way indebted to foreign imports, but since 1297 Hijri (1880 A.D.) this Government entered into a treaty with the Government of India. Ever since all the opium now consumed here is imported from British India. Should the Government of India now resolve to stop the supply to this province, it will become necessary for this Government to grow the poppy and make opium again locally. The average quantity of opium imported into this country for three years ending with Fasli 1300 is 47,887 lbs. and the amount realised thereon is Government Rs. 3,31,204, at the rate of 20 per cent. of Halli Sicca and the rate of consumption per head* per annum is about one dram. Even if the Government be prepared to award us the above sum as compensation it will not at all be advisable to stop its use here entirely, taking of course the well-being of the public into consideration. Should, however, the use of opium be forcibly stopped and the necessary compensation be not awarded, which is improbable, the step would have a serious effect on the finances of this State, which it would be impossible to replenish either by means of taxation or other measures.

6. In my opinion the measures now in force for the purpose of minimising the consumption of opium are quite sufficient and practicable for the present; and any step to entirely stop the use of opium would certainly involve loss of life, and the Government would be knowingly besmearing its hands with the innocent blood of the opium-eaters.

IV.

LETTER to A. J. DUNLOP, Esq., Senior Member, Board of Revenue, Hyderabad State.

I beg to acknowledge your letter of the 7th Bahman 1303 Fasli, on the subject of the inquiry of the Royal Opium Commission and enclosing a translation of First Assistant Resident's letter No. 193, dated 6th December, calling for a written statement of the views entertained here on this subject.

In the Committee held on the 15th Azar 1303 Fasli, I have already expressed my general opinion that no restriction should be imposed on the use of opium, and in maintaining the same view now, I beg to say that the greatest harm will be done by preventing the use of this drug, and those who are addicted to its daily use will suffer to a very large extent in health.

The advantages derived from the use of opium when it is administered as a medicine, or is habitually consumed, need not be described. Opium, no doubt, is a poison, but the prevention of its use by those who are accustomed to it would prove fatal to them. A large number of people both in His Highness the Nizam's Dominions and in the British territories are given to the use of this drug, and it is the duty of both these Governments to see that the health of these people is not affected in any way.

From a revenue point of view, the Nizam's Government has suffered a loss by the prohibition of the opium cultivation. Although other crops such as cereals, &c. are sown in its place, they are not so profitable as an opium crop, because a single crop of the latter produces three such valuable products as (1) opium, (2) poppy seed, and (3) poppy heads.

In any case I am of opinion that neither the traffic in opium nor the use of the drug should be prohibited. If any prohibition is to be made on the grounds that that use of the drug leads to intoxication, then it becomes

incumbent on me to point out the evils of drink, and the injurious results which follow from the use of spirits.

Liquor is consumed to a large extent in England and other cold countries, but scientists and doctors have shown that it causes *delirium tremens*, burns and destroys the liver, spoils the teeth, impairs the eyesight, shatters the brain and constitution and produces many other injurious results, and consequently they have tried to restrict its use.

Many countries are still advocating the prevention of the consumption of liquor. In India drink is mostly used by way of imitation, without any regard to the climate and other circumstances of this country. The consequence is that such injurious results ensue as is beyond the power of pen to describe. It is therefore necessary and desirable that the use of liquor and not that of opium should be prohibited, as the former is entirely fraught with evil results.

(Signed) SHEO LALL MOTI LALL SAHOO.

TRANSLATION of EVIDENCE of SETH BHAGWANDAS,
BANKER of HYDERABAD, DECCAN.

The practice of consuming opium has become universal in this country. If the opium-eater cannot get his opium, he will become a wreck, that is to say he will become physically unfit for any work. His health is therefore dependent on his opium. In my opinion an order for the prohibition of opium could not be enforced. The climate of this country warrants the use of opium as a specific for good health. Opium-eaters suffer no ill effects from the climate. The effects of opium-eating are not so pernicious as those produced by liquor. There are many men who, if told to take liquor, will rather lose their lives than touch a drop, and at the same time, such men who are addicted to opium find it impossible to break off the habit.

(Signed) BHAGWANDAS.

APPENDIX XXIX.

APP. XXIX.

Central
Provinces.

MEMORANDUM ON THE ADMINISTRATION OF THE EXCISE REVENUE FROM OPIUM IN THE CENTRAL PROVINCES.

(See Questions 28,101, 28,102, 28,103.)

revenue.

1. This Note describes the growth of the system of Opium Excise administration in the Central Provinces, and supplements the information regarding the existing arrangements there in force which has already been supplied to the Royal Commission by the Government of India.

I.—REVENUE AND SYSTEM OF CONTROL in the KHALSA.

sources of supply.

2. The district of Sambalpur has from the first been supplied with Government opium. This district lapsed to the British Government in 1849, and till the early part of 1861 was administered by an officer styled the Principal Assistant to the Governor-General's agent at Hazaribagh. Then for about a year the district was under a deputy commissioner subordinate to the commissioner of Orissa, and on the 30th April 1862 it was transferred to the Central Provinces. From 1852 up to 1882 licensed vendors were supplied from the Government Treasury with Bengal excise opium; since the latter year the district has received its annual stock from the Ghazipur Factory. The issue price has always been Rs. 22 per ser. The poppy has at no time since 1865-66 been cultivated within the district, and if there was any local cultivation in earlier years no statistics are now ascertainable.

3. In all districts except Sambalpur the regulation of the source of supply has been closely connected with the extent to which opium was grown locally, and the two subjects may therefore conveniently be dealt with together.

Monopolists of the right of retail vend were, up to the beginning of the year 1873-74, allowed to make their own arrangements for obtaining supplies of opium, subject to certain rules purporting to be framed under Act XXI of 1856.* Those rules prohibited the growth of opium without a license, and permitted licensed cultivators to sell their produce only to licensed retail vendors or to persons holding the written permission of the district officer or the tahsildar to purchase for export from the district or sub-division, as the case might be. Import from foreign territory was allowed under pass granted by the district officer, or by the tahsildar of the sub-division into which it was desired to bring opium, and there was no import duty.

4. Section 34 of Act XXI of 1856 required licensed vendors to sell only opium obtained from the Government stores, but also provided that the Government might exempt any district or districts from the operation of this rule. Accordingly by Home Department Notification No. 185, dated the 24th April 1868, all districts except Sambalpur were exempted from the operation of the section, and by Notification No. 186 of the same date sections 21, 22, 23, and 25 to 29 of Act XIII of 1857 were extended to all districts of the Central Provinces. The second notification was issued because Act XXI of 1856 (the Abkari Act) provided

only, so far as opium was concerned, for the collection of a revenue on the sale of the drug, and not for controlling cultivation of the poppy, so that so much of the rules referred to in the foregoing paragraph as prohibited cultivation without a license and made licenses obtainable only on payment of fees lacked a proper legal basis.

5. Act XXI of 1856 was repealed by Act X of 1871 (the Excise Act), and in October 1872 a new set of rules for regulating the cultivation, import, &c. of opium was issued. The duty on cultivation was raised to Re. 0-8-0 per acre, and district officers were required to arrange for the measurement of plots sown and for ascertaining the amount of outturn in each case. The right of licensed vendors to import from foreign territory remained unaltered, and cultivators were, as before, bound to sell only to licensed vendors or to persons licensed to purchase for export.

6. By the end of the year 1872, it had been brought home to the local administration that Sambalpur was yielding a higher revenue from opium than any district in the provinces except Nagpur, and that this must be due solely to the Government system of supply enabling a full excise to be levied on consumption. Raipur and Bilaspur being contiguous to Sambalpur, there seemed to be every probability that the Government system of supply would work well in them also, and it was extended to those two districts with effect from the 1st April 1873, local cultivation being at the same time prohibited by executive order. This measure had the result of raising the net* opium revenue of the Chhattisgarh Division, which comprises the districts of Sambalpur, Bilaspur, and Raipur, from Rs. 38,979 to Rs. 78,216 in a single year. In 1874-75 the net revenue of the Division further rose to Rs. 1,06,944, and from the 1st June 1875 the system was extended to the five districts of the Nagpur Division and to Seoni. In three (Chanda, Bhandara, and Balaghat) out of these six districts there was no cultivation, and an executive order formally prohibiting cultivation in them was issued; in the remaining three, where cultivation existed, arrangements were made that cultivators should either export their produce or sell it to Government, and that all produce should be weighed as gathered under official supervision.

7. Net revenue rose in the six districts to which the Government supply system was thus extended in June 1875 from Rs. 97,823 in 1874-75 to Rs. 1,17,619 in 1875-76. The reason why results were not so good in the case of these districts as they had been in Chhattisgarh was that much illicit opium was introduced into them from Betul and Chhindwara, the chief centres of local cultivation. In order to eliminate this source of danger to the revenue, the new system was extended, with effect from the 1st April 1876, both to those two districts and to Mandla. A boundary of jungle and hills was thus placed between the two systems instead of the previous border line, which was, for almost its entire length, unmarked by natural obstacles.

8. In March 1876 an order was issued that in all districts where cultivation of the poppy had not been prohibited the cultivators must dispose of their produce each year by the 15th May. This further restriction

* Rules under Act X of 1871 only issued in October 1872, *i.e.*, nearly at the end of the period referred to.

† Fees were payable at the following rates:—

For a license to sow with opium a plot under 3 acres - 8 annas.
Do. of 3 acres or above - 1 rupee.

* *i.e.*, after deducting the cost price of opium supplied by the Bengal Government.

APP. XXIV.
Central
Provinces.

was accompanied by increased strictness in measuring plots and ascertaining out-turn, and in paragraph 38 of the Excise Report for the year 1876-77 it was remarked that the result had been a decrease in cultivation in all districts under the Government system and also in Hoshangabad. On the other hand, in Jubbulpore, Nimar, and Saugor, where, as in Narsinghpur, Damoh and Hoshangabad, licensed vendors still made their own arrangements for obtaining opium for sale to consumers, cultivation showed a tendency to increase.

9. No more districts were brought under the Government supply system in 1877-78, but the net revenue continued to rise, and stood for the year at Rs. 3,84,349* against Rs. 3,58,629* in the preceding one, and from the 1st April 1878 the system was extended to three more districts (Jubbulpore, Damoh and Narsinghpur). By this time cultivation was almost entirely confined to the Jubbulpore and Betul districts. In Jubbulpore, however, cultivation suffered heavy loss in 1876-77 from hail, and many gave up cultivation of the poppy in consequence; while in Betul, in spite of numerous prosecutions, cultivators habitually kept back the greater part of their produce. In November 1878 it was decided that no more licences for local cultivation should be granted, and since then the poppy has not been grown in any part of the provinces.

10. The remaining three districts (Saugor, Hoshangabad and Nimar), in which farmers had previously been allowed to buy opium in the open market, were brought under the Government supply system from the 1st April 1879, and in the following June the Opium Act of 1878 was extended to the Central Provinces, ousting the operation of Act X of 1871 so far as it concerned opium. No rules permitting cultivation of the poppy have been framed under Section 5 of the Act of 1878, and local production is therefore punishable under Section 9.

11. In Appendix A to this Note are given statistics of the number of licences granted for the cultivation of the poppy, the area sown and the annual outturn in the several districts of the provinces from the year 1866-67 to 1877-78. The chief producing districts were Betul, Chhindwara, Jubbulpore, Nimar and Hoshangabad, the first three of these producing more than enough to meet the local (i.e., district) demand. From Betul opium was exported to Berar and to the Central Provinces districts lying to the south and east, while the Jubbulpore District supplied the northern and central districts, as well as parts of the Nerbudda Valley and the less distant parts of Chhattisgarh. Though there were thus some tracts where the local produce was in excess of the local demand, the provinces as a whole were, even when cultivation was least restricted, always largely dependent on imports from other parts of India, and there has never been a time when a system of supplying retail vendors, on payment of a direct duty, with locally produced opium only, was practicable.

12. In Betul and Chhindwara the prohibition of cultivation caused some discontent, and complaints are still occasionally heard. In Wardha the Settlement operations of 1892-93 have brought to light the fact that though the rents paid for land under opium were often very high, no reductions were made by landlords when cultivation of the poppy was stopped, and in several cases of this kind it has now been found necessary to reduce rents. The following quotations from reports by the Settlement Officer, Rai Bahadur Purshotam Das, will serve to make this point clear:—

(1) *Rent-rate Report* (Karanjia group, Arvi Tahsil).—A large portion of the rent enhancement provided for will be counterbalanced by reductions, which will be granted in cases of excessive payments of ordinary tenants and those made for opium cultivation.

(2) *Rent rate Report* (Arvi group, Arvi Tahsil).—The cultivation of opium has been prohibited since the introduction of the Excise Act, but the former high payments have since continued untouched. They undoubtedly press on certain lands, and have resulted in the indebtedness of their occupants.

(3) *Assessment Report* (Anji group).—The fields on which rents have been reduced are mostly those on which opium was grown at the former Settlement, and although the cultivation of opium was prohibited on the introduction of the Excise Act, the same high rents were realized by the malguzars.

Similar cases will no doubt come to notice when assessment work is taken up in the other districts where opium was formerly grown.

13. The system of requiring licensed vendors to supply themselves with opium purchased from Government justified itself, wherever introduced, by financial

results; and it is safe to say that, on the whole, the interests of the Local Administration and of the people were best served by the entire prohibition of cultivation. Deputy Commissioners, to whom the work of buying up the local crops in districts under the Government supply system was entrusted, found it impossible to prevent illicit retention of the produce, and cultivation being considerable in a few districts only, the continued protection in those districts of the interests which had been affected by its prohibition elsewhere would have involved more trouble to the executive than their importance warranted.

14. So long as local cultivation was permitted, the local produce was, as already stated, bought up by Deputy Commissioners on behalf of Government in all districts under the Government supply system, and was issued to licensed vendors at prices which varied from time to time.

Thus, in 1876-77, the following rates prevailed in respect of local opium:—

	Rs.
For Betul opium	- 18 per ser in Wardha.
" " "	- 19 " " in Mandla and Seoni.
" " "	- 20 " " in Raipur.
Local opium of other districts.	16 " " in the district where raised.

The opium purchased on behalf of Government outside the provinces and that supplied from Bengal and Ghazipur have always been issued at Rs. 22 per ser in the Khalsa, except in the Chanda district, where licensed vendors in parts near Berar and the territories of His Highness the Nizam were supplied at rates varying between Rs. 19 and Rs. 21 per ser from June 1875 to April 1880; the sole exception now existing is the Sironcha tahsil of that district, where the issue price was, in 1879, fixed at Rs. 20 per ser, and has since remained at that figure. From 1875-76 to 1877-78, both years included, local produce was supplemented by purchases made in the open market at Indore, through a commission agent specially appointed by Government, the opium thus obtained costing from Rs. 10-5-0 to Rs. 13-12-0 per ser delivered at Nagpur and being supplied to all districts except Sambalpur. In 1878-79 the Ghazipur Factory supplied Bengal opium to all districts under the Government system except Sambalpur, and by 1883 all districts without exception received their stocks from that factory. From 1883 to 1888, Malwa opium was received under the orders of the Government of India; since the latter year, opium produced in the North-Western Provinces and Oudh, and costing Rs. 7-4-0 per ser, has invariably been supplied.

15. In October 1880, Opium Rules framed under Act I of 1878 were issued. They have been slightly modified from time to time but the only change that need be noticed here is the distinction laid down in 1892 between opium and intoxicating drugs, and the reduction of the quantity of the latter which may legally be possessed by a private person from two tolas to one tola. A copy of the rules as they now stand forms Appendix B to this note.

16. In Appendix C will be found for each year in which a separate report on the operations of the Excise Department has issued—

- (1) the number of shops in the provinces licensed for the retail sale of opium and madak;
- (2) the sales to retail vendors of Government opium and confiscated opium in the Khalsa;
- (3) the amount of (a) direct duty, (b) licence fees realized on account of opium.

In the method of controlling retail sale, there has been scarcely any change since the provinces were first formed in 1861. It has always been the rule, and is the rule now, to sell annually to the highest bidder, provided he be a respectable man and solvent, and subject to his furnishing suitable security, the right to retail opium in a particular shop or group of shops; and at no time in the history of the provinces have the monopolists been bound down either to sell at a specified price or to guarantee any minimum, aggregate, annual sale. The price of the drug to consumers has been made as high as possible, not merely by subjecting the annual sale of monopolies to a strict competition, but also, as has already been shown, by obliging retail vendors to pay a fixed price of Rs. 22 per ser for their supplies. The result of the policy pursued by the Administration has been gradually to raise the retail price of the drug from 4 to 6 tolas per rupee—which ruled under the old system when no direct duty was levied—to 2 to 2½ tolas, which may now be said to be the normal price.

17. The policy followed in regard to licensing shops for the sale of crude opium may be stated as follows.

* These figures include profits on supplies of opium to Feudatory Chiefs and certain Zamindars—vide foot-note to Appendix C.

Rules and
the Opium
Act, 1878.

Retail sale

Opium
shops.

Except in districts which border on Native States, and into which there is reason to believe that foreign opium is smuggled, *permanent* shops are not numerous, because the drug is portable and keeps; but in order to give reasonable facilities to the rural population for obtaining supplies for medicinal purposes *temporary* shops are licensed for fair or market days only. Each temporary shop is, as a rule, sold and licensed along with the nearest permanent shop. In districts into which foreign opium is smuggled from Native States, it is impossible to obtain high fees for the privilege of vend at any place near the border, and there is the danger that the holder of a shop may sell smuggled opium under cover of his license: the plan followed in such cases is to establish shops near the border pretty freely, licensing them to respectable persons for what they will fetch, and watching closely the quantity of Government opium purchased for sale by the licensees. In the current year (1893-94) the total number of shops for the sale of crude opium is 1,374, of which 881 are permanent, and 493 temporary: each shop serves, on an average, 56 square miles and 7,312 persons.

18. The Administration has always, and especially since 1891-92, drawn a marked distinction between the smoking and the eating of opium. The former habit is condemned by respectable native opinion throughout the provinces, and the policy followed has been to check its extension, so far as this is practically possible. The only preparation of opium which can legally be smoked is that known as madak, and a detailed account of this preparation is given in Appendix D to this Note. †Chandu is very possibly made and smoked by stealth here and there in the Northern districts, but no licences have ever been issued for its manufacture or sale, and indulgence in it, except by occasional travellers, appears to be rare.

In 1890 it was determined to prohibit the consumption of madak on the premises of licensed vendors, and it was at the same time laid down that the number of shops for the sale of the drug was to be restricted as far as possible, and that no madak license was to be given except to a licensed opium vendor. The orders which issued to secure practical effect being given to this decision are reproduced as Appendix E. to this Note. The policy therein indicated has already led to a marked decrease in the number of madak shops, and though there has been no corresponding diminution in the quantity of crude opium consumed, it seems probable that there has been some falling off in consumption of this particular preparation. In the current year the number of opium shops licensed for the sale of madak is 131 only, as compared with 298 in 1890-91.

19. Appendix F shows, for the year 1892-93, the population of each district in the provinces, the total consumption of opium in it, and the average consumption per head. No particular castes can be singled out as specially addicted to the drug: it is eaten by persons of all classes and all ages, but smoking is for the most part confined to persons who are prohibited by religion or by caste custom from indulging in liquor.

II.—SMUGGLING OF OPIUM INTO THE CENTRAL PROVINCES.

20. A few words may be added regarding smuggling, which was very general in the days when the local cultivation of the poppy was permitted, and when excise arrangements in Madras and in Berar were less strict than they are at present, but is now much less common.

Smuggling from the Madras side, from the Rewah State, and from Berar, was at one time prevalent; from Madras and Rewah it has now entirely ceased, and the retail price of opium in Berar has for some years been quite as high as it is in these provinces. But across the long line of frontier with Native States in the north and west, where the cultivation of the poppy is unrestricted, a great deal of smuggling still goes on, and is a constant difficulty in the way of efficient excise administration in the Hoshangabad, Nimar, Saugor, and Narsinghpur districts. Special measures have frequently been tried for the prevention of this illicit traffic, but so far with slight success. Neither special supervisors, patrol police, paid detectives, nor a system of liberal rewards, have yet had the effect of materially checking this traffic.

* Vide paragraph 88 on page 41 of the Central Provinces Excise Manual.

† The statement in paragraph 43 of the Government of India's "Note on opium produced and consumed in India," that in a few cases the licence to sell opium includes the right to sell madak and chandu as well is not quite accurate. The manufacture or sale of chandu is never licensed.

III.—OPIUM ARRANGEMENTS IN FEUDATORIES and ZAMINDARIES.

21. The preceding portion of this Note has dealt only with the arrangements in regard to opium which are in force in the Khalsa; but apart from the regularly settled area of British districts there are a number (15) of Feudatory States attached to these provinces, and numerous large estates (jagirs and zamindaris) the owners of which have hitherto had some degree of control over their local opium administration. The following is a brief description of the system in force in the Feudatory States.

The existing arrangements have been in force since 1880 in the case of the Chhattisgarh feudatories and Bastar, and since 1881 in the case of Makrai, in the Hoshangabad district. The feudatories of the Raipur and Bilaspur districts (with the sole exception of Bastar) are supplied with opium at Rs. 17 per ser, and those of the Sambalpur district at Rs. 22 per ser. The Bastar State is supplied with opium at Rs. 12-8-0 per ser, and Makrai in the Nerbudda Division at Rs. 10 per ser. All these States make their own arrangements for the retail sale of the drug, but they are not allowed to issue opium to their vendors at a less rate than Rs. 22 per ser, and the cultivation of the poppy is unknown throughout their area.

22. Besides the chiefs of Feudatory States there are several non-feudatory zamindars who have hitherto enjoyed excise rights in respect to opium, have made their own arrangements for the retail vend of the drug, and have enjoyed the revenue therefrom. These zamindars are supplied with Government opium at the following rates:—

Rs. 22 per ser in Raipur and Bilaspur.

" 14 " Hoshangabad and Chhindwara.

All these landholders are bound to prevent cultivation of the poppy in their estates, and to issue opium to their retail vendors at rates not less than that at which the Khalsa retail vendors purchase from the Treasury, viz., Rs. 22 per ser. The zamindars of Hoshangabad and Chhindwara are known as "Jagirdars," and in their case the interests of Government are specially safeguarded by requiring their retail vendors to purchase direct from the Government Treasury at Rs. 22 per ser, of which Rs. 14 are credited to Government, and the balance, Rs. 8, to the account of the jagirdar concerned. It may be added that the Government of India has recently expressed its disapproval of the control over Excise administration now exercised by the local zamindars; accordingly, these rights are now being gradually withdrawn, and their territories will, when this has been done, be treated as a part of the Khalsa for excise purposes.

23. The yearly issues of opium under these arrangements are as follows for the period 1881-82 to 1892-93:—

Year.	m.	s.	c.
1881-82	-	-	119 0 0
1882-83	-	-	100 15 8
1883-84	-	-	114 10 0
1884-85	-	-	118 17 8
1885-86	-	-	135 13 8
1886-87	-	-	126 35 8
1887-88	-	-	121 15 0
1888-89	-	-	125 31 0
1889-90	-	-	149 38 0
1890-91	-	-	136 34 8
1891-92	-	-	171 35 8
1892-93	-	-	155 29 8

Since 1888-89 there has been a marked increase in issues, most of which has occurred in the Chhattisgarh division. In 1887 the Chief Commissioner directed that the subject of excise arrangements in that division should be considered by the Commissioner and the Political agent. This was done, and though no new rules were issued, the fact that the attention of each chief and zamindar was specially drawn to the subject has tended to improve excise administration in their estates, and to put a stop to the illicit traffic in the drug which was previously common in these remote and little visited tracts. The appointment of Government diwans to assist the chiefs, and the gradual extension of the sphere of the Chhattisgarh political agent's duties to all the Feudatory States of the Chhattisgarh division have worked in the same direction.

H. V. DRAKE-BROCKMAN,
Officiating Commissioner of Excise,
Nagpur, Central Provinces.
24th February 1894.

APPENDIX B.

OPIUM RULES IN FORCE IN THE CENTRAL PROVINCES.

The following rules have been made by the Chief Commissioner under sections 5 and 13 of the Opium Act, and sanctioned by the Governor-General in Council.

Interpretation Clause.

In these rules—

- (1.) As regards officers serving in the Central provinces, "Commissioner" and "Deputy Commissioner" mean the Commissioner of Excise and the deputy commissioner of a district, including any assistant or extra-assistant commissioner duly authorised by a deputy commissioner to exercise all or any of the powers or duties conferred or imposed on a deputy commissioner by these rules. As regards officers serving in other presidencies or provinces, "Commissioner," "Deputy Commissioner," and "Collector" mean officers thus designated in the presidencies or provinces in which they serve.
- (2.) "Opium" means the inspissated juice of the poppy.
- "Intoxicating drugs" includes madak and chandu and every preparation and admixture thereof, and kafa, and all other intoxicating or narcotic preparation of opium and of the poppy, but does not include poppy-heads.
- "Poppy-heads" mean the dry capsules of the poppy.
- (3.) "Farmer" means a person who has obtained a farm from the deputy commissioner of a district of the Central Provinces, under Rule XXIX. or XXXIV.
- (4.) "Licensed vendor" means a person who has obtained a license for retail vend from the deputy commissioner of a district of the Central Provinces, under Rules XXIII., XXVII., or XXX.
- (5.) "Medical practitioner" means a medical practitioner to whom a license has been granted by a deputy commissioner under Rule VII.
- (6.) The sale of any quantity of opium exceeding two tolas, or of intoxicating drug exceeding one tola, or of poppy-heads exceeding one seer is a wholesale.
- (7.) The sale of any quantity of opium not exceeding two tolas, or of intoxicating drugs not exceeding one tola, or of poppy-heads not exceeding one seer is a retail.
- (8.) The words "import," "export," and "transport" have the respective meanings assigned to them in the Opium Act, 1878.
- (9.) "Transit" means the import, transport, and export of opium passing through the Central Provinces from one place to another outside such provinces without change of ownership.

Manufacture.

II. The manufacture of intoxicating drugs under a license from the deputy commissioner or a farmer is permitted.

Possession.

III. Any person may have in his possession—

- (a) two tolas of opium,
- (b) one tola of an intoxicating drug,
- (c) one seer of poppy-heads;

provided that such opium, intoxicating drug, or poppy-heads have been purchased from the Government, or from a farmer or a licensed vendor, or a medical practitioner.

IV. The possession of more than—

- (a) two tolas of opium,
- (b) one tola of an intoxicating drug,
- (c) one seer of poppy-heads,

by a farmer or licensed vendor at his licensed place (or places) of vendor in transport (under pass) thereto is permitted.

V. Medical servants of Government or, with the permission of the deputy commissioner, medical servants of any municipal committee or other public body may have in their possession opium and poppy-heads for *bonâ fide* Government purposes.

VI. With the sanction of the commissioner, the deputy commissioner may especially authorise the

possession by any person of a quantity of opium or intoxicating drugs not exceeding one seer.

VII. The deputy commissioner may grant to any medical practitioner residing within his district a license in Form I., hereto annexed, or in such other form as may be prescribed by the chief commissioner from time to time, for the possession and retail of opium, intoxicating drugs, and poppy-heads for medical purposes only; provided that such medical practitioner shall not have in his possession at one time more than one seer of opium, one seer of intoxicating drugs, and five seers of poppy-heads.

Transport.

VIII. When a farmer or licensed vendor desires to transport opium, intoxicating drugs, or poppy-heads, he shall obtain an entry in his shop pass-book by an excise officer for each consignment in such form as the commissioner may from time to time prescribe.

IX. The bulk of the consignment shall not be broken in transport.

X. Any revenue officer not inferior in grade to a Naib-Tahsildar, or any police officer not inferior in grade to a head-constable, may, at any time, examine a consignment in transport.

Import.

XI. The import of opium and poppy-heads on account of Government is permitted.

Export.

XII. The export of opium and poppy-heads on account of Government is permitted.

Transit.

XIII. When accompanied by a passport issued by the opium agent at Indore or his authorised assistants, certifying prepayment of the duty from time to time ordered by the Governor-General in Council to be levied at the scales, the transit of opium from the scales at Bhopal by road through the town of Hoshangabad to Itarsi, and thence by rail is permitted; and when accompanied by such passport the transit by rail of opium which has passed the scales established at places other than Bhopal is permitted.

XIV. The bulk of a consignment shall not be broken in transit.

XV. The destination of a consignment shall not be altered from that which has been specified in the passport.

XVI. Delivery of opium in transit shall not be taken from the railway company by the owner or consignee, or by any other person, without the written authority of the deputy commissioner.

XVII. Opium in transit may be detained and examined as to all particulars specified in the passport, or as to the prepayment of duty, or as to tampering in transit, or change of destination of the consignment, or as to the due observance of these rules at any station at which the chief commissioner may direct such detention or examination either generally or specially. The railway officials shall afford at all times all reasonable facilities to the Government official or officials authorised in writing by the deputy commissioner to make such general or special examinations, and on the requisition of such Government official or officials shall detain any consignment pending the order of the deputy commissioner, and shall be indemnified for acting on such requisition.

Sale, Wholesale.

XVIII. Opium in quantities of not less than half a ser, and poppy-heads in quantities of not less than five sers, shall be supplied on prepayment at such rates as the chief commissioner may from time to time direct from the deputy commissioner's office, or such other offices as the chief commissioner may direct, to a farmer or licensed vendor or medical practitioner, or to the committee of any public hospital or charitable dispensary.

XIX. Subject to the provisions of Rule VIII. regarding transport, a farmer or licensed vendor may sell any quantity of opium to another farmer or licensed vendor, and a quantity not exceeding one ser of opium or five sers of poppy-heads at one time to a medical practitioner.

APP. XXIX.

Central
Provinces.*Sale, Retail.*

XX. Opium or intoxicating drugs or poppy-heads may be retailed under licenses from the deputy commissioner or from a farmer, and in accordance with the conditions specified in each license.

XXI. No opium or poppy-heads shall be sold wholesale or retail which has not been bought from some Government officer or from a farmer or licensed vendor.

XXII. No larger quantities of opium than two tolas, or of intoxicating drugs than one tola, or of poppy-heads than one ser, shall be sold, except to a licensed vendor, farmer, or medical practitioner, or under a special order from a deputy commissioner.

XXIII. Licenses for the retail of opium or for the manufacture and retail of intoxicating drugs may be granted by the deputy commissioner, and the settlement of the vend of opium, and of the monopolies of manufacture and retail of intoxicating drugs, shall be made periodically under the instructions of the commissioner. The commissioner may from time to time restrict or increase the number of opium shops and of licenses allowed for the manufacture and retail of intoxicating drugs, and shall decide whether the shops or licenses shall be settled or contracted for separately or in groups.

XXIV. Licenses for the retail of opium shall be granted by the deputy commissioner to licensed vendors in Form II. hereto annexed.

XXV. Licenses for the manufacture and retail sale of intoxicating drugs shall be granted by the deputy commissioner in Form IV. hereto annexed.

XXVI. Whenever the deputy commissioner grants a license for the retail of opium or of intoxicating drugs, he shall demand such duty and shall impose such conditions on the license over and above those specified in the license as may from time to time be prescribed by the chief commissioner; and every person taking out such a license shall give such security for the performance of his engagement, or make such deposit in lieu of security as the deputy commissioner may require.

XXVII. Licenses for the retail of poppy-heads shall be granted by the deputy commissioner on such terms as the commissioner may prescribe.

XXVIII. Licenses for the retail of opium, intoxicating drugs, and poppy-heads shall be granted for one year only, unless the chief commissioner shall otherwise specially direct.

Farm of Duties leviable on Retail Vend.

XXIX. With the sanction of the commissioner, the deputy commissioner may let in farm the duties leviable on the retail of opium, and all or any intoxicating drugs for a term not exceeding two years in any district or part of a district, and with the sanction of the chief commissioner for a term not exceeding five years. The commissioner may prescribe rules—

- (a) for the invitation and acceptance of tenders for such farms;
- (b) for the requisition of security for the due fulfilment of the engagements entered into by the farmers; and
- (c) as to the form and conditions of such leases.

XXX. When the duties leviable on the retail of opium or any intoxicating drugs are let in farm, the farmer may make his own arrangements for the retail of opium or for the manufacture and retail of any intoxicating drug within the limits of his farm, and may grant licenses for the same in such form as may from time to time be prescribed for this purpose; provided that no opium except that supplied from the deputy commissioner or other officers appointed by the chief commissioner (Rule XVIII.) shall be sold or shall be used in the manufacture of intoxicating drugs. Such licenses shall be countersigned by the deputy commissioner, and when so countersigned shall have the same force as if they were granted by the deputy commissioner.

XXXI. Before entering into engagements for any such farm of the duties leviable on opium or on intoxicating drugs as aforesaid, the commissioner may make such reservations and restrictions with respect to the grant of licenses by the farmer as he thinks fit.

XXXII. Every farmer shall file in the deputy commissioner's office, in such form as may from time to

time be prescribed by the commissioner, a list of all licenses granted by him.

XXXIII. With the sanction of the chief commissioner obtained through the commissioner, the deputy commissioner may cancel any lease granted under Rule XXIX., or may, within the period of the lease, impose any new reservation and restriction on the farmer. If a lease be cancelled for any cause other than a breach of the conditions of the lease, or if any reservation or restriction with respect to the grant of licenses be imposed during the lease, the chief commissioner may award to the farmer compensation for any loss thereby caused to him.

XXXIV. The deputy commissioner may farm the duties leviable on the retail of poppy-heads on such terms as the commissioner shall from time to time prescribe.

Disposal of Opium on expiry of License.

XXXV. If any licensed vendor or farmer shall have in his possession on the expiry of his license or farm any opium, intoxicating drugs or poppy-heads which he is unable to dispose of to the satisfaction of the deputy commissioner, by private sale, to other licensed vendors or farmers, he shall surrender the same to the deputy commissioner, and the incoming licensed vendor or farmer, or if the expired license or farm is not renewed, any licensed vendor or farmer within the district, when required by the deputy commissioner, shall be bound to purchase the articles aforesaid to the extent of two months' supply, at such price and in such quantities as the deputy commissioner shall adjudge; provided that the price of opium thus adjudged shall in no case exceed the rate at which it can be procured from the Government; provided also that if such articles be declared to be unfit for use, the deputy commissioner shall cause them to be destroyed.

General.

XXXVI. Except where otherwise specially provided in the foregoing rules, the possession, transport, import, export, or sale of opium, intoxicating drugs, or poppy-heads by, or on behalf of, the Government shall be unrestricted.

Disposal of Things confiscated.

XXXVII. Opium confiscated under the Opium Act, 1878, shall be disposed of as may be directed by the commissioner, if certified after examination by the deputy commissioner to be fit for use; if declared by him to be unfit for use, it shall be immediately destroyed.

XXXVIII. If the opium so confiscated be added to the stores and prove of inferior quality, it may be issued to retail vendors at a special rate proportionate to its quality, but shall be subject in other respects to the same conditions as other opium.

XXXIX. Intoxicating drugs confiscated under the said Act shall be immediately destroyed.

XL. Poppy-heads confiscated under the said Act shall be disposed of as the deputy commissioner may direct.

XLI. All property, other than opium, intoxicating drugs, or poppy-heads, which is confiscated under the said Act, shall be sold under the orders of the magistrate or other officer by whom the confiscation was adjudged.

Rewards.

XLII. Any magistrate convicting an offender under Section 9, or any magistrate or other officer ordering under Section 12 the confiscation of opium, or any other articles liable to confiscation under the Act, may forthwith grant (in such proportion as he thinks fit) to any person or persons who have contributed to the conviction of the offender, or to the seizure of the opium or other article confiscated, as a reward,—

- (1) a sum not exceeding the amount of the fine (if any) imposed, plus the value of the opium and other articles confiscated; or
- (2) if no fine be imposed, or if in the opinion of the magistrate or other officer aforesaid the amount of fine imposed is an inadequate reward,

a sum not exceeding Rs. 100, plus the value of the opium and other articles confiscated, or with the sanction of the Commissioner of Excise, not exceeding

Rs. 500, plus the value of the opium and other articles confiscated.

XLIII. In any case in which in the opinion of the commissioner any person has performed any service of special merit in respect of the prevention or detection of opium smuggling, or of any offence against the Opium Act, 1878, the commissioner may grant to such person a reward not exceeding an amount of Rs. 500. The commissioner, or a deputy commissioner, with the sanction of the commissioner, may incur, at his discretion, expenditure not exceeding Rs. 500 in each case, for the employment of informers or for any other purpose connected with the prevention or detection of opium smuggling, or of any offence against the Opium Act, 1878.

The commissioner shall from time to time report the circumstances under which any reward may have been granted or expenditure may have been incurred under this rule.

Control and Appeal.

XLIV. All deputy commissioners shall, as regards any matter arising in the administration of these rules, be subject to the general control of the commissioner.

All executive orders of deputy commissioners under these rules shall be appealable to the commissioner, and an appeal from the orders of the commissioner shall lie to the chief commissioner; but the decision of the deputy commissioner as to the value of the opium which has been seized shall be final.

FORMS.

I.—SPECIAL LICENSE TO MEDICAL PRACTITIONERS UNDER RULE VII.

Special license is granted to _____, following the profession of _____ at _____, in the district of _____, for the retail of opium, intoxicating drugs, or poppy-heads, on the condition that the said _____ shall not have in his possession at one time more than one ser of opium, one ser of intoxicating drugs, and five sers of poppy-heads, and that such opium, intoxicating drugs, or poppy-heads shall be procured from the deputy commissioner's office, or a licensed vendor or farmer, and shall be used *bona fide* as medicine, or in medical preparations or prescriptions.

District _____

Dated _____

II.—LICENSE FOR RETAIL SALE OF OPIUM. (Granted by the Deputy Commissioner.)

District _____

No. of license in Register _____

Name of retailer _____

Locality of shop _____

Be it known that _____, resident of _____, District _____, is hereby authorised by the deputy commissioner of _____, to sell opium by retail and wholesale, under the provisions of Rules VIII. and XIX. of the Central Provinces' Opium Rules to another licensed vendor, or to a medical practitioner licensed under Rule VII. of those Rules, in his shop at _____, in _____, from the date of this license to the _____ day of _____, 18____, upon the following conditions:—

I. That he shall pay to Government a monthly duty of Rs. _____

II. That he shall sell no opium, but such as he may purchase from Government or a licensed vendor, and that he shall not received or have in his possession opium obtained otherwise; and that all opium purchased by him from the Treasury shall, after entry (under Rule VIII.) in the shop pass-book of the quantity of opium purchased, and of the time allowed for transport to the shop, be taken to the shop for which the pass is granted (and not to any other shop or place), and shall also be taken to the said shop within the time allowed in the pass-book.

III. That he shall not receive any wearing apparel or other goods in barter for opium, and that he shall not sell any opium on credit, nor allow any opium to be consumed on his premises.

IV. That he shall not open his shop, or make sales therein, before sunrise; that he shall not keep it open, or make sales therein, after* _____ and that he shall not harbour any person therein during during the night.

V. That he shall not permit persons of notoriously bad character to resort to his shop; that he shall prevent gaming and disorderly conduct therein; and that he shall give information to the nearest magistrate or police officer of any suspected person who may resort to his shop.

VI. That he shall have constantly fixed up, at the entrance of his shop, a sign-board bearing the following inscription, in legible characters, in the vernacular language:—

(Name of vendor.) _____

"Licensed to retail opium."

VII. That, if so required by the Deputy Commissioner, he shall keep up daily an account in this form, showing the receipts and deliveries of opium at his shop each day, and the balance in store:—

Date.	Question of Opium in Store from Yesterday.			Quantity of Opium received this Day, and whence received.			Total Quantity to be accounted for.			Quantity sold this day, with Name, Caste, and Residence of each Purchaser of half a tola or upwards.			Quantity left in Store.		
	M.	S.	C.	M.	S.	C.	M.	S.	C.	M.	S.	C.	M.	S.	C.

VIII. That he shall at once produce his license and accounts for inspection on demand of any officer of the departments of excise, police, customs, salt, opium, or revenue, superior in rank to a peon or constable; and that he shall not prevent any such officer, of whatever rank, from entering his shop at any hour of the day or night.

IX. That if the holder of this license does not intend to renew it on the expiry of the period for which it is granted, he shall give notice to the Deputy Commissioner that he contemplates its surrender, at least 15 days before the expiry of the period for which it is granted, i.e., before the _____ day of _____, 18____.

If such notice be not given, and if this license be not re-called by the deputy commissioner under the autho-

rity reserved to him in Clause X., this license, and any counterpart engagement for the due observance of these conditions that the license-holder may have entered into, shall remain in force as if this license and the engagement were formally renewed for a further term of one year, viz., to the _____ day of _____, 18____.

X. This license may be re-called by the deputy commissioner:—

(a.) For default of punctual payment of the duty stipulated to be paid in Clause I.;

(b.) For violation of any of the conditions specified in this license;

* Opium shops may not be kept open after 9 p.m.

* To be countersigned by the deputy commissioner.

purchased and of the time allowed for transport to the shop, be taken to the shop for which the pass is granted (and not to any other shop or place), and shall also be taken to the said shop within the time allowed in the pass-book.

III. That he shall not receive any wearing apparel, or other goods in barter for the drug, and that he shall not sell the drug on credit nor allow any of the drug to be consumed on his premises.

IV. That he shall not open his shop, or make sales therein, before sunrise; that he shall not keep it open, or make sales therein after* and that he shall not harbour any suspected persons therein.

V. That he shall not permit persons of notoriously bad character to resort to his shop; that he shall

prevent gaming and disorderly conduct therein; and that he shall give information to the nearest magistrate or police officer of any suspected person who may resort to his shop.

VI. That he shall have constantly fixed up at the entrance of his shop a sign board bearing the following inscription, in the vernacular language of the country :—

(Name of vendor.)

“ Licensed vendor of madak (or chandu).

VII. That, if so required by the deputy commissioner, he shall keep up daily the following account showing the receipts of opium in his shop, the quantity used in the manufacture of madak (or chandu), and the balance remaining in store at the end of the day :—

I.—OPIUM.

1.	2.			3.			4.			5.			6.		
Date.	Quantity of Opium remaining in Store Yesterday.			Quantity received To-day, and whence received.			Total Quantity of Opium to be accounted for.			Opium used in the preparation of Madak (or Chandu).			Quantity remaining in Store.		
	M.	S.	C.	M.	S.	C.	M.	S.	C.	M.	S.	C.	M.	S.	C.

II.—MADAK OR CHANDU.

1.	2.			3.			4.			5.			6.		
Date.	Quantity remaining in Store Yesterday.			Quantity manufactured out of Opium To-day.			Total Quantity of Madak or Chandu to be accounted for.			Madak or Chandu sold to day.			Quantity remaining in Store this Day.		
	M.	S.	C.	M.	S.	C.	M.	S.	C.	M.	S.	C.	M.	S.	C.

VIII. That he shall at once produce his license and accounts for inspection, on the demand of any officer of the departments of excise, police, customs, salt, opium or revenue, superior in rank to a peon or constable; and he shall not prevent any officer, of whatever rank, from entering his shop at any hour of the day or night.

IX. That if the holder of this license does not intend to renew it on the expiry of the period for which it is granted, he shall give notice to the deputy commissioner that he contemplates its surrender, at least 15 days before the expiry of the term for which it is granted, i.e., before the day of 18 .

If such notice be not given, or if license be not recalled by the deputy commissioner under the authority reserved to him in Clause X., this license, and any counterpart engagement for the due observance of these conditions that the license-holder may have entered into, shall remain in force as if this license and the engagement were formally renewed for a further term of one year, viz., to the day of 18 .

X. This license may be recalled by the deputy commissioner—

- (a) for default of punctual payment of the duty stipulated to be paid in Clause I.;
- (b) for violation of any of the conditions specified in this license;
- (c) if the holder of this license be convicted of breach of the peace, or of any other criminal offence.

Should the license be recalled for any of these causes, the license-holder shall have no claim to any compensation whatever, or to any refund of any duty, or instalment of duty, already paid. But it shall be in the discretion of the deputy commissioner to make such compensation or refund, should he consider it necessary or advisable to do so.

Should the deputy commissioner desire to recall this license before the expiry of the period for which it has been granted, for any cause other than those above specified (a), (b), and (c), he shall give 15 days' previous notice, and remit a sum equal to the duty for 15 days, or, if notice be not given, shall make such further compensation, in default of notice, as the chief commissioner may direct.

XI. This license may be surrendered by the license-holder on his giving one month's previous notice to the deputy commissioner, and paying such fine, not exceeding the amount of the duty for six months or the loss caused to Government by the failure to carry out any condition imposed, as the deputy commissioner may adjudge.

Should the deputy commissioner be satisfied that the reason for resigning the license is adequate, he may, with the sanction of the chief commissioner, remit the fine.

XII. On the infringement of any of the above articles, or any of the conditions imposed by the Opium Act, 1878, or by the rules made thereunder, this license, and any other license or licenses that the holder may have obtained for the sale of opium, or for the manufacture or sale of madak or chandu, shall be forfeited.

* All madak shops must be closed at 9 p.m.

Central
Provinces.

(To be granted by a farmer.)

District.
No. in register.
Name of vendor.
Locality of shop.

Be it known that _____, resident of _____, Mauzah _____, District _____, is authorised by _____, the farmer of _____, to manufacture and sell by retail, madak (or chandu, as the case may be), in his shop at _____, from the date of this license to the _____ 189 _____, upon the following conditions:—

I. That he shall pay to the farmer a monthly duty of Rs.

II. That he shall purchase all the opium he may use in the manufacture of madak (or chandu, as the case may be) direct from the farmer, and not from any licensed opium vendor, and that all opium purchased by him from the former shall after entry (under Rule VIII.) in the shop pass-book of the quantity of opium purchased and of the time allowed for transport to the shop, be taken to the shop for which the

pass is granted (and not to any other shop or place), and shall also be taken to the said shop, within the time allowed in the pass-book.

III. That he shall not receive any wearing apparel or other goods in barter for the drug, and that he shall not sell the drug on credit, nor allow any of the drug to be consumed on his premises.

IV. That he shall not open his shop, or make sales therein before sunrise, that he shall not keep it open, or effect sales therein after _____, and that he shall not harbour any suspected person therein.

V. That he shall not permit persons of notoriously bad character to resort to his shop; that he shall not permit gaming and disorderly conduct therein; and that he shall give information to the nearest magistrate or police officer of any suspected person who may resort to his shop.

VI. That he shall have constantly fixed up at the entrance of his shop a sign board bearing the following inscription, in the vernacular language of the country:—

(Name of vendor.)

"Licensed vendor of madak (or chandu)."

VII. That, if so required by the deputy commissioner, he shall keep up daily the following account showing the receipts of opium in his shop, the quantity used in the manufacturing of madak (or chandu), and the balance remaining in store at the end of the day :

I.—ORPUM.

[illegible]

II.—MADAK OR CHANDU.

[illegible]

VIII. That he shall at once produce his license and accounts for inspection on demand of any officer of any of the departments of excise, police, customs, salt, opium, or revenue, superior in rank to a peon or constable empowered under section 14, Opium Act; and that he shall not prevent any such officer, of whatever rank, from entering his shop at any hour of the day or night.

IX. This license may be recalled by the farmer—

(a) for default of punctual payment of the duty stipulated to be paid in Clause I.;

and by the farmer or deputy commissioner—

(b) for violation of any of the conditions specified in this license;

(c) if the holder of this license be convicted of breach of the peace, or of any other criminal offence.

X. On the infringement of any of the above articles, or any of the conditions imposed by the Opium Act, 1878, or by the rules made thereunder, this license, and any other license or licenses that the holder may have taken out for the sale of opium, or for the manufacture or sale of madak or chandu, will be forfeited.

* For the years 1877-78 to 1880-81 the statistics in columns 3, 5, and 6 include those of Feudatory States and of Zamindaris, the owners of which enjoy excise rights in respect to opium. Separate statistics for the Khalsa only are not now ascertainable.

APPENDIX D.

PREPARATION AND USE OF MADAK.

It is a fairly general tradition among madak smokers that the drug was introduced into these Provinces from Bengal about 60 years ago by one, Mir Salamat Ali, a Sadar Amin at Jubbulpore. There are no means, however, of confirming this statement, but it leads to the inference that the use of this confection is of comparatively recent introduction in the Central Provinces.

Madak is prepared in the following way :—

Take two tolas of pure opium, cut into small pieces with a knife, and put the pieces into as much water as a large breakfast cup will hold. Boil until the opium is thoroughly melted and mixed with the water. Strain the mixture through a thin cloth into a small brass bowl, squeezing the cloth to ensure that nothing of value is left in it. Pour the resulting liquid drop by drop through cotton wool placed on the edge of the bowl into another vessel. Boil the liquor thus doubly

strained until it becomes thick enough to adhere to the finger when inserted therein, i.e., until a consistency resembling that of freshly melted sealing wax is attained. Stir and allow to cool. Meanwhile strip leaves from a bough of babul, and dry them in the sun. Separate stalk and dust by shaking in a small sifting fan or basket used for cleaning grain taking the leaves so separated, and heat them in an earthen pot with a wide mouth until perfectly dry and black. Sprinkle with water to cool. Take about an ounce and half of the leaves thus prepared, and mix in with the opium syrup, using a piece of stick for the purpose. Make up the compound into balls, any number from 65 to 80.

Calcined babul leaves ready for mixing with opium syrup may be kept for months before use. Pan is sometimes used instead of babul leaves.

Madak balls are sold for one paisa each, and are smoked in a straight-stemmed pipe with a small brass-bound bowl. The pipe is termed in vernacular "Chungi."

APP. XXIX.

Central
Provinces.

APPENDIX E.

CIRCULAR No. 4.

From H. H. PRIEST, Esq., I.C.S., Officiating Commissioner of Excise, Central Provinces, to all DEPUTY COMMISSIONERS, Central Provinces.

SIR, Dated Nagpur, 5th September 1890.
In forwarding, for your information and guidance, copy of a letter from the secretary to the chief commissioner, containing the chief commissioner's orders regarding the proposal to close madak shops and prohibit the manufacture of madak, I have the honour to inform you that the instructions contained in that letter should have effect given to them from the 1st April 1891. From that date the consumption of opium, madak, ganja, foreign bhang, or majum on the premises of the licensed vendors of these drugs will be entirely prohibited, and a condition to this effect will be inserted

in all leases granted to such vendors. These orders should be promptly made known to all who are interested in the sale of drugs. When they come into force special care will have to be taken to prevent the illicit manufacture of madak, and for this end a watch must be maintained by both the police and excise officers upon all habitual assemblages of madak smokers, and the sources of supply should be quietly ascertained in all such cases. Attention is also invited to the instructions contained in paragraphs 3 and 4 of the secretariat letter, which should be very carefully complied with. From my own experience, I incline to think that it is possible to reduce considerably the number of madak shops in these Provinces, and deputy commissioners should carefully consider this point when submitting their annual proposals regarding the excise arrangements of their several districts in November next.

I have, &c.

H. H. PRIEST,
Officiating Commissioner
of Excise.

COPY of a LETTER No. 5106-500, dated the 14th August 1890, from L. K. LAURIE, Esq., I.C.S., Officiating Secretary to the Chief Commissioner, Central Provinces, to the COMMISSIONER of Excise, Central Provinces.

I am directed to acknowledge receipt of your letter No. 1767, dated the 8th instant, submitting the replies received by you from commissioners and deputy commissioners on the subject of your proposal to close madak shops and prohibit the manufacture of madak.

2. I am to say that after carefully considering the various arguments adduced, the chief commissioner is of opinion that, while there is much to be said in favour of the entire prohibition of the manufacture of madak, it is inadvisable, in view of the opinions expressed on the other side, to go as far as this at present. He thinks that the step which the facts and papers before him render justifiable and expedient, is to put a stop to the practice of allowing vendors of intoxicating drugs to maintain "taverns" for the consumption not only of madak, but of opium and ganja and all their pre-

parations. It should be a condition of all retail licenses hereafter granted for the sale of intoxicating drugs of any kind that the drug is not to be consumed on the premises. Persons who cannot do without their regular dose of a narcotic must carry home from the shops what they require and smoke, or swallow it in private. Gregariousness in habits of vice must no longer be encouraged by Government.

3. As a rule, I am to add, the opium and madak contracts should, in future, be sold together. The opium vendor should be also the madak vendor, and if he declines in any instance to combine the sale of the preparation with the sale of the drug from which it is prepared, the madak shop should be closed.

4. Finally, no new licenses to manufacture and sell madak should be given in places where there are no madak shops at present, even though there may be an opium shop. As an ordinary rule, madak-licenses should be granted only at large centres of population, where there is a considerable and permanent demand for the preparation.

APPENDIX XXX.

APP. XXX.
Central
Provinces.

ABSTRACTS OF EVIDENCE OF WITNESSES tendered for Examination from the CENTRAL PROVINCES, and not examined by the ROYAL COMMISSION.

[See Question 28, 103.]

Abstract of evidence to be given by the Rev. Israel Jacob, Missionary Priest of the Church of England and Chairman of the District Council, Chanda.

Question I. I have been a missionary for the past 20 years, the greater part of which I worked in Chanda, Central Provinces, and a few years at Indore, Central India, where abundance of poppy is grown and opium is manufactured and exported to other places.

My position and work have brought me into direct personal observation and acquaintance of several people of different status and position in society, who use opium in one form or another. I have taken an interest in the opium question, and discussed it with men of my own profession and intelligent native gentlemen of India. I have also read with attention what specialists have written on the subject.

Question II. My varied experience has led me to the deliberate opinion that opium eating, in moderate quantities, far from being harmful or injurious, is most beneficial to health at certain periods of life.

For instance, 95 per cent. of the population of Chanda use it as a prophylactic against infantile diseases. The administration of it to little infants is an absolute necessity with the labouring classes of people.

The suppression of opium manufacture, or laying further restriction on the sale of it, will be felt a great hardship by these people. Its use by the adult population is very limited.

Opium eating at the age of 50 is considered most efficacious in its effects in checking maladies of a certain nature incident to that stage of life.

Yes, my observation has led me to draw a distinction between the eating of opium and the smoking of it in the form of madak and chandu. The latter was observed to ruin the human system and to demoralize the consumer. The appearance of the madak smoker is generally emaciated, and he looks stupid, dull, and listless. Opium smoking therefore is, I consider, very demoralizing in its effects.

The public opinion is not adverse to its use either medicinally or as a mild stimulant in small doses.

If due regard is to be paid to the liberty of the ryot, I do not think it feasible, or at any rate advisable, to prohibit the growth of poppy and the production and sale of opium for any purpose.

The suppression of the sale of opium will, I fear, lead to serious and sad results.

Question V. Yes, I am acquainted with the present system in these Provinces for regulating the sale of opium. The system in vogue at present is the best, and I do not think any change or alteration is either called for or necessary.

Question VI. The people will, on no account, be willing to bear extra taxation to meet the loss of the revenue from opium to Government in any shape.

ADDENDA.

No. 1.—The consumption of opium in British India is comparatively very small. Its effects, morally and physically, are not perceived to be great, calling for any interference.

No. 2.—The use of opium *per se* is not an evil. It is not so deleterious an article as ganja or liquor. Therefore, its use need not be prohibited by law, more so as it is generally used as an article of necessity rather than of luxury.

No. 3.—Since opium is not an evil article *per se*, the revenue derived from it by Government is not an iniquitous one, and therefore it should not be surrendered.

No. 4.—Government have adopted wise and just measures to check the abuses of opium eating and smoking, and no further restrictions are necessary, except the closing of dens for madak smoking, where it is not so done already.

Abstract of evidence to be given by Rai Bahadur C. Narainswami, Pleader of Nagpur.

I had opportunities of informing myself on the use and effects of opium generally, and with special reference to the people in these Provinces and Berars. Question I.

Some of my servants were in the habit of eating and smoking opium, and I often watched their conditions.

During my practice as a pleader for the last 29 years in the Central Provinces and Berars, I have often come across persons in the habit of eating and smoking opium. I have also sometimes seen people smoking opium in Madakkhanas.

There are several forms in which opium is used. It is called—

Madak,	Arak,
Sadak,	Sith,
Chandu.	Posteen,
Kasumbha,	Burush, &c.,

according to the different modes in which it is manufactured. In these Provinces madak is used generally by low-caste Mahomedans, Kunbus, Marathas, and Koshtees. Many Marwarees and some Brahmans are in the habit of eating opium, and they, however, take special care to use nourishing food, such as milk, cream, sweetmeats, &c. after taking opium.

The effects of opium on persons habitually using it for pleasure (who generally indulge in large quantities, though commencing at first with small doses) and not as medicine, are to a great extent pernicious. The physical condition of persons always using opium is generally undermined. It gets gradually deteriorated. They lose all their energies. There is no lustre or bloom left on their features. They look pale and yellowish. Their vital and generative organs get affected. Their mind gets muddled and their brain weakened. They, in fact, become unfit for any active pursuit in life. By the use of this drug one's moral character is affected for the worse. When one gets to the habit of using opium he loses all control over himself and cannot do without it. In case of poor and lower classes who are habituated to the use of opium, they resort to the offences of theft, &c., when they have no money to buy it. The eating of opium is not so bad as that of smoking it. By smoking, one's constitution gets spoiled much sooner than by eating opium. When opium is taken in very moderate quantities, with nourishing food along with it, the poisonous effects of the drug are, in the majority of cases, minimized. Question II.

The use of opium is generally disliked. Habitual opium eating or smoking is looked upon by the public as a disgraceful practice, and a person who is a slave to this habit is looked down upon. Public opinion is adverse to the use of opium, except for medicinal purposes or in very small quantity. Question III.

There is no doubt a great possibility of smuggling, but this smuggling would not, I think, permit the importation of so much opium as to make the people use it in such large numbers and in such large quantities, as they are doing at present. There is, however, this danger that for want of opium, the people used to it may take to liquor, which will be worse. Question IV.

No poppy is grown, and no opium is manufactured in these Provinces, so there is no fear of any smuggling taking place in these Provinces, except by way of importation, which can easily be stopped by the same means which are now adopted for preventing the importation of smuggled opium.

I do not think that entire prohibition of the sale of opium, except for medical purposes, is unpracticable in these Provinces, where, as I have already stated, no poppy is grown and no opium is produced; but where its prohibition is impracticable, I think that if the manufacture in the form of madak and chandu be made Question V.

APP. XXX.
Central
Provinces.

penal and the licensing of the manufacture and the sale in the form of madak and chandu be entirely stopped, and the sale of opium only be allowed, the consumption would be greatly checked. There appears to be necessity of making any modifications in the present system of regulating the sale of opium.

Question IV.

I do not think the people would in any way be willing to bear any extra taxation on account of the loss of revenue by the prohibition or further restriction of the use of opium. As far as my experience goes, native opinion is decidedly opposed to fresh taxation in any shape or form.

Abstract of Evidence to be given by Rao Saheb Balwant Rao Bhuskatey, Jagirdar of Timorni and Honorary Extra-Assistant Commissioner, Nimar.

Question I.

Yes; I have had opportunities both, special and general, for informing myself on the subject of the use and effects of opium. I have a number of dependants, amongst whom opium eaters form a part. I have also come across people who are habituated to the use of the drug in question, but, in my experience, I have found that such opium consumers do not exclusively belong to a particular sect or class of people, and higher classes of people are not seen smoking opium. On tours to my Jagir villages, I have found that smoking is much resorted to by lower orders of people. In my visits to parts out of British India, I met with people taking opium in liquid form called Kusambba. It would not be out of place, were I to mention that this Kusambba is also used in some parts of British India, though to a very limited extent.

Question II.

As far as my experience goes, opium-eating of itself does not necessarily lead a man to immoral practices, but physically it does affect the human constitution to a greater or less degree according as the consumers get nourishing food or otherwise. There is undoubtedly a noticeable difference between eating and smoking

opium; smoking, even with a good diet, utterly impairs human health, while eating opium in small doses serves as a tonic, and the more so in old age.

Opium-eaters are not at all, in the opinion of the public, held in any low estimation; opium smokers, on the other hand are looked upon with great abhorrence, and are very much censured.

Question III.

I dare say that if the growth of poppy be entirely prohibited, it would be a death-blow to those who are already accustomed to it. I should even go the length of saying that some of them would succumb to death, for I have met with people who, trying to get rid of this practice, have fallen victims to death after suffering from several diseases as diarrhoea, &c., and others, in their turn could not but retain their long-continued habits. Prohibition will also encourage smuggling on all sides.

Question IV.

With regard to this question, my knowledge and information are limited, but I could suggest that smoking only should be entirely prohibited, except in the cases of those who are already addicted to it, they may be allowed this privilege for reasons stated in answers to the last question. And for these habitual smokers a place should be fixed wherein they should be allowed to smoke at particular times of the day, and with a limited number of pills. This would not be innovation to them, as they are already habituated to resort to such assemblies. I can confidentially say that this modification would not go to prohibit smuggling in its entirety, but it would be a kind of check to a certain extent, as these people would be ashamed to resort to these public-houses.

Question V.

People would never be willing to bear extra taxation for the prohibition or further restriction, as it has been already pointed out that eating is not censured by them, but, on the contrary, is held as a tonic, and in case of smoking where restriction is necessary, the resulting loss cannot be compensated by extra taxation for the aforesaid reasons or additional taxation, as the practice of smoking is in use in lower classes of people who are very poor.

Question VI.

The QUESTIONS referred to in the preceding ABSTRACTS are questions issued by the Local Administration, Central Provinces, to the Witnesses selected to give Evidence. These Questions are printed below.

List of Questions to be answered by Witnesses who have been selected to give Evidence before the Royal Opium Commission.

(1.) Have you had any special opportunities for informing yourself on the subject of the use and effects of opium either (a) generally, or (b) with reference to any particular locality or class of people?

If so, what have these opportunities been?

(2.) What opinion have you been led to form regarding the effects of opium on the moral and physical condition of the people who habitually use it? Have you been led by your experience to draw any distinction between the eating and the smoking of opium? If so, state what that distinction is.

(3.) What is the opinion of the natives with whom you are familiar regarding the use of opium? Is there any strong public opinion adverse to its use other than medicinally?

(4.) Do you think that, with reference to the habits of the people and the possibility of smuggling, it would be possible to entirely prohibit the growth of the poppy and the production and sale of opium, except for medical purposes?

(5.) Are you familiar with the present system in these Provinces for regulating the sale and manufacture of opium? If you consider that entire prohibition of sale, except for medical purposes, is impracticable, do you think that consumption could be checked by any modification of the existing Government system? If so, what modifications would you suggest in the present arrangements for (a) licensing the sale of opium, (b) licensing its manufacture and sale in the form of chandu and madak?

(6.) If prohibition or further restriction were to be decided on, and if the resulting loss of revenue were to make other taxation necessary, do you think that the people would be willing to bear such extra taxation?

APPENDICES.

APPENDIX I.

APP. I.
Bengal opium
system (1883).

CORRESPONDENCE REGARDING THE RECOMMENDATIONS OF THE OPIUM COMMISSION OF 1883.

No. 1218-52 O., dated 7th April 1884.

From A. P. MACDONNELL, Esq., Officiating Secretary to the Government of Bengal, Revenue Department, to the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Finance and Commerce.

With reference to the correspondence ending with my letter No. 429 T.—R., dated the 25th June 1883, regarding the remission of outstanding advances in the Behar Opium Agency, and Mr. Bolton's letter, No. 2344-176 O., dated the 13th November 1883, submitting a copy of the Report of the late Opium Commission, I am directed to submit, for the consideration and orders of his Excellency the Governor-General in Council, the accompanying copy of a letter from the Board of Revenue, No. 55 B., dated the 19th January

1884, containing an expression of their opinion on the subject of the general policy which should be followed by the Government in regard to the remission of outstanding balances of the Opium Department, and on the recommendations of the Opium Commission in the matter.

2. The Commission observe that until 1878 it had been customary to allow remissions of outstanding balances to opium cultivators, on proof of the destruction of their crops and of their inability to pay their debt to Government by the delivery of opium, and that this policy was altered in September of that year. They condemn this change as tending to reduce the extent of opium cultivation and to make it unpopular with the ryots, and advocate a reversion of the policy of wholesale remission on failure of crops. To bring home the benefit of the new policy to the people, they would remit all balances at present outstanding, and would refund all the collections that have been made on account of last year's crop.

3. After a careful consideration of the correspondence which preceded and followed the issue of the orders of the 5th September 1878, referred to by the Commission,* the Lieutenant-Governor finds that those orders

were not opposed to the ideas of the most experienced officers of the Opium Department. When, in 1878, Mr. D'Oyly, then officiating as Opium Agent of Behar, recommended, in opposition to the wishes of his sub-deputy agents, the remission of the entire outstanding balances of the Behar Agency for 1877-78, amounting to Rs. 6,59,112, the Board of Revenue supported him, on the ground that, if some such leniency were not shown, the orders which had been issued to reduce the price of opium from Rs. 5 to Rs. 4-8 a seer would injuriously affect cultivation; but the recommendation was negatived by Sir Ashley Eden, who, while enjoining leniency in recovering balances, thought the policy of total remission then advocated by the Board (and now by the Opium Commission) to be a mistaken and mischievous policy, for the reasons stated in the letter of the 5th September 1878.

4. The Commission, I am to observe, do not say much to weaken the arguments against the policy of entire remission of balances on failure of crops; while the present Board show good reasons in support of their position, that the collection of outstanding balances in 1878 had less to do with the falling off of cultivation than the Commission seem to suppose. Mr. Rivers Thompson himself fears that, if the Government were to support the views of the Commission, it would afford a direct incentive to slothful and careless cultivation and dishonest dealings. There can be little doubt, he thinks, that if an opium cultivator knew that a failure in his opium crop would not render him liable for the advances made to him, more advances would be taken and less careful cultivation practised than at present. Many opium cultivators would doubtless cultivate none the less carefully because they knew that they were protected from the worst effects of failure,

but many, again, would give up all attempt at improvement when the season seemed to be going against them. In a bad season, moreover, there would be no security that all the opium produced would be delivered to Government if the cultivators were protected from the results of short delivery. If the outturn of a field were much reduced, through blight or any other calamity, the inducement to deliver to the factory the whole of the produce would be much weakened, when it was no longer incumbent on the cultivator to make good the advances received by him.

5. For these reasons, the Lieutenant-Governor, as at present advised, cannot support the proposals of the Commission. The interests of the Government involved in the matter are so important and extensive that any principle of wholesale remission of outstanding balances seems to him unjustifiable. Even in land revenue cases the rule of suspension rather than of absolute remission of the demand has been enjoined both by the Secretary of State and the Government of India; and the same principle should, in the Lieutenant-Governor's opinion, regulate the action of the Government in dealing with opium transactions. In cases of proved hardship, where leniency of treatment is undoubtedly required, remissions should continue to be made as hitherto; and with the view to prompt disposal of such cases some procedure based on paragraph 664 of the Commission's report might be adopted. Improvements should also be introduced into the khatadari system, whereby the industry of one ryot shall cease to be taxed for the sloth of his neighbour.

No. 55B., dated 19th January 1884.

From C. E. BUCKLAND, Esq., Officiating Secretary to the Board of Revenue, Lower Provinces, to the SECRETARY TO THE GOVERNMENT OF BENGAL, Revenue Department.

I AM directed to acknowledge the receipt of Government Order No. 2650-196 O., dated 11th December 1883, forwarding a copy of a letter from the Secretary to the Opium Commission, dated 22nd October 1883, and requesting an expression of the Board's opinion on the subject of the general policy followed by Government in regard to the remission of outstanding balances of the Opium Department.

2. In reply, I am to say that immediately on receipt of the orders of Government confidential instructions were issued to the opium agents to postpone pressing for the recovery of outstanding balances, and the Board now, in accordance with the orders of his Honour the Lieutenant-Governor, beg to submit their opinion on paragraphs 3 to 6 of the letter from the Secretary to the Opium Commission.

3. In the letter in question, the Board observe that the members of the Opium Commission express their conviction that the policy regarding the realisation of balances, which was announced in 1878-79, has caused and is causing serious injury to the interests of the Department, and that every day during which that policy is allowed to remain in force strengthens the feeling of dissatisfaction amongst the cultivators. They recommend that the Government should accept the principle that advances which from no fault of the cultivator cannot be covered by deliveries of opium shall be remitted and written off the accounts. It is also suggested that not only should the principle be announced as an expression of the future policy of Government, but that it should be extended with retrospective effect to the balance of the present season.

4. Before proceeding to consider the question of the policy to be followed in regard to the realisation or remission of outstanding balances, the Board would invite the attention of Government to certain statements and assumptions on the part of the Opium Commission regarding the results of the orders passed in 1878-79, which seem to be hardly borne out by facts.

APP. I.

In paragraph 659 of their report, it is asserted that the Orders of 1879 "resulted in so alarming a forecast of "decrease of cultivation for the ensuing season that in "the early part of 1880 the need of an increase in the "price to be paid for crude opium (from Rs. 4-8 to "Rs. 5) began to be pressed upon Government." The Board are not aware on what evidence this statement is based; but if such were really the case, it seems remarkable that the Behar Agent should not have mentioned it in the reports which were submitted to Government, urging an increase in the price to be paid for crude opium. Mr. Lewis, the Officiating Agent, in a letter dated 16th July 1879, attributes the disinclination of the ryots to cultivate the poppy (1) to the lowering of the price paid by Government for the crude drug; (2) to the growing precariousness of the crop; and (3) to the increasing profit to be derived from other crops grown on similar lands. In a report, dated 16th January 1880, Mr. Mangles (for whom Mr. Lewis had been officiating) stated as his opinion "that whatever "other causes may have been at work tending to "diminish the extent of our poppy cultivation, the "collection of our outstanding balances has had little "or nothing to do with it." In the same letter the Agent added that, though several deputations of cultivators had waited on him in the different districts through which he had passed, in no single instance was the remission of balances asked for. The assertion of the Commission that the diminution of poppy cultivation in the year 1880-81 may be fairly ascribed to the exaction of the debt to Government incurred by the cultivators in 1877-78 is not borne out by the official reports of those who were in the best position to judge of the causes that chiefly influenced the action of the cultivators. Again, the Commission, in paragraph 661 of their report, state that the second consequence of this policy was that the price of crude opium had to be raised to Rs. 5 per seer throughout the Behar Agency in 1880-81, and throughout the Benares Agency in 1881-82. The Board must here again observe that the statement made by the Opium Commission is not borne out by any of the official reports submitted at the time. Mr. Mangles, in a letter dated 5th December 1879, whilst endorsing his predecessor's (Mr. Lewis') recommendation for an increase in the price to be paid for crude opium, added that the previous lowering of the Government price was received with disfavour, not only because the ryots' profits were thereby reduced, but because there was no certainty that the reduction would stop at Rs. 4-8, and that a further reduction seemed to the ryots to be not impossible. An element of uncertainty was thereby introduced into what had hitherto always been regarded as fixed and sure, and these reasons caused the cultivators to entertain in their minds the question whether the advantages to be derived from the cultivation of the poppy were such as to induce them to continue it. Mr. Mangles further pointed out that the unfortunate results of the past two seasons had done much to discourage the ryots in regard to the cultivation of the poppy, and that opium was no longer, as it had been in former years, the most lucrative crop that the ryot could cultivate; wheat, barley, and peas giving as good a return, and potatoes and sugar-cane a far better one. The necessity of an increase in the price paid by Government for opium was strongly pressed by the Agent, but nothing is to be found in his reports which can justify the statement that this necessity was considered by him to be in any way due to the Government orders of 1879 regarding the recovery of outstanding balances.

5. The views expressed by the Agent in the matter do not appear to have been completely shared by the Board, inasmuch as the latter, whilst admitting in their letter to Government, No. 182 B., dated 15th March 1880, that the discouragement which had been felt by the ryots was mainly due to the extensive failure of the crop, were of opinion that something might be due to the recovery of the unprecedented large sum of six lakhs of rupees on account of the balances of 1877-78. The Board accordingly recommended that a more definite and liberal policy should be adopted in regard to the recovery of advances where the crop had failed, but these views were not concurred in by his Honour the Lieutenant-Governor, who directed that the policy laid down in 1879 should be adhered to. That the remission of outstanding balances amounting to more than six lakhs of rupees would be an exceedingly popular measure amongst the khattadars, if not with the assamees themselves (the fact of the remissions reaching these latter being in many cases open to doubt), the Board do not, of course,

question, but their official records fail to show that the reduction of the area under cultivation was due to the orders of 1878-79, or that, as stated by the Commission, they had the effect of compelling Government to raise the price of opium earlier than would have been otherwise necessary.

6. It is desirable to refer here briefly to the circumstances under which the orders of 5th September 1878 and 30th April 1879 were passed, and to state what was the policy laid down in those orders, a policy which the Opium Commission describe as unwise, unjust, and unworthy of Government.

The proposal before the Lieutenant-Governor Sir A. Eden at the time these orders were passed was that the entire outstanding balances of the Behar Agency for 1877-78, amounting to more than 6½ lakhs of rupees, should be remitted. The Lieutenant-Governor declined to accept without reserve the position that the cultivation of opium was to be a purely one-sided arrangement, under which, when the season was a good one, the cultivator was to gain; when it was unfavourable, the Government was to be the sole loser. He held that some consideration should be given to the ryot's capacity to repay a debt irrespective of his opium crop, which in many cases formed but a small portion of his assets, and that those who were able to repay the advance they had received should be made to do so, leniency and total remission being granted to petty cultivators who had suffered large loss of crops, and were unable to repay any portion of the advances they had received. Whilst desirous of making all possible concessions to the opium cultivators, such concessions must, the Lieutenant-Governor held, be consistent with the duty of Government to the payers of revenue at large. Sir A. Eden was of opinion that the position which Government should hold towards its opium cultivators should be similar to that held by a liberal and enlightened zemindar towards his tenants; that in bad seasons every possible leniency and consideration should be shown to the cultivators; but that before wholesale and indiscriminate remissions were made, the condition of the cultivators (many of whom are men of substance), and their ability to repay the advances made to them by the Opium Department, should be taken into consideration.

7. The members of the Opium Commission, in their enthusiasm in favour of the yeoman's service rendered to the State by the typical opium cultivator, Bishn Koeri, view with some scorn the idea that the ordinary tax-payer should grudge him the remission of the balances due from him for failure to complete the contract which he entered into when he received his advance on account of opium. Putting sentiment aside, it is desirable to consider the question from a practical point of view, to see whether there are sufficient grounds for the opinion advanced by the Opium Commission in paragraph 661 of their report, that unless the policy enunciated in the orders of 1879 is speedily reversed, or the price of crude opium is raised, it will be found that the prospects of the opium cultivation in the Behar Agency have been seriously, perhaps irretrievably, ruined.

8. The difference between what is laid down by the Commission in paragraph 663 of their report as the true principle to be observed in dealing with opium cultivators and the policy laid down by Sir A. Eden in the orders of April 1879 appears to the Board to be as follows: The Opium Commission are of opinion that, on proof of the inability of the ryot, owing to the failure or destruction of the crop, to make good his debt to Government, either whole or in part, by the delivery of opium, remission of advances should be allowed. Sir A. Eden, on the other hand, was of opinion that the remission of the advances should not depend merely on the failure of the opium crop, which often forms but a very small fraction of a well-to-do ryot's cultivation, but that his general ability to liquidate the debt should be taken into consideration, all pressure being avoided and the greatest tenderness shown to cases of real hardship.

9. It seems to the Board that the Opium Commission have not, in considering the question, had sufficient regard for the altered circumstances of the country, and the different position which the opium cultivator now occupies throughout a large extent of the area in which it is grown. Some few years ago the poppy cultivation was the most lucrative that a ryot could engage in. It was the only crop, except indigo, which was grown under a system of cash advances, the latter crop being notoriously unremunerative. The cultivator had the prestige and protection from zemindar and

planter which the fact of his being a ryot under advances from Government and the presence of gomastah and zilladar afforded him. There was but little competition in the demand for other crops, all of which, probably, went into the hands of the village mahajun, and he was well content, looking to the advantages it brought him, to give the best of his time and his labour and the largest share of the water from his well to his poppy cultivation. His chief fear was that he might lose his status as an opium ryot. Under such a state of things, the departmental officers might rest assured that if the cultivator did fail to give the requisite quantity of crude opium, it was owing to causes beyond his control, and not to any default on his part.

10. Now, however, there can be no such assurance. The railways and other means of communication which have been opened out, and the ever-growing demands of the commerce of the country, have completely changed the state of affairs. Opium has lost its place as the most lucrative crop a cultivator can grow. The anxiety is no longer so much on his part to keep his status as a Government cultivator, but on the part of the gomastah to retain him. Crops which pay him better compete in a year of short rainfall, like the present, with the poppy for their share of irrigation from his well. The liberal cash advance still forms an inducement to him to continue his poppy cultivation, but it seems to the Board that the only means by which Government can ensure that a full and proper share of attention shall be given to the opium crop is by making the ryot understand that the mere failure of his crop of poppy will not, as a matter of course, lead to the remission of his unliquidated debt, without regard to his general circumstances and ability to pay what he owes. The circumstances of the day appear to the Board more and more to require that the opium cultivation should be carried on on a proper business footing, and that the loose system under which, without detailed inquiry, wholesale remissions were made should be put a stop to. They concur in the following opinion expressed by Mr. Worsley, the Collector of Mozufferpore, in his report in connexion with the balances of 1877-78, and fully endorsed by the experienced Commissioner of the Division:—

“In my opinion any undue or sentimental leniency is always calculated to demoralise a ryot. If contracts annually made with ryots be fair, voluntary on their part, and likely to prove remunerative to them under ordinary conditions, I am satisfied that it is the worst possible policy (except in seasons of general distress) to release them from their obligations in the few or exceptional instances in which they suffer losses from such contracts. I have observed that the best ryots are those who hold lands on fair and equitable terms, and who are required by their landlords to pay their rents strictly and punctually.”

11. From paragraph 662 of the Commission's report it appears that they advocate the system under which large remissions are made in bad seasons in preference to that of paying a better price for the crop; and it is on this point that the Board find themselves at issue with their conclusions. The Board are of opinion that the time has gone by when the opium cultivation can

* Paragraph 662, Opium Commission's report.

be advantageously continued on the plan advocated by the Commission. The system* under which the cultivator looked to Government to cherish and protect him, must, the Board think, give place to a more business-like and practical system, under which the ryot will feel that he has entered into an agreement which entails some responsibility on him for its fulfilment. There are, it is hardly necessary to point out, many intermediate stages between a bumper crop and that in which blight, hail, or early hot winds either totally or partially destroy the poppy, in which the amount of produce must mainly depend on the exertions of the ryot, the degree of attention which he pays to his cultivation, and the share of the well or irrigation water that he gives the plant. Unless he is made to feel that his profits depend on his individual exertions, and that he will be a sufferer if his opium crop is neglected, the Board are of opinion that the temptation will be great for the ryot, whilst taking advantage of his position as an opium cultivator to obtain advances without interest, to neglect the interests of the Government, in favour of those of the harder taskmaster to whom he is under bond as to his potatoes or wheat crop. In cases of real hardship and general inability to repay the advance received, the Board would advocate the greatest liberality towards the opium cultivator, but they would have each case

treated singly and exceptionally, and the remission granted only after full inquiry.

12. One of the great disadvantages connected with the existing system of general remissions in bad years is the uncertainty and inequality of its operation. As pointed out by Mr. Worsley (Collector of Mozufferpore in 1879), if there is one thing more than another which makes ryots discontented it is to see wholesale remissions made to their fellow ryots after they themselves have had to pay up their own balances. Unless general remissions are made to all cultivators, it is very bad policy to remit the balances of a considerable section of the cultivators by one stroke of the pen.

13. In considering this question it must not be forgotten that in districts in which the khattadari system prevails, the extent to which the remission reaches the actual cultivator is always open to doubt. Practical experience hardly confirms, the Board are inclined to believe, the view expressed by the Commission in paragraph 249 of their report, that the confidence reposed in the khattadar is seldom abused. Mr. Kemble, the opium agent of Behar, in a letter dated 5th instant, on the subject of the balances of the season 1882-83, outstanding and realised, reports that in the opinion of the sub-deputy opium agent of Tirhoot the balances have been recovered from the actual cultivators, but are kept back by the khattadars. Further on in the same letter he again refers to the fraudulent practices of the khattadars and amlah as amongst the causes which have led to land in other districts going out of opium cultivation.

14. The Board are of opinion that much may be done to improve the popularity of the opium cultivation by the measures proposed by the Commission to remedy the admitted inadequacy of the present salaries of the kothi establishments. The Board are inclined to think that some of the recommendations of the Commission are on a somewhat unnecessarily liberal scale; but they have no doubt that the employment of better paid and more honest agency would make the cultivation of poppy more popular. The Board fully realise the probability that the adoption of the principles of 1879 instead of that recommended by the Commission will lead from time to time to the necessity of some increase in the price to be paid for crude opium as the competition with other and more remunerative crops becomes keener and keener; but they take leave to doubt whether in the long run the Government will be a loser by placing its dealings with opium cultivation on a proper commercial footing. At any rate the Board can see nothing in the adoption of such a policy which can justify the severe condemnation passed on it by the Commission of its being unwise, unjust, and unworthy of Government.

15. In conclusion, I am to state that the policy the Board would recommend may be briefly summarised as follows:—

- (i.) An adequate price to be paid for crude opium, to be settled from time to time with reference to the competition of other crops.
- (ii.) Wholesale remissions of unliquidated advances to be put a stop to at once; the ryot's general ability to pay, his previous season's opium crops, &c., being taken into consideration before remission is granted.
- (iii.) Remissions to be granted liberally in bad seasons in cases of real hardship, where found to be actually necessary, each case being treated as a special one, and remission only made after inquiry.
- (iv.) Adequate salaries to be paid to the native establishment, and the abolition of all illegal gratification strictly enforced.

No. 1701, dated 18th June 1884.

From J. F. FINLAY, Esq., Officiating Under Secretary to the Government of India, Department of Finance and Commerce, to the SECRETARY TO THE GOVERNMENT OF BENGAL, Revenue Department.

I AM directed to acknowledge the receipt of your letter No. 1218-520, dated 7th April 1884, forwarding copy of a letter from the Board of Revenue, No. 55B., dated 19th January 1884, and conveying an expression of the views of his Honour the Lieutenant-Governor on the proposals of the late Opium Commission regarding the remission of outstanding balances of advances to opium cultivators, when a ryot is unable, owing to the failure or destruction of the poppy crop, to repay his

APP. I.

debt to Government, either wholly or in part by the delivery of opium.

2. In reply, I am directed to say that the Governor-General in Council entirely concurs in the conclusions of his Honour the Lieutenant-Governor as set forth in the closing paragraph of your letter.

3. His Excellency in Council thinks that on the occurrence of such a total failure as to lead to the destruction of a ryot's crop (the only case in which even under the old practice remission was to be allowed), it will be found the better course, in the interests both of the Government and of the cultivator, to arrange for suspension of demand extending over a period proportionate to the ryot's means, and the area on which the crop has been destroyed. Remission in part or in whole should be reserved for cases where a ryot is known to be so completely deprived of all resources as to make the payment of his arrears by instalments practically impossible. In cases of serious disaster, liberal suspensions and rare remissions will probably be found to be the best policy in dealing with opium transactions. Ordinarily, and where the damage done to the whole or part of a crop is not of a nature to be called destruction (where, in fact, it is only a question of a short crop or indifferent season), even suspension should be very cautiously allowed.

4. In conclusion, I am directed to say that the Governor-General in Council desires that arrangements may be made for the introduction of field books on the plan sketched in paragraph 664 of the Commission's report in order to facilitate the disposal of claims to remission of advances.

No. 980 T. R., dated 28th June 1884.

From A. P. MacDONNELL, Esq., Officiating Secretary to the Government of Bengal, Revenue Department, to the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Finance and Commerce.

In continuation of my letter No. 1218—52 O., dated 7th April 1884, I am now desired by the Lieutenant-Governor to submit, for the consideration of his Excellency the Governor-General in Council, the following observations on the Report of the Opium Commission, copies of which have already been forwarded to the Government of India.

2. The events connected with the damage which befel the Benares Provision Opium of 1880-1 are known to the Government of India, and need not be related here in any detail. It will suffice to say that, in order to ascertain the exact facts of the case, and apportion responsibility for the result, a committee of inquiry was appointed, composed of Messrs. Reynolds and Monro of the Civil Service, and Dr. Warden, chemical examiner to this Government. The report of that committee was submitted to the Government of India, with my letter No. 9 of 3rd January 1883, a further communication being at the same time promised. The Government of India, in acknowledging the receipt of the committee's report, expressed an opinion that possibly the time had come for a thorough examination and re-organisation of the establishments and system of working of both agencies. The opinion on these points of the Bengal Government was asked for, and generally on the scope and direction such an inquiry should take. Accordingly, in my letter No. 859—80 O. of 10th March 1883, a line of inquiry was sketched out by the Lieutenant-Governor and the Bengal members of the Commission nominated. Some demi-official correspondence followed, in which the Lieutenant-Governor was given to understand that his proposals were acceptable to the Government of India, and later on a formal expression of this approval and the orders of the Government of India appointing the Commission were received. Meanwhile the Commission had gone to work under authority of the Lieutenant-Governor's order No. 1,005 of the 22nd March, as it was desirable that they should visit the opium-producing districts during the weighing season. They were directed to prosecute their inquiry on the lines of my letter (above referred to) dated 10th March, to the Government of India; and as the subsequent detailed instructions were not inconsistent with the substance of that letter, the Commission's proceedings were in no way impeded. The Commission were at work for seven months. Their report was submitted on 20th October 1883; and though, perhaps, it is allowable to think it defective in some degree from a financial and statistical

point of view, it must still be pronounced a valuable and interesting record of research, industry, and observation.

3. In forwarding their report to this Government (in accordance with the instructions of the Government of India), the Commission, while requesting that their recommendations might be considered as a whole, represented that on one question, namely, the policy of recovering advances not covered by deliveries of opium, immediate orders were necessary. There had been a most serious failure in the opium crop in 1883, and the Commission were apprehensive that if the policy of recovering advances, insisted on by Sir Ashley Eden, were followed up, the interests of the opium revenue would be gravely prejudiced. The Commission referred to that portion of their Report (Chapter 22, Part II., and Chapter 4, Part III.) in which the question was discussed, and urgently pressed for the reversal of the existing policy of recovery when people became able to pay, and the adoption of the "principle that advances which (from no fault of the cultivator) cannot be covered by deliveries of opium shall be remitted and written off the accounts." In accordance, therefore, with the Commission's wish, that question was dealt with in the Lieutenant-Governor's letter No. 1218—52 O., dated 7th April 1884, to the Government of India. In that letter Mr. Rivers Thompson, without supporting a policy of total remission as urged by the Commission, advocated leniency in recovering advances, and remission in all hard cases. The Lieutenant-Governor has just received the orders of the Government of India, No. 1701 of the 18th instant, approving of his conclusions upon this point.

4. In now submitting the Commission's Report to the Government of India, the Lieutenant-Governor is obliged to say that he cannot deal finally with it. Indeed the Report is so voluminous, and the ground it traverses so varied and debated, that it would be hopeless to attempt to obtain a satisfactory solution to all the questions raised in a single letter. The numerous recommendations and reforms suggested involve, too, a very large additional expenditure; and as the charge is an Imperial one, it is only the Government of India who can decide whether this increased outlay should be accepted. It is, however, open to the Lieutenant-Governor to comment upon the changes proposed by the Commission from a general or departmental point of view.

A further difficulty is found in the fact that the Commission have not elaborated, in any precise form, an estimate of the cost which an acceptance of their proposals would entail. It would, of course, be possible for this Government to ascertain from other sources the total additional expenditure involved in the acceptance of the Commission's proposals. But this would be a waste of time and labour if the Government of India declined to consider the principal changes which the Commission would introduce; or if accepting them as regards the chief control of the department, they preferred to work out the details with the aid of a director-general. Therefore, in the present communication, the course the Lieutenant-Governor proposes to adopt is to review the main features of the Report, to ascertain what the policy of the Government of India is on those main features, and thus, having come to an understanding with the Government of India, to take up the Report in detail, and work the proposals out in communication with the local officers and the Board of Revenue, should it be resolved to maintain the superintendence which the Board now exercise over the Department.

5. The Commission's Report is divided into three parts. Part I. gives a historical summary of the Department from the earliest times of which we have any information up to the present day. Part II. reviews the existing condition of things in all branches of the Department; while Part III. sets forth the recommendations which the Commission make "for the purpose of placing this important Department of the public service on a satisfactory footing, and for rectifying such errors and supplying such deficiencies as our inquiries have shown to exist in its organisation and working." Each of these main divisions is sub-divided into minor divisions, but it is unnecessary here to enumerate the latter.

6. *Historical.*—The history of the opium monopoly is a history of small beginnings and great development. Less than a century ago it formed an insignificant portion of the East India Company's business. "Now the magnitude of the interests involved is indicated

" by the fact that more than 1,300,000 ryots cultivate the poppy every year under advances from Government; and even this number does not adequately express the truth, as a large share of the labour required for the production of the drug falls to the lot of the women and children of the ryot's family. " We should probably be within the mark in saying that the Opium Department calls into activity the energies of not less than four million persons of the agricultural classes. The cash paid to the cultivators for opium flower-leaves and trash amounts to " about 180 lakhs of rupees a year." The earliest authentic reference to opium cultivation is said by the Commission to occur in the *Ain-i-Akbari* (1590 A.D.), which states that opium was a staple crop throughout what is now the Benares Agency, in Malwa, and in the Punjab. The trade in opium in Mogul times was an Imperial monopoly, and " was farmed at a quit-rent." Until the British acquired sovereignty in Bengal and Behar, the Dutch were the chief foreign purchasers of opium, though 200 years ago, the first orders were given to make opium a part of the East India Company's investment.

7. During the political commotions of the first half of the eighteenth century, when the Mogul power was on the wane, the opium monopoly fell into abeyance, and the cultivation of the poppy seems, at all events in what is now the Behar Agency, to have been carried on by the ryots without license, on advances from Patna merchants, who, in their turn, disposed of the drug to the English and Dutch. The triumphs of Serajudowla, however, brought ruin on the English merchants, and as there was no competition the Dutch commanded the opium market. The price of opium accordingly fell so low that the native dealers could no longer make advances, and the production of the drug declined. This state of things prevailed when the victories of Clive enabled the English merchants to recover their lost position at Patna. They found the trade disorganised, and, in default of native dealers, the European merchants began to make advances direct to the cultivators. This, however, led to quarrels, which resulted in the re-establishment of the monopoly by Mr. Hastings in 1773, on the understanding that a certain quantity of opium was to be delivered annually to the Dutch, Danish, and French companies. Political complications subsequently led to the annulment of the understanding with the Dutch and the Danes, but that with the French is still in force.

8. From 1773 to 1781 the exclusive right to manufacture opium on account of the East India Company was sold annually; and it would seem from the Fifth Report of the House of Commons on the affairs of the East India Company (to which the Commission make no allusion) that under the first contract Behar opium was deliverable at Rs. 320 and Oudh opium at Rs. 350 per maund. Stipulations were inserted in those contracts against oppression of the cultivators, and the Provincial Council were enjoined to see that the stipulations were observed. From 1781, according to the Opium Commission, sale contracts were made for four years; and in 1785 the sales became competitive, various stipulations, designed in the interests of the cultivators, being at the same time insisted upon. According to the Fifth Report, however, competitive sales and contracts for four years were introduced simultaneously in 1785, while power was also taken to appoint inspectors to superintend the provision and manufacture of opium, and collectors were enjoined to protect the cultivators against the contractors. These competitive sales, according to the Commission, while for the time benefiting the revenue, left the contractors a smaller margin of profit, and consequently lowered the prices paid by them to the cultivators. Adulteration of the drug, and its depreciation in the market, ensued, and accordingly, say the Commission in 1797, with the object of "restoring and improving" the character of the opium, the contract system was done away with, and the agency system, which has lasted ever since, was introduced. Doubtless this improvement was a result of that scrutiny which Lord Cornwallis instituted in the opium as well as in all other Departments of the Administration—a scrutiny which brought to light the fact that the contract system had developed impositions in the nature of *abwabs* on cultivators "in the same manner" (to quote the Fifth Report) "as practised in the land rents." This portion of the Report then conveys a valuable lesson, and gives us some insight into what may be expected if the agitation against the opium monopoly should be successful. The early history of the question teaches us that the abolition of the monopoly would lead

to increased production and increased consumption among the people of India; that competition among exporters would follow, and, as a natural consequence, that the opium produced would be inferior. An inferior article would succumb in the competition with the Chinese drug, and thus the opium revenue, which now depends on the excellent quality and character of the drug, would tend to fall off and ultimately become extinct. The result would be a heavy loss to the people of India and increased taxation.

9. The agency system, under which the Department is at present administered, was thus established in 1797. Two agents were appointed, the Behar agent being purely an opium officer, while until 1835 the Benares agent had other duties to perform in addition to his function as opium agent. Until 1833 the agents were paid partly by fixed salaries, and partly by commission, which was abolished in that year. While it continued, the opium agent of Behar was perhaps the best paid civilian officer in the service, drawing from commission alone in some years nearly a lakh of rupees. The agents were at first assisted by independent deputy agents, but in 1822 the collectors of the opium districts were made deputy opium agents with a commission on the sale profits. In 1835, at Captain Jeremie's suggestion, an independent opium service of sub-deputy agents was constituted, and the active connexion of collectors with opium fell into abeyance. Since that time they have remained *ex-officio* deputy agents, but they now never interfere with the work of the Department.

10. It has been stated that Captain Jeremie was the originator of the separate opium service. To him is also due the introduction of a more scientific method of manufacture of the drug in both factories. For the first 25 years of the monopoly system, the factory testing and manufacture were superintended by the agent. In 1826 Captain Jeremie, quartermaster of a native regiment, who had made certain experiments in opium cultivation and manufacture, submitted proposals to Government, which ultimately led to his appointment as "first assistant to the agent" at Patna, which designation was, in 1839, changed to the "principal assistant." After Captain Jeremie's time the post was held by the civil surgeon of the station, in addition to his other duties. But from 1846 in Behar, and from 1859 in Benares, the post was made a separate one, the incumbent being placed wholly under the control of the agent.

11. Reverting to the connexion of the Department with the Government, it will be seen that when in 1797 the agency system was established, the control of the Opium Department was at that time vested in the Board of Trade, the President of which was *ex-officio* a Member of Council. The opium accounts, however, were always kept distinct from those of the Commercial Department, so that when by Regulation IV. of 1819, the "Board of Revenue in the Customs, Salt, and Opium Departments" was constituted, no difficulty was experienced in transferring the opium business to the new Board at Calcutta, which, consisting at first of three, was, from 1826, composed of two members. In 1834, on the creation of the Government of Agra, the Governor-General in Council declared it necessary to retain the management of the Benares Opium Agency by the Board of Customs, Salt, and Opium at Calcutta, "in order to secure that the whole concern, whether in Behar or Benares, may be conducted on one uniform system." By these orders the Benares Agency is still governed. To bring this portion of the history of the Department down to the present time, it need only be added that by Act XLIV. of 1850, the Customs, Salt, and Opium Board was merged in the Board of Revenue at Calcutta, the number of members in the latter Board being at the same time increased from two to three. In 1865, however, a vacancy in the Board of Revenue occurred, which was not filled up, and since then the Board in the Lower Provinces has consisted of two members only.

12. *Production.*—I am now to pass on from the history of the superior administrative machinery to say a few words on the production of the drug—the system of dealing with the producers, the grievances the latter had against the Government, and the grievances the Government had against them. At the beginning of the century, the poppy was cultivated on behalf of Government in Bengal proper as well as in Behar and the North-Western Provinces. The drug produced in the Bhagulpore Division, and in the districts of Rungpore, Dingapore, and Cooch Behar was, however, of inferior quality, and its production was prohibited by Regulation VI. of 1799. The local officers and the

APP. I.

people opposed the enforcement of that Regulation, and a long struggle ensued which was terminated by the enactment of Regulation XIII. of 1816, which legalised the cultivation of opium in Bengal, under the supervision of the Commercial Resident of Rungpore. The opium produced was to be used for excise purposes only. But it soon turned out that nothing could be made of this Bengal opium, and the production of it was again abandoned in 1837, only to be revived in Monghyr and Bhagulpore between 1830 and 1834, and in numerous Bengal districts between the latter year and 1840.

13. The cause of this expansion of cultivation was probably due to the policy adopted in 1830 regarding "Malwa" opium produced in the Native States of Central India, where cultivation was unrestricted, the manufacturers skilful, and the quality of the drug exceptionally good. This "Malwa" opium was brought via Baroda and Cambay to Din and Damaun and thence exported to China, where it threatened the Bengal monopoly in the early years of this century. The Company's efforts having proved futile to restrict the cultivation in Central India, or to introduce the Bengal monopoly system, the trade was in 1830 thrown open. The supervision till then exercised over Malwa opium affairs by the Bengal Board of Customs, Salt, and Opium was withdrawn, and the pass system introduced, care being taken to fix the duty levied on the drug brought direct to Bombay for exportation to China at a favourable rate compared with the cost of transmission through Native States to Diu, Damaun, or Karachi. It was anticipated that this change of policy would cheapen the Malwa drug in the China market; and to counteract the effect that result would have on Bengal opium Government, in 1830, directed that an effort should be made to make up for the probable loss in price by increase in quantity. Accordingly, between 1830 and 1840, opium cultivation was largely extended throughout Benares, Behar, and Bengal; but in 1840 there was a collapse, largely due no doubt to the seizure of British merchants and the destruction of a large quantity of opium by the Chinese in 1839—events which led to war between England and China. The immediate effect of events in China on opium in India was the contraction of the area of operations in the North-Western Provinces, while opium cultivation in Bengal proper was finally abandoned. Since then, the number of districts which grow opium has been largely extended in the Benares Agency, but in Behar (with the exception of the re-introduction of cultivation into Chota Nagpur in 1869 and its abandonment again in 1877) there has been no change. From the statistics given on page 26 of the Report, it would appear that the average produce per bigha has generally decreased, with any very marked extension of the area under cultivation, and this is what might be expected from recourse being had to inferior soils.

14. *System of dealing with Producers.*—The main points of the system have not greatly changed during the century, and the principles of the first opium law (Regulation VII. of 1799) are not very different from those of the present Act (XIII. of 1857). Engagements were taken by the agent or his deputy for a specific area of cultivation. When the poppy was grown, an estimate of its yield was made, and a further engagement for the delivery of the estimated quantity of drug drawn up. The opium, when delivered, was weighed; if found too liquid, an additional quantity or *batta* for consistence fixed by arbitration was deducted from the price; if adulterated, it was confiscated; and if any of it was kept back, the cultivator was liable to fine. These were the lines worked upon in the beginning of the century, and with additions and modifications, notably under the head of *batta for consistence*, the same are followed to-day. The system was worked by *gomastas* and *zilladars* on behalf of the agents, while *sudder mahatoes* and *gyne mahatoes* were supposed to look after the cultivators' interests. The *zilladars* still exist, and perform much the same duties now as they did before. The *gomasta*, though still an important officer, has less to do now than formerly, while the *sudder mahatoes* have disappeared. The *gyne mahatoes*, on the other hand, has become the *khatadar* or *lombardar*, who plays a most important part in the economy of the Opium Department, as will subsequently appear.

15. This organisation in early times did not always work smoothly, and various complaints were from time to time made by the cultivators of the exactions to which they were subjected and the inconveniences to which they were exposed. It was urged by the ryots that the price of opium (which from 1820 to 1860 varied

between Rs. 3 and Rs. 4 the seer) was fixed too low; that nothing was allowed for cost of carriage to the weighing places, of which there were too few; that ryots were confined and sold up for arrears; that the various grades of under-officers extorted at weighment and other times an unlimited quantity of the drug under various pretences, and that when accounts were settled the gomastas levied perquisites. Redress did not always follow upon these complaints, the Board at first being somewhat apprehensive of interference with any custom that had grown up; and if it is said by the Commission that generally the history of the Department is one of improvement, of increasing supervision by European officers, of increasing checks upon the malpractices of subordinates, and of increasing security to the producers, it is more than may be said of every public department. The custom of taking *batta for consistence* opened perhaps the widest door to fraud, for, as till 1830 there was no fixed standard of consistence, the *batta* depended on personal caprice. A standard was, however, fixed in 1831, and since then the existing principle has prevailed in both agencies, viz., that for the deliveries below 70 deg. a proportionably decreased, and for deliveries above 70 deg. a proportionably increased, price should be given. But even in Benares, where weighments are elaborately conducted, instances in which subordinates have been effectually punished for defrauding the cultivators are extremely rare. This cannot be due to the absence of abuses, for admittedly such exist; but the consideration of these abuses, and the best methods of removing them, will be dealt with later on.

16. If the cultivators had thus many grievances against the Government, the Government also had grievances against the cultivators. Minor grievances were the practice of planting of other crops along with the poppy, and delay in bringing in the produce; but the chief grievances were illicit cultivation, "paper cultivation," or drawing advances for poppy land, yet growing other crops upon it, and illicit sale of the drug. It was illicit cultivation in Northern Bengal that led to the re-introduction of the opium system there under Regulation XIII. of 1816, but latterly it is said that both illicit cultivation and "paper cultivation" have ceased to trouble the Department. Illicit sale, however, still gives trouble, and the Commission's remarks on pages 44-45 show that no effort hitherto made to suppress it has been completely successful; while one at least of the methods adopted—the granting of large rewards to informers—greatly aggravated the evil it was devised to check.

17. *Manufacture and Disposal of the Drug.*—The chapter which deals with the history of the "manufacture and disposal" of the drug when delivered by the cultivators to the opium authorities also demands attention. It seems that from the earliest times the crude opium when received from the cultivators had been packed in earthen jars, each containing about a maund of the drug, and in this way forwarded to the factory. This mode of conveyance led to considerable evaporation, and experiments were therefore tried with leather bags, galvanized-iron vessels, and wooden boxes, with a view to the prevention of loss of weight—all proving unsuitable. The original method of transport in earthen jars was reverted to, and is still in force. At times loss is experienced by the breaking of the vessels in transit, and such loss used originally to fall on the cultivators. But the unfairness of this arrangement was perceived in 1831, and since then Government bears the loss.

18. On arrival at the sudder factory it was the custom formerly to keep the opium in the jars, and to cake from them direct. But so far back as 1830 wooden tanks were introduced. These proving unsuitable, were replaced by stone vats, which are still in use. In the manufacture of opium for the market two objects were always aimed at—(a) that the quality of the drug should be invariably good; (b) that the weight of pure opium per chest should be always the same. In order to secure the first object, it does not appear that in the early years of the century any definite rules were prescribed, but the practice must have been very appropriate to the end in view; for that practice, as described in general terms by the agent in 1820, is pretty much what it is to-day. As regards point (b), it may be said that before Captain Jeremie's time, consistence, scientifically ascertained and regulated, was unknown; but in 1832 it was determined that Patna should cake at 75 deg. and Benares at 70 deg., and these average standards have been since adhered to. Accordingly it has been since 1832 possible to regulate

the weight per chest. This is done with reference to the Chinese system of weights, which runs in taels, catties (16 taels), and piculs (100 catties). A chest of opium should contain 1 picul (133 lbs. 5 ozs. 5½ drs. avoirdupois) of pure opium, and as 40 balls are packed in a chest, each ball should contain 3 lbs. 5½ ozs. of the pure drug.

19. As has been observed, no great change in the system of manufacture has been introduced from the beginning of the century, though some improvements have no doubt been effected. There is, for instance, owing to mechanical appliances, less danger of variation in consistence, and owing to better chemical knowledge, less danger of adulteration now than formerly. But the greater scientific knowledge of to-day has been unable to improve, to any very material extent, on the empiricism of earlier times, either in the manufacture of the drug or in caking and packing. Numerous experiments have been tried under all three heads; but unless Captain Jeremie's invention of compartments in the chest be considered a great improvement, we are now pretty much where we were 60 years ago. Captain Jeremie's aim was, just as the Board's aim now is, to pack the cakes without dunnage; but he had, after all, to furnish his compartments with a bed of trash. It is unnecessary to summarise any further the Commission's remarks on this part of their Report; but that section of this chapter which deals with the three great disasters which befel the opium provision owing to preventable causes is interesting. History repeats itself, and in the recital points occur which recall the Benares disaster of 1880-81. With this the Commission do not deal, as when they wrote it was still *sub judice*.

20. The Commission close their interesting sketch of the origin and growth of the Department by exhibiting statistics of the general results of the monopoly from the establishment of the agency system in 1797 down to 1882. These statistics show that the highest price ever obtained for the drug was in March 1822, when it averaged Rs. 4,274-9-7 per chest; the lowest occurring in April 1839, when, under the panic caused by the news from China, the average per chest was only Rs. 365-1-11. The net profit to Government from opium grown on this side of India has risen since 1797 from less than five lakhs to more than five crores of rupees per annum. On the general uses of their review of the past history of the monopoly, the Commission make the following remarks, which are worthy of being quoted here:—

"The considerations suggested by this review of the past are not, we think, foreign to the questions which our instructions direct us to examine. There are economists who assert that the Government, without incurring a loss, might sever its connexion with the production of opium, and confine itself to the levy of an excise duty and a tax on exportation. It may be useful to remind these gentlemen of the evil days when, under the contract system of supply, the quality of the drug had fallen so low that Bengal opium was offered at Rs. 50 a chest without finding a purchaser. The history of the connexion of the Government of Bengal and the Calcutta Board of Revenue with the administration of the Department may be of service in determining what answer shall be given to the question whether that connexion should any longer be maintained. There are officers at the present day who advocate a general return to the system of remuneration by commission. Upon this point, the reasons which led such distinguished administrators as Lord William Bentinck and Lord Dalhousie to an opposite conclusion seem worthy of being reproduced. The difficulties with which the Department has to contend, the complaints made by the cultivators, the practices by which the law is violated or evaded, are substantially the same now in kind (though differing in degree) as they have been for many years past. We gladly recognise the fact that the record of the opium administration is in the main a record of progress and improvement. Much has been done to remedy such evils as experience has brought to light, and to make the cultivating license a source of profit to the ryot as well as to the Government. There is not the slightest ground for saying that the officers of the Department exercise any undue influence, or that the engagements entered into by the cultivators are not entirely voluntary. In most matters of detail such reforms as are still required will probably be most successfully carried out, by working upon the lines which have been laid down by the administrators of a former day. It has therefore appeared to us that a summary of the past history of the Department is a

useful introduction to the inquiry which we have been directed to undertake."

21. In the preceding remarks the existing constitution of the Opium Department has been to some extent described; but the narrative looked more to the genesis and history of the Department than to any other aspect. It was insufficient as a statement of existing facts with a view to determining whether improvements were necessary or not. Such a statement the Commission give in Part II. of their Report.

The Lieutenant-Governor does not, however, purpose to summarise Part II. here, because, in the first place, the existing state of things is generally known, and in the second place, such a summary would cause useless repetition. When stating and examining the Commission's recommendations, some description of the existing facts which the recommendations are intended to alter and improve will be necessary, and opportunity can be taken of that necessity to explain facts as fully as may be needed. In other words, instead of following the Commission through the various stages of their Report, I am to discuss Parts II. and III. together, thus saving time without any great sacrifice of clearness.

22. Before entering on the subject of the Commission's recommendations, I am to call attention to their desire (paragraph 602) that their proposals should be regarded as a whole, each portion of which is naturally dependent on the other; and to the fact that they guard themselves against being understood as recommending changes except as component parts of a complete plan. Having carefully examined all the proposals made in the Report, the Lieutenant-Governor, I am to say, is not prepared to follow the Commission in thinking that all or none of their proposals should be accepted. He thinks that some proposals may be adopted at once, while the introduction of others may with advantage be postponed. The Commission's proposals are not always very clearly put from a financial point of view; but as far as the Lieutenant-Governor can ascertain, the yearly increase of expenditure which they involve would be about eight lakhs of rupees, while the improvements in plant, &c., could hardly cost less than five lakhs more. Whether the Government of India, in consideration of a better system and prospective benefits, will incur such expenditure, rests at the threshold of the inquiry, and if to that question an affirmative answer be given, then it becomes a question for his Excellency the Governor-General in Council to decide whether this Government should not leave all action on this Report for the Director-General of Opium and the Government of India. The doubt on this point does not relieve the Lieutenant-Governor from the duty of submitting his general views on the whole question, and on the Commission's recommendations.

23. The first recommendation which the Commission make in Part III. of their Report has reference to the questions of general control and administration. Their instructions directed them to consider whether the Opium Department should continue to be administered by the Board of Revenue at Calcutta, acting under the orders of the Bengal Government; or whether the control and administration should be divided between the Governments of Bengal and the North-Western Provinces; or lastly, whether a single officer, acting under the orders of the Government of India alone, should be appointed to administer the Department. The Commission are strongly of the opinion that the third course should be adopted, and they justify their view as well by illustrating the imperfections and inadequacy of the existing system as by maintaining that a divided control, such as the second plan contemplates, would lead to even greater difficulties than are at present felt. To commence at the head. The Commission point out that, although the Government of India is alone financially interested in the success of the Opium Department, its connexion with the administration is slender. The power of the purse, of course, gives that Government an ultimate controlling voice; but so long as budget requirements are satisfied, it is discretionary with the Government of Bengal to consult the Government of India, or not to consult it. And in point of fact, the Government of India is not often consulted, though matters of exceptional importance are reported to it for information. Again, as far as the Government of Bengal is itself concerned, the Commission think that the control which it exercises is not a control over the actual work of the Department so much as a control over the Board's management of that work. The administration is mostly conducted by correspondence between the agents and the Board, the Government

APP. I.

having no independent means of testing or forming an opinion on the matters reported. Therefore its control consists, the Commission say, of comments (mostly laudatory) upon the Board's administration, and of orders (generally affirmative) on the Board's remarks. This is particularly noticeable in the case of the Benares Agency, the districts comprising which lie outside the jurisdiction of the Lieutenant-Governor of Bengal. And if the control of the Bengal Government be, in the Commission's opinion, shadowy, that exercised by the Board is hardly more real. Under the law, indeed, their powers are full, and in point of fact the Board are consulted on almost everything that is done. Still their knowledge of the wants and requirements of the Department is of a mere routine order, the reflex of subordinate officers' opinions, not a living opinion of their own. "In dealing," say the Commission, "with every other subject than opium, the Board's Report is an independent review of the administration of the year. The Board lay before Government their own summary of the facts, their own conclusions and recommendations, their own tabular statements of what has been accomplished, and of what remains to be done The scheme of the Opium Report is altogether different. The reports of the agents and their principal assistants are submitted at length, and form the bulk of the Report, the Board's share in it being confined to the preparation of a brief extract which is prefixed to the local reports and tables It may be added that this practice is not confined to the annual reports, but is the common procedure when the Government calls for information upon any point affecting the working of the Department." The Commission consider it thus apparent that the Board instil no energy of life into the actual work of the Department; while, as the controlling authority originates nothing, no advantage results from the control which the Government of Bengal exercises over the Board. And this view is, the Commission think, confirmed by the consideration that, owing to the enormous extension of cultivation in the Benares Agency, the Calcutta Board of Revenue is no longer the natural administrative head of the Department, nor is the Bengal Government any longer the Local Government with which the Department is chiefly concerned. Therefore, the Commission declare that a change is necessary. "We have," they say, "patiently investigated the past history and present working of this Department, and we are led by our inquiries to believe not merely that certain specific cases of disaster have been due to faulty administration, but that the general principles on which the existing system is based are unsuited to the circumstances of the present day. If a certain measure of success has been achieved, we are convinced that this result has been attained, not in consequence of the present constitution of the Department, but in spite of it." They therefore recommend the withdrawal of the control of the Department from the Bengal Government and Board of Revenue, and the appointment of an Opium Commissioner or Director-General of the Opium Department, who would act immediately under the orders of the Government of India. To the Director-General they would attach a secretary or personal assistant, who, after five years' tenure of his office, would be eligible for the post of opium agent. The latter should, in the Commission's opinion, be able and energetic covenanted civilians of from 13 to 15 years' service, whose pay should be fixed at Rs. 2,200, rising to Rs. 2,200 in order to retain them in the Department, and for the most successful among whom should be reserved the post of Director-General when vacancies occur.

Finally, the Commission propose to drop the deputy agent (the district collector) out of the sphere of the Department altogether; to style the sub-deputies in future deputy agents; to raise the number from 23 to 29 by the creation of six new appointments in the Benares Agency, and by the addition of three new appointments to the 47 appointments of the assistant class; to equalise the house allowances they receive; and, lastly, to place at the disposal of the Director-General the sum of Rs. 13,500 to be annually expended in bonuses to the most successful deputy and assistant agents in both agencies. These latter proposals are defended on the ground that the present staff in Benares is altogether inadequate for the work which is to be done there.

24. In the Commission's recommendation to increase the number of sub-deputy agents, the Lieutenant-

Governor thinks there is much reason, and he, on the whole, agrees in them; while in the recommendation to appoint a Director-General of Opium, acting under the orders of the Government of India, he entirely concurs. The recommendation, it will be seen, is not approved by the Board of Revenue, who, in their letter No. 3 B. of the 2nd January 1884, propose an alternative, which the Commission have not noticed. That letter (which is an imperfect commentary upon the Commission's Report, and might, of itself, be held to suggest that some reform is necessary in the constitution of the Department) is chiefly remarkable for a suggestion which, in the Lieutenant-Governor's opinion, is little calculated to improve matters. The suggestion is that, instead of having a Director-General of Opium, whose whole time would be given up to the work of the Department, and who would serve only one master, we should have the member of the Board in charge of the Opium Department placed under the control of the Governor-General in Council, and freed from the control of the Government of Bengal in all matters connected with opium. This suggestion affords, in the Lieutenant-Governor's opinion, no solution of the question. It would remove none of the difficulties which the Commission so forcibly dwell upon, unless the member is to be constantly on tour making inspections to the detriment of his many other duties; and to suppose that he can be constantly on tour, even in the present extent of opium cultivation in the Benares Division, is to suppose the impossible. There would be the disadvantage of a Bengal officer controlling details of administration in other Governments, and there would be the great objection of allowing this member of the Board to be the servant of two or more masters. In writing as they have done, the Board have, the Lieutenant-Governor thinks, unduly estimated the value of "the official traditions which have hitherto guided the working of the Department;" but the report which condemns these traditions has, in Mr. Rivers Thompson's opinion, all the greater force in that Mr. Reynolds, the president of the committee, speaks with the knowledge arising from personal experience acquired as member of the Board in charge of opium affairs. Mr. Reynolds' condemnation of the system carries conviction to the Lieutenant-Governor's mind, not only as it concerns the Board, but as it concerns the local Government also. In the Lieutenant-Governor's belief this Government can rarely do any substantial good in connexion with the Department, while the financial control is in the hands of the Government of India, and while it is dependent on the opium agents alone for all knowledge of facts and details. And if particular examples to enforce this belief are wanting, the report furnishes them. The history of the Patna saw-mills, given in paragraph 156 of the report, is an excellent illustration of how not to do it; while the history of the recent misfortunes in the Ghazipore Agency, by which Government lost several lakhs of rupees, no one being punished except an unfortunate mohurir, indicates the necessity of such a complete reform as shall bring the internal conduct of the agencies under a much closer and more direct personal supervision than now exists. For these reasons the Lieutenant-Governor would strongly support the recommendation that a Director-General be appointed to control the Opium Department, under the direct orders of the Government of India. It is perfectly clear to his mind, both from practical experience of the working of the Department and from this report, that the Department must be under the undivided control of one authority; and looking to the vast extent of cultivation extending into the territories of three Governments, there seems no room for doubt that the central authority should be that of the Government of India. The Lieutenant-Governor, further, sees no reason why the Director-General should not have the charge of the opium godown in Calcutta, and the conduct of the periodical sales (as noticed in paragraph 620 of the report). The courteous relations between him and the opium merchants (on which the Board lay stress) would, Mr. Rivers Thompson thinks, be soon established.

25. Turning from the Director-General (to whom the Lieutenant-Governor would allot a salary of Rs. 3,000 a month, with Rs. 300 as travelling allowance) to the agents, the Lieutenant-Governor must concur in the opinion that the Government of the North-Western Provinces should have the appointment of the Benares agent. Every consideration seems to justify this, and although the Civil Service of these provinces, which is not very fortunate now as regards promotion, will

suffer, the interests of the public service call for the change. Mr. Rivers Thompson, while agreeing so far with the Commission, must, however, differ as regards the salary which the agents should draw. He sees no reason for thinking that a higher pay than Rs. 1,500 rising to Rs. 2,250 is necessary. Such pay as this would practically mean the addition of an officer to the lowest grade of magistrates on the Bengal list, rising with the promotion of his contemporaries to the highest grade. This would secure continuity in administration in a special department, which has, in Mr. Rivers Thompson's opinion, more to recommend it than changes in the office every five years.

Finally, the Lieutenant-Governor does not think that a strong case is made out for a personal assistant of the covenanted civilian class to the Director-General. If help of the kind is wanted it can be got more cheaply from the uncovenanted service, as in the case of the Inland Revenue and Salt Departments. The Lieutenant-Governor, however, doubts whether such assistance would be required at all; if required, it should not, he thinks, be liable to the changes which the Commission recommend in paragraph 618 of their report.

26. While thus in general accord with the chief proposals of the Commission on this part of the subject, Mr. Rivers Thompson must confess that the want of anything like a precise and tabulated estimate of cost in the report renders it difficult for him to make recommendations with assurance of support from the Government of India. Failing such an estimate, he can only presume that the pay and travelling allowances of the Director-General, with the cost of his establishment, would be about Rs. 50,000 per annum, while the pay of his assistant, if allowed, would come to close on Rs. 8,000 more. The additional appointments in the deputy grades would probably be scattered over all classes, and possibly one appointment of the first class, two of the second, four of the third, and five of the fourth, at a cost of Rs. 8,300 per mensem, or Rs. 99,600 per annum, might be considered appropriate. The cost of three new assistants' appointments (one in each of the first, second, and third grades) would be Rs. 1,200 per mensem, or Rs. 14,400 yearly. Thus excluding house allowances and bonuses, but having regard to the saving that would be effected in the pay of the agents, the cost of the Commission's proposals would be about Rs. 1,50,000. With bonuses and house allowances the cost would be about Rs. 1,70,000, which, with costs of additional establishments, may mount up to nearly two lakhs of rupees. It is for the Government of India to say whether for prospective advantages it is prepared to incur such an increase of cost. If they are not prepared to accept the Commission's proposals as a whole on this head, the Lieutenant-Governor certainly thinks that, at all events, a very strong case is made out for an increase in the number of sub-deputies employed in the Benares Agency, and with reference to this point I am to request attention to a letter from the Board, No. 393 B., dated 14th June 1884 (copy sent herewith), in which an application is made to raise the number at once by three. The Board point out that this can be done without any immediate expense; but the Lieutenant-Governor has preferred to postpone orders until the views of the Government of India on the whole question were expressed.

27. *Agency and District Establishments.*—The Lieutenant-Governor sees no reason why the recommendations in regard to the agents' establishments should not be accepted in their entirety. At present the cost of the Behar Agency establishment is Rs. 1,632; but the Commission think that there is no need for the treasurer, nazir, and poddar, while the Persian and English office can be amalgamated. These alterations would lead to a saving, as the maximum cost on the new scale would never exceed Rs. 1,558 per mensem, the minimum of the scale being Rs. 1,128. It is, however, impossible to say what the saving would be compared with the present cost, as the Commission do not say whether the present establishment approximates to the maximum or minimum cost.

In regard to the Benares Agent's establishment, the Commission, in the first place, object to the agent's practice of detaching one of the gazetted assistants from his proper duties and employing him as a private secretary and aide-de-camp. They properly deprecate this practice, and the Lieutenant-Governor will at once order its discontinuance. Owing to this practice of employing an officer away from his proper duties, to the indefiniteness of the line, separating the agent's establishment from that of the factory, and to the custom of entertaining a large number of clerks at the

busy season of the year, the Commission find a difficulty in understanding what the existing strength of the Benares Agent's establishment is. This difficulty prevents them from making more than conjectural recommendations; but they think that an establishment, consisting of an accountant and head assistant, 18 clerks and menial servants, at a cost rising from Rs. 1,441 to Rs. 1,951 per month, should suffice. They insist on the necessity of making the head assistant responsible for all branches of the office, and doing away with the separate staff of menial servants attached to the so-called branches into which the present agent has divided his office. On these points the Lieutenant-Governor would accept the Commission's recommendations as far as conjectural recommendations can be accepted. If the Government of India also approve, the recommendations will have to be examined and verified before final orders issue.

28. The sub-agency establishments are next considered under the heads of (a) *sudder offices* (b) *hothee* establishments. There are at present 23 *sudder* sub-agency offices, a number which, as we have seen, it is proposed to raise to 29. The establishments maintained at these sub-agency head offices vary greatly, being in some places redundant, while the clerks are, as a rule, under-paid. The Commission, therefore, recommend a standard strength for a sub-deputy agent's *sudder* office in both agencies consisting of five clerks, a duffry, four peons, and a sweeper, at a monthly cost of Rs. 330 rising to Rs. 400. As far as can be gathered from the imperfect statement of the cost of existing establishments in Behar and Benares, contained in paragraphs 223-236 of the report, the cost of this standard scale of establishment would exceed the present average by nearly one-half. On this point, however, further information is necessary, and all that can here be said, with an approach to certainty, is that if the Commission's proposals are accepted the standard cost of the (29) sub-agency *sudder* office establishments would vary from a minimum of Rs. 9,670 per mensem, or Rs. 1,16,040 per annum, to a maximum of Rs. 11,600 per mensem, or Rs. 1,39,200 per annum.

29. It has been already observed that the Commission's report is defective in its treatment of the financial aspects and results of the proposals made in it, and this fact places this Government at a disadvantage in criticising those proposals. Still the Lieutenant-Governor feels some confidence in saying that the scale of pay proposed for the sub-agency establishments is too lavish, while the inadequate recognition in it of the progressive principle is a blemish. Having regard to the pay drawn by the ordinary district executive establishments, Mr. Rivers Thompson is disposed to think that the following scale, if adopted, instead of that proposed in paragraph 636 of the report, would be considered liberal by those affected by it:—

	Rs.	Rs.
Head clerk -	80 rising to	100
2nd " -	50	75
3rd " -	40	50
4th " -	30	40
5th " -	20	30
Duffry -	5	5
2 Peons -	12	12
2 " -	10	10
Sweeper -	3	3
Monthly -	250	325

This gives for 29 sub-agencies a minimum cost of Rs. 87,000 and a maximum of Rs. 1,13,100 per annum, and shows a yearly saving of Rs. 29,000 at the lower, and of Rs. 26,100 at the higher end of the scale, compared with the Commission's recommendations. It must be confessed, however, that in all this there is a good deal of guess-work. It is desirable that in this portion of the question actual figures worked out by the Board and local officers should be prepared before any well-considered recommendations can be made to the Government of India. All that can at present be safely said is that a standard scale of sub-agency establishment is desirable, if only to remove the variations which now exist (apparently without sufficient cause), and to admit of the easy interchange of officers between one agency and another when the interests of the service require it. Therefore the Lieutenant-Governor desires to submit the question in its present state to the Government of India. If they approve of the general idea, the details will be worked out afterwards.

APP. I.

30. I am now to offer some remarks in connexion with the *kothee* establishments. It will be observed from Chapter III., Part II. of the report, that the unit of opium administration in the Behar Agency is called the *kothee*, and in the Benares Agency the *sub-division*. In Behar there are 42 *kothees*, each sub-agency containing from three to six *kothees* according to its size; while in Benares the 12 sub-agencies now in existence are sub-divided into 53 sub-divisions and two minor outposts. In Behar the usual *kothee* establishment consists of a gomasta, a mohurir, two mutsudis, and a staff of from 10 to 25 zilladars. The total pay drawn by these officers is about Rs. 75,000 per annum (paragraph 226); but all except the zilladars receive commission which, in good years, gives them about Rs. 60,000 more. The authorised pay and allowances of the *kothee* establishments in Behar, therefore, amount in the aggregate to about Rs. 1,35,000 yearly. Of course in such a bad year as 1883 the establishments suffer heavily in commission.

In Benares the sub-divisional staff consists of one gomasta, three mohurirs, and about 18 zilladars. The total cost of the sub-divisional establishments in Benares would therefore seem (from paragraph 229 of the report) to be Rs. 12,055 per mensem, or Rs. 1,44,660 per annum. The Benares staff receive no commission, and, as the figures show, are worse off than the Behar staff in good years. In bad years, however, their position is better, as they do not in any way depend on commission.

31. It is on the question of the *kothee* and sub-divisional establishments' pay that the Commission seem to the Lieutenant-Governor to make their strongest point. They very reasonably express the reconviction that these establishments are under-paid, and they declare their belief that, owing to this under-payment, "every seer of opium which a cultivator delivers pays toll to the amlah, and from every rupee which a cultivator receives a percentage is deducted for their benefit." They declare that it is equally the duty and the interest of the Government to see that its promise of Rs. 5 per seer of opium to the cultivator is well kept, and they point out that the only way of securing the fulfilment of the promise is by paying the amlah adequate salaries and by abolishing the practice of taking commission. The salaries which they consider adequate are stated in paragraph 642; and applying the scale therein given to the number of *kothees* and sub-divisions, and assuming that of the 1,595 zilladars (paragraph 645) employed, one-half would get the lower and the other half the higher scale of pay, we get Rs. 5,63,040 and Rs. 6,42,840 as the minimum and maximum cost respectively of the Commission's proposals on this head for both agencies. When it is remembered that, as shown above, the present authorised scale of pay and allowances for the *kothee* and sub-divisional establishments in both agencies comes (as far as can be made out from the report) to Rs. 2,79,660, the bold character of the Commission's proposal on this head will be apparent. Yet Mr. Rivers Thompson believes that the case is one which calls for liberal measures, and he is not at all prepared to say that the Commission's proposals would not be, in the long run, found prudent. As will appear later on, he does not, indeed, think that in Behar we are ready for introducing the reforms into the khattadari system which the Commission (paragraph 674 *et seq.*) recommend, and until we are ready the introduction of the proposed changes there must perforce be postponed. But it should be a postponement, not an abandonment. As far as the Lieutenant-Governor can estimate the gross cost of all the proposals in connexion with superior and inferior establishments, a sum of 6 lakhs yearly would cover them, and we get six lakhs of rupees for 500 chests of opium. One way of looking at the question then is: Should we by a wise liberality, by suppressing commissions, and by prohibiting all irregular impositions on the cultivators—in fact, by doing all we can to secure to the cultivator the full profits of his cultivation—get 700 chests of opium more than we now do? If so, we should, speaking broadly, cover our six lakhs plus the price we should pay the cultivators for the 700 chests. We should avoid all loss and and go far to strengthen the stability of the opium industry in this country. Mr. Rivers Thompson is strongly disposed to think that the chance of success is worth the price to be paid for it.

32. *Settlements, Advances, and Remissions.*—From the improvements suggested in the organisation of the Department, we now come to improvements in its working, beginning with settlements, and it is desirable that, before going further, a few brief words should be

said describing the existing state of things in this regard. The wording of the Opium Act (XIII. of 1857) seems to imply that settlements for cultivating the poppy should be entered into between the Government officer and the cultivator in person; but in practice this is never done, the settlements being in fact made with a sort of village foreman called a *khattadar* in Behar and a *lambardar* in Benares. The *khattadar* or *lambardar* is a substantial cultivator himself who possesses the confidence of the other ryots in his village, and represents them in Benares on all occasions except at the final settlement of the year's account, and in Behar on this occasion also. In return he gets the scrapings (*khurchan*) of the cultivators' opium pots at weightment time, and a fee varying from 12 annas to Rs. 2-8 per bigha of poppy cultivation, the receipt of which, though illegal, is overlooked by the Department. It is, then, with the *khattadar* or *lambardar* that the agreement to cultivate is made by the opium officer, and it is to him that the advance is given for distribution among the cultivators whom he represents. In the Benares Division the *lambardar's* application to engage for so much land is tested by an excellent system of maps and records of land fit for opium in the particular village; but in Behar no such test is available, inquiries by the zilladars, and comparison by the gomastas of the results of these inquiries with the records past years, insufficiently supplying its place. When the *lambardar's* application for leave to cultivate so much land is approved in Benares, and when the zilladar's lists are passed in Behar, a license is given to the *lambardar* or *khattadar*, as the case may be; a *kabuliyat* and security bond taken from him; and the advance given. In many Benares districts only one advance of Rs. 6 is given; but in some districts of that agency, and usually in Behar, Rs. 4 are advanced in September and Rs. 2 in the following January. A third advance on the ripening of the crops is also occasionally made in March. The practice is not invariable, and the Commission see no good in giving advances twice. The settlements are completed in September.

Advances for wells are made on a different system, and at no special time, but a bond pledging property for the repayment of the advance is always taken. On these well advances no interest is charged.

33. Such being the system already in force in this matter, it remains to be seen what modifications the Commission would introduce. In the first place, it is clear that at the present time there is no binding engagement at all entered into with the opium cultivator. The agreement with the *khattadar* or *lambardar* may bind him, but it cannot bind the ryot, whom the opium officer at settlement time never sees. The present rough-and-ready system has worked fairly well hitherto; but for obvious reasons we ought not to presume too much upon freedom from loss in the past. An effort should now be made to place the system on a legal footing, while preserving, as far as possible, the advantages of the *lambardari* and *khattadari* system. This the Commission hope to do by taking engagements in writing from the actual cultivators who may wish to attend, while enabling those who prefer staying away to engage through the *lambardar* duly authorised by a power of attorney in that behalf. There can be no doubt in the Lieutenant-Governor's opinion that if this were practicable it would be a great improvement, for it would at once exempt the industry of a careful ryot from being taxed, as it now is, for the sloth of his careless neighbour. Each man's responsibility would be defined, and thus a stimulus to individual industry supplied. To the success of this plan, however, the possession by the opium officer of such a knowledge of the villages as the Benares opium maps and records (paragraph 251) give is, if not essential, at all events most desirable and necessary, and it may well be doubted whether without such maps the plan is really practicable. The Commission, however, seem undeterred by the ill-success which attended the experimental introduction of the system into Behar (paragraph 262), and they propose to make another effort in that direction. The Lieutenant-Governor has heard something of the effort which was made to introduce maps, &c. into the Sewan Sub-Agency in Behar in 1880, and it would appear that the ill-success of the scheme was in a measure due to that want of local information, village maps, *patwari's* papers, &c., which meets us at every turn of administration in Bengal. If there is to be a cadastral survey of Behar under the Tenancy Bill all this will disappear, and it will become as easy to work in Behar on the system in question as in Benares. Until, however, our opium officers can be furnished

with cadastral village maps, the Lieutenant-Governor is doubtful of the use of trying an experiment which, from the beginning, seems exposed to failure in Behar from causes which seem to have escaped the Commission's notice. The case furnishes an addition to the multitude of arguments which support the claims of this Government for an Agricultural Department.

34. In regard to advances, the Commission see in the practice of giving more than one advance, "no advantage commensurate with the inconvenience to Government in having to arrange for it, and to the cultivators in having to receive it." They accordingly recommend that ordinarily only one advance of Rs. 8 per bigha be given, besides Rs. 4 per maund for leaves, and Rs. 16 per 100 maunds of trash when contracts for these are given. This advance should, the Commission think, be made at time of settlements in August or September, a discretion being allowed to the deputy agent to make a further advance of Rs. 4 per bigha on special grounds. Settlements and advances should be made at each *kothee*, and not, as now, at the sub-agencies; and opium officers should be relieved of all treasury responsibilities by having the requisite funds disbursed by the collector at the *kothees* under special arrangements made for the purpose.

35. The proposals to relieve the opium officers of treasury responsibilities, and to hold settlements at the *kothees* within easy reach of the cultivators' villages, seem good; but the proposal to make only one advance runs counter to present practice or prejudice, and seems insufficiently supported by the Commission. No doubt the mere opinion of such a Commission is entitled to great weight, but it must not be forgotten that the opportuneness of the opium advances (which, be it remembered, bear no interest) has always been alleged as one of the reasons why the cultivation of the poppy is popular, and that this idea of opportuneness implied that advances were made at successive rent-paying seasons, thus saving the ryots from the mahajan, who charges heavy interest on his loans. It may, however, be that too much stress has been laid in local reports on this frequency of advances, and the fact that in Benares, where it seems only one advance is usually given, opium cultivation is no less popular than in Behar, would seem to show that there is no magic in giving several advances. The truth may lie between the extremes, and it may be unwise to lay down any general rule. In those districts where the *khareef*, being the chief crop, has to pay the largest rent kist, no doubt one payment in September would be convenient; but where, as in Behar, the largest kist is usually the *awghani*, it may be doubted whether, among an improvident people, one advance in September would be best calculated to preserve the popularity of the opium cultivation. After all the labour of making advances is not great, and as the lambardars take and distribute the money, the cultivators are not harassed. The Lieutenant-Governor understands that in this matter of distributing advance, it is not proposed to change the existing *khattadari* or *lambardari* system, the change to *assameewar* payments noted below being proposed in connexion with the payments on delivery of the drug only. In the matter of advances, then, it may be a wise policy to let well alone, or, at all events, to improve by degrees.
